*LACTUCA (*θρίδαξ*), Lettuce. According to Pliny,³ the Greeks made three species of this plant, one with a broad stem (*laticaulis*), another with a round stem (*rotundicaulis*), and the third termed *Laconicon*, in Latin *sessile*. The stem of the first kind was so broad, that, as we are informed by the same authority, who copies in this from Theophrastus, the gates of kitchen-gardens (*ostiola olitoria*) were wont to be made of them. No variety of lettuce, at the present day, offers a stem of such a size as this. The second kind, namely, that with a round stem, cannot be cited as a distinct variety, since every species of lettuce with which we are acquainted has a stem of this kind. The third kind, or *Laconicon*, obtained its Latin name *sessile* from its having hardly any stem, and being, therefore, as it were, seated on the ground. Billerbeck⁴ makes it to have been the Head Lettuce (*Kopf-lattuk*). Another Greek name for this kind is *χαμαί-ζηλον*. The ancients also distinguished between different kinds of lettuce by their colour and times of sowing. Thus the kind called *nigra* (dark green Summer Endive) was sown in January; the white, or *alba*, in March; the *rubentes* in April, &c. They had also the Cappadocian, the Greek, and many other species. Martial applies to the Cappadocian Lettuce the epithet of *viles*. The ancients were acquainted with the narcotic properties of the lettuce. Galen⁵ informs us that he frequently found good effects resulting from its use, and Dioscorides recommends both the domesticated and the wild kinds with the same view. The calming effects of the juice of the cultivated lettuce is acknowledged also by modern practitioners. A writer quoted by Athenæus⁶ ascribes to the Lettuce anti-aprodisiac qualities. It was also believed, from its affording but little nourishment, to be a very good article of food for the sick and those who required a low diet. We have given at the head of this article the Greek term *θρίδαξ*, as corresponding to the Latin *Lactuca*, but *θριδακίνη* and *θριδάκινος* were also employed. According to Nicander, the Lettuce, under the leaves of which Adonis was concealed when he was slain by the boar, was called by the inhabitants of Cyprus *Brinthis*.—According to Adams, the *θρίδαξ ἡμερος* of Dioscorides would seem to be the *Lactuca sativa*, or Garden Lettuce. The *θρίδαξ ἄγρια* is held by Sprengel to be the *Lactuca virosa*. So, again, with regard to the term *θριδακίνη*, Stackhouse acknowledges this also to be the *Lactuca sativa*. "Schneider," says Adams, "thinks that the learned men who refer the *θρίδαξ* and *θριδακίνη* to the *Lactuca*, do not seem to have distinguished correctly, the *θρίδαξ* being rather referable to the *Cichorium endivia*. I have been unable, however, to discover upon what ground he founds this opinion."⁷

LACUNAR. (*Vid. HOUSE*, ROMAN, p. 520.)

*LADANUM (*λάδανον*). "All agree," remarks Adams, "that this is the product of the *κίστος*, that is, either of the *Cistus Creticus* or *C. ladaniferus*. It is a soft resin, still much used by the Grecian ladies as a perfume, and is now procured from the tree by scraping it with leathern thongs. Anciently, it

would appear that it was collected from the herds of goats that browsed upon it. The *Cistus* is now frequently cultivated in this country as an ornamental shrub."

LÆNA, the same word with the Greek *χλαίνα*, and radically connected with *λάχνη*, *lana*, &c.

1. It signifies, properly, a woollen cloak, the cloth of which was twice the ordinary thickness (*duarum togarum instar*¹), and therefore termed *duplex*,² shaggy upon both sides,³ worn over the pallium or the toga for the sake of warmth.⁴ Hence persons carried a læna with them when they went out to supper;⁵ and the rich man in Juvenal, who walks home at night escorted by a train of slaves and lighted on his way by flambeaux, is wrapped in a scarlet læna.⁶

2. A robe of state, forming, it is said, in ancient times, part of the kingly dress.⁷

3. The flamines offered sacrifice in a læna which was fastened round the throat by a clasp, and in the case of the dialis, was woven by the hands of the flaminica.⁸

4. In later times the læna seems, to a certain extent, to have been worn as a substitute for the toga. Thus the courtly bard in Perseus⁹ is introduced reciting his fashionable lays with a violet-coloured læna over his shoulders, and we gather from Juvenal¹⁰ that it was an ordinary article of dress among the poorer classes.¹¹

5. Nonius defines it to be "*vestimentum militare quod supra omnia vestimenta sumitur*," but quotes no authority except Virgil, *Æn.*, iv., 262.

*LAGO'PUS (*λαγῶπους*), a species of Bird, which Gesner takes to be the White Partridge of Savoy. "The ancients can scarcely be supposed to have been acquainted with the *Tetrao Lagopus*, L., or Ptarmigan, as it is confined to the Alpine regions of the North. Perhaps, as Dr. Trail suggested to me, the name was applied to various sorts of Grouse, which all have hairy feet."¹²

*II. A plant, which Adams suggests may have been the *λαγῶπους* of Hippocrates. The same authority follows Valerius Cordus and Fuchsius in referring it to the *Trifolium arvense*, or Field-clover.¹³

*LAGO'PYRUS (*λαγῶπυρος*), probably Field-clover. Dierbach, however, holds the *λαγῶπυρος* to be the *Lagurus ovalis*.

*LAGOS (*λαγῶς*), the Hare, or *Lepus timidus*, L.

*ΛΑΓΩΣ ΘΑΛΑΤΤΙΟΣ (*λαγῶς θαλάττιος*), a fish of the Molluscous order, the *Aplysia depilans*. Dr. Fleming says of it, "The *Aplysia* has been known in the records of superstition under the name of the Seahorse, &c." The superstitions here referred to are those described by Pliny, as Adams thinks. The seahorse is represented by Nicander as an acrid poison, and by Dioscorides as a depilatory. These properties, as Adams remarks, are certainly not imaginary. The *Aplysia* is described by naturalists as having the head supported by a neck more or less long; two superior tentacula, excavated like the ears of a quadruped, with two flattened ones on the edge of the lower lip; the eyes are beneath the former; the gills are on the back, and consist of highly complicated lamellæ, attached to a broad membranous pedicle, and covered by a small membranous mantle, in the thickness of which is a flat and horny shell, &c.¹⁴

*II. A fish of a very different kind from the preceding. Schneider supposes it some species of the *Diodon* or *Tetraodon*.¹

*LAM'IA (*λαμία*), a species of Fish, called in English the White Shark, in French *Requin*, and answering to the *Squalus Carcharias*, L., or *Carcharias vulgaris*, Cuvier. It is the same with the *κύων θαλάττιος* of Ælian, and the *κάρχαρος κύων* of Lycophron.²

LAMPADEPHORIA (*λαμπαδηφορία*), torch-bearing (as Herodotus calls it), or *λαμπαδηφορία*, torch-race (as some lexicographers), also *λαμπαδοσύχος* *ἀγών*, and often simply *λαμπάς*, was a game common, no doubt, throughout Greece; for though all we know concerning it belongs to Athens, yet we hear of it at Corinth, Pergamus, and Zerinthus;³ and a coin in Mionnet, with a *λαμπάς* on it, which is copied below, bears the legend *Ἀμφιπολιτῶν*.

At Athens we know of five celebrations of this game: one to Prometheus at the Prometheia;⁴ a second to Athena at the Panathenæa⁵ (probably the greater Panathenæa); a third to Hephaistos at the Hephaisteia⁶ (the ceremony at the Apaturia was different); a fourth to Pan;⁷ a fifth to the Thracian Artemis or Bendis.⁸ The three former are of unknown antiquity; the fourth was introduced soon after the battle of Marathon, the last in the time of Socrates.

The race was usually run on foot, horses being first used in the time of Socrates;⁹ sometimes, also, at night.¹⁰ The preparation for it was a principal branch of the *γυμνασιarchia*, so much so, indeed, in later times, that *λαμπαδarchia* seems to have been pretty much equivalent to the *γυμνασιarchia*.¹¹ The gymnasiarch had to provide the *λαμπάς*, which was a candlestick with a kind of shield set at the bottom of the socket, so as to shelter the flame of the candle, as is seen in the following woodcut, taken from a coin in Mionnet.¹² He had also to provide for the training of the runners, which was of no slight consequence, for the race was evidently a severe one,¹³ with other expenses, which, on the whole, were very heavy, so that Isæus¹⁴ classes this office with the *χορηγία* and *τριηραρχία*, and reckons that it had cost him 12 minæ. The discharge of this office was called *γυμνασιarcheîn* *λαμπάδι*,¹⁵ or *ἐν ταῖς λαμπάσι γυμνασιarcheîsthai*.¹⁶ The victorious gymnasiarch presented his *λαμπάς* as a votive offering (*ἀνθήμα*¹⁷).

As to the manner of the *λαμπαδηφορία*, there are some things difficult to understand. The case stands thus. We have two accounts, which seem contradictory. First, it is represented as a course, in which a *λαμπάς* was carried from one point to another by a chain of runners, each of whom formed a successive link. The first, after running a certain distance, handed it to the second, the second in like manner to the third, and so on, till it reached the point proposed. Hence the game is used by Herodotus¹⁸ as a comparison whereby to illustrate the Persian *ἀγγάρηιον*, by Plato¹⁹ as a lively

image of successive generations of men, as also in the well-known line of Lucretius,¹

"*Ei quasi cursores vitai lampada tradunt.*"²

And it is said that the art consisted in the several runners carrying the torch unextinguished through their respective distances, those who let it go out losing all share of honour. Now, if this were all, such explanation might content us. But, secondly, we are plainly told that it was an *ἀγών*; the runners are said *ἀμιλλᾶσθαι*;³ some are said to have won (*νικᾶν λαμπάδι*);⁴ the scholiast on Aristoph., Ran.,⁵ talks of *τοὺς ὑστάτους τρέχοντας*, which shows that it must have been a race between a number of persons; the scholiast on the same play⁶ speaks of *ἀφείναι τοὺς δρομέας, τοὺς τρέχοντας*, which shows that a number must have started at once.

This second account implies *competition*. But in a chain of runners, each of whom handed the torch to the next man *successively*, where could the competition be? One runner might be said to *lose*—he who let the torch go out; but who could he be said to *win*?

We offer the following hypothesis in answer to this question. Suppose that there were several chains of runners, each of which had to carry the torch the given distance. Then both conditions would be fulfilled. The torch would be handed along each chain, which would answer to the first condition of *successive* delivery. That chain in which it travelled most quickly and soonest reached its destination would be the winner, which would answer to the second condition, its being a race between competitors.

In confirmation of this hypothesis, we observe as follows: The inscription in Böckh, No. 245, consists of the following lines:

λαμπάδα νεικήσας σὺν ἐφηβοῖς τὴν δ' ἀνέθηκα
Εὐτυχίδης παῖς ὦν Εὐτυχίδου Ἀθημένους.

This Eutychides was no doubt the gymnasiarch who won with the *ἐφηβοί* he had trained, just as Andocides⁷ talks of his *νενικηκέναι λαμπάδι* as gymnasiarch; so, too, Inscr. No. 250 records a like victory of the tribe Cæropis. Now we know that the gymnasiarchs were chosen one from each tribe. If, then, each one furnished a chain of *λαμπαδιφόροι*, there would have been ten (in later times twelve) chains of runners. Perhaps, however, the gymnasiarchs were not all called on to perform this service, but each once only in the year, which would allow us for each of the three greater celebrations (the Prometheia, Panathenæa, and Hephaisteia) three or four chains of competitors. It may be here remarked, that Inscr. No. 244 gives a list of *οἱ νεικήσαντες τὴν λαμπάδα, the winners in the torch-race*, fourteen in number. Who were these? If the several links of the winning chain, it is rather against analogy that they should be named. No one ever heard the names of a chorus: yet they can hardly be fourteen winning gymnasiarchs.

The place of running was, in these great celebrations, from the altar of the Three Gods (Prometheus, Athena, and Hephaistos) in the outer Cerameicus to the Acropolis, a distance of near half a mile.⁸ That in honour of Bendis was run in the Peiræus.⁹

The origin of these games must be sought, we think, in the worship of the Titan Prometheus. The action of carrying an unextinguished light from the Cerameicus to the Acropolis is a lively symbol of the benefit conferred by the Titan upon man, when he bore fire from the habitations of the gods and bestowed it upon man.

1. (ii., 77.)—2. (Compare also Auct. ad Herenn., iv., 46.)—3. (Plat., Rep., i. c.)—4. (Andoc. in Alcibi., ad fin.)—Compare Böckh, Inscr., No. 243, 244.)—5. (i. c.)—6. (v., 133.)—7. (i. c.)—8. (Pausan., i., 30, 2.—Schol. ad Ran., 1035.)—9. (Plat., i. o.)

κλέψας ἀκαμάτοιο πυρὸς τηλέσκοπον ἀτήν
ἐν κοίλῳ νάρθηκι.¹

But the gratitude to the giver of fire soon passed to the Olympian gods who presided over its use; Hephaistos, who taught men to apply it to the melting and moulding of metal, and Athena, who carried it through the whole circle of useful and ornamental arts. To these three gods, then, were these games at first devoted, as the patrons of fire. And looking to the place it was run in—the Cerameicus, or Potters' quarter—we are much inclined to adopt Welcker's suggestion,² viz., that it was the *κεραμεῖς* or potters who instituted the *λαμπαδηφορία*. Athena (as we learn from the *Κεραμίδς*) was their patron goddess; and who more than they would have reason to be thankful for the gift and use of fire! Pottery would be one of the first modes in which it would be made serviceable in promoting the wants of life. In later times the same honour was paid to all gods who were in any way connected with fire, as to Pan, to whom a perpetual fire was kept up in his grotto under the Acropolis, and who was in this capacity called by the Greeks Phanes, by the Romans Lucius; so also to Artemis, called by Sophocles *Ἀμφίτροπος*, and worshipped as the moon.³ At first, however, it seems to have been a symbolic representation in honour of the gods who gave and taught men the use of material moulding fire (*πάντεχρον πῦρ, διδάσκαλος τέχνης*, as Æschylus calls it⁴), though this special signification was lost sight of in later times. Other writers, in their anxiety to get a common signification for all the times and modes of the *λαμπαδηφορία*, have endeavoured to prove that all who were honoured by it were connected with the heavenly bodies, *λαμπροὶ δυνασταί* (so Creuzer⁵ and Müller⁶); others, that it always had an inner signification, alluding to the inward fire by which Prometheus put life into man (so Brönsted⁷). But this legend of Prometheus was a later interpretation of the earlier one, as may be seen by comparing Plat. *Protag.*, p. 321, D., with Hesiod, *Theog.*, 561, sq.

LAMPAS. (Vid. LAMPADEPHORIA.)

*LAMPAS'ANE, a plant mentioned by Dioscorides and Galen, and which most of the commentators take for the *Sinapi arvensis*. Sprengel, however, joins Columna in preferring *Raphanus raphanistrum*. Adams will not decide between the two. Both plants get the English name of Charlock.⁸

LAN'CEA. (Vid. HASTA, p. 489.)

LANISTA. (Vid. GLADIATORES, p. 475.)

LANX, *dim.* LANCULA, a large dish, made of silver or some other metal, and sometimes embossed, used at splendid entertainments to hold meat or fruit⁹ (vid. CENA, p. 275), and consequently at sacrifices¹⁰ and funeral banquets.¹¹ (Vid. FUNUS, page 462.) The silver dishes used by the Romans at their grand dinners were of vast size, so that a boar, for example, might be brought whole to table.¹² They often weighed from 100 to 500 pounds.¹³

The *balance* (*LIBRA bilanx*)¹⁴ was so called, because it had two metallic dishes.¹⁵

When an officer entered a house for the recovery of stolen goods, being nearly naked, he held a dish before his face. Such a search was said to be made *lance et hicio*.¹⁶ (Vid. FURTUM, p. 463.)

*LAPATHUM (*λάπαθον*), a kind of Sorrel, Monk's Rhubarb, or Dock. The five species described by

1. (Hesiod., *Theog.*, 566, ed. Gaisf.)—2. (Æschyl., *Trilogie*, p. 121.)—3. (Crouzer, *Symbolik*, ii., p. 752, 764, French transl.)—4. (Prom., 7, 110.)—5. (i. c.)—6. (Minerva Polias, p. 5.)—7. (Voyages, &c., ii., p. 286, note 2.)—8. (Dioscor., ii., 142.—Adams, *Append.*, s. v.)—9. (Cic. ad Att., vi., 1.—Hor., *Sat.*, II., ii., 4.—Id. ib., II., iv., 41.—Ovid, *Pont.*, III., v., 20.—Petron., 31.)—10. (Virg., *Georg.*, ii., 194, 394.—En., viii., 284.—Id., xii., 215.—Ovid, *Pont.*, IV., viii., 40.)—11. (Propert., II., xiii., 23.)—12. (Hor., i. c.)—13. (Plin., H. N., xxxiii., 52.)—14. (Mart. Cap., ii., 180.)—15. (Cic., *Acad.*, iv., 12.—Id., *Tusc.*, v., 17.—Virg., *Æneid.*, xii., 725.—Pers., iv., 10.)—16. (Festus, s. v.—Aul. Gell., xi., 18.)

Dioscorides are thus arranged by Sprengel, who in this, as Adams remarks, closely follows Bauhin: 1. The *δξύλαραθον* is the *Rumex acutus*; the 2d species is the *R. patientia*; the 3d, the *R. scutatus*; the 4th, the *R. acetosa*; and the 5th, the *R. hydrolopathum*, Huds. The Dock is named *Rumex* by Pliny, and *Paratella* by Macer. The *Lapathum* of Celsus, according to Adams, is not well defined, and Dr. Milligan refers it, as the same authority remarks, to seven species of *Rumex*, in a very fanciful and loose manner.¹

LAPHRIA (Λάφρια), an annual festival, celebrated at Patræ, in Achaia, in honour of Artemis, surnamed Laphria. The peculiar manner in which it was solemnized during the time of the Roman Empire is described by Pausanias.² On the approach of the festival, the Patræans placed in a circle, around the altar of the goddess, large pieces of green wood, each being sixteen yards in length; within the altar they placed dry wood. They then formed an approach to the altar in the shape of steps, which were slightly covered with earth. On the first day of the festival a most magnificent procession went to the Temple of Artemis, and at the end of it there followed a maiden who had to perform the functions of priestess on the occasion, and who rode in a chariot drawn by stags. On the second day the goddess was honoured with numerous sacrifices, offered by the state as well as by private individuals. These sacrifices consisted of eatable birds, boars, stags, goats, sometimes of the cubs of wolves and bears, and sometimes of the old animals themselves. All these animals were thrown upon the altar alive at the moment when the dry wood was set on fire. Pausanias says that he often saw a bear, or some other of the animals, when seized by the flames, leap from the altar and escape across the barricade of green wood. Those persons who had thrown them upon the altar caught the devoted victims again, and threw them back into the flames. The Patræans did not remember that a person had ever been injured by any of the animals on this occasion.

LAPIS SPECULARIS. (Vid. HOUSE, ROMAN, p. 521.)

LA'QUEAR. (Vid. HOUSE, ROMAN, p. 520.)

LAQUEATORES. (Vid. GLADIATORES, p. 476.)

LARA'RIUM was a place in the inner part of a Roman house, which was dedicated to the Lares, and in which their images were kept and worshipped. It seems to have been customary for religious Romans in the morning, immediately after they rose, to perform their prayers in the lararium. This custom is at least said to have been observed by the Emperor Alexander Severus,³ who had among the statues of his lares those of Christ, Abraham, Orpheus, and Alexander the Great. This emperor had a second lararium, from which the first is distinguished by the epithet *majus*, and the images of his second or lesser lararium were representations of great and distinguished men, among whom are mentioned Virgil, Cicero, and Achilles. That these images were sometimes of gold, is stated by Suetonius.⁴ We do not know whether it was customary to have more than one lararium in a house, or whether the case of Alexander Severus is merely to be looked upon as an exception.

LARENTALIA, sometimes written **LARENTINALIA** and **LAURENTALIA**, was a Roman festival in honour of Acca Larentia, the wife of Faustulus, and the nurse of Romulus and Remus. It was celebrated in December, on the 10th before the calends of January.⁵ The sacrifice in this festival

was performed in the Velabrum at the place which led into the Nova Via, which was outside of the old city, not far from the Porta Romanula. At this place Acca was said to have been buried.¹ This festival appears not to have been confined to Acca Larentia, but to have been sacred to all the Lares.²

LARGITIO. (Vid. AMBITUS.)

LARNAKES. (Vid. FUNUS, p. 456.)

***LARUS** (λάρος), a species of Bird, generally regarded as the Gull or Seamew, the *Larus cœnus*, L. Some of its characters, however, as given by Aristotle, agree better with the *L. parasiticus* or *L. marinus*. "The poet Lycophron uses the word *καὶνῆς* for *λάρος*. Tzetzes says that he calls an old man by this name, because in old age the hair becomes hoary, like the feathers of the Seamew."³

***LATAX** (λάταξ), the Otter. (Vid. ENHYDRUS.)

LATER, dim. LATERCULUS (πλινθος, dim. πλινθίς, πλινθιον), a Brick. Besides the Greeks and Romans, other ancient nations employed brick for building to a great extent, especially the Babylonians⁴ and Egyptians. In the latter country, a painting on the walls of a tomb at Thebes⁵ exhibits slaves, in one part employed in procuring water, in mixing, tempering, and carrying the clay, or in turning the bricks out of the mould (vid. FORMA), and arranging them in order on the ground to be dried by the sun, and in another part carrying the dried bricks by means of the yoke (vid. ASILLA) to be used in building. In the annexed woodcut we see a man with three bricks suspended from each end of the yoke, and beside him another who returns from having deposited his load.

These figures are selected from the above-mentioned painting, being, in fact, original portraits of two *Αἰγύπτιοι πλινθοφόροι*, girt with linen round the loins in exact accordance with the description given of them by Aristophanes, who at the same time alludes to all the operations in the process of brick-making (*πλινθοποιία*), which are exhibited in the Theban painting.⁷

The Romans distinguished between those bricks which were merely dried by the sun and air (*lateres crudi*; ⁸ *πλινθος ὠμή*), and those which were burned in the kiln (*cocci* or *cocciles*; *ὄπτα*).⁹ They preferred for the purpose of clay which was either whitish or decidedly red. They considered spring the best time for brick-making, and kept the bricks two years before they were used. They made them principally of three shapes: the *Lydian*, which was a foot broad, 1½ feet long; the *tetradoron*, which was four palms square; and the *pentadoron*, which was five palms square. They used them smaller

in private than in public edifices. Of this an example is presented in the great building at Treves, called the palace of Constantine, which is built of "burned bricks, each of a square form, fifteen inches in diameter, and an inch and a quarter thick."¹ These bricks, therefore, were the pentadorea of Vitruvius and Pliny. At certain places the bricks were made so porous as to float in water; and these were probably used in the construction of arches, in which their lightness would be a great advantage.² It was usual to mix straw with the clay.³ In building a brick wall, at least *crudo latere*, i. e., with unburned bricks, the interstices were filled with clay or mud (*luto*), but the bricks were also sometimes cemented with mortar.⁴ For an account of the mode of arranging the bricks, see MURVS. The Babylonians used asphaltum as the cement.⁵ Pliny⁷ calls the brickfield *lateraria*, and to make bricks *lateres ducere*, corresponding to the Greek *πλίνθους ἔλκειν* or *ἔρπειν*.⁸

The Greeks considered perpendicular brick walls more durable than stone, and introduced them in their greatest public edifices. Brick was so common at Rome as to give occasion to the remark of the Emperor Augustus in reference to his improvements, that, having found it brick (*lateritiam*), he had left it marble.⁹ The Babylonian bricks are commonly found inscribed with the characters called from their appearance arrow-headed or cuneiform. It is probable that these inscriptions recorded the time and place where the bricks were made. The same practice was enjoined by law upon the Roman brickmakers. Each had his mark, such as the figure of a god, a plant, or an animal, encircled by his own name, often with the name of the place, of the consulate, or of the owner of the kiln or the brickfield.¹⁰ It has been observed by several antiquaries, that these imprints upon bricks might throw considerable light upon the history and ancient geography of the places where they are found. Mr. P. E. Wiener has accordingly traced the 22d legion through a great part of Germany by the bricks which bear its name.¹¹ In Britain many Roman bricks have been found in the country of the Silures with the inscription LEG. II. AVG. stamped upon them.¹²

The term *laterculus* was applied to various productions of the shape of bricks, such as pastry or confectionary;¹³ and for the same reason, ingots of gold and silver are called *lateres*.¹⁴

LATERNA or LANTERNA (ἰπνός, ¹⁵ λυχνόηχος; ¹⁶ in later Greek, *φανάριον*), a Lantern. Two bronze lanterns, constructed with nicety and skill, have been found in the ruins of Herculaneum and Pompeii. One of them is represented in the annexed woodcut. Its form is cylindrical. At the bottom is a circular plate of metal, resting on three balls. Within is a bronze lamp attached to the centre of the base, and provided with an extinguisher, shown on the right hand of the lantern. The plates of translucent horn, forming the sides, probably had no aperture; but the hemispherical cover may be raised so as to admit the hand and to serve instead of a door, and it is also perforated with holes through which the smoke might escape. To the two upright pillars supporting the frame-work, a front view of one of which is shown on the left hand of the

lantern, chains are attached for carrying the lantern by means of the handle at the top.

We learn from Martial's epigrams¹ that bladder was used for lanterns as well as horn. Some centuries later glass was also substituted.² The most transparent horn lanterns were brought from Carthage.³ When the lantern was required for use, the lamp was lighted and placed within it.⁴ It was carried by a slave,⁵ who was called the *laternarius*.⁶ When a lantern was not at hand, a basket (*σπυρίδιον*), as a cheaper and commoner utensil, was taken to hold the lamp.⁷

Lanterns were much employed in military operations;⁸ and not only the common kind, but the *dark lantern*, which was square, with a white skin on the side next to the bearer, enabling him to see, and with black skins on the three other sides.⁹

LATICLA VII. (Vid. CLAVVS, p. 264.)

LATINÆ FERIÆ. (Vid. FERIÆ, p. 436.)

LATINITAS, LATIUM, JUS LATII (τὸ καλουμένον Λατεῖον¹⁰). All these expressions are used to signify a certain status intermediate between that of cives and peregrini. The word "Latinitas" occurs in Cicero.¹¹ Before the passing of the lex Julia de Civitate, the above expressions denoted a certain nationality, and, as part of it, a certain legal status with reference to Rome; but after the passing of that lex, these expressions denoted only a certain status, and had no reference to any national distinction. About the year B.C. 89, a lex Pompeia gave the jus Latii to all the Transpadani, and, consequently, the privilege of obtaining the Roman civitas by having filled a magistratus in their own cities. To denote the status of these Transpadani, the word Latinitas was used, which, since the passing of the lex Julia, had lost its proper signification; and this was the origin of that Latinitas which thenceforth existed to the time of Justinian. This new Latinitas, or jus Latii, was given to whole towns and countries; as, for instance, by Vespasian to the whole of Spain,¹² and to certain Alpine tribes (*Latii donati*).¹³

This new Latinitas was given not only to towns already existing, but to towns which were founded subsequently to the lex Pompeia, as *Latinæ Coloniæ*; for instance, *Novum-Comum*, which was founded B.C. 59 by Cæsar. Several Latin towns of this class are mentioned by Pliny, especially in Spain.

Though the origin of this Latinitas, which makes so prominent a figure in the Roman jurists, is certain, it is not certain wherein it differed from that

Latinitas which was the characteristic of the Latini before the passing of the Julia lex. It is, however, clear that all the old Latini had not the same rights with respect to Rome, and that they could acquire the civitas on easier terms than those by which the new Latinitas was acquired.¹ Accordingly, the rights of the old Latini might be expressed by the term *majus Latium*, and those of the new Latini by the term *minus Latium*, according to Niebuhr's ingenious emendation of Gaius.² The *majus Latium* might be considered to be equivalent to the *Latium antiquum* and *vetus* of Pliny;³ for Pliny, in describing the towns of Spain, always describes the proper colonies as consisting "*civium Romanorum*," while he describes other towns as consisting sometimes "*Latinorum*" simply, and sometimes "*Latinorum veterum*," or as consisting of *oppidani* "*Latini veteris*," from which an opposition between Latini veteres and Latini simply might be inferred. But a careful examination of Pliny rather leads to the conclusion that his Latini veteres and Latini are the same, and that by these terms he merely designates the Latini *coloniarii* hereafter mentioned. The emendation of Niebuhr is therefore not supported by these passages of Pliny, and though ingenious, it ought, perhaps, to be rejected; not for the reasons assigned by Madvig, which Savigny has answered, but because it does not appear to be consistent with the whole context of Gaius.

The new Latini had not the *connubium*, and it is a doubtful question whether the old Latini had it. The new Latini had the *commercium*, and herein their condition was the same as that of the twelve or eighteen old Latin colonies, which were specially favoured. (*Vid. CIVITAS.*)

This new Latinitas, which was given to the Transpadani, was that legal status which the *lex Junia Norbana* gave to a numerous class of freedmen, hence called Latini Juniani.⁴ The date of this lex is not ascertained.

The Latini *coloniarii*, who are mentioned by Ulpian,⁵ are the inhabitants of towns beyond Italy, to whom the Latinitas was given. These are the towns which Pliny calls "*oppida Latinorum veterum*," and enumerates with the "*oppida civium Romanorum*,"⁶ which were military colonies of Roman citizens. The passages in which the Latini *coloniarii* are mentioned as a class then existing, must have been written before Caracalla gave the civitas to the whole empire.

These, the most recent views of Savigny on this difficult subject, are contained in the *Zeitschrift*, vol. ix., *Der Röm. Volksschluss der Tafel von Heraclea*.

The Latini could acquire the *jus Quiritium*, according to Ulpian,⁷ in the following ways: By the *beneficium principale*, *liberi*, *iteratio*, *militia*, *navis*, *ædificium*, *pistrinum*; and by a *senatus consultum* it was given to a female "*vulgo quæ sit ter eniza*." These various modes of acquiring the civitas are treated in detail by Ulpian, from which, as well as the connexion of this title "*De Latinis*" with the first title, which is "*De Libertis*," it appears that he only treated of the modes in which the civitas might be acquired by those Latini who were *liberti*. The same remark applies to the observations of Gaius⁸ on the same subject (*Quibus modis Latini ad civitatem Romanam perveniant*). In speaking of the mode of acquiring the civitas by means of *liberi*, Gaius speaks of a *Latinus*, that is, a *libertus Latinus*, marrying a Roman citizen, or a *Latina* *coloniaria*, or a woman of his own condition, from which it is clear that all his remarks under this head apply to *liberti* Latini; and it also appears that Gaius

speaks of the Latini *coloniarii* as a class existing in his time. Neither Ulpian nor Gaius says anything on the mode by which a *Latinus coloniarius* might obtain the civitas Romana.

*LATOS (λατός), the name of a fish mentioned by Strabo and Athenæus. It would appear to have been some variety of the *κορᾶκιος*, or *Umbre*.

LATRUNCULI (παισοί, ψήφαι), Draughts. The invention of a game resembling draughts was attributed by the Greeks to Palamedes, whom they honoured as one of their greatest benefactors. (*Vid. ABACUS*, § 7.) The game is certainly mentioned by Homer, who represents the suitors of Penelope amusing themselves with it.¹ Others ascribed the invention to the Egyptian Theuth;² and the paintings in Egyptian tombs, which are of far higher antiquity than any Grecian monuments, not unfrequently represent persons employed in this recreation. The painting, from which the accompanying woodcut is taken, is on a papyrus preserved in the Museum of Antiquities at Leyden, and was probably made about

1700 years B.C. It is remarkable that a man is here represented playing alone; whereas, not only in works of Egyptian art, but also on Greek painted vases, we commonly observe two persons playing together. For this purpose there were two sets of men, one set being black, the other white or red. Being intended to represent a miniature combat between two armies, they were called soldiers (*militēs*), foes (*hostes*), and marauders (*latrones*, dim. *latrunculi*); also CALCULI, because stones were often employed for the purpose.³ Sometimes they were made of metal or ivory, glass or earthenware, and they were various and often fanciful in their forms. The object of each player was to get one of his adversary's men between two of his own, in which case he was entitled to take the man kept in check,⁴ or, as the phrase was, *alligatus*.⁵ Some of the men were obliged to be moved in a certain direction (*ordine*), and were therefore called *ordinarii*; others might be moved any way, and were called *vagi*;⁶ in this respect the game resembled chess, which is certainly a game of great antiquity.

Seneca calls the board on which the Romans played at draughts, *tabula latruncularia*.⁷ The spaces into which the board was divided were called *mandrae*.⁸ The abacus, represented at page 10, is crossed by five lines. As five men were allowed on each side, we may suppose one player to arrange his five men on the lines at the bottom of the abacus, and the other to place his five men on the same lines at the top, and we shall have them disposed according to the accounts of ancient writers,⁹ who

say that the middle line of the five was called *ἡρὰ γράμμη*. But instead of five, the Greeks and Romans often had twelve lines on the board, whence the game so played was called *duodecim scripta*.¹ Indeed, there can be little doubt that the latrunculi were arranged and played in a considerable variety of ways, as is now the case in Egypt and other Oriental countries.²

Besides playing with draughtsmen only, when the game was altogether one of skill, the ancients used dice (*vid. Tesseræ, κυβολ*) at the same time, so as to combine chance with skill, as we do in backgammon.³

LATUS CLAVUS. (*Vid. CLAVUS LATUS*.)

LAUDA'TIO FUNEBRIS. (*Vid. FUNUS*, p. 459.)

LAURENTA'LIA. (*Vid. LARENTALIA*.)

*LAURUS, the Bay-tree. (*Vid. DAPHNE*.)

LAUTIA. (*Vid. LEGATUS*, p. 575.)

LAUTUMIÆ, LAUTOMIÆ, LATOMIÆ, or LATUMIÆ (*λίθοτομιαί or λατομιαί*, Lat. *Lapidicinae*), are literally places where stones are cut, or quarries; and in this sense the word *λατομιαί* was used by the Sicilian Greeks.⁴ In particular, however, the name lautumiae was given to the public prison of Syracuse. It lay in the steep and almost inaccessible part of the town which was called Epipolæ, and had been built by Dionysius the tyrant.⁵ Cicero, who had undoubtedly seen it himself, describes it as an immense and magnificent work, worthy of kings and tyrants. It was cut to an immense depth into the solid rock, so that nothing could be imagined to be a safer or stronger prison than this, though it had no roof, and thus left the prisoners exposed to the heat of the sun, the rain, and the coldness of the nights.⁷ The whole was a stadium in length, and two plethra in width.⁶ It was not only used as a prison for Syracusan criminals, but other Sicilian towns also had their criminals often removed to it.

The Tullianum at Rome was also sometimes called lautumiae. (*Vid. CARCER*.)

*LAVER, a plant of the aquatic class, supposed by some to be the Water Parsley, or yellow Watercress. It is the same with the *Sium*. (*Vid. Sium*.)

LECTICA (*κλίνη, κλινίδιον, or φορείον*) was a kind of couch or litter, in which persons, in a lying position, were carried from one place to another. They may be divided into two classes, viz., those which were used for carrying the dead, and those which served as conveniences for the living.

The former of these two kinds of lecticæ (also called lectica funebris, lecticula, lectus funebris, feretrum, or capulum), in which the dead were carried to the grave, seems to have been used among the Greeks and Romans from very early times. In the beauty and costliness of their ornaments these lecticæ varied according to the rank and circumstances of the deceased. (*Vid. FUNUS*, p. 459.) The lectica on which the body of Augustus was carried to the grave was made of ivory and gold, and was covered with costly drapery worked of purple and gold.⁹ During the latter period of the Empire, public servants (*lecticarii*) were appointed for the purpose of carrying the dead to the grave without any expense to the family to whom the deceased belonged.¹⁰ Representations of lecticæ fune-

bres have been found on several sepulchral monuments. The following woodcut represents one taken from the tombstone of M. Antonius Antius Lupus.¹

Lecticæ for sick persons and invalids seem likewise to have been in use in Greece and at Rome from very early times, and their construction probably differed very little from that of a lectica funebris.² We also frequently read that generals in their camps, when they had received a severe wound, or when they were suffering from ill health, made use of a lectica to be carried from one place to another.³

Down to the time of the Gracchi we do not hear that lecticæ were used at Rome for any other purposes than those mentioned above. The Greeks, however, had been long familiar with a different kind of lectica (*κλίνη or φορείον*), which was introduced among them from Asia, and which was more an article of luxury than anything to supply an actual want. It consisted of a bed or mattress, and a pillow to support the head, placed upon a kind of bedstead or couch. It had a roof consisting of the skin of an ox, extending over the couch and resting on four posts. The sides of this lectica were covered with curtains (*αὐλαῖαι*). It appears to have been chiefly used by women,⁴ and by men only when they were in ill health.⁵ If a man without any physical necessity made use of a lectica, he drew upon himself the censure of his countrymen as a person of effeminate character.⁶ But in the time subsequent to the Macedonian conquests in Asia, lecticæ were not only more generally used in Greece, but were also more magnificently adorned.⁷ The persons or slaves who carried their masters or mistresses in a lectica were called *φορεφόροι*,⁸ and their number was generally two or four.⁹ When this kind of lectica was introduced among the Romans, it was chiefly used in travelling, and only very seldom in the city of Rome itself. The first trace of such a lectica is in a fragment of a speech of C. Gracchus, quoted by Gellius.¹⁰ From this passage it seems evident that this article of luxury was introduced into Italy from Asia, and that at the time scarcely any other lectica than the lectica funebris was known to the country people about Rome. It also appears from this passage that the lectica there spoke of was covered, otherwise the countryman could not have asked whether they were carrying a dead body.¹¹ The resemblance of such a lectica used by the Romans to that which the Greeks had received from Asia is manifest from the words of Martial:¹² "*lectica tuta pelle veloque*." It had a roof, consisting of a large piece of skin or leather expanded over it and supported by four posts, and the sides also were covered with curtains (*ocla, plagæ or plagulae*).¹³ During the time of the Empire, how-

ever, the curtains were not thought a sufficient protection for a lectica; and, consequently, we find that lecticæ, used by men as well as women, were closed on the sides by windows made of transparent stone (*lapis specularis*), whence Juvenal¹ calls such a lectica an *antrum clausum latis specularibus*.² We sometimes find mention of a lectica aperta,³ but we have no reason to suppose that in this case it had no roof, for the adjective aperta probably means nothing more than that the curtains were removed, i. e., either thrown aside or drawn up. The whole lectica was of an oblong form, and the person conveyed in it lay on a bed (*pulvinus*), and the head was supported by a pillow, so that he might read and write in it with ease. To what extent the luxury of having a soft and pleasant bed in a lectica was carried, as early as the time of Cicero, may be seen from one of his orations against Verres.⁴ Feather-beds seem to have been very common.⁵ The framework, as well as the other appurtenances, were, with wealthy persons, probably of the most costly description. The lectica, when standing, rested on four feet, generally made of wood. Persons were carried in a lectica by slaves (*lecticarii*) by means of poles (*asseres*) attached to it, but not fixed, so that they might easily be taken off when necessary.⁶ There can be no doubt that the asses rested on the shoulders of the lecticarii, and not on thongs which passed round the necks of these slaves and hung down from their shoulders, as some modern writers have thought.⁷ The act of taking the lectica upon the shoulders was called *succollare*,⁸ and the persons who were carried in this manner were said *succollari*.⁹ From this passage we also learn that the name lecticarii was sometimes incorrectly applied to those slaves who carried a person in a sella or sedan-chair. The number of lecticarii employed in carrying one lectica varied according to its size, and the display of wealth which a person might wish to make. The ordinary number was probably two;¹⁰ but it varied from two to eight, and the lectica is called hexaphoron or octophoron, accordingly as it was carried by six or eight persons.¹¹ Wealthy Romans kept certain slaves solely as their lecticarii;¹² and for this purpose they generally selected the tallest, strongest, and most handsome men, and had them always well dressed. In the time of Martial it seems to have been customary for the lecticarii to wear beautiful red liveries. The lectica was generally preceded by a slave called anteambulo, whose office was to make room for it.¹³

Shortly after the introduction of these lecticæ among the Romans, and during the latter period of the Republic, they appear to have been very common, though they were chiefly used in journeys, and in the city of Rome itself only by ladies and invalids.¹⁴ But the love of this, as well as of other kinds of luxury, increased so rapidly, that J. Cæsar thought it necessary to restrain the use of lecticæ, and to confine the privilege of using them to certain persons of a certain age, and to certain days of the year.¹⁵

In the reign of Claudius we find that the privilege of using a lectica in the city was still a great distinction, which was only granted by the emperor to his especial favourites.¹⁶ But what until then had been a privilege, became gradually a right assumed

by all, and every wealthy Roman kept one or more lecticæ, with the requisite number of lecticarii. The Emperor Domitian, however, forbade prostitutes the use of lecticæ.¹⁷ Enterprising individuals gradually began to form companies (*corpus lecticariorum*), and to establish public lecticæ, which had their stands (*castra lecticariorum*) in the reg' Transiberina, and probably in other parts also, where any one might take a lectica on hire.¹⁸ The persons of whom these companies consisted were probably of the lower orders or freedmen.¹⁹

The lecticæ of which we have hitherto spoken were all portable, i. e., they were constructed in such a manner that the asses might easily be fastened to them whenever it was necessary to carry a person in them from one place to another. But the name lectica, or, rather, the diminutive lecticula, was also sometimes applied to a kind of sofa, which was not moved out of the house. On it the Romans frequently reclined for the purpose of reading or writing, for the ancients, when writing, seldom sat at a table as we do, but generally reclined on a couch; in this posture they raised one knee, and upon it they placed the parchment or tablet on which they wrote. From this kind of occupation the sofa was called lecticula lucubratoria,⁴ or, more commonly, lectulus.⁵

LECTICARII. (Vid. LECTICA.)

LECTISTERNIUM. Sacrifices being of the nature of feasts, the Greeks and Romans, on occasion of extraordinary solemnities, placed images of the gods reclining on couches, with tables and viands before them, as if they were really partaking of the things offered in sacrifice. This ceremony was called a *lectisternium*. Three specimens of the couches employed for the purpose are in the Glyptotek at Munich. The woodcut here introduced ex-

hibits one of them, which is represented with a cushion covered by a cloth hanging in ample folds down each side. This beautiful *pulvinus*⁶ is wrought altogether in white marble, and is somewhat more than two feet in height. At the *Epulum Jovis*, which was the most noted lectisternium at Rome, and which was celebrated in the Capitol, the statue of Jupiter was laid in a reclining posture on a couch, while those of Juno and Minerva were seated on chairs by his side; and this distinction was observed in allusion to the ancient custom, according to which only men reclined, and women sat at table.⁷ (Vid. CÆNA, p. 276.) Nevertheless, it is probable that at a later period both gods and goddesses were represented in the same position: at least four of them, viz., Jupiter Serapis and Juno or Isis, together with Apollo and Diana, are so exhibited with a table before them, on the handle of a Roman lamp engraved by Bartoli.⁸ Livy⁹ gives an account of a

very splendid lectisternium, which he asserts to have been the origin of the practice.

LECTUS (λέχος, κλίνη, ἐνύ), a Bed. In the heroic ages of Greece beds were very simple; the bedsteads, however, are sometimes represented as ornamented (τρητὴ λέχεια¹). The principal parts of a bed were the χλαῖναι and ῥήγεια;² the former were a kind of thick woollen cloak, sometimes coloured, which was in bad weather worn by men over their χιτῶν, and was sometimes spread over a chair to render the seat soft. That these χλαῖναι served as blankets for persons in their sleep, is seen from *Odys.*, xiv., 488, 500, 504, 513, 529; xx., 4. The ῥήγεια, on the other hand, were probably a softer and more costly kind of woollen cloth, and were used chiefly by persons of high rank. They were, like the χλαῖναι, sometimes used to cover the seat of chairs when persons wanted to sit down.³ To render this thick woollen stuff less disagreeable, a linen cloth was sometimes spread over it.⁴ It has sometimes been supposed that the ῥήγεια were pillows or bolsters; but this opinion seems to be refuted by the circumstance that, in *Odys.*, vi., 38, they are described as being washed, without anything being said as to any operation which would have necessarily preceded the washing had they been pillows. Beyond this supposition respecting the ῥήγεια, we have no traces of pillows or bolsters being used in the Homeric age. The bedstead (λέχος, λέκτρον, δέμνιον) of persons of high rank was covered with skins (κῶα), upon which the ῥήγεια were placed, and over these linen sheets or carpets were spread; the χλαῖνα, lastly, served as a cover or blanket for the sleeper.⁵ Poor persons slept on skins or beds of dry herbs spread on the ground.⁶ These simple beds, to which, shortly after the Homeric age, a pillow for the head was added, continued to be used by the poorer classes among the Greeks at all times. Thus the bed of the orator Lycurgus is said to have consisted of one sheepskin (κῶδιον) and a pillow.⁷ But the complete bed (ἐνύ) of a wealthy Greek in later times generally consisted of the following parts: κλίνη, ἐπίτονοι, τυλεῖον or κνέφαλον, προσκεφάλειον, and στρώματα.

The κλίνη is, properly speaking, only the bedstead, and seems to have consisted only of posts fitted into one another, and resting upon four feet. At the head part alone there was a board (ἀνάκλιντρον or ἐπικλιντρον) to support the pillow and prevent its falling out. Sometimes the ἀνάκλιντρον is wanting.⁸ (Compare the first woodcut in page 188.) Sometimes, however, the bottom part of a bedstead was likewise protected by a board, so that in this case a Greek bedstead resembled a modern so-called French bedstead. The κλίνη was generally made of wood, which in quality varied according to the means of the persons for whose use it was destined; for in some cases we find that it was made of solid maple or boxwood, or veneered with a coating of these more expensive woods. At a later period, bedsteads were not only made of solid ivory or veneered with tortoise-shell, but sometimes had silver feet.⁹

The bedstead was provided with girths (τόνοι, ἐπίτονοι, κειρία), on which the bed or mattress (κνέφαλον, τυλεῖον, κοῖτος, or τύλη) rested; instead of these girths, poorer people used strings.¹⁰ The cover or ticking of a mattress was made of linen or woollen cloth, or of leather, and the usual material

with which it was filled (τὸ ἐμβαλλόμενον πληρωμα, or γνάφαλον) was either wool or dried weeds. At the head part of the bed, and supported by the ἐπικλιντρον, lay a round pillow (προσκεφάλειον) to support the head; and in some ancient pictures two other square pillows are seen, which were intended to support the back. The covers of such pillows are striped in several pictures on ancient vases (see the woodcut in page 326), and were therefore probably of various colours. They were undoubtedly filled with the same materials as the beds and mattresses.

The bed-covers, which may be termed blankets or counterpanes, were called by a variety of names, such as περιστρώματα, ὑποστρώματα, ἐπιβλήματα, ἑρεστρίδες, χλαῖναι, ὠφέιστρίδες, ἐπιβόλαια, δάπνεις, ψιλοδάπνεις, ἐυστρίδες, χρυσόπαστοι, τάπητες, or ἀμφιτάπητες. The common name, however, was στρώματα. They were generally made of cloth, which was very thick and woolly either on one or on both sides.¹ It is not always easy to distinguish whether the ancients, when speaking of κλίνη, mean beds in our sense of the word, or the couches on which they lay at meal-times. We consequently do not know whether the descriptive epithets of κλίνη, enumerated by Pollux, belong to beds or to couches. But this matters little, as there was scarcely any difference between the beds of the ancients and their couches, with this exception, that the latter, being made for appearance as well as for comfort, were, on the whole, undoubtedly more splendid and costly than the former. Considering, however, that bedsteads were often made of the most costly materials, we may reasonably infer that the coverings and other ornaments of beds were little inferior to those of couches. Notwithstanding the splendour and comfort of many Greek beds, the Asiatics, who have at all times excelled the Europeans in these kinds of luxuries, said that the Greeks did not understand how to make a comfortable bed.² The places most celebrated for the manufacture of splendid bed-covers were Miletus, Corinth, and Carthage.³ It appears that the Greeks, though they wore nightgowns, did not simply cover themselves with the στρώματα, but wrapped themselves up in them. Less wealthy persons continued, according to the ancient custom, to use skins of sheep and other animals, especially in winter, as blankets.⁴ The bedsteads of the poorer classes are designated by the names σκίμπον, ὑσκάντης, and κνάβας, and an exaggerated description of such a bed is given by Aristophanes.⁵ The words χαμῆνη and χαμῆνιον, which originally signified a bed of straw or dry herbs made on the ground,⁶ were afterward applied to a bed which was only near the ground, to distinguish it from the κλίνη, which was generally a high bedstead. Χαμῆναια were the usual beds for slaves, soldiers in the field, and poor citizens, and the mattresses used in them were mere mats made of rushes or bast.⁷

The beds of the Romans (*lecti cubiculares*) in the earlier periods of the Republic were probably of the same description as those used in Greece; but towards the end of the Republic and during the Empire, when Asiatic luxuries were imported into Italy, the richness and magnificence of the beds of the wealthy Romans far surpassed everything we find described in Greece. The bedstead was generally rather high, so that persons entered the bed (*scandere, ascendere*) by means of steps placed beside it

(*scannum*¹). It was sometimes made of metal, and sometimes of costly kinds of wood, or veneered with tortoise-shell or ivory; its feet (*fulcra*) were frequently of silver or gold.² The bed or mattress (*culcita* and *torus*) rested upon girths or strings (*restes*, *fasciæ*, *insultæ*, or *funes*) which connected the two horizontal side-posts of the bed.³ In beds destined for two persons, the two sides are distinguished by different names; the side at which persons entered was open, and bore the name *sponda*; the other side, which was protected by a board, was called *pluteus*.⁴ The two sides of such a bed are also distinguished by the names *torus exterior* and *torus interior*, or *sponda exterior* and *sponda interior*; and from these expressions it is not improbable that such lecti had two beds or mattresses, one for each person. Mattresses were in the earlier times filled with dry herbs⁵ or straw,⁷ and such beds continued to be used by the poor. But in subsequent times, wool, and, at a still later period, feathers, were used by the wealthy for the beds as well as the pillows.⁸ The cloth or ticking (*operimentum* or *involucrum*) with which the beds or mattresses were covered was called *toral*, *torale*, *lintheum*, or *segestre*.⁹ The blankets or counterpanes (*vestes stragula*, *stragula*, *peristromata*, *peripetasmata*) were in the houses of wealthy Romans of the most costly description, and generally of a purple colour (*stragula conchylio tincta*, *peristromata conchyliata*, *coccinea stragula*), and embroidered with beautiful figures in gold. Covers of this sort were called *peripetasmata Attalica*, because they were said to have been first used at the court of Attalus.¹⁰ The pillows were likewise covered with magnificent casings. Whether the ancients had curtains to their beds is not mentioned anywhere; but as curtains, or, rather, a kind of canopy (*aulæa*), were used in the *lectus tricliniaris*¹¹ for the purpose of preventing the dust falling upon the persons lying on it, it is not improbable that the same or a similar contrivance was used in the *lectus cubicularis*.

The *lectus genialis* or *adversus* was the bridal bed, which stood in the atrium, opposite the janua, whence it derived the epithet *adversus*.¹² (Compare *HOUSE*, p. 517.) It was generally high, with steps by its side, and in later times beautifully adorned.¹³

Respecting the *lectus funebris*, see the articles *FUNUS* and *LECTICA*. An account of the disposition of the couches used at entertainments, and of the place which each guest occupied, is given under *TRICLINIUM*.¹⁴

LE'CUTHI (λήκυθιοι). (Vid. *FUNUS*, p. 456.)

LEGAT'IO LI'BERA. (Vid. *LEGATUS*, p. 576.)

LEGATUM, a Legacy, is variously defined by the Roman jurists, but there can be no exact definition except reference be made to a heres. Unless there is a heres duly instituted, no legacy can be given. A *legatum*, then, is a part of the hereditas which a testator gives out of it, from the heres (*ab herede*); that is, it is a gift to a person out of that whole (*universum*) which is diminished to the heres by such gift. Accordingly, the phrase "*ab*

herede legare" thus becomes intelligible¹ ("et testamentum legat grandem pecuniam a filio"²). A legatee could not be charged with the payment of a legacy out of what was given to him, a rule of law which was thus expressed: "*A legatario legari non potest.*" A legacy could only be given in the Latin language.

The word "*legatum*," from the verb *lego*, contains the same element as *lex*. *Lego* has the sense of appointing or disposing of a matter, as in the phrase "*legatum negotium*;"³ and it is used in the Twelve Tables to express generally a testator's disposition of his property (*uti legassit*, &c.). Ulpian accordingly explains the word *legatum* by referring to its etymology, and likening a *legatum* to a *lex*, properly so called. "*A legatum*," he says, "*is that which is left by a testament, legis modo*, that is, *imperative*; for those things which are left *precativo modo* are called *fideicommissa*."⁴ A legatee was named *legatarius*; those to whom a thing was given jointly (*conjunctim*) were *collegatarii*. A legacy which was legally valid or good was *legatum utile*; a void legacy was *inutile*. A legacy which was given absolutely or unconditionally was said to be given *pure*; one which was given conditionally was said to be given *sub conditione*. The expression *purum legatum*, an unconditional legacy, also occurs.⁵

Gaius apologizes for treating of *legata* in that part of his institutional work in which he has placed it. In the first ninety-six chapters of his second book he treats of the acquisition of property in *res singulæ*, to which class legacies belong. But as the matter of legacies is not intelligible without reference to the matter of hereditas or universal acquisition, he places the law of legacies (*hæc juris materia*) immediately after that of hereditas.

There were four forms in which a legacy could be left: *per vindicationem*, *per damnationem*, *sine di modo*, *per præceptionem*.

A *legatum per vindicationem* was given in these words: "*Hominem stichum do, lego*," or the words might be with reference to the legatee, "*Capito, sumito, sibi habeto*." A *legatum per vindicationem* was so called with reference to the legal means by which the legatee asserted his right to the legacy against the heres or any possessor, which was by a *vindicatio* or an *actio in rem*; for as soon as the hereditas aditio had taken place, the legatee had the *quiritarian* (*ex jure quiritium*) ownership of the legacy. The two schools raised a question as to this. Whether, under such circumstances, the legatee obtained the *quiritarian* ownership of the thing before he had consented to take it. The opinion of the *Proculiani*, who contended for such consent, was confirmed by a constitution of Antoninus Pius. It was consistent with the nature of the *per vindicationem*, that those things only could be so given in which the testator had *quiritarian* ownership: and it was also necessary that he should have such ownership both at the time of making his will and at the time of his death; otherwise the legacy was void (*inutile*). But there was an exception in respect of things "*quæ pondere, numero, mensura constant*," as wine, oil, corn, and the precious metals in the form of coin (*pecunia numerata*), in regard to which it was sufficient if the testator had the *quiritarian* ownership at the time of his death. This was the civil law (*jus civile*), but it was altered by a *senatus consultum* of the time of Nero, which enacted that if a testator left a thing as a legacy which had never been his, the legacy should be equally good as if it had been left in the form most

advantageous to the legatee (*optimo jure*), which form was the *legatum per damnationem*. But if a testator gave a thing of his own by his testament which he afterward alienated, it was the best opinion that the legacy was inutile by the *jus civile*, and that the *senatus consultum* did not make it good. If the same thing was given to more than one person, either jointly (*conjunctim*), so as to make them *collegatarii*, or severally (*disjunctim*), each took an equal share. A *legatum* was given *conjunctim* thus: "*Titio et Seio hominem Stichum do, lego*;" *disjunctim*, thus: "*Titio hominem Stichum do, lego; Seio eundem hominem do, lego*." If one *collegatarius* failed to take, his portion went to the others. In the case of a conditional legacy left per vindicationem, the schools were divided in opinion: the Sabiniani said that it was the property of the heres during the pendency of the condition; the Proculiani said that it was "*res nullus*."

The form of the *per damnationem* was this: "*Heres meus Stichum servum meum dare damnas esto*;" but the word *dato* was equally effective. A thing which belonged to another (*aliena res*) could be thus left, and the heres was bound to procure the thing for the legatee, or to pay him the value of it. A thing not in existence at the date of the will might be left by this form, as the future produce of a female slave (*ancilla*). The legatee did not acquire the *quiritarian* ownership of the legacy by virtue of the *hereditatis aditio*: the thing still remained the property of the heres, and the legatee could only sue for it by an *actio in personam*. If it was a thing *mancipi*, the legatee could only acquire the *quiritarian* ownership of it by *mancipatio* or in *jure cessio* from the heres: if it was merely delivered, the *legatarius* only acquired the complete ownership (*plenum jus*) by *usucapion*. If the same thing was left to two or more *conjunctim*, each had an equal share; if *disjunctim*, the heres was bound to give the thing to one, and its value to the rest. In the case of a gift *conjunctim*, the share of the legatee who failed to take belonged to the *hereditas*; but the *lex Papia* made it *caducum*, and gave it first to a *collegatarius* who had children, then to the *heredes* who had children, and then to the other legatees who had children (*legatarii*), a privilege which *Juvenal* alludes to (*dulce caducum*¹).

The *legatum sinendi modo* was thus given: "*Heres meus damnas esto sinere Lucium Titium hominem Stichum sumere sibi que habere*;" by which form a testator could give either his own property or that of his heres. As in the case of a *legatum per damnationem*, the legatee prosecuted his claim by an *actio in personam*. It was doubted whether the heres was bound to transfer the property, in the case of a *res Mancipi*, by *mancipatio* or in *jure cessio*, or, in the case of a thing *nec Mancipi*, by *traditio* or *delivery*, for the words of the gift are "permit him to take." It was also a still more doubtful question (in the time of *Gaius*), whether, if the same thing was given in this way to two severally (*disjunctim*), the whole was due to each, or if the heres was released from all farther claim when either of them had obtained possession of the whole with his permission.

The *legatum per præceptionem* was in this manner: "*Lucius Titius hominem Stichum præcipito*;" where "*præcipito*" is the same as "*præcipium sumito*," or "take first." The Sabiniani were of opinion that a legacy could only thus be left to one who was also made a heres; but a *senatus consultum* *Neronianum* made the legacy good, even if it was thus left to an extraneous, that is, to another than the heres, provided the legatee was a person to whom a legacy could be left in any of the three other modes.

For the *senatus consultum* made those legacies valid which were not valid by the *jus civile* on account of the words of the gift (*verborum vitio*), but not those legacies which were invalid on account of the incapacity of the legatee (*vitio personæ*), which was the case with a *peregrinus*. The Sabiniani also maintained that a man could leave in this manner only what was his own; for the only way in which the legatee could enforce his right was by a *judicium familiæ eriscundæ*, in which *judicium* it was necessary that the *judex* should adjudicate that which was given per *præceptionem*, and he could adjudicate on nothing else than the *res hereditaria*. But the same *senatus consultum* made a legacy valid which was given in this form, even if the thing did not belong to the testator. The *Proculiani* contended that a legacy could be given to an extraneous per *præceptionem*; and, farther, that if the thing was the testator's *ex jure quiritium*, it could be sued for (*vindicari*) by the legatee, whether he was a heres or not (*extraneus*); if it was the testator's in *bonis*, it was a *utile legatum* to the extraneous by the *senatus consultum*, and the heres could obtain it in a *judicium familiæ eriscundæ*. If it did not belong to the testator in either way, still the *legatum* was made *utile* both to the heres and the extraneous by the *senatus consultum*. If the same thing was thus left to more than one either *disjunctim* or *conjunctim*, each had only his share.

By the law of the Twelve Tables, a man could dispose of his property as he pleased, and he might exhaust (*erogare*) the whole *hereditas* by legacies and bequests of freedom to slaves, so as to leave the heres nothing. The consequence was, that in such cases the *scripti heredes* refused to take the *hereditas*, and there was, of course, an *intestacy*. The first legislative measure on this subject was the *lex Furia*, called *Testamentaria*, which did not allow a testator to give as a *donatio mortis causa* or as a legacy more than a thousand asses to one person, certain relatives excepted.¹ But this measure was a failure, for it did not prevent a man from giving as many several thousands to as many persons as he pleased, and so exhausting his estate. The *lex Voconia* (B.C. 169) afterward enacted that no person should take by way of legacy or *donatio mortis causa* more than the *heredes* (severally, as it seems); but this *lex* was ineffectual; for, by distributing the *hereditas* among numerous legatees, the heres might have so small a portion as not to make it worth his while to assume the burdens attached to the *hereditas*.² The *lex Falcidia* (B.C. 40) at last took away all means of evasion by declaring that a testator should not give more than three fourths in legacies, and thus a fourth was secured to the heres; and "this law," says *Gaius*, "is now in force." The *senatus consultum* *Pegasi-anum* extended the same rule of law to *fideicommissa* (*vid. FIDEICOMMISSA*); and the Emperor *Antoninus Pius* applied it to the case of *fideicommissa* when there was an *intestacy*.³ The *lex Falcidia* applied to the wills of persons who died in captivity (*apud hostes*), for a previous *lex Cornelia* had given to the wills of such persons the same force as if they had died *cives* (*in civitate*).⁴

Legata were *inutilia* or void if they were given before a heres was instituted by the will, for the will derived all its legal efficacy from such institution; there was the same rule as to a gift of freedom. It was an inutile *legatum*, if in form the gift was given after the death of the heres, but it might be given on the event of his death; it was

1. (*Gaius*, iii., 225.—*Ulp.*, *Frag.*, i., s. 2; xviii., s. 7.)—2. (*Gaius*, ii., 26.—*Cic.* in *Verr.*, li. i., c. 43.)—3. (*Dig.* 35, tit. 2, s. 13.)—4. (*Dig.* 35, tit. 2, s. 1.)

also irritable if given in form on the day before the death of the testator, for which rule of law, says Gaius, there seems to be no good reason (*pretiosa ratio*). A legatum could not be left in the way of a penalty (*pœna nomine*), that is, for the purpose of compelling the heres to do, or restraining him from doing, any particular act. A legacy could not be left to an uncertain person (*incerta persona*). The notion of an uncertain person was not of a person who could never be ascertained; for in several of the instances mentioned by Gaius, the person or persons would be easily ascertained (for instance, "*qui post testamentum consulēs designati erunt*"); but the notion of the uncertainty was referred to the mind of the testator at the time of making his testament. Accordingly, the persona was not considered incerta where he was one of a certain class, such as cognati, though the individual of the class might be uncertain till the event happened which was to determine who out of the class was intended by the testator. Such a form of bequest was called a certa demonstratio incertæ personæ.¹ A legacy could not be left to a postumus alienus, nor could such a person be a heres institutus, for he was an incerta persona. It has been explained elsewhere who is a postumus (*vid. HERES*, p. 500): a postumus alienus is one who, when born, cannot be among the sui heredes of the testator.

It was a question whether a legacy could be legally (*recte*) left to a person who was in the power of another person who was made heres by the same will. The Proculiani denied that such a legacy could be left either pure or sub condicione. But if a person who was in the power of another was made heres, a legacy might be left (*ab eo legari*) to the person in whose power he was; for if such latter person became heres thereby (*per eum*), the legacy was extinguished, because a man cannot owe a thing to himself; but if the son was emancipated, or the slave was manumitted or transferred to another, and so the son became heres, or so the slave made another person heres, the legacy was due to the father or former master. Not only *res singulæ* could be given as a legacy, but also a part of a universitas of things (*universarum rerum*) could be so given; thus the heres might be directed to share a half or any other part of the hereditas with another, which was called *partitio*.² By the *jus civile* there might be a legacy of a usufructus of those things which were capable of being used and enjoyed without detriment to the things. By a *senatus consultum* there might be a legacy of the *abusus* of those things which were consumed in the use, as wine, oil, wheat, but the legatarius had to give security for the restoration of them when his right to the enjoyment ceased. This technical meaning of *abusus*, that is, the use of things which are consumed in the use, is contrasted with *usufructus* by Cicero.³

A legacy might be transferred to another person, or taken away (*adimi*) by another will or codicilli confirmed by a will; it might also be taken away by erasure of the gift from the will. Such a revocation of legacies (*ademptio legatorum*) seems to have been only effected in the way mentioned. The expression ademption of legacies in English law has a different meaning, and in the case of a specific thing corresponds to the Roman extinction of legacies, which took place if the testator disposed of the thing in his lifetime.

If a legatee died after the day on which the legatum had become his (*post diem legati cedentem*), it passed to his heres; or, to use a phrase of English law, the legacy was vested. The phrase "*dies le-*

gati cedit" accordingly means "the time is come at which the legacy belongs to the legatee," though the time may not have come when he is entitled to receive it; and "*dies venit*" denotes the arrival of the day on which it can be demanded.¹ If the legacy was left conditionally, there was no vesting till the condition was fulfilled. By the old law, legacies which were left unconditionally, or from a time named (*in diem certum*), were vested from the time of the testator's death; but by the *lex Papia* they vested from the time of opening the will. The legacy might vest immediately on the death of the testator, and yet the testator might defer the time of payment.² A legacy might also be left on a condition of time only, as a legacy to Titius *when or if* he should attain the age of fourteen years, in which case the words *when* and *if* were considered equivalent, a decision which has been adopted in English law, in cases in which there is nothing in the will which gives the words "when" or "if" a different signification.³

LEGATUS. Legati may be divided into three classes: 1. Legati or ambassadors sent to Rome by foreign nations; 2. Legati or ambassadors sent from Rome to foreign nations and into the provinces; 3. Legati who accompanied the Roman generals into the field, or the proconsuls and prætors into the provinces.

1. Foreign legati at Rome, from whatever country they came, had to go to the Temple of Saturn and deposit their names with the quæstors, which Plutarch⁴ explains as a remnant of an ancient custom; for formerly, says he, the quæstors sent presents to all legati, which were called *lautia*; and if any ambassador was taken ill at Rome, he was in the care of the quæstors, who, if he died, had also to pay the expenses of his burial from the public treasury. When, afterward, the number of foreign ambassadors increased, in proportion as the Republic became extended, the former hospitable custom was reduced to the mere formality of depositing the name with the keepers of the public treasury. Previous to their admission into the city, foreign ambassadors seem to have been obliged to give notice from what nation they came and for what purpose; for several instances are mentioned in which ambassadors were prohibited from entering the city, especially in case of a war between Rome and the state from which they came.⁵ In such cases the ambassadors were either not heard at all, and obliged to quit Italy,⁶ or an audience was given to them by the senate (*senatus legatis datur*) outside the city, in the Temple of Bellona.⁷ This was evidently a sign of mistrust, but the ambassadors were nevertheless treated as public guests, and some public villa outside the city was sometimes assigned for their reception. In other cases, however, as soon as the report of the landing of foreign ambassadors on the coast of Italy was brought to Rome, especially if they were persons of great distinction, as the son of Masinissa,⁸ or if they came from an ally of the Roman people, some one of the inferior magistrates, or a legatus of a consul, was despatched by the senate to receive and conduct them to the city at the expense of the Republic. When they were introduced into the senate by the prætor or consul, they first explained what they had to communicate, and then the prætor invited the senators to put their questions to the ambassadors.⁹ The manner in which this questioning was frequently

1. (Gaius, ii., 238.)—2. (Cic., Leg., ii., 20; Pro Cæcin., 4.—Up., Frag., tit. 24, s. 25.)—3. (Top., 3.—Ueber das alter des quasi-usufructus, von Puchta, Rheinisches Mus., 1829.)

1. (Dig. 50, tit. 16, s. 213.)—2. (Dig. 36, tit. 3, s. 21.)—3. (Dig. 36, tit. 2, s. 5. 22.—Hanson v. Graham, 6 Ves., p. 243.—Compare Gaius, 191–245.—Up., Frag., tit. xxiv.—Dig. 30, &c.—Paulus, S. R., iii., tit. 6.)—4. (Quæst. Rom., p. 275, B.)—5. (Liv., xxx., 21.—Id., xli., 36.—Id., xlv., 22.)—6. (Liv., xlii., 36.)—7. (Liv., i. c.—Id., xxx., 21.)—8. (Liv., xlv., 13.)—9. (Liv., xxx., 22.)

carried on, especially when the envoys came from a state with which the Romans were at war, resembled more the cross-questioning of a witness in a court of justice, than an inquiry made with a view to gain a clear understanding of what was proposed.¹ The whole transaction was carried on by interpreters, and in the Latin language (*vid. INTERPRETES*.) Valerius Maximus² states that the Greek rhetorician Molo, a teacher of Cicero, was the first foreigner who ever addressed the Roman senate in his own tongue. After the ambassadors had thus been examined, they were requested to leave the assembly of the senate, who now began to discuss the subject brought before them. The result was communicated to the ambassadors by the prætor.³ In some cases, ambassadors not only received rich presents on their departure, but were, at the command of the senate, conducted by a magistrate, and at the public expense, to the frontier of Italy, and even farther.⁴ By the lex Gabinia it was decreed, that from the first of February to the first of March, the senate should every day give audience to foreign ambassadors.⁵ There was at Rome, as Varro⁶ expresses it, a place on the right-hand side of the senate-house called Græcostasis, in which foreign ambassadors waited.

All ambassadors, whencesoever they came, were considered by the Romans throughout the whole period of their existence as sacred and inviolable.⁷

2. Legati to foreign nations in the name of the Roman Republic were always sent by the senate;⁸ and to be appointed to such a mission was considered a great honour, which was conferred only on men of high rank or eminence; for a Roman ambassador, according to Dionysius, had the powers (*ἐξουσία καὶ δυνάμεις*) of a magistrate and the venerable character of a priest. If a Roman, during the performance of his mission as ambassador, died or was killed, his memory was honoured by the Republic with a public sepulchre and a statue in the Rostra.⁹ The expenses during the journey of an ambassador were, of course, paid by the Republic; and when he travelled through a province, the provincials had to supply him with everything he wanted.

3. The third class of legati, to whom the name of ambassadors cannot be applied, were persons who accompanied the Roman generals on their expeditions, and in later times the governors of provinces also. Legati, as serving under the consuls in the Roman armies, are mentioned along with the tribunes at a very early period.¹⁰ These legati were nominated (*legabantur*) by the consul or the dictator under whom they served,¹¹ but the sanction of the senate (*senatus consultum*) was an essential point, without which no one could be legally considered a legatus;¹² and from Livy¹³ it appears that the nomination by the magistrates (consul, prætor, or dictator) did not take place until they had been authorized by a decree of the senate. The persons appointed to this office were usually men of great military talents, and it was their duty to advise and assist their superior in all his undertakings, and to act in his stead both in civil and military affairs.¹⁴ The legati were thus always men in whom the consul placed great confidence, and were frequently his friends or relatives; but they had no power inde-

pendent of the command of their general.¹ Their number varied according to the greatness or importance of the war, or the extent of the province: three is the smallest number we know of, but Pompey, when in Asia, had fifteen legati. Whenever the consuls were absent from the army, or when a proconsul left his province, the legati, or one of them, took his place, and then had the insignia as well as the power of his superior. He was in this case called *legatus pro prætore*,² and hence we sometimes read that a man governed a province as legatus without any mention being made of the proconsul whose vicegerent he was.³ During the latter period of the Republic, it sometimes happened that a consul carried on a war, or a proconsul governed his province through his legati, while he himself remained at Rome, or conducted some other more urgent affairs.

When the provinces were divided at the time of the Empire (*vid. PROVINCIA*), those of the Roman people were governed by men who had either been consuls or prætors, and the former were always accompanied by three legati, the latter by one.⁴ The provinces of the emperor, who was himself the proconsul, were governed by persons whom the emperor himself appointed, and who had been consuls or prætors, or were at least senators. These vicegerents of the emperor were called *legati augusti pro prætore*, *legati prætorii*, *legati consulares*, or simply *legati*, and they, like the governors of the provinces (*populi Romani*), had one or three legati as their assistants.⁵

During the latter period of the Republic, it had become customary for senators to obtain from the senate the permission to travel through or stay in any province at the expense of the provincials, merely for the purpose of managing and conducting their own personal affairs. There was no restraint as to the length of time the senators were allowed to avail themselves of this privilege, which was a heavy burden upon the provincials. This mode of sojourning in a province was called *legatio libera*, because those who availed themselves of it enjoyed all the privileges of a public legatus or ambassador, without having any of his duties to perform. At the time of Cicero, the privilege of *legatio libera* was abused to a very great extent. Cicero, therefore, in his consulship, endeavoured to put an end to it, but, owing to the opposition of a tribune, he only succeeded in limiting the time of its duration to one year.⁶ Julius Cæsar afterward extended the time during which a senator might avail himself of *legatio libera* to five years,⁷ and this law of Cæsar (*lex Julia*) seems to have remained in force down to a very late period.⁸

LEGES. (*vid. LEX*.)

LEGIO. (*vid. ARMV, ROMAN.*)

LEGIS ACTIO. (*vid. ACTIO, p. 16.*)

***LEIMO'NIUM** (λεϊμόνιον), a plant, which Mathiolus and most of the early commentators make to have been the *Statice Limonium*, or Sea Lavender. Sprengel, however, follows Gesner in referring it to the *Polygonum Bistorta*, or Snakeweed.¹

***LEIOBATOS** (λεϊβάτος), a species of *Raia* or Skate. Artdi calls it *Raia varia*; Coray, *Raia miralet*.²

ΛΕΙΠΟΜΑΡΤΥΡΙΟΥ ΔΙΚΗ (λεϊπομαρτυρίον δίκη). (*Vid.* MARTURIA.)

ΛΕΙΠΟΝΑΥΤΙΟΥ ΓΡΑΦΗ (λεϊπονναυτίου γραφή).

The indictment for desertion from the fleet was preferred before the tribunal of the strategi; and the court which, under their superintendence, sat for the trial of this and similar military offences, was composed of citizens who had been engaged in the expedition in question.³ The penalty upon conviction seems to have been a fine, and the complete disfranchisement of the offender and his descendants.⁴

ΛΕΙΠΟΣΤΡΑΤΙΟΥ ΓΡΑΦΗ (λεϊποστρατίου γραφή). The circumstances of the trial for desertion from the army, and the penalties inflicted upon conviction, were the same as in the case of desertion from the fleet (*vid.* ΛΕΙΠΟΝΑΥΤΙΟΥ ΓΡΑΦΗ), and the offence was also punishable by an eisangelia, which, Heraldus suggests, would be frequently adopted when the accuser was solicitous to impose silence upon a political opponent by procuring his disfranchisement, as this was a necessary consequence of judgment being given against the defendant, and prevented his speaking or appearing in public. The eisangelia in such case would be preferred before the assembly of the people, by which, if reasonable cause appeared, it would be submitted to the decision of one of the ordinary legal tribunals.⁵

ΛΕΙΠΟΤΑΣΙΟΥ ΓΡΑΦΗ (λεϊποτασίου γραφή). (*Vid.* ASTRATEIAS GRAPHE.)

LEITOURGIA (leitourgia, from λείτων, Ion. λήϊτον, i. e., δημόσιον, or, according to others, πρυτανεῖον) is the name of certain personal services which, at Athens and in some other Greek republics, every citizen who possessed a certain amount of property had to perform towards the state. These personal services, which in all cases were connected with considerable expenses, occur in the history of Attica as early as the time of the Peisistratids,⁶ and were probably, if not introduced, at least sanctioned by the legislation of Solon. They were at first a natural consequence of the greater political privileges enjoyed by the wealthy, who, in return, had also to perform heavier duties towards the Republic; but when the Athenian democracy was at its height, the original character of these liturgies became changed; for, as every citizen now enjoyed the same rights and privileges as the wealthiest, they were simply a tax upon property connected with personal labour and exertion (τοῖς χρήμασι καὶ τῷ σώματι λειτουργεῖν). Notwithstanding this altered character of the liturgies, we scarcely ever find that complaints were made by persons subject to them; many wealthy Athenians, on the contrary, ruined their estates by their ambitious exertions, and by the desire to gain the favour of the people.⁷ To do no more than the law required (ἀποσφύσασθαι)⁸ was at Athens considered as a disgrace, and in some cases a wealthy Athenian, even when it was not his turn, would volunteer to perform a liturgy.⁹

All liturgies may be divided into two classes: 1, ordinary or encyclic liturgies (ἐγκύκλιοι λειτουργίαι), and, 2, extraordinary liturgies. The former were called encyclic, because they recurred every year at certain festive seasons, and comprised the χορηγία, γυμνασιαρχία, λαμπαδαρχία, ἀρχιθεωρία, and ἐστίασις, which are all described in separate articles. (*Vid.* CHORAGUS, GYMNASIUM, p. 483; LAMPADEPHORIA, THEORIA, HESTIASIS.) Every Athenian who possessed three talents and above was subject to them,² and they were undertaken in turns by the members of every tribe who possessed the property qualification just mentioned, unless some one volunteered to undertake a liturgy for another person. But the law did not allow any one to be compeller³ to undertake more than one liturgy at a time,⁴ and he who had in one year performed a liturgy, was free for the next (ἐνιαυτὸν διαλείπων ἑκάστος λειτουργεῖν), so that legally a person had to perform a liturgy only every other year. Those whose turn it was to undertake any of the ordinary liturgies, were always appointed by their own tribe,⁵ or, in other words, by the ἐπιμεληταὶ τῶν φυλῶν,⁶ and the tribe shared praise as well as blame with its λειτουργός.

The persons who were exempt from all kinds of liturgies were the nine archons, heiresses, and orphans, until after the commencement of the second year of their coming of age.⁷ Sometimes the exemption from liturgies (ἀτελεία) was granted to persons for especial merits towards the Republic.⁸

The only kind of extraordinary liturgy to which the name is properly applied is the trierarchy (τριηραρχία); in earlier times, however, the service in the armies was in reality no more than an extraordinary liturgy. (*Vid.* EISPHORA and TRIERARCHIA.) In later times, during and after the Peloponnesian war, when the expenses of a liturgy were found too heavy for one person, we find that in many instances two persons combined to defray the expenses of a liturgy (συντελεία). Such was the case with the choragia and the trierarchy.⁹

Liturgies in regard to the persons by whom they were performed were also divided into λειτουργίαι πολιτικαί, such as were incumbent upon citizens, and λειτουργίαι τῶν μετοίκων.¹⁰ The only liturgies which are mentioned as having been performed by the μέτοικοι, are the choregia at the festival of the Lenææ,¹¹ and the ἐστίασις,¹² to which may be added the hydiaphoria and skiadephoria. (*Vid.* HYDRIAPHORIA.)

That liturgies were not peculiar to Athens has been shown by Böckh,¹³ for choregia and other liturgies are mentioned at Siphnos;¹⁴ choregia in Ægina even before the Persian wars;¹⁵ in Mytilene during the Peloponnesian war;¹⁶ at Thebes in the time of Epaminondas;¹⁷ at Orchomenos, in Rhodes, and in several towns of Asia Minor.¹⁸

***LEMNIA TERRA** (Λημνία γῆ), Lemnian earth "There were among the ancients," observes Sir John Hill,¹⁹ "two Earths of Lemnos, well known and in common use, though applied to different purposes: these distinctions have been since lost, and these has caused us a great deal of confusion. That two we distinguish by the names of Terra

Lemnia and *Rubrica Lemnia*, or γῆ Λημνία and μίλ-
ρος Λημνία, the Lemnian Earth and Lemnian Red-
dle. The latter of these was used by painters as it
was taken out of the pit: the former was made into
cakes, and sealed with great ceremony, and was in
very high esteem in medicine. The great occasion
of the errors about the Lemnian earths is the mis-
take of Pliny in confounding them together, as he
evidently has done, not distinguishing the medicinal
sealed earth of that island from the reddle used by
painters. The sealed earth was esteemed sacred,
and the priests alone were allowed to meddle with
it. They mixed it with goat's blood, and made the
impression of a seal upon it. The *Rubrica Lemnia*,
on the other hand, was a kind of reddle of firm con-
sistence and deep red colour, dug in the same is-
land, and never made into any form or sealed, but
purchased in the rough gleans by artificers of many
kinds, who used it in colouring." The Lemnian
earth was a fat, unctuous clay, of a pale red colour.
It is sometimes called *Lemnium sigillum*. A com-
mon Greek name for it is σφραγίς, in allusion to its
having been sealed, whence the sphragide of Jame-
sun. The stamp before the time of Dioscorides
was the figure of a goat; afterward, in Galen's
time, with the image of Diana. Of late years it
has been stamped with the seal of the Turkish Em-
pire. It acts as an astringent, but was much more
frequently used in former days as a medicine than
at the present day.¹

**LEMNA* (λέμνα), a plant, which Stackhouse
conjectures was the *Lemna trisulca*, but Sprengel
the *Marsilea quadrifolia*.²

LEMNISCUS (λημνίσκος). This word is said to
have originally been used only by the Syracusans.³
It signified a kind of coloured riband, which hung
down from crowns or diadems at the back part of
the head.⁴ The earliest crowns are said to have
consisted of wool, so that we have to conceive the
lemniscus as a riband wound around the wool in
such a manner that the two ends of the riband,
where they met, were allowed to hang down. See
the representations of the corona obsidionalis and
civica in p. 310, where the lemnisci not only appear
as a means to keep the little branches of the crowns
together, but also serve as an ornament. From the
remark of Servius,⁵ it appears that coronæ adorned
with lemnisci were a greater distinction than those
without them. This serves to explain an expres-
sion of Cicero⁶ (*palma lemniscata*), where palma
means a victory, and the epithet lemniscata indi-
cates the contrary of infamis, and, at the same time,
implies an honourable as well as a lucrative victory.⁷

It seems that lemnisci were also worn alone, and
without being connected with crowns, especially by
ladies, as an ornament for the head.⁸ To show
honour and admiration for a person, flowers, gar-
lands, and lemnisci were sometimes showered upon
him while he walked in public.⁹

Lemnisci seem originally to have been made of
wool, and afterward of the finest kinds of bast (*phyl-
lyrae*¹⁰); but, during the latter period of the Repub-
lic, the wealthy Crassus not only made the foliage
or leaves of crowns of thin sheets of gold and sil-
ver, but the lemnisci likewise; and P. Claudius
Pulcher embellished the metal-lemnisci with works
of art in relief and with inscriptions.¹¹

The word lemniscus is used by medical writers
in the signification of a kind of liniment applied to
wounds.¹²

LEMURA'LIA or *LEMUR'IA*, a festival for the
souls of the departed, which was celebrated at Rome
every year in the month of May. It was said to
have been instituted by Romulus to appease the
spirit of Remus, whom he had slain,¹ and to have
been called originally Remuria. It was celebrated
at night and in silence, and during three alternate
days, that is, on the ninth, eleventh, and thirteenth
of May. During this season the temples of the gods
were closed, and it was thought unlucky for women
to marry at this time, and during the whole month
of May, and those who ventured to marry were be-
lieved to die soon after, whence the proverb, *men-
se Maio male nubent*. Those who celebrated the *Le-
muralia* walked barefooted, washed their hands three
times, and threw nine times black beans behind
their backs, believing by this ceremony to secure
themselves against the Lemures.² As regards the
solemnities on each of the three days, we only
know that on the second there were games in the
circus in honour of Mars,³ and that on the third day
the images of the thirty Argei, made of rushes, were
thrown from the Pons Sublicius into the Tiber by
the vestal virgins.⁴ (Compare *ARGEI*.) On the
same day there was a festival of the merchants
(*festum mercatorum*⁵), probably because on this day
the Temple of Mercury had been dedicated in the
year 495 B.C.⁶ On this occasion, the merchants
offered up incense, and, by means of a laurel-branch,
sprinkled themselves and their goods with water
from the well of Mercury at the Porta Capena, ho-
ping thereby to make their business prosper.

LENÆA. (Vid. *DIONYSIA*, p. 364.)

LENOS. (Vid. *TORCULAR*.)

**LEO* (λέων), the Lion, or *Felis leo*, L. "Cuvier
has, with much learning and research, accumulated
instances of lions in parts where they are no longer
indigenous, and of their former great abundance in
countries where they are now but partially known.
'It is true,' says he, 'that the species has disap-
peared from a great number of places where it was
formerly found, and that it has diminished in an ex-
traordinary degree everywhere.' Herodotus relates
that the camels which carried the baggage of the
army of Xerxes were attacked by lions in the
country of the Pæonians and Crestonæans, in Ma-
cedonia; and also, that there were many lions in
the mountains between the river Nestus in Thrace,
and the Achelous, which separates Acarnania from
Ætolia. Aristotle repeats the same as a fact in his
time. Pausanias, who also relates the accident
which befell the camels of Xerxes, says farther,
that these lions often descended into the plains at
the foot of Olympus, between Macedonia and Thes-
saly. If we except some countries between India
and Persia, and some parts of Arabia, lions are now
very rare in Asia. Anciently they were common.
Besides those of Syria, often mentioned in Scrip-
ture, Armenia was pestered with them, according
to Oppian. Apollonius of Tyana saw, near Baby-
lon, a lioness with eight young; and in his time
they were common between the Hyphasis and the
Ganges. Ælian mentions the Indian lions which
were trained for the chase, remarkable for their
magnitude and the blackish tints of their fur. That
the species has become rare, in comparison with
former times, even where it is now most abundant,
may be sufficiently inferred from the accounts given
by Pliny. This writer informs us that Sylla caused
one hundred lions to engage together for the
amusement of the people; Pompey exhibited six
hundred in the circus, and Cæsar, when dictator,

four hundred. The same abundance continued, also, under the first emperors. Adrian once destroyed one hundred in the circus; Antoninus, on one occasion, one hundred; and Marcus Aurelius the like number on another. The latter exhibition Eutropius considers as particularly magnificent, whence Cuvier infers that the number of the species was then diminishing, though Gordian the Third had seventy which were trained; and Probus, who possessed a most extensive menagerie, had one hundred of either sex.¹¹

*II. A sea-animal of the class *Crustacea*, described by Athenæus and Pliny. It is a species of *Locusta* or Crab. Aldrovandus holds that the *λέων* of Ælian is the same as the *Elephantus* of Pliny, i. e., the Craw-fish. The name is also applied by Ælian and Oppian to a cetaceous fish. (*Vid.* III.)²

*III. A cetaceous fish briefly noticed by Oppian and others.³

LEONIDEIA (*Λεωνόεια*) were solemnities celebrated every year at Sparta in honour of Leonidas, who, with his 300 Spartans, had fallen at Thermopylæ. Opposite the theatre at Sparta there were two sepulchral monuments, one of Pausanias and another of Leonidas, and here a funeral oration was spoken every year, and a contest was held, in which none but Spartans were allowed to take part.⁴

*LEONTOPETALON (*λεοντοπέταλον*), a plant which Dodonæus and Adams refer to the *Leontice Leontopetalum*, although Sprengel is not quite satisfied upon this point.⁵

*LEONTOPODIUM (*λεοντοπόδιον*), a plant which Matthioli (whom Sprengel follows) holds to be the species of Cudweed called *Gnaphalium Leontopodium*.⁶

*LEOPARDUS (*λεόπαρδος*, *λεοπάραλος*), the Leopard, or *Felis Leopardus*. Galen distinguishes the *λεόπαρδος* from the *πάρδαλις*, applying the latter term most probably, as Adams thinks, to the Ounce. He is the only Greek writer who uses the word *λεόπαρδος*. For further remarks on this subject, consult article *PARDALIS*.⁷

*LEPAS (*λεπᾶς*), "the name of a shellfish noticed by Aristotle, Xenocrates, Athenæus, and others. It is translated *Patella* by Gaza, and Gesner says it is the *Limpet* of the English, which belongs to the genus *Patella*, L. Pennant and Schneider agree in referring the *λεπᾶς ἄγρια* of Aristotle to the *Haliotis tuberculata*, L., called in English the Ear-shell."⁸

*LEPIDIDIUM (*λεπίδιον*), the *Lepidium latifolium*, or broad-leaved Pepperwort.⁹

*LEPIS (*λεπίς*). "Celsus," observes Adams, "writes thus: '*Squamam æris quam Græci λεπίδα χάλκον vocant.*' This, according to Dr. Milligan, was the peroxide of copper. The *λεπίς σιδήρον* of Dioscorides and Paul of Ægina was a black oxide of iron. According to Dr. Milward, the *σόμωμα* was the *Chalybs*, or *ferrum purgatus* of the Latins, i. e., hardened or purified iron or steel. Trallian is the first medical author who mentions it."¹⁰

LEPTA. (*Vid.* ÆS, p. 30.)

LERIA. (*Vid.* LIMBUS, TUNICA.)

LERNÆA (*Λερναία*) were mysteries (*τελετή*) celebrated at Lerna, in Argolis, in honour of Demeter.¹¹ They were said to have been instituted by Philammon.¹² In ancient times, the Argives carried the fire from the Temple of Artemis Pyronia, on Mount Crathis, to the Lernaæ.¹³ These myster-

ies were probably a remnant of the ancient religion of the Pelasgians, but farther particulars are not known.

*LEUCACANTHA (*λευκάκανθα*), a plant belonging to the Thistle tribe. Stackhouse supposes it to be the *Oнопорidium acanthium*, or Cotton-thistle. Sprengel prefers the *Cirsium tuberosum*, All. Bauhin calls it *Spina alba*.¹

*LEUCAS (*λευκάς*), according to Bauhin, the *Lamium maculatum*, or spotted Dead-nettle. Sprengel adopts this opinion in his edition of Dioscorides, although, in his history of Botany, he had set it down for the *L. album*.²

*LEUCE (*Λεύκη*), the White Poplar, or *Populus alba*. It is the *ἀρχαῖος* of Homer.³

*LEUCOION (*λευκοιον*), a plant mentioned by Theophrastus, Dioscorides, and others. "The *λευκοιον* of Theophrastus may be confidently set down," says Adams, "as the Stockgilly-flower, or *Leucoium vernum*. Matthioli shows satisfactorily that the *λευκοιον* of Dioscorides is the *Cheiranthus Cheiri*, L., or wild Wall-flower; to which Sprengel adds, that the *Matthiola incana*, R. Br., is also comprehended under it. Wall-flower grows plentifully near Athens, and in the southern part of the Morea, according to Sibthorp. The *λευκοιον πορφύρεον* of Dioscorides is held by Sibthorp to be the *Cheiranthus incanus*, and the *λ. θαλάσσιον* the *C. tricuspidatus*."⁴

LEX. Lex is thus defined by Papinian: "*Lex est commune præceptum, virorum prudentium consultum, delictorum, quæ sponte vel ignorantia contrahuntur, coercitio, communis reipublicæ sponsio.*" Cicero⁵ defines it thus: "*Quæ scripto sancit quod vult, aut jubendo, aut vetando.*" The fault of these definitions consists in their referring to the object of a lex, which is an accident, rather than to that which constitutes the essential character of a lex. A law is a rule or command of the sovereign power in a state addressed to and enforced upon the members of such state; and this is the sense of lex in the Roman writers.

In the Institutes⁷ there is a definition of a lex, which approaches nearer to the truth, because it has a more direct reference to that power which is the source of law: "*Lex est quod populus Romanus senatorio magistratu interrogante, veluti consule, constituebat.*" The definition of Capito⁸ is "*Generale jussum populi aut plebis rogante magistratu,*" but this definition, as Gellius observes, will not apply to such cases as the lex about the imperium of Pompey, or that about the return of Cicero, which related only to individuals, and were therefore properly called privilegia.

Of Roman leges, viewed with reference to the mode of enactment, there were properly two kinds, leges curiatae and leges centuriatae. Plebiscita are improperly called leges, though they were laws, and in the course of time had the same effect as leges.

Originally the leges curiatae were the only leges, and they were passed by the populus in the comitia curiata. After the establishment of the comitia centuriata, the comitia curiata fell almost into disuse; but so long as the Republic lasted, and even under Augustus, a shadow of the old constitution was preserved in the formal conferring of the imperium by a lex curiata only, and in the ceremony of adrogation being effected only in these comitia. (*Vid.* ADOPTION.)

Those leges, properly so called, with which we are acquainted, were passed in the comitia centu-

1. (Griffith's Cuvier, vol. ii., p. 435, &c.—Herod., vii., 126.—Aristot., H. A., vi., 28.)—2. (Plin., H. N., ix., 31.—Ælian, N. A., xiv., 9.—Adams, Append., s. v.)—3. (Oppian, i., 367.)—4. (Paus., iii., 14, § 1.)—5. (Dioscor., iii., 100.—Adams, Append., s. v.)—6. (Dioscor., iv., 129.)—7. (Adams, Append., s. v.)—8. (Aristot., H. A., iv., 4.—Coray ad Xenocr., p. 158.—Adams, Append., s. v.)—9. (Dioscor., ii., 205.)—10. (Celsus, ii., 12.—Dioscorides, v., 89.—Paul. Ægin., vii., 3.—Adams, Append., s. v.)—11. riata, and were proposed (*rogabantur*) by a magistratus of senatorial rank, after the senate had approved of them by a decretum. Such a lex was also designated by the name *populi scitum*.¹

A plebiscitum was a law made in the comitia tributa on the rogation of a tribune: "*Plebiscitum est quod plebs plebeio magistratu interrogante, veluti tribuno, constituebat.*"² "Accordingly," says Gaius,³ "formerly the patricii used to say that they were not bound by plebiscita, because they were made without their sanction (*sine auctoritate eorum*); but afterward the lex Hortensia was carried (B.C. 288), which provided that plebiscita should bind the whole populus (in the larger sense of the word), and thus they were made of equal force with leges."⁴

Consistently with this statement, we find that Cicero, in his enumeration of the sources of Roman law,⁵ does not mention plebiscita, which he undoubtedly comprehended under "leges." Various plebiscita also are quoted as leges, such as the lex Falcidia⁶ and lex Aquilia.⁷ In the Table of Heraclia, the words "*lege plebisvescito*" appear to refer to the same enactment; and in the lex Rubria there occurs the phrase "*ex lege Rubria sive id plebisvescitum est*," both which expressions are probably only a way of designating a plebiscitum.⁸

The word *rogatio* (from the verb *rogo*) properly means any measure proposed to the legislative body, and therefore is equally applicable to a proposed lex and a proposed plebiscitum. Accordingly, there occur the expressions "*populum rogare*," to propose a lex to the populus; and "*legem rogare*," to propose a lex.⁹ A *rogatio*, then, is properly a proposed lex or a proposed plebiscitum. The form of a *rogatio*, in the case of *adrogatio*, which was effected at the comitia curiata,¹⁰ is preserved by Gellius.¹¹ It begins with the words "*Velitis, jubeatis*," &c., and ends with the words "*ita vos Quirites rogo*." The corresponding expression of assent to the *rogatio* on the part of the sovereign assembly was *Uti rogas*. The term *rogatio*, therefore, included every proposed lex, plebiscitum, and privilegium, for without a *rogatio* there could be no command (*jussum*) of the populus or plebs. But the words *lex*, *plebiscitum*, and *privilegium* were often improperly used as equivalents; and *rogationes*, after they had become laws, were still sometimes called *rogationes*.¹² The term *rogationes* is often applied to measures proposed by the tribunes, and afterward made plebiscita: hence some writers (improperly) view *rogatio* as simply equivalent to plebiscitum. Besides the phrase "*rogare legem*," there are the equivalent phrases "*legem ferre*" and "*rogationem promulgare*," as applied to the proposer; the phrase "*rogationem accipere*" applies to the enacting body. "*Lex rogata*" is equivalent to "*lex lata*."¹³ The terms relating to legislation are thus explained by Ulpian:¹⁴ "A lex is said either *rogari* or *ferri*; it is said *abrogari* when it is repealed; it is said *derogari* when a part is repealed; it is said *subrogari* when some addition is made to it; and it is said *obrogari* when some part of it is changed." It follows from these terms being used in Roman law, independent of direct evidence, which is not wanting, that a subsequent lex always repealed or altered a prior lex which was inconsistent with it.

As to their form, we can judge of the Roman style of legislation by the fragments which exist. The Romans seem to have always adhered to the old expressions, and to have used few superfluous words.

1. (Festus, s. v. *Scitum Pop.*)—2. (Inst., i., tit. 2, s. 4.)—3. (G., 3.)—4. (Liv., viii., 12.—Coll., xv., 27.)—5. (Top., 5.)—6. (Gaius, ii., 227.)—7. (Cic., Pro Tullio, 8, 11.)—8. (Savigny, *Zeitschrift*, &c. ix., 355.)—9. (Festus, s. v. *Rogatio*.)—10. ("per populi rogationem.")—11. (v., 19.)—12. (Gell., xv., 27.)—13. (Dig. 35, tit. 2, s. 1: "ad legem Falcidianam.")—14. (tit. 1, s. 3.)

Great care was taken with such clauses as were proposed to alter a former lex, and great care was also used to avoid all interference with a former lex, when no change in it was intended. The *leges* were often divided into chapters, each of which concluded with the sanction or punishment which was intended to secure the observance of the lex. The title of the lex was generally derived from the gentile name of the magistratus who proposed it, as the lex Hortensia from the dictator Hortensius. Sometimes the lex took its name from the two consuls or other magistrates, as the *Acilia Calpurnia*, *Ælia* or *Ælia Sentia*, *Papia* or *Papia Poppæa*, and others. It seems to have been the fashion to omit the word *et* between the two names, though instances occur in which it was used. (*Vid. JULIA LEX ET TITIA*.) A lex was also often designated with reference to its object, as the lex Cincia de Donis et Muneribus, lex Furia Testamentaria, lex Julia Municipalis, and many others. Leges which related to a common object were often designated by a collective name, as *leges Agrariæ*, *Judiciariæ*, and others. Sometimes a chapter of a lex was referred to under the title of the lex, with the addition of a reference to the contents of the chapter, as *lex Julia de Fundo Dotali*, which was a chapter of the lex Julia de Adulteriis. A lex sometimes took its name from the chief contents or its first chapter, as *lex Julia de Maritandis Ordinibus*. Sometimes a lex comprised very various provisions, relating to matters essentially different, and in that case it was called *lex Satura*. (*Vid. LEX CÆCILIA DIDIA, LEX JULIA MUNICIPALIS*.)

The number of *leges* was greatly increased in the later part of the republican period, and J. Cæsar is said to have contemplated a revision of the whole body. Under him and Augustus numerous enactments were passed, which are known under the general name of *Julianæ leges*. (*Vid. JULIANÆ LEGES*.) It is often stated that no *leges*, properly so called, or plebiscita, were passed after the time of Augustus; but this is a mistake. Though the voting might be a mere form, still the form was kept; and if this were not so, the passage of Gaius,² in which he speaks of *leges* and plebiscita as forms of legislation still in use, would be hardly correct. Besides, various *leges* are mentioned as having been passed under the Empire, such as the lex Junia under Tiberius, the lex Visellia, the lex Mamilia under Caligula, and a lex Claudia on the tutela of women.³ It does not appear when the ancient forms of legislation were laid aside, but they certainly long survived the popular elections to which alone the passage of Tacitus⁴ refers.

In the Digest a *senatus consultum* is sometimes referred to as a *lex*,⁵ in which there was no great impropriety if we have regard to the time, for *senatus consulta* were then laws. Still a *senatus consultum*, properly so called, must not be confounded with a *lex* properly so called; and there is no reason for supposing that the lex Claudia of Gaius was a *senatus consultum*, for when he speaks of a *senatus consultum* of the time of Claudius, he calls it such.⁶

It remains farther to explain the words *rogatio* and *privilegium*.

Rogatio is defined by Festus to be a command of the populus relating to one or more persons, but not to all persons; or relating to one or more things, but not to all. That which the populus has commanded (*sciri*) with respect to all persons or things is a *lex*; and Ælius Gallus says *rogatio* is a *genus legis*; that which is *lex* is not consequently (*continuo*) *rogatio*, but *rogatio* must be *lex* if it has been pro-

1. (Tacit., Ann., iii., 25-28.)—2. (i., 2, &c.)—3. (Gaius, i., 157, 171.)—4. (Ann., i., 15.)—5. (14, tit. 6, s. 9, § 4; s. 14.)—6. (i., 64, 91.)

posed (*roga a*) at legal comitia (*justis comitiis*). According to this definition, a rogatio, when enacted, is lex; there is also lex which is not rogatio: therefore we must assume a general name lex, comprehending lex proper and rogatio. The passage of Ælius Gallus is emended by Götting,¹ whose emendation is founded on his usual felicity in mistaking the sense of a passage, and converts the clear meaning of Gallus into nonsense. According to the definition of Gallus, rogatio was equivalent to privilegium, a term which occurred in the Twelve Tables,² and it signified, according to Gallus,³ an enactment that had for its object a single person, which is indicated by the form of the word (*privi-legium*) "privæ res," being the same as "singulæ res." The word privilegium, according to the explanation of Gellius, did not convey any notion of the character of the legislative measures: it might be beneficial to the party to whom it referred, or it might not. It is generally used by Cicero in the unfavourable sense* (*rogationem privilegii similem**). Under the Empire, the word is used in the sense of a special grant proceeding from the imperial favour.

The meaning of lex, as contrasted with jus, is stated in the article Jus.

Some other significations of lex, which are not its proper significations, are easily explained; for instance, lex is used to express the terms and conditions of a contract, apparently with reference to the binding force of all legal contracts. In English instruments of contract, it is often expressed that it shall be "lawful" for one or more of the parties to do a certain act, by which is simply meant that the parties agree about something which is legal, and which, therefore, makes a valid contract. Accordingly, we find the expression *leges censoriæ* to express the conditions on which the censors let the public property to farm; and perhaps the term also signified certain standing regulations for such matters, which the censors were empowered to make.⁶ In both the cases just referred to, the phrase *lex censoria* is used (in the singular number), and this lex, whether a lex proper or not, seems to have been divided into chapters.

Lex simply sometimes signifies the laws of the Twelve Tables.

A particular enactment is always referred to by its name. The following is a list of the principal leges, properly so called; but the list includes also various plebiscita and privilegia.

ACILIA. (*Vid. REPETUNDÆ.*)

ACILIA CALPURNIA or CALPURNIA. (*Vid. AMBITUS.*)

ÆBU'TIA, of uncertain date, which, with two Julæ leges, put an end to the legis actiones, except in certain cases. (*Vid. JUDEX, ACTIO*, p. 17.)

This, or another lex of the same name, prohibited the proposer of a lex, which created any office or power (*curatio ac potestas*), from having such office or power, and even excluded his colleague, cognati, and affines.⁷

ÆLIA. This lex, and a Fufia lex passed about the end of the sixth century of the city, gave to all the magistrates the obnuntiatio or power of preventing or dissolving the comitia, by observing the omens, and declaring them to be unfavourable.⁸

ÆLIA SENTIA. This lex contained various provisions as to the manumission of slaves. (*Vid. ÆLIA SENTIA LEX, MANUMISSIO.*)

ÆMILIA. A lex passed in the dictatorship of Mamercus Æmilius (B.C. 433), by which the cen-

sors were elected for a year and a half instead of a whole lustrum.¹ After this lex they had accordingly only a year and a half allowed them for holding the census and letting out the public works to farm.

ÆMILIA BÆBIA. (*Vid. CORNELIA BÆBIA.*)

ÆMILIA LEPIDI, ÆMILIA SCAURI. (*Vid. SUMTUARIÆ LEGES.*)

AGRA'RIÆ. (*Vid. APULEIA, CASSIA, CORNELIA, FLAMINIA, FLAVIA, JULIA, LICINIA, MAMILIA, SEMPRONIA, SERVILIA, THORIA.*)

AMBITUS. (*Vid. AMBITUS.*)

ANNA'LIIS or VILLIA. (*Vid. ÆDILES.*)

ANTIA. (*Vid. SUMTUARIÆ LEGES.*)

ANTONLÆ, the name of various enactments proposed or passed by the influence of M. Antonius, after the death of the dictator J. Cæsar, such as the judiciaria. (*Vid. JUDEX*, p. 553.) Another lex that was promulgated allowed an appeal to the populus after conviction for vis or majestas.² Various other measures proposed by M. Antonius are mentioned by Cicero,³ Dion Cassius,⁴ and Appian.⁶

APULEIA, gave a surety an action against his cosureties for whatever he had paid above his share. (*Vid. INTERCESSIO.*)

APULEIA AGRA'RIA, proposed by the tribune L. Apuleius Saturninus, B.C. 101.⁶

APULEIA FRUMENTARIA, proposed about the same time by the same tribune.⁷

APULEIA MAJESTA'TIS. (*Vid. MAJESTAS.*)

AQU'ILIA. (*Vid. DAMNI INJURIA ACTIO.*)

ATERNIA TARPEIA (B.C. 441). This lex empowered all magistratus to fine persons who resisted their authority; but it fixed the highest fine at two sheep and thirty cows, or two cows and thirty sheep, for the authorities vary in this.⁸

A'TIA DE SACERDOTIIS (B.C. 63), proposed by the tribune T. Atius Labienus, repealed the lex Cornelia de Sacerdotiis.⁹

ATILIA. (*Vid. JULIA LEX ET TITIA, TUTOR.*)

ATTINIA allowed no usucapion in a stolen thing.¹⁰ (*Vid. FURTUM.*)

ATTINIA, of uncertain date, was a plebiscitum which gave the rank of senator to a tribune.¹¹ The measure probably originated with C. Atinius, who was tribune B.C. 130.¹²

AUFIDIA. (*Vid. AMBITUS.*)

AURELIA. (*Vid. TRIBUNI.*)

AURELIA JUDICIA'RIA. (*Vid. JUDEX*, page 553.)

BÆBIA (B.C. 192 or 180), which enacted that four prætors and six prætors should be chosen alternately;¹³ but the law was not observed.

CÆCILIA DE CENSORIBUS or CENSORIA (B.C. 54), proposed by Metellus Scipio, repealed a Clodia lex (B.C. 58), which had prescribed certain regular forms of proceeding for the censors in exercising their functions as inspectors of mores, and had required the concurrence of both censors to inflict the nota censoria. When a senator had been already convicted before an ordinary court, the lex permitted the censors to remove him from the senate in a summary way.¹⁴

CÆCILIA DE VECTIGALIBUS (B.C. 62), released lands and harbours in Italy from the payment of taxes and dues (*portoria*). The only vectigal

1. (Geschichte der Röm. Staatsv., &c., p. 310.)—2. (Cic., Leg., iii., 19.)—3. (Festus, s. v. Rogatio.)—4. (Pro Domito, 17.—Pro Sextio, 30.)—5. (Brut., 23.)—6. (Prag. de Jure Fisci, s. 18; Dig. 50, tit. 16, s. 203.)—7. (Cic. in Rull., ii., 8.)—8. (Cic., Phil., ii., 32.—Id., Pro Sextio, 15, 26.—Id., ad Att., ii., 9.)

1. (Liv., iv., 24.—Id., ix., 33.)—2. (Cic., Phil., i., 9.)—3. (Phil., i., 1; ii., 43; v., 3, 5.)—4. (xlv., 51; xlv., 9, 20, 25, 34; xlv., 23, 24.)—5. (Bell. Civ., iii., 27, 30.)—6. (Liv., Ept., 69.—Appian, Bell. Civ., i., 29.—Cic., Pro Sextio, 16, 47.)—7. (Auct. ad Heren., i., 12.)—8. (Cic., De Rep., ii., 35.—Dionys., x., 50.—Gell., xi., 1.—Festus, s. v. "Multa."—"Ovibus."—"Peculatus."—Niebuhr, Hist. of Rom., ii., p. 300.)—9. (Dion Cass., xxxvii., 37.)—10. (Gell., xvii., 7.—Instut., 2, tit. 6, s. 2.)—11. (Gell., xiv., 8.)—12. (Plin., H. N., vii., 45.—Cic., Pro Dom., 47.)—13. (Liv., xl., 44.)—14. (Dion Cass., xl., 57.—Id., xxxviii., 13.—Cic., Pro Sextio, 25.—Dig. 50, tit. 16, s. 203, De Portoria.)

remaining after the passing of this lex was the *Vicesima*.¹

CÆCILIA DIDIA (B.C. 88) forbade the proposing of a lex *Satura*, on the ground that the people might be compelled either to vote for something which they did not approve, or to reject something which they did approve, if it was proposed to them in this manner. This lex was not always operative.² (*VID. LEX*.)

CALPU'RNA DE A'MBITU. (*VID. AMBITUS*.)
CALPU'RNA DE CONDICTIONE. (*VID. PER CONDICTIONEM*.)

CALPU'RNA DE REPETUNDIS. (*VID. REPETUNDÆ*.)

CANULE'IA (B.C. 445) established *connubium* between the *patres* and *plebs*, which had been taken away by the law of the Twelve Tables.³

CASSIA (B.C. 104), proposed by the tribune L. Cassius Longinus, did not allow a person to remain a senator who had been convicted in a *iudicium populi*, or whose *imperium* had been abrogated by the *populus*.⁴

CASSIA,⁵ which empowered the dictator Cæsar to add to the number of the *patricii*, to prevent their extinction.

CASSIA AGRA'RIA, proposed by the consul Sp. Cassius, B.C. 486.⁶

CASSIA TABELLARIA. (*VID. TABELLARIE LEGES*.)

CASSIA TERE'NTIA FRUMENTARIA (B.C. 63), for the distribution of corn among the poor citizens and the purchasing of it.⁷

CINCIA DE DONIS ET MUNERIBUS. (*VID. CINCIA LEX*.)

CLAUD'IA, a lex passed in the time of the Emperor Claudius, took away the *agnatorum tutela* in the case of women.⁸

CLOD'IE, the name of various plebiscita, proposed by Clodius when tribune, B.C. 59.

CLODIA DE AUSPICIS prevented the magistratus from dissolving the *comitia tributa*, by declaring that the auspices were unfavourable. This lex, therefore, repealed the *Ælia* and *Fufia*. It also enacted that a lex might be passed on the *Dies Fasti*.⁹ (*VID. ÆLIA LEX*.)

CLODIA DE CENSORIBUS. (*VID. CÆCILIA*.)

CLODIA DE CIVIBUS ROMANIS INTEREMPTIS, to the effect that "*qui civem Romanum indemnatum interemisset ei aqua et igni interdiceretur*."¹⁰ It was in consequence of this lex that the interdict was pronounced against Cicero, who considers the whole proceeding as a *privilegium*.¹¹

CLODIA FRUMENTARIA, by which the corn, which had formerly been sold to the poor citizens at a low rate, was given.¹²

CLODIA DE SODALITATIBUS OF DE COLLEGIIIS, restored the *sodalitia*, which had been abolished by a *senatus consultum* of the year B.C. 80, and permitted the formation of new *sodalitia*.¹³

There were other so-called *leges Clodiarum*, which were, however, *privilegia*.

CÆ'LIA. (*VID. TABELLARIE LEGES*.)

CORNE'LIÆ. Various *leges* passed in the dictatorship of Sulla, and by his influence, are so called.

ÆORARIA, by which many of the inhabitants of Etruria and Latium were deprived of the complete *civitas* and retained only the *commercium*, and a

large part of their lands were made *publicum*, and given to military colonists.

DE FALSIS. (*VID. FALSUM*.)

DE INJURIIS. (*VID. INJURIA*.)

JUDICIARIA. (*VID. JUDEX*, p. 553.)

MAJESTATIS. (*VID. MAJESTAS*.)

NUMMARIA. (*VID. FALSUM*.)

DE PROSCRIPTIONE AND PROSCRIPTIS. (*VID. PROSCRIPTIO*.)

DE PARRICIDIO. (*VID. CORNELIA LEX DE SICARIIS*.)

DE SACERDOTIIS. (*VID. SACERDOTIA*.)

DE SICARIIS. (*VID. CORNELIA LEX DE SICARIIS; SUMTUARIAE.* (*VID. SUMTUARIE LEGES*.)

TESTAMENTARIA. (*VID. FALSUM*.)

UNCIARIA appears to have been a lex which lowered the rate of interest, and to have been passed about the same time with the *leges Sumtuarie* of Sulla.¹

DE VADIMONIO. (*VID. VADIMONIUM*.)

There were other *leges Cornelie*, such as that of *Sponsoribus* (*VID. INTERCESSIO*), which may be *leges* of L. C. Sulla.

There were also *leges Cornelie* which were proposed by the tribune C. Cornelius about B.C. 37, and limited the *edictal* power by compelling the *prætors* *jus dicere ex edictis suis perpetuis*.² (*VID. EDICTUM*.)

Another lex of the same tribune enacted that no one "*legibus solveretur*," unless such a measure was agreed on in a meeting of the senate at which two hundred members were present, and afterward approved by the people; and it enacted that no tribune should put his veto on such a *senatus consultum*.³

There was also a lex *Cornelia* concerning the wills of those Roman citizens who died in captivity (*apud hostes*). (*VID. LEGATUM*, p. 574.)

DE VI PUBLICA. (*VID. VI PUBLICA*.)

CORNE'LIA BÆ'BBIA DE AMBITU, proposed by the consuls P. Cornelius Cethegus and M. Bæbius Tampilus, B.C. 181.⁴ This law is sometimes, but erroneously, attributed to the consuls of the preceding year, L. Æmilius and Cn. Bæbius. (*VID. AMBITUS*.)

DID'IA. (*VID. SUMTUARIE LEGES*.)

DOMIT'IA DE SACERDOTIIS. (*VID. SACERDOTIA*.)

DUL'IA (B.C. 449), a plebiscitum proposed by the tribune Dullius, which enacted "*qui plebem sine tribunis reliquisset, quique magistratum sine provocacione creasset, tergo ac capite puniretur*."⁵

DUL'IA MÆ'NIA de *unciario fenore*, B.C. 357. The same tribune, Dullius and Mænius, carried a measure which was intended in future to prevent such unconstitutional proceedings as the enactment of a lex by the soldiers out of Rome, on the proposal of the consul.⁶

FAB'IA DE PLA'GIO. (*VID. PLAGIUM*.)

FALCI'DIA. (*VID. LEGATUM*.)

FAN'NIA. (*VID. SUMTUARIE LEGES*.)

FLAMIN'IA, was an agraria lex for the distribution of lands in Picenum, proposed by the tribune C. Flaminius in B.C. 228 according to Cicero, or in B.C. 232 according to Polybius. The latter date is the more probable.⁷

FLA'VIA AGRA'RIA, B.C. 60, for the distribution of lands among Pompey's soldiers, proposed by the tribune L. Flavius, who committed the consul Cæcilius Metellus to prison for opposing it.⁸

FRUMENTARIE. Various *leges* were so called

1. (Dion Cass., xxxvii., 51.—Cic. ad Att., ii., 10.—Id., ad Quint. Fr., i., 10.)—2. (Cic., Phil., v., 3.—Id., Pro Dom., 16, 20.—Id., ad Att., ii., 9.)—3. (Liv., iv., 1, 4.—Cic., Rep., ii., 37.)—4. (Ascon. in Cic., Corn., p. 78, ed. Orelli.)—5. (Tacit., Ann., xi., 25.)—6. (Liv., ii., 41.—Dionys., viii., 76.)—7. (Cic., Ver., iii., 70.—Id. ib., v., 21.—Gaius, i., 171.)—8. (Dion Cass., xxxviii., 13.—Cic. in Vat., 17.—Id. in Pison., 4, 5.)—10. (Vell. Patenc., ii., 45.)—11. (Pro Dom., 18, &c.—Post Red. in Sen., 2, 5, &c.)—12. (Dion Cass., xxxviii., 13.—Cic., Pro Dom., 10.)—13. (Cic. in Pis., 4.—Id., Pro Sext., 25.—Id., ad Att., iii., 15.—Dion Cass., xxxviii., 13.)

which had for their object the distribution of grain among the people at a low price or gratuitously. (*VID. APULEIA, CASSIA TERENTIA, CLODIA, LIVIA, OCTAVIA, SEMPRONIA.*)

FUFIA DE RELIGIONE, B.C. 61, was a privilege which related to the trial of Clodius.¹

FUFIA JUDICIARIA. (*VID. JUDEX, p. 553.*)

FURIA, or FUSIA CANTINIA, limited the number of slaves to be manumitted by testament. (*VID. MANUMISSIO.*)

FURIA DE SPONSU. (*VID. INTERCESSIO.*)

FURIA or FUSIA TESTAMENTARIA. (*VID. LEGATUM.*)

GABINIA TABELLARIA. (*VID. TABELLARIAE.*)

There were various Gabiniae leges, some of which were privilegia, as that for conferring extraordinary power on Cn. Pompeius for conducting the war against the pirates.²

A Gabinia lex, B.C. 58, forbade all loans of money at Rome to legationes from foreign parts (*Salmastius cum Romæ versuram facere vellent, non poterant, quod lex Gabinia vetabat*). The object of the lex was to prevent money being borrowed for the purpose of bribing the senators at Rome.

GEILLIA CORNELIA, B.C. 72, which gave to Cn. Pompeius the extraordinary power of conferring the Roman civitas on Spaniards in Spain, with the advice of his consilium (*de consilii sententia*).³

GENU'CIA, B.C. 341, forbade altogether the taking of interest for the use of money.⁴ Other plebiscita of the same year are mentioned by Livy.⁵

GALLIÆ CISPALPINÆ. (*VID. RUBRIA.*)

HIERONICA was not a lex properly so called. Before the Roman conquest of Sicily, the payment of the tenths of wine, oil, and other produce had been fixed by Hiero, and the Roman quaestors, in letting these tenths to farm, followed the practice which they found established.⁷

HORATIA, proposed by M. Horatius, made the persons of the tribunes, the aediles, and others sacrosancti.⁸ Another lex Horatia mentioned by Gellius⁹ was a privilegium.

HORTENSIA DE PLEBISCITIS. (*VID. PLEBISCITUM.*)

Another lex Hortensia enacted that the *nundinae*, which had hitherto been *feriae*, should be *dies fasti*. This was done for the purpose of accommodating the inhabitants of the country.¹⁰

HOSTILIA DE FASTIS is mentioned only in the Institutes of Justinian.¹¹

ICILIA, B.C. 456, by which the Aventinus was assigned to the plebs. This was the first instance of the *ager publicus* being assigned to the plebs.¹²

Another lex Icilia, proposed by the tribune Sp. Icilius, B.C. 470, had for its object to prevent all interruption to the tribunes while acting in the discharge of their duties. In some cases the penalty was death.¹³

JULIÆ. (*VID. JULIÆ LEGES.*)

JUNIA DE PEREGRINIS, proposed B.C. 126 by M. Junius Pennus, a tribune, banished peregrini from the city.

A lex of C. Fannius, consul, B.C. 122, contained the same provisions respecting the Latini and Italici; and a lex of C. Papius, perhaps B.C. 65, contained the same respecting all persons who were not domiciled in Italy.¹⁴

JUNIA LICINIA. (*VID. LICINIA JUNIA.*)

JUNIA NORBANA, of uncertain date, but probably about A.D. 17, enacted that when a Roman citizen had manumitted a slave without the requisite formalities, the manumission should not in all cases be ineffectual, but the manumitted person should have the status of a Latinus.¹ (*VID. LATINITAS, LIBERTUS.*)

JUNIA REPETUNDARUM. (*VID. REPETUNDÆ.*)

JUNIA VELLEIA, A.D. 8, allowed a postumus to be instituted heres, if he should be born in the lifetime of the testator. It also so far modified the old law, that a person who, by the death of a heres institutus, after the testator had made his will, became a heres quasi agnascendo, did not break the will if he was instituted heres.²

LÆTORIA. (*VID. CURATOR.*)

Sometimes the lex proposed by Volero for electing plebeian magistrates at the comitia tributa is cited as a lex Lætoria.³

LICINIA DE SODALITIS. (*VID. AMBITUS.*)

LICINIA JUNIA, or, as it is sometimes called, Junia et Licinia, passed in the consulship of L. Licinius Murena and Junius Silanus, B.C. 62, enforced the Cæcilia Didia, in connexion with which it is sometimes mentioned.⁴

LICINIA MUCIA DE CIVIBUS REGUNDIS, passed in the consulship of L. Licinius Crassus and Q. Mucius Scaevola, B.C. 95, which enacted a strict examination as to the title to citizenship, and deprived of the exercise of civic rights all those who could not make out a good title to them. This measure partly led to the Marsic war.⁵

LICINIA SUMTUARIA. (*VID. SUMTUARIÆ LEGES.*)

LICINIÆ ROGATIONES. (*VID. ROGATIONES LICINIÆ.*)

LI'VIÆ were various enactments proposed by the tribune M. Livius Drusus, B.C. 91, for establishing colonies in Italy and Sicily, distributing corn among the poor citizens at a low rate, and admitting the *fœderatæ civitates* to the Roman civitas. He is also said to have been the mover of a law for adulterating silver by mixing with it an eighth part of brass.⁶ Drusus was assassinated, and the senate declared that all his leges were passed contra auspicia, and were therefore not leges.⁷

LUTATIA DE VI. (*VID. VIS.*)

MÆNIA LEX is only mentioned by Cicero,⁸ who says that M. Curius compelled the patres "ante auctores fieri," in the case of the election of a plebeian consul, "which," adds Cicero, "was a great thing to accomplish, as the lex Mænia was not yet passed." The lex therefore required the patres to give their consent, at least to the election of a magistratus, or, in other words, to confer, or agree to confer, the imperium on the person whom the comitia should elect. Livy⁹ appears to refer to this law. It was probably proposed by the tribune Mænius, B.C. 287.

MAJESTA'TIS. (*VID. MAJESTAS.*)

MAMILIA DE COLONIIS. The subject of this lex and its date are fully discussed by Rudorff,¹⁰ who shows that the lex Mamilia, Roscia, Peducæa, Alliena, Fabia, is the same as the "lex Agraria quam Gaius Cæsar tulit,"¹¹ and that this Gaius Cæsar is the Emperor Caligula.

MANILIA, proposed by the tribune C. Manilius,

1. (Cic. ad Att. i., 13, 16.)—2. (Cic., Pro Lege Manil., 17.—Vell. Pat. ii., 31.—Dion Cass., xxxvi., 6.—Plut., Pomp., 25.)—3. (Cic. ad Att., v., 21.—Id. ib., vi., 1, 2.)—4. (Cic., Pro Balbo, 8, 14.)—5. (Liv., vii., 42.)—6. (vii., 42.)—7. (Cic., Verr., ii., 13, 26, 60.—Id. ib., iii., 6, &c.)—8. (Liv., iii., 55.)—9. (vi., 7.)—10. (Macrob., i., 16.—Plin., II. N., xviii., 3.)—11. (iv., tit. 10.)—12. (Liv., iii., 21, 32.—Dionys., x., 32.—Niebuhr, Hist. of Rome, ii., p. 299.)—13. (Dionys., vii., 17.—Cic., Pro Sextio, 37.—Niebuhr, ii., p. 231.)—14. (Cic., De Off., iii., 11.—Brut., 26, 28.—De Leg. Agr., i., 4.—Festus, s. v. Respublicas.)

1. (Gaius, i., 16, 17, 22.—Id., iii., 56.—Ulp., Frag., tit. 1.)—2. (Gaius, ii., 134.—Ulp., Frag., xxii., 19.)—3. (Liv., ii., 56, 57.)—4. (Cic., Pro Sextio, 64; Phil., v., 3; ad Att., ii., 9; iv., 16; in Vatini, 14.)—5. (Cic., De Off., iii., 11.—Id., Brut., 16.—Id., Pro Balbo, 21, 24.)—6. (Plin., H. N., xxxiii., 3.)—7. (Cic., Leg., ii., 6, 12.—Id., Pro Dom., 16.—Liv., Epit., 71.—Appian, Bell. Civ., i., 35.—Ascon. in Cic., Corneli., p. 62.)—8. (Brutus, 14.)—9. (i., 17.)—10. (Zeitschrift, vol. ix.)—11. (Dig. 47, tit. 21., s. 3.)

B.C. 66, was a privilegium by which was conferred on Pompey the command in the war against Mithradates. The lex was supported by Cicero when prætor.¹

The leges Manilianæ, mentioned by Cicero,² were evidently not leges proper, but probably forms which it was prudent for parties to observe in buying and selling.

MA'NLIA, also called LICINIA, B.C. 196, created the triumviri epulones.³

MA'NLIA DE VICESIMA. (Vid. VICESIMA.)

MAR'CIA, probably about the year B.C. 352, "adversus feneratores."⁴

MAR'CIA, an agrarian law proposed by the tribune L. Marcius Philippus, B.C. 104.⁵

MAR'IA, proposed by Marius when tribune, B.C. 119, for narrowing the pontes at elections.⁶

ME'MMIA or RE'MMIA. (Vid. CALUMNIA.)

ME'NSIA. This lex enacted that if a woman who was a Roman citizen (*civis Romana*) married a peregrinus, the offspring was a peregrinus. If there was connubium between the peregrinus and the woman, the children, according to the principle of connubium, were peregrini, as the legal effect of connubium was that children followed the condition of their father (*liberi semper patrem sequuntur*). If there were no connubium, the children, according to another rule of law, by which they followed the condition of the mother, would have been Roman citizens; and it was the object of the law to prevent this.⁷

MINU'CIA, B.C. 216, created the triumviri mensarii.⁸

OCTA'VIA, one of the numerous leges frumentariæ which repealed a Sempronia Frumentaria. It is mentioned by Cicero⁹ as a more reasonable measure than the Sempronia, which was too profuse.

OGU'L'IA, proposed by the tribunes B.C. 300, increased the number of pontifices to eight and that of the augurs to nine; it also enacted that four of the pontifices and five of the augurs should be taken from the plebes.¹⁰

O'PIA. (Vid. SUMTUARIÆ LEGES.)

O'RCHIA. (Vid. SUMTUARIÆ LEGES.)

OVI'NIA, of uncertain date, was a plebiscitum which gave the censors certain powers in regulating the lists of the senators (*ordo senatorius*): the main object seems to have been to exclude all improper persons from the senate, and to prevent their admission, if in other respects qualified.¹¹ The lex Ovinia of Gaius,¹² if the reading is right, was perhaps a different lex.

PAT'IA DE PEREGRINIS. (Vid. JUNIA DE PEREGRINIS.)

PA'PIA POPPÆA. (Vid. JULIÆ LEGES.)

A lex Papia on the manner of choosing the vestal virgins is mentioned by Gellius,¹³ but the reading appears to be doubtful, and perhaps it ought to be called lex Popilia.

PAP'RIA or JU'LIA PAP'RIA DE MULCTA'RUM ÆSTIMATIONE (B.C. 430), fixed a money value according to which fines were paid, which formerly were paid in sheep and cattle.¹⁴ Gellius¹⁵ and Festus¹⁶ make this valuation part of the Aternian law (*vid. ATERNIA TARPEIA*), but in this they appear to be mistaken, according to Niebuhr.¹⁷

PAP'RIA, by which the as was made semunci-

alis,¹ one of the various enactments which tapered with the coinage.

PAP'RIA, B.C. 332, proposed by the prætor Papirius, gave the Acerrani the civitas without the suffragium. It was properly a privilegium, but is useful as illustrating the history of the extension of the civitas Romana.²

PAP'RIA, of uncertain date, enacted that no ædes should be declared consecratæ without a plebiscitum (*injussu Plebis*).³

PAP'RIA PLAUT'IA, a plebiscitum of the year B.C. 89, proposed by the tribunes C. Papirius Carbo and M. Plautius Silvanus, in the consulship of Cn. Pompeius Strabo and L. Porcius Cato, is called by Cicero⁴ a lex of Silvanus and Carbo.⁵

PAP'RIA POETE'LIA. (Vid. POETELIA.)

PAP'RIA TABELLARIA. (Vid. TABELLARIÆ LEGES.)

PEDUCÆA, B.C. 113, a plebiscitum, seems to have been merely a privilegium, and not a general law against incestum.⁶

PESUL'NIA provided that if an animal did any damage, the owner should make it good or give up the animal.⁷ There was a general provision to this effect in the Twelve Tables,⁸ and it might be inferred from Paulus that this lex extended the provisions of the old law to dogs.

PETRE'TA, a lex under this title, De Decimatione Mditum, in case of mutiny, is mentioned by Appian.⁹

PETRONIA, probably passed in the reign of Augustus, and subsequently amended by various senatus consulta, forbade a master to deliver up his slave to fight with wild beasts. If, however, the master thought that his slave deserved such a punishment, he might take him before the authorities (*judex*), who might condemn him to fight if he appeared to deserve it.¹⁰

PINA'RIA¹¹ related to the giving of a *judex* within a limited time.

PLETO'RIA. (Vid. CURATOR.)

PLAUT'IA or PLOT'IA DE VI. (Vid. VIS.)

PLAUT'IA or PLOT'IA JUDICIA'RIA is mentioned by Asconius¹² as having enacted that fifteen persons should be annually taken from each tribe to be placed in the album judicum.

POETE'LIA, B.C. 358, a plebiscitum, was the first lex against ambitus.¹³

POETE'LIA PAP'RIA, B.C. 326, made an important change in the liabilities of the Nexi.¹⁴ (Vid. NEXI.)

POMPELE. There were various leges so called POMPEIA, proposed by Cn. Pompeius Strabo, the father of Cn. Pompeius Magnus, probably in his consulship, B.C. 89, gave the jus Latii or Latinitas to all the towns of the Transpadani, and probably the civitas to the Cispadani.¹⁵

POMPEIA DE AMBITU. (Vid. AMBITUS.)

POMPEIA JUDICIA'RIA. (Vid. JUDEX.)

POMPEIA DE JURE MAGISTRA'TUUM¹⁶ forbade a person to be a candidate for public offices (*petitio honorum*) who was not at Rome; but J. Cæsar was excepted. This was, doubtless, the old law, but it had apparently become obsolete.

POMPEIA DE PARRICIDIIS. (Vid. CORNELIA DE SICARIIS.)

POMPEIA TRIBUNI'TIA (B.C. 70) restored

1. (De Lege Manlia.—Plut., Pomp., 30.—Dion Cass., xxxvi., 25.)—2. (De Or., i., 58.)—3. (Liv., xxxiii., 42.—Cic., De Or., iii., 19.)—4. (Gaius, iv., 23.—Liv., vii., 21.)—5. (Cic., De Or., ii., 21.)—6. (Cic., De Leg., ii., 17.—Plut., Mar., 4.)—7. (Gaius, i., 78.—Ulp., Frag., v., ut 8.)—8. (Liv., xxiii., 21.)—9. (Brut., 62.—De Off., ii., 21.)—10. (Liv., x., 6–9.)—11. (Festus, s. v. "Pretoriti Scutores"—Cic., De Leg., iii., 12.)—12. (iv., 109.)—13. (i., 12.)—14. (Liv., iv., 30.—Cic., De Rep., ii., 35.)—15. (iii., 1.)—16. (s. v. Peculatus.)—17. (Hist. of Rome, ii., p. 300.)

1. (Plin., H. N., xxxiii., 3.)—2. (Liv., viii., 17.)—3. (Cic., Pro Dom., 49.)—4. (Pro Archia, 4.)—5. (Vid. CIVITAS, FEDERATÆ CIVITATES, and Savigny, "Volkschluss der Tafel von Heraclea," Zeitschrift, ix.)—6. (Cic., De Nat. Deor., iii., 30.—Ascon. in Cic., Mil., p. 46.)—7. (Paulus, S. R., i., 15, s. 1, 3.)—8. (Dirksen, Uebersicht, &c., p. 532.)—9. (De Bell. Civ., ii., 47.)—10. (Dig. 48, tit. 8, s. 11; 18, tit. 1, s. 42.—Gell., vi., 14.)—11. (Gaius, iv., 15.)—12. (In Cic., Corn., p. 79.)—13. (Liv., viii., 15.)—14. (Liv., viii., 28.)—15. (Savigny, "Volkschluss der Tafel von Heraclea," Zeitschrift, ix.)—16. (Suet., Jul., 28.—Dion Cass. xl., 56.—Cic. ad Att., viii., 3.)

the old *tribunitia potestas*, which Sulla had nearly destroyed.¹ (*Vid.* *TRIBUNI*.)

POMPEIA DE VI was a *privilegium*, and only referred to the case of Milo.²

POPILIA. (*Vid.* *PAPIA*.)

PORCIE DE CAPITIS CIVIUM or DE PROVOCATIONE enacted that a Roman citizen should not be scourged or put to death.³

PORCIA DE PROVINCIIS (about B.C. 198). The passage in Livy⁴ ("*Sumtus quos in cultum pratorum*," &c.) is supposed to refer to a Porcia lex, to which the *plebiscitum De Thermensibus* refers; and the words quoted by Cicero⁵ ("*Ne quis emat mancipium*") are taken, as it is conjectured, from this Porcia lex.

PUBLICIA permitted betting at certain games which required strength, as running and leaping.⁶

PUBLICIA DE SPONSORIBUS. (*Vid.* *INTERCESSIO*.)

PUBLICLLE of the dictator Q. Publilius Philo, B.C. 339.⁷ (*Vid.* *PUBLICLLE LEGES*.)

PUBLICLLE LEGES of the tribune Q. Volero Publilius, B.C. 472. (*Vid.* *PUBLICLLE LEGES*.)

PUPPIA, mentioned by Cicero,⁸ seems to have enacted that the senate could not meet on *comitiales dies*.

QUINTIA was a lex proposed by T. Quintus Crispinus, consul B.C. 9, and enacted by the populus for the preservation of the *aquæductus*. The lex is preserved by Frontinus.⁹

REGIA. (*Vid.* *REGIA LEX*.)

REGLE. (*Vid.* *JUS CIVILE PAPIRIANUM*.)

REMMIA. (*Vid.* *CALPURNIA*.)

REPETUNDARUM. (*Vid.* *REPETUNDÆ*.)

RHO'DIA. The Rhodians had a maritime code which was highly esteemed. Some of its provisions were adopted by the Romans, and have thus been incorporated into the maritime law of European states. Strabo¹⁰ speaks of the wise laws of Rhodes and their admirable policy, especially in naval matters; and Cicero¹¹ to the same effect. The Digest¹² contains so much of the lex Rhodiorum as relates to *jactus*, or the throwing overboard of goods in order to save the vessel or remainder of the cargo. This lex Rhodiorum de *Jactu* is not a lex in the proper sense of the term.

ROSCIA THEATRALIS, proposed by the tribune L. Roscius Otho, B.C. 67, which gave the equites a special place at the public spectacles in fourteen rows or seats (*in quatuordecim gradibus sive ordinibus*) next to the place of the senators, which was in the orchestra. This lex also assigned a certain place to *spendthrifts* (*decoctores*¹³). The phrase "*sedere in quatuordecim ordinibus*" is equivalent to having the proper census equitris which was required by the lex. There are numerous allusions to this lex,¹⁴ which is sometimes simply called the Lex of Otho,¹⁵ or referred to by his name.¹⁶ This lex is supposed by some writers to have been enacted in the consulship of Cicero, B.C. 63.¹⁷ (*Vid.* *JULIA LEX THEATRALIS*.)

RUBRIA. The province of Gallia Cisalpina ceased to be a provincia, and became a part of Italia about the year B.C. 43. When this change took place, it was necessary to provide for the administration of justice, as the usual modes of provincial administration would cease with the determination of the provincial form of government.

This was effected by a lex, the name of which is unknown, but a large part of it, on a bronze tablet, is preserved in the Museum at Parma. This lex arranged the judiciary establishment of the former provincia, and appointed ii. viri and iv. viri juri dicundo: a *præfectus Mutinensis* is also mentioned in the lex. In two passages of this lex,¹ a lex Rubria is mentioned, which, according to some, is an earlier lex, by which Mutina was made a *præfectura*; and, according to others, the lex Rubria is this very lex De Cisalpina. This subject is discussed by Savigny² and by Puchta.³

This lex has been published several times; the latest edition is "*Tavola legislativa della Gallia Cisalpina ritrovata in Veleia et restituita alla sua vera lezione da D. Pietro de Lama, Parma, 1820.*" We only possess the end of the nineteenth chapter of this lex, which treats of the *Novi Operis Nuntiatio*; the twentieth chapter, on the *Damnnum Infectum*, is complete; the twenty-first treats of *Pecunia Certa Credita*, but only of Execution; the twenty-second treats in like manner of similar actions; there is only the beginning of the twenty-fourth, which treats of the division of an *hereditas* (*quæ de familia cerceisunda dividenda indicium sibi dari reddere, &c., postularevit, &c.*). The matter of this lex, therefore, so far as we know it, purely concerns procedure, as Puchta remarks.

RUPILLE LEGES (B.C. 131) were the regulations established by P. Rupilius and ten legati for the administration of the province of Sicily, after the close of the first servile war. They were made in pursuance of a consultum of the senate. Cicero⁴ speaks of these regulations as a *decretum* of Rupilius (*quod is de decem legatorum sententia statuit*), which he says they call lex Rupilia; but it was not a lex proper. The powers given to the commissioners by the lex Julia Municipalis were of a similar kind.

SACRATÆ, mentioned by Livy⁵ and by Cicero.⁶ Leges were properly so called which had for their object to make a thing or person *sacer*, as in Livy⁷ (*de sacrandum cum bonis capite ejus qui, &c.*). The consecratio was in fact the sanction by which a lex was to be enforced.⁸ In the latter case it was the opinion of the juriconsulti (*juris interpretes*) that the lex did not make "*sacrosancti*" the persons for whose protection it was designed, but that it made "*sacer*" (*sacrum sanxit*) any one who injured them; and this interpretation is certainly consistent with the terms of the lex.⁹

A lex Sacrata Militaris is also mentioned by Livy,¹⁰ but the sanction of the lex is not stated.

SA'TURA. (*Vid.* *LEX*, p. 580.)

SCANTINIA, proposed by a tribune: the date and contents are not known, but its object was to suppress unnatural crimes. It existed in the time of Cicero.¹¹ The lex Julia de Adulteriis considered this offence as included in *stuprum*, and it was punishable with a fine; but by the later imperial constitution the punishment was death.¹²

SCRIBONIA. The date and whole import of this lex are not known; but it enacted that a right to servitudes should not be acquired by *usucapion*,¹³ from which it appears that the law was once different. A "*libertas servitutum*" could be gained by *usucapion*, or, rather, *disuse*, for the lex only applied to that *usucapion* which established a *servitus* (*servitutum constituebat*), and not to that so-called *usucapion* which took away the right (*sustulit*

1. (Suet., Jul., 5. — Vell. Patern., ii., 30.)—2. (Cic., Phil., ii., 2. — Ascon. and Schol. Bob. in Argum. Milon.)—3. (Liv., x., 3. — Cic., De Rep., ii., 31. — Id., Pro Rabir., 3, 4.)—4. (xxii., 27.)—5. (Verr., ii., 4, 5.)—6. (Dig. 11, tit. 5.)—7. (Liv., viii., 12.)—8. (ad Quint. Fr., ii., 13; ad Fam., i., 4.)—9. (De Aquæduct. Roman.)—10. (p. 652, Casaub.)—11. (Pro Leg. Manil., c. 18.)—12. (14, tit. 2.)—13. (Cic., Phil., ii., 18.)—14. (Dion., xxvi., 25. — Vell. Patern., ii., 32. — Liv., Epit., 99. — Cic., Pro Muræna, 19.)—15. (Juv., xiv., 324.)—16. (Hor., Epod., iv., 16.)—17. (ad Att., i., 1.)

1. (c. xx., l. 29, 38.)—2. (Zeitschrift, ix.)—3. (Zeitschrift, x., "Ueber den Inhalt der Lex Rubria de Gallia Cisalpina.")—4. (In Verr., lib. ii., 13, 16.)—5. (ii., 54.)—6. (De Off., iii., 33.)—7. (ii., 8.)—8. (Liv., iii., 55.)—9. (Festus, s. v. Sacratæ leges.)—10. (vii., 41.)—11. (Auson., Epig., 69.)—12. (Juv., ii., 44. — Cic., ad Fam., viii., 12, 14.)—13. (Suet., Dom., 8. — Paulus, S. R., ii., tit. 26 s. 13.)—14. (Dig. 41, tit. 3, s. 4, § 29.)

servitutem). It is, perhaps, doubtful if the passage of Cicero¹ should be alleged in proof of this usucapion formerly existing.

SEMPRONIÆ. Various leges proposed by the Gracchi were so named. (*Vid.* SEMPRONIÆ LEGES.)

SEMPRONIA DE FENORE, B.C. 193, was a plebiscitum proposed by the tribune M. Sempronius,² which enacted that the law (*jus*) about money lent (*pecunia redita*) should be the same for the Socii and Latini (*Socii ac nomen Latinum*) as for Roman citizens. The object of the lex was to prevent Romans from lending money in the name of the Socii, who were not bound by the fenebre leges. The lex could obviously only apply within the jurisdiction of Rome.

SERVILIA AGRARIA, proposed by the tribune P. S. Rullus in the consulship of Cicero, B.C. 63, was a very extensive agraria rogatio. It was successfully opposed by Cicero;³ but it was in substance carried by J. Cæsar, B.C. 59 (*vid.* JULIA LEX AGRARIA), and is the lex called by Cicero *lex Campana*,⁴ from the public land called *Ager Campanus* being assigned under this lex.

SERVILIA GLAUCIA DE CIVITATE. (*Vid.* REPETUNDÆ.)

SERVILIA GLAUCIA DE REPETUNDIS. (*Vid.* REPETUNDÆ.)

SERVILIA JUDICIARIA, B.C. 106. See the article *JUDEX*, p. 553, and the various passages in Cicero.⁵ It is assumed by some writers that a lex of the tribune Servilius Glaucia repealed the *Servilia Judiciaria* two years after its enactment.⁶

SILLA.⁷ The *legis actio* called *condictio* was established by this lex in the case when the demand was a determinate sum of money (*certa pecunia*).

SILVANI ET CARBONIS. (*Vid.* PAPIRIA PLAUTIA.)

SULPICIÆ, proposed by the tribune P. Sulpicius Rufus, a supporter of Marius, B.C. 88, enacted the recall of the exiles, the distribution of the new citizens and the libertini among the thirty-five tribes, that the command in the Mithradatic war should be taken from Sulla and given to Marius, and that a senator should not contract debt to the amount of more than 2000 denarii.⁸ The last enactment may have been intended to expel persons from the senate who should get in debt. All these leges were repealed by Sulla.⁹

SULPICIA SEMPRONIA, B.C. 304. No name is given to this lex by Livy,¹⁰ but it was probably proposed by the consuls. It prevented the dedication of a templum or altar without the consent of the senate or a majority of the tribunes.¹¹

SUMTUARIÆ. (*Vid.* SONTUARIÆ LEGES.)

TABELLARIÆ. (*Vid.* TABELLARIÆ LEGES.)

TARPEIA ATERNIA. (*Vid.* ATERNIA TARPEIA.)

TERENTILIA, proposed by the tribune C. Terentilius, B.C. 462, but not carried, was a rogatio which had for its object an amendment of the constitution, though in form it only attempted a limitation of the imperium consulare.¹² This rogatio probably led to the subsequent legislation of the Decemviri.

TESTAMENTARIÆ. Various leges, such as the Cornelia, Falcidia, Furia, and Voconia, regulated testamentary dispositions.

THORIA. The importance of this lex requires that it should have a separate notice. (*Vid.* THORIA LEX.)

TI TIA, similar in its provisions to the *lex Publilia*.

TI TIA DE TUTORIBUS. (*Vid.* JULIA LEX TI TIA, and Gaius, i., 195.)

TREBONIA, a plebiscitum proposed by L. Trebonius, B.C. 448, which enacted that if the ten tribunes were not chosen before the comitia were dissolved, those who were elected should not fill up the number (*co-optare*), but that the comitia should be continued till the ten were elected.³

TRIBUNITIA. (*Vid.* TRIBUNITIA LEX.)

TULLIA DE AMBITU. (*Vid.* AMBITUS.)

TULLIA DE LEGATIONE LIBERA. (*Vid.* LEGATUS, p. 576.)

VALERIÆ of P. Valerius Publicola. (*Vid.* VALERIÆ LEGES.)

VALERIA HORATIA. (*Vid.* PLEBISCITUM.)

VARIA. (*Vid.* MAJESTAS.)

VATINIA DE PROVINCIIS was the enactment by which J. Cæsar obtained the province of Gallia Cisalpina with Illyricum for five years, to which the senate added Gallia Transalpina. This plebiscitum was proposed by the tribune Vatinius.³ A Trebonia lex subsequently prolonged Cæsar's imperium for five years.

VATINIA. (*Vid.* REPETUNDÆ.)

VATINIA DE COLONIS, under which the Latina Colonia (*vid.* LATINITAS) of Novum-Comum in Gallia Cisalpina was planted, B.C. 59.⁴

LEGES DE VI. (*Vid.* VIS.)

VIARIA. A *Varia* lex which Cicero says⁵ the tribune C. Curio talked of; but nothing more seems to be known of it.

Some modern writers speak of leges *Viariæ*, but there do not appear to be any leges properly so called. The provisions as to roads in many of the agrarian laws were parts of such leges, and had no special reference to roads.⁶

VICESIMARIA. (*Vid.* VICESIMARIA.)

VILLIA ANNA'LIS. (*Vid.* ÆDILES, p. 25.)

VISELLIA made a man liable to a criminal prosecution who, being a Latinus, assumed to exercise the rights of an ingenuus.⁷

VOCONIA. (*Vid.* VOCONIA LEX.)

This list of leges may not be quite complete, and the dates of some of them may not be perfectly accurate. Still it contains all the leges that are of any importance for the understanding of Roman History and Jurisprudence. Those which are not specially noticed here are referred to their proper heads, particularly when there are many leges relating to one subject, as ambitus, repetundæ, &c. Several of the Roman leges were modified by *senatus consulta*. The *senatus consulta*, which are properly laws, are enumerated under *SENATUS CONSULTUM*.

LEXIARCHICON. (*Vid.* DEMUS, p. 348.)

LEXIARCHOL. (*Vid.* ECCLESIA, p. 385.)

LEXIS. (*Vid.* DICE, p. 358.)

*LIBANOTIS (*λίβανωτις*), a plant, our *Rosemary*. The Greek name is derived from *λίβανος*, "incense," and has reference to the strong aromatic odour emitted; the Latin name *Rosmarinus*, which the poets commonly write as two words, *Ros marinus*, alludes to the circumstance of the plant's being "used by the ancients in sprinkling, as we read in the Scriptures of hyssop, and of its growing in places near the seacoast. Virgil is supposed to be the first author who mentions it by the name of *Ros (marinus)*. Theophrastus describes two species, the first, or *λίβανωτις ἄκαρπος*, is the true *Rosmarinus officinalis*; the other, the *λ. κάρπιμος*, is the *Ath-*

1. (Dig. 11, tit. 5, s. 3.)—2. (Liv., ii., 64, 65.)—3. (Dion Cass., xxxviii., 8.—Appian, Bell. Civ., ii., 13.—Suet., Jul., 22.—Vell. Patern., ii., 44.)—4. (Suet., Jul., 28.)—5. (ad Fam., viii.)—6. (Frontinus, De Colonia.)—7. (Cod. ix., tit. 21.)

amanta libanotis, according to Stackhouse. Sprengel is decidedly of opinion that the first species of *Dioscorides* is the *Cachrys libanotis*; the second, the *Ferula nodiflora*; the third he hesitates about admitting as the *Prenanthe purpurea*.¹²

*LIBANOTUS (λίβανωτος), Frankincense. The name, however, is also applied to the Frankincense-tree itself. "Forskael, the Danish traveller," observes Adams, "gave the name of *Amyrus Kataf* to the Frankincense-tree, and Colebrook calls it *Boswellia turifera*. However, as Stackhouse and Sprengel state, there is still great uncertainty about the tree which produces the frankincense. Dr. Harris remarks, that 'what is called 'pure incense' is no doubt the same as the *mascula thura* of Virgil.' Dr. Martyn farther states, that the ancients called the best sort of incense 'male.' A late writer on this class of medicinal substances, Dr. Maton, says, 'Some authors have considered the genuine *λίβανος* (*Thus*) to have been obtained from the *Juniperus Lycia*, and to constitute the *Olibanum* of our shops, but I cannot find any passage in the ancient authors sufficiently precise to corroborate this conjecture.' According to Ammonius and the scholiast on Aristophanes, the tree is, properly speaking, to be named *λίβανος*, and the term *λίβανωτος* is to be restricted to the Frankincense itself. Theophrastus, however, does not use the terms in this sense."¹²

LIBATIO. (Vid. SACRIFICIUM.)

LIBELLA. (Vid. DENARIUS.)

LIBELLUS is the diminutive form of *liber*, and signifies, properly, a little book. A libellus was distinguished from other kinds of writing by being written, like our books, by pages, whereas other writings were written *transversa charta*.³ A libellus, however, did not necessarily consist of several pages. It was used by the Romans as a technical term in the following cases:

1. *Libelli accusatorum* or *accusatorii* were the written accusations which in some cases a plaintiff, after having received the permission to bring an action against a person, drew up, signed, and sent to the judicial authorities, viz., in the city to the prætor, and in a province to the proconsul.⁴ (Compare *Actio*, p. 17.) The form in which a libellus accusatorius was to be written is described by Ulpian in a case of adultery.⁵ The accuser had to sign the libellus, and if he could not write, he was obliged to get somebody else to do it for him. If the libellus was not written in the proper legal form, it was invalid, but the plaintiff had still the right to bring the same action again in its legal form.⁶

2. *Libelli famosi* were what we call libels or pasquinades, intended to injure the character of persons. A law of the Twelve Tables inflicted very severe punishments on those who composed defamatory writings against any person.⁷ During the latter part of the Republic this law appears to have been suspended, for Tacitus⁸ says that, previous to the time of Augustus, libels had never been legally punished,⁹ and that Augustus, provoked by the audacity with which Cassius Severus brought into disrepute the most illustrious persons of the age, ordained, by a *lex majestatis*, that the authors of libelli famosi should be brought to trial. On this occasion, Augustus, who was informed of the existence of several such works, had a search made at

Rome by the ædiles, and in other places by the local magistrates, and ordered the libels to be burned; and some of the authors were subjected to punishment.¹ A law quoted by Ulpian² ordained that the author of a libellus famosus should be *intestabilis*, and during the latter period of the Empire we find that capital punishment was not only inflicted upon the author, but upon those persons in whose possession a libellus famosus was found, or who did not destroy it as soon as it came into their hands.³

3. *Libellus memorialis*, a pocket or memorandum book.⁴ The libellus, from which Cicero⁵ communicates a memorandum of Brutus, appears to have been a book of this kind.

4. The word libellus was also applied to a variety of writings, which in most cases, probably, consisted of one page only:

a. To short letters addressed to a person for the purpose of cautioning him against some danger which threatened his life,⁶ and to any short letters or reports addressed to the senate or private individuals.⁷

b. To the bills called *libelli gladiatorii* or *muncera rii*, which persons who gave gladiatorial exhibitions distributed among the people. (Vid. *GLADIATORES*, p. 476.)

c. To petitions to the emperors.⁸ The emperors had their especial officers or secretaries who attended to all petitions (*libellis præfectus*), and who read and answered them in the name of the emperor.¹⁰ Such a libellus is still extant.¹¹

d. To the bill of appeal called *libellus appellatorius*, which a person who did not acquiesce in a judicial sentence had to send in after the lapse of two or three days.¹²

e. To the bills stuck up in the most frequented parts of the city, in case of a debtor having absconded.¹³ Such bills were also stuck upon the estates of such a debtor, and his friends who wished to pay for him sometimes pulled down such bills.¹⁴

f. To bills in which persons announced to the public that they had found things which had been lost, and in which they invited the owner to claim his property.¹⁵ The owner gave to the finder a reward (*εὐρετρα*), and received his property back. Sometimes the owner also made known to the public by a libellus what he had lost, stated his name and residence, and promised to give a reward to the person who found his property and brought it back to him.¹⁶

LIBER (*βιβλίον*), a Book. The most common material on which books were written by the Greeks and Romans was the thin coats or rind (*liber*, whence the Latin name for a book) of the Egyptian papyrus. This plant was called by the Egyptians Byblos (*βύβλος*), whence the Greeks derived their name for a book (*βιβλίον*). It formed an article of commerce long before the time of Herodotus,¹⁷ and was extensively used in the western part of Europe, as is proved by the number of rolls of papyri found at Herculaneum. In the sixth century of the Christian æra the duty on imported papyrus was abolished by Theodorice the Great, on which occasion Cassiodorus wrote a letter,¹⁸ in which he congratulates the world on the cessation of a tax so unfavourable to the progress of learning and of commerce. The papyrus-tree grows in swamps to the height of ten feet and more, and paper was prepared from the

thin coats or pellicles which surround the plant in the following manner according to Pliny.¹ The different pieces were joined together by the turbid Nile water, as it has a kind of glutinous property. A layer of papyrus (*scheda* or *philyra*) was laid flat on a board, and a cross layer put over it; and being thus prepared, the layers were pressed, and afterward dried in the sun. The sheets were then fastened or pasted together, the best being taken first, and then the inferior sheets. There were never more than twenty in a scapus or roll. The papyri found in Egyptian tombs differ very much in length, but not much in breadth, as the breadth was probably determined by the usual length of the strips taken from the plant. The length might be carried to almost any extent by fastening one sheet to another. The writing was in columns, with a blank slip between them.² The form and general appearance of the papyri rolls will be understood from the following woodcut, taken from paintings found at Pompeii.³

The paper (*charta*) made from the papyrus was of different qualities. The best was called after Augustus, the second after Livia, the third, which was originally the best, was named Hieratica, because it was appropriated to the sacred books. The finest paper was subsequently called Claudia, from the Emperor Claudius. The inferior kinds were called *Amphitheatrica*, *Saitica*, *Lenoica*, from the places in Egypt where it was made, and also *Fanniana*, from one Fannius, who had a celebrated manufactory at Rome. The kind called *Emporetica* was not fit for writing, and was chiefly used by merchants for packing their goods, from which circumstance it obtained its name.⁴

Next to the papyrus, parchment (*membrana*) was the most common material for writing upon. It is said to have been invented by Eumenes II., king of Pergamus, in consequence of the prohibition of the export of papyrus from Egypt by Ptolemy Epiphanes.⁵ It is probable, however, that Eumenes introduced only some improvement in the manufacture of parchment, as Herodotus mentions writing on skins as common in his time, and says that the Ionians had been accustomed to give the name of skins (*διόρηται*) to books.⁶ Other materials are also mentioned as used for writing on, but books appear to have been almost invariably written either upon papyrus or parchment.

The ancients wrote usually on only one side of the paper or parchment, whence Juvenal⁷ speaks of an extremely long tragedy as

"summi plena jam margine libri
Scriptus et in tergo necdum finitus Orcestes."

Such works were called *Opistographi*,⁸ and are also said to be written in *aversa charta*.⁹

The back of the paper, instead of being written upon, was usually stained with saffron colour or the cedrus¹⁰ (*crocea membrana tabellæ*¹¹). We learn from Ovid that the cedrus produced a yellow colour.¹²

1. (H. N., xiii., 23.)—2. (Egyptian Antiquities, vol. ii., ch. 7, Lond., 1836.)—3. (Gell., Pompeii, p. 187.)—4. (Plin., H. N., xiii., 23, 24.)—5. (Plin., H. N., xiii., 21.)—6. (v., 58.)—7. (i., 5.)—8. (Plin., Epist., iii., 5.)—9. (Mart., viii., 62.)—10. (Lucian, Περὶ ἀραίδων, 10, vol. iii., p. 113.)—11. (Juv., vii., 23.—Pers., iii., 10.)—12. (Ovid, Trist., iii., 1, 13.)

As paper and parchment were dear, it was frequently the custom to erase or wash out writing of little importance, and to write upon the paper or parchment again, which was then called *Palimpsestus* (*παλινψήστος*). This practice is mentioned by Cicero,¹ who praises his friend Trebatius for having been so economical as to write upon a palimpsest, but wonders what those writings could have been which were considered of less importance than a letter.²

The paper or parchment was joined together so as to form one sheet, and when the work was finished, it was rolled on a staff, whence it was called a *volumen*; and hence we have the expression *evolvere librum*.³ When an author divided a work into several books, it was usual to include only one book in a volume or roll, so that there were generally the same number of volumes as of books. Thus Ovid⁴ calls his fifteen books of *Metamorphoses* "*mutata ter quinque volumina forma*."⁵ When a book was long, it was sometimes divided into two volumes: thus Pliny⁶ speaks of a work in three books, "*in sex volumina propter amplitudinem divisi*."

In the papyri rolls found at Herculaneum, the stick on which the papyrus is rolled does not project from the papyrus, but is concealed by it. Usually, however, there were balls or bosses, ornamented or painted, called *umbilici* or *cornua*, which were fastened at each end of the stick, and projected from the papyrus.⁷ The ends of the roll were carefully cut, polished with pumice-stone, and coloured black; they were called the *geminae frontes*.⁸

To protect the roll from injury, it was frequently put in a parchment case, which was stained with a purple colour, or with the yellow of the luteum. Martial⁹ calls such a covering a *purpurea toga*. Something of the same kind is meant by the Greek *σιντιβά* (*σιντιβά*), which Hesychius explains by *δεγυράται σιντιβά*.

The title of the book (*titulus, index*) was written on a small strip of papyrus or parchment with a light red colour (*coccum* or *minium*). Winkelmann supposed that the title was on a kind of ticket suspended to the roll, as is seen in the paintings at Herculaneum (see woodcut), but it was most probably stuck on the papyrus itself.¹¹ We learn from Seneca¹² and Martial¹³ that the portraits of the authors were often placed on the first page of the work.¹⁴ Compare the articles *ATRAMENTUM*, *BIBLIOPOLA*, *BIBLIOTHECA*, *CALAMUS*, *CAPSA*, *STYLUS*.

LIBERARIA. (Vid. DIONYSIA, p. 366.)

LIBERARIS CAUSA. (Vid. ASSERTOR.)

LIBERI. (Vid. INGENUI, LIBERTUS.)

LIBERORUM JUS. (Vid. JULIA ET PAPIA POPULÆA LEX.)

LIBERTUS, LIBERTINUS. Freeman (*liberi*) were either *ingenui* (vid. INGENUI) or *libertini*. Libertini were those persons who had been released from legal servitude (*qui ex justa scriptura manumissi sunt*).¹⁵ A manumitted slave was *libertus* (that is, *liberatus*) with reference to his master; with reference to the class to which he belonged after manumission, he was *libertinus*. According to Suetonius, libertinus was the son of a libertus in the time of the censor Appius Claudius, and for some time after;¹⁶ but this is not the meaning of the word in the extant Roman writers.

There were three modes of *legitima manumissio*, the *vindicta*, the *census*, and the *testamentum*: if

1. (ad Fam., vii., 18.)—2. (Compare Catull., xxi., 5.—Martial, xiv., 7.)—3. (Cic. ad Att., ix., 10.)—4. (Trist., i., 1, 117.)—5. (Compare Cic. Tusc., iii., 3.—Id., ad Fam., xvi., 17.)—6. (Epist., 5.)—7. (Martial, iii., 2.—Id., v., 6, 15.—Tibull., iii., 1, 13.—Ovid, Trist., i., 1, 8.)—8. (Ovid, l. c.)—9. (x., 93.)—10. (Cic. ad Att., iv., 5.)—11. (Compare Tibull., l. c.)—12. (De Tranq. An., 9.)—13. (xiv., 186.)—14. (Becker, Gallus, i., p. 163—174.)—15. (Gaius, i., 11.)—16. (Claud., c. 21.)

the manumitted slave was above thirty years of age, if he was the quiritarian property of his master, and if he was manumitted in proper form (*legitime, justa et legitima manumissione*), he became a *civis Romanus*: if any of these conditions were wanting, he became a *Latinus*, and in some cases only a *dediticius*. (*Vid. MANUMISSIO*.) Thus there were, as Ulpian observes, three kinds of *liberti*: *cives Romani*, *Latini Juniani*, and *dediticii*.

The status of a *civis Romanus* and that of a *dediticius* have been already described. (*Vid. CIVITAS, DEDITICI*.)

Originally, slaves who were so manumitted as not to become *cives Romani*, were still slaves; but the prætor took them under his protection, and maintained their freedom, though he could not make them *cives Romani*. The *lex Junia* gave them a certain status, which was expressed by the phrase *Latini Juniani*: they were called *Latini*, says Gaius,¹ because they were put on the same footing as the *Latini coloniarii*, and *Juniani*, because the *Junia lex* gave them freedom, whereas before they were by strict law (*ex jure Quiritium*) slaves. Gaius² says that the *lex Junia* declared such manumitted persons to be as free as if they had been *cives Romani* citizens by birth (*cives Romani ingenui*), who had gone out from Rome to join a Latin colony, and thereby had become *Latini coloniarii*: this passage, which is not free from difficulty, is remarked on by Savigny.³

A *Latinus* could attain the *civitas* in several ways.⁴ (*Vid. LATINITAS*.) As the *patria potestas* was a *jus* peculiar to Roman citizens, it followed that a *Latinus* had not the *patria potestas* over his children. If, however, he had married either a *Latina* and had begotten a child, who would, of course, be a *Latinus*, or had married a *Roman civis*, and had begotten a child, which, by a *senatus consultum* of Hadrian, would be a *Romanus civis*, he might, by complying with the provisions of the *lex Ælia Sentia*, in the former case obtain the *civitas* for himself, his wife, and child, and in both cases acquire the *patria potestas* over his child just as if the child had been born in *justæ nuptiæ*.⁵

In considering the legal condition of *libertini*, it is necessary to remember that even those who were *cives Romani* were not *ingenui*, and that their patroni had still certain rights with respect to them. The *Latini* were under some special incapacities; for the *lex Junia*, which determined their status, neither gave them the power of making a will, nor of taking property under a will, nor of being named tutores in a will. They could not, therefore, take either as *heredes* or *legatarii*, but they could take by way of *fideicommissum*.⁶ The sons of *libertini* were *ingenui*, but they could not have gentile rights; and the descendants of *libertini* were sometimes taunted with their servile origin.⁷

The law which concerns the property (*bona*) of *libertini* may be appropriately considered under *PATRIGENUS*: see also *INGENUI*.

LIBERTUS (GREEK) (*Ἀπελευθερος*), a freedman. It was not unfrequent for a master at Athens to restore a slave to freedom, or to allow him to purchase it. The state into which a slave thus entered was called *ἀπελευθερία*, and he was said to be *καθ' εαυτόν*.⁸ It is not quite certain whether those persons who are termed *οἱ χωρίς οἰκοῦντες*⁹ were likewise freedmen, as the grammarians assert, or whether they were persons yet in slavery, but living separated from their master's household; but in Demosthenes¹⁰ the expression *χωρίς ὄκει* is evident-

ly used as synonymous with "he has been emancipated." A slave, when manumitted, entered into the status of a *μετοικός* (*vid. ΜΕΤΟΙΚΟΣ*), and, as such, he had not only to pay the *μετοίκιον*, but a *triobolon* in addition to it. This *triobolon* was probably the tax which slaveholders had to pay to the Republic for each slave they kept, so that the *triobolon* paid by freedmen was intended to indemnify the state, which would otherwise have lost by every manumission of a slave.¹ The connexion of a freedman with his former master was, however, not broken off entirely on his manumission, for he had throughout his life to regard him as his patron (*προστάτης*), and to fulfil certain duties towards him. In what these duties consisted beyond the obligation of showing gratitude and respect towards his deliverer, and of taking him for his patron in all his affairs, is uncertain, though they seem to have been fixed by the laws of Athens.² Whether the relation existing between a person and his freedman descended to the children of the latter, is likewise unknown. That a master, in case his freedman died, had some claims to his property, is clear from Isæus.³ The neglect of any of the duties which a freedman had towards his former master was prosecuted by the *ἀποστασίον δίκη*. (*Vid. ΑΠΟΣΤΑΣΙΟΤ ΔΙΚΗ*.)

The Spartans likewise restored their slaves some times to freedom, but in what degree such freedmen partook of the civic franchise is not known. That they could never receive the full Spartan franchise is expressly stated by Dion Chrysostomus;⁴ but Müller⁵ entertains the opinion that Spartan freedmen, after passing through several stages, might in the end obtain the full franchise; this opinion, however, is more than doubtful. Spartan freedmen were frequently used in the armies and in the fleet, and were, according to Myro,⁶ designated by the names of *ἀφεται*, *ἀδέσποτοι*, *ἐρκητῆρες*, *δεσποσιοναῦται*, and *νεοδαμῶντες*.

LIBITINARIJ. (*Vid. FUNUS*, p. 459.)

LIBRA, dim. LIBELLA (*σταθμός*), a Balance, a pair of Scales. The principal parts of this instrument were, 1. The beam (*vid. JUCTUM*), whence anything which is to be weighed is said *ὑπὸ ζυγὸν ἀναβλήθηναι*, literally, "to be thrown under the beam."⁷ 2. The two scales, called in Greek *τάλαντα*⁸ and *πλάστιγγε*,⁹ and in Latin *lances*.¹⁰ (*Vid. LANX*.) Hence the verb *ταλαντεύω* is employed as equivalent to *σταθμάω* and to the Latin *libra*, and is applied as descriptive of an eagle balancing his wings in the air.¹¹ The beam was made without a tongue, being held by a ring or other appendage (*ῥήμα*), fixed in the centre. (See the woodcut.) Specimens of bronze balances may be seen in the British Museum, and in other collections of antiquities, and also of the steelyard (*vid. STATERA*), which was used for the same purpose as the *libra*. The woodcut to the article *CATENA* shows some of the chains by which the scales are suspended from the beam. In the works of ancient art, the balance is also introduced emblematically in a great variety of ways. Cicero¹² mentions the balance of Critolaus, in which the good things of the soul were put into one scale, and those of the body and all external things into the other, and the first was found to outweigh the second, though it included both earth

and sea. In Egyptian paintings the balance is often introduced for the sake of exhibiting the mode of comparing together the amount of a deceased man's merits and of his defects. The annexed woodcut

is taken from a beautiful bronze patera, representing Mercury and Apollo engaged in exploring the fates of Achilles and Memnon, by weighing the attendant genius of the one against that of the other.¹ A balance is often represented on the reverse of the Roman imperial coins; and, to indicate more distinctly its signification, it is frequently held by a female in her right hand, while she supports a cornucopia in her left, the words *ÆQUITAS AVGVSTI* being inscribed on the margin, so as to denote the justice and impartiality with which the emperors dispensed their bounty.

The constellation libra is placed in the zodiac at the equinox, because it is the period of the year at which day and night are equally balanced.²

The mason's or carpenter's level was called *libra* or *libella* (whence the English name) on account of its resemblance in many respects to a balance.³ Hence the verb *libro* meant to level as well as to weigh. The woodcut to the article *CIRCINVS*, which is inserted sideways, shows a *libella fabricis* having the form of the letter A, and the line and plummet (*perpendicularum*) depending from the apex.

LIBRA or AS, a pound, the unit of weight among the Romans and Italians. Many ancient specimens of this weight, its parts and multiples, have come down to us; but of these some are imperfect, and the rest differ so much in weight that no satisfactory conclusion can be drawn from them. The difference between some of these specimens is as much as two ounces. An account of some of the most remarkable of them is given by Hussey⁴ and Böckh.⁵ This variety is to be accounted for partly by the well-known carelessness of the Romans in keeping to their standards of weights, and partly by the fact that many of the extant weights are from provincial towns, in which this carelessness was notoriously greater than in the metropolis.

The Roman coins furnish a mode of calculating the weight of the *libra*, which has been more relied on than any other by most modern writers. The AS will not help us in this calculation, because its weight, though originally a pound, was very early diminished, and the existing specimens differ from each other very greatly. (*Vid. AS.*) We must, therefore, look only to the silver and gold coins. Now the average weight of the extant specimens of the denarius is about 60 grains, and in the early ages of the coinage 84 denarii went to the pound. (*Vid. DENARIUS.*) The pound, then, by this calcula-

tion, would contain 5040 grains. Again, the *aurei* of the early gold coinage were equal in weight to a *scrupulum* and its multiples. (*Vid. AURUM.*) Now the *scrupulum* was the 288th part of the pound (*vid. UNCIA*), and the average of the *scrupulari aurei* has been found by Letronne to be about 17½ grains. Hence the pound would be $288 \times 17\frac{1}{2} = 5040$ grains, as before. The next *aurei* coined were, according to Pliny, 40 to the pound, and, therefore, if the above calculation be right, = 126 grains; and we do find many of this weight. But, well as these results hang together, there is great doubt of their truth; for, besides the uncertainty which always attends the process of calculating a larger quantity from a smaller, on account of the multiplication of a small error, we have every reason to believe that the existing coins do not come up to their nominal weight, for there was an early tendency in the Roman mint to make money below weight¹ (compare AS, AURUM, DENARIUS), and we have no proof that any extant coins belonged to the *very earliest* coinage, and, therefore, no security that they may not have been depreciated. In fact, there are many specimens of the denarius extant which weigh more than the above average of 60 grains. It is therefore probable that the weight of 5040 grains, obtained from this source, is too little.

Another mode of determining the pound is from the relation between the Roman weights and measures. The chief measures which aid us in this inquiry are the amphora, or quadrantal, and the congius. The solid contents of the amphora were equal to a cube of which the side was one Roman foot, and the weight of water it contained was 80 pounds. Hence, if we can ascertain the length of the Roman foot independently, it will give us the solid contents of the amphora, from which we can deduce the weight of the Roman pound. But it may be obtained at once from the congius of Vespasian, which holds 10 Roman pounds, and was found by Dr. Hase (in 1721) to contain 5203·69 grains troy of distilled water. (*Vid. CONGIUS.*) This would give for the pound 5203·769 grains troy, or very nearly 5204 grains = 11½ ounces and 60·45 grains. By another experiment (in 1680), Auzout found the congius to contain 51463·2 grains troy. This would make the pound 5146·32 grains troy, which is only 57·449 grains less than before. Hussey considers that Dr. Hase's experiment is more to be relied on than Auzout's, as being more recent. The difference may be partly owing to another cause, which throws doubt on the whole calculation. The interior surface of the congius may have been injured by time and other causes, and its capacity therefore increased. Wurm asserts this as a fact.² Again, the nature of the fluid employed in the experiment, its temperature, and the height of the barometer, would all influence the result, and the error from these sources must occur twice, namely, at the original making of the congius, and at the recent weighing of its contents. Still these errors are probably small, and therefore we may take the weight of 5204 grains troy, as obtained from this experiment, to be the nearest approximation to the weight of the Roman pound. This result very little exceeds that obtained from the coins; and as we have seen that the latter give too small a weight, the excess may be viewed rather as a correction than a contradiction. For it gives as the weight of the denarius of 84 to the pound nearly 62 grains, and many denarii weigh as much, or even more. The scruple would be 18·07 grains, which only exceeds the average of extant specimens by about half a grain.³ Wurm, who de-

1. (Winckelmann, *Mon. Ined.*, 133.—Millin, *Point. de Vases Ant.*, t. i., pl. 19, p. 39.)—2. (Virg., *Georg.*, i., 208.—Plin., *H. N.*, xviii., 25.—Schol. in *Arat.*, 89.)—3. (Varro, *De Re Rust.*, i., 6.—Columella, iii., 13.—Plin., *H. N.*, xxvi., 22.)—4. (*Ancient Weights*, &c., ix., § 3.)—5. (*Metrolog. Untersuch.*, p. 170.)

1. (Plin., *H. N.*, xxxiii., 13, 46.)—2. (*De Pond.*, &c., p. 78.)—3. (*Vid. Hussey, Ancient Weights*, &c., chap. ix.)

pet. is solely on the coins, makes it 5053·635 grains troy,¹ and Böckh arrives at nearly the same result.²

The uncial division, which has been noticed in speaking of the coin As, was also applied to the weight. The following table shows the divisions of the pound, with their value in ounces and grains, avoirdupois weight :

	Unciæ.	Oz.	Grs.
As or Libra	12	11½	60·45
Deunx	11	10½	64·54
Dextans or Decunciis	10	9½	38·50
Dodrans	9	8½	42·57
Bes or Bessis	8	7½	76·75
Septunx	7	6½	80·88
Semis or Semissis	6	5½	84·95
Quincunx	5	4½	89·05
Triens	4	3½	93·14
Quadrans or Teruncius	3	2½	97·21
Sextans	2	1½	101·29
Sescuncia or Sescunx	1½	1½	103·624
Uncia	1	0½	105·36

or 433·666

The divisions of the ounce are given under *UNCIA*. Where the word *punda*, or its abbreviations *p.* or *pono*, occur with a simple number, the weight understood is the *libra*.

The name *libra* was also given to a measure of horn, divided into twelve equal parts (*unciæ*) by lines marked on it, and used for measuring oil.³

LIBRARI, the name of slaves who were employed by their masters in writing or copying in any way. They must be distinguished from the scribe publici, who were freedmen (*vid. SCRIBÆ*), and also from the booksellers (*vid. BIBLIOPOLA*), to both of whom this name was also applied. The slaves to whom the name of *librarii* was given may be divided into three classes :

1. *Librarii* who were employed in copying books, called *scriptores librarii* by Horace.⁴ These *librarii* were also called in later times *antiquarii*.⁵ Isidore⁶ says that the *librarii* copied both old and new books, while the *antiquarii* copied only old books. Becker,⁷ however, thinks that, when the cursive character came into general use, the name of *antiquarii* was applied to the copyists who transcribed books in the old uncial character. The name of *librarii* was also given to those who bound books,⁸ and to those who had the care of libraries.

2. *Librarii a studiis* were slaves who were employed by their masters, when studying, to make extracts from books, &c.⁹ To this class the *notarii*, or short-hand writers, belonged, who could write down rapidly whatever their masters dictated to them.¹⁰

3. *Librarii ab epistolis*, whose principal duty was to write letters from their masters' dictation.¹¹ To this class belonged the slaves called *ad manum*, *a manu*, or *amanuenses*. (*VID. AMANUENSIS*.)

LIBRATOR is, in general, a person who examines things by a *LIBRA*; but the name was, in particular, applied to two kinds of persons.

1. *Librator aquæ*, a person whose knowledge was indispensable in the construction of aqueducts, sewers, and other structures for the purpose of conveying a fluid from one place to another. He examined by a hydrostatic balance (*libra aquaria*) the relative heights of the places from and to which the water was to be conducted. Some persons at Rome made this occupation their business, and were en-

gaged under the *curatores aquarum*, though architects were also expected to be able to act as *libratores*.¹

2. *Libratores* in the armies were probably soldiers who attacked the enemy by hurling with their own hands (*librando*) lances or spears against them.² Lipsius³ thinks that the *libratores* were men who threw darts or stones against the enemy by means of machines, *tormenta*.⁴ But this supposition can scarcely be supported by any good authority. During the time of the Republic, *libratores* are not mentioned in the Roman armies.

LIBRIPENS. (*VID. MANCIPATIO*.)

LIBURNA, *LIBURNICA* (*Λιβυρνίς*, *Λιβυρνον*), commonly a bireme with the mast amidship, as appears from Lucian,⁵ but not unfrequently of larger bulk, as may be inferred from comparing Florus, iv., 2, with Suetonius, *Octav.*, 17, from which passages we learn that the fleet of Augustus at Actium consisted of vessels from the trieres, the lowest line of battle ship, to the hexeres, and that the ships were *Liburnicæ*. Horace⁶ alludes to the immense size of the ships of Antony compared with these *Liburnicæ*. From the description of them by Varro, as quoted by A. Gellius,⁷ they appear to have been originally somewhat similar to the light Indian boats, literally sewn together, which are now used to cross the surf in Madras Roads. The *Liburni* stitched the planks of their boats together probably only in their earliest and rudest shape, as is still the practice in Malabar. Pliny⁸ informs us that the material of which these vessels were constructed was pine timber, as clear from resin as could be obtained. The piratical habits of the Illyrian nation, from whose ships the Romans affixed this term to their own, are described by Appian,⁹ who also confirms Lucian in the statement that they were commonly biremes. From its resemblance in shape to these vessels, the *Liburnum* or *litter* derives its name. Its convenience is well described by Juvenal,¹⁰ though some commentators think that this passage refers to *Liburnian* slaves who carried the litter. The sharpness of the beak of these ships, which was probably of also great weight (Böckh conjectures in the trieres of nearly four talents), is clearly indicated by Pliny.¹¹ The same writer also informs us that they were constructed sharp in the bows, to offer the least possible resistance to the water. The *Navis Rostrata* and *Liburnica* were the same.¹²

The term *Liburna* became incorporated into the Latin tongue simply from the assistance rendered to Augustus by the *Liburni* as a maritime power at the battle of Actium. From this period, experience having shown their efficiency, this class of vessels became generally adopted by the Romans.¹³ In a similar manner, many naval terms, from the excellence of a foreign construction, have been introduced into our language from the Dutch, French, Spanish, and Italian, as brigantine, galleon, felucca, frigate, &c. After the period of the naturalization of the word in the Latin language, it lost its local and particular force, and became applied to other kinds of ships.

LICHAS. (*VID. PES*.)

**LICHEN* (*λεχών*), the Lichen. "The *Lichen* of Pliny," observes Adams, "would appear to be different from that of Dioscorides. The former is the *Marchantia conica*, L. The other is not so easily determined. Sprengel inclines to the *Peltigera*

canina, sive *Aphthosa*, Hoffm. The *λεχίνες ἱππων*, described in the M.M. of the ancients, were the well-known callosities which form at the knees of horses, called *spavins* in English, and *l'epavin* in French. The term *λεχίν* was also applied to a cutaneous disease allied to leprosy.*

LICINÆ ROGATIO'NES. (*Vid.* ROGATIONES LICINÆ.)

LICTOR, a public officer, who attended on the chief Roman magistrates. The number which waited on the different magistrates is stated in the article FASCES.

The office of lictor is said to have been derived by Romulus from the Etruscans.¹ The etymology of the name is doubtful; Gellius² connects it with the verb *ligare*, because the lictors had to bind the hands and feet of criminals before they were punished. The lictors went before the magistrates one by one in a line; he who went last or next to the magistrate was called *proximus lictor*, to whom the magistrate gave his commands;³ and, as this lictor was always the principal one, we also find him called *primus lictor*,⁴ which expression some modern writers have erroneously supposed to refer to the lictor who went first.

The lictors had to inflict punishment on those who were condemned, especially in the case of Roman citizens;⁵ for foreigners and slaves were punished by the *carfax*; and they also, probably, had to assist in some cases in the execution of a decree or judgment in a civil suit. The lictors also commanded (*animadvertunt*) persons to pay proper respect to a magistrate passing by, which consisted in dismounting from horseback, uncovering the head, standing out of the way, &c.⁶

The lictors were originally chosen from the plebs,⁷ but afterward appear to have been generally freedmen, probably of the magistrate on whom they attended.⁸

Lictors were properly only granted to those magistrates who had the *imperium*. Consequently, the tribunes of the plebs never had lictors,⁹ nor several of the other magistrates. Sometimes, however, lictors were granted to persons as a mark of respect or for the sake of protection. Thus, by a law of the triumvirs, every vestal virgin was accompanied by a lictor whenever she went out,¹⁰ and the honour of one or two lictors was usually granted to the wives and other female members of the imperial family.¹¹

There were also thirty lictors, called *Lictores Curiati*, whose duty it was to summon the *curiæ* to the *comitia curiata*; and when these meetings became little more than a form, their suffrages were represented by the thirty lictors.¹²

LIGO (*δίκελλα* or *μύκελλα*) was a hatchet formed either of one broad iron or of two curved iron prongs, which was used by the ancient husbandmen to clear the fields from weeds.¹³ The ligo seems also to have been used in digging the soil and breaking the clods.¹⁴

LIGULA, a Roman measure of capacity, containing one fourth of the *cyathus*, and therefore equal to .0206 of a pint English.¹⁵

*LIGUSTRUM, a plant about which considerable uncertainty prevails. It is commonly, however, regarded as the *Privet*. Virgil mentions it in

one of his Eclogues, but all that can be gathered from what he says of it is, that the flowers are white and of no value. "Pliny," observes Martyn, "says it is a tree, for in the 24th chapter of the 12th book, where he is speaking of the *cypros* of Egypt, he uses the following words: 'Quidam habere esse dicunt arborum quæ in Italia Ligustrum vocatur.' Thus, also, we find in the tenth chapter of the 24th book, 'Ligustrum eadem arbor est quæ in Oriente cypros.' If the *ligustrum* of Pliny was that which is now commonly known by that name, by us called *privet* or *primprint*, and by the Italians *guistrico*, which seems a corruption of *ligustrum*, then he was mistaken in affirming it to be the same with the *cypros* of Egypt, which is the *elhanne* or *alcanna*. Matthioli, in his commentaries on Dioscorides, says that Servius, among others, took the *ligustrum* to be that sort of *convolvulus* which we call *great bindweed*. Where Matthioli found this opinion of Servius I cannot tell, unless he made use of some copy very different from those which we now have. We find no more in our copies of Servius than that the *ligustrum* is a very white but contemptible flower. Still it must be acknowledged that the great bindweed has a very fair claim to be accounted the *ligustrum* of Virgil, on account of its name being derived from 'binding' (*a ligando*), from the pure whiteness of its flower, and from its being, at the same time, a contemptible weed. We may also, with good reason, suspect that our *privet* is not the plant intended, because the flowers are not fair enough, and yet are too sweet to be rejected with contempt. But it weighs something on the other side, that Pliny has called the *ligustrum* a tree in two different places. In conformity, therefore, with the most common opinion, I have translated the term *ligustrum* by 'privet'; but if any one would change it for 'bindweed,' I shall not greatly contend with him."¹

*LIGUSTICUM (*Λιγυστικόν*). "Woodville agrees with the earlier commentators on Dioscorides and Galen, in referring this to the well-known plant, the *Ligusticum Levisticum*, or common Lovage; but this opinion is questioned by Alston Sprengel, also, is not quite satisfied, and rather inclines to the *Laserpitium Siler*. Apicius recommends it frequently as a condiment."²

*LILIUM (*κρίνον*), the Lily, or *Lilium candidum*, L. The Persian term *taléh*, which is a name for all the liliaceous plants, and especially for the tulip (of which last the ancients knew nothing), has passed, on the one hand, into the family of Northern languages, under the forms of "*lily*," "*lilie*," &c., and on the other into the Greek and Latin, for *λείριον* and *lilium* only differ by a very usual change of letters. (*Vid.* LIRIUM.) "We need have no hesitation," remarks Adams, "in determining the common *κρίνον* of the Greeks to have been the *Lilium candidum*, L. Dioscorides describes another species with purple flowers, which Sprengel is in doubt whether to set down as the *Lilium martagon* or *L. Chalcedonicum*."³

LIMA, a File, was made of iron or steel, for the purpose of polishing metal or stone, and appears to have been of the same form as the instruments used for similar purposes in modern times.⁴

LIMBUS (*παρρηγή*), the border of a tunic⁵ or a scarf.⁶ This ornament, when displayed upon the tunic, was of a similar kind with the *Cyclas* and *INSTITA*,⁷ but much less expensive, more common and more simple. It was generally woven in the

(Serv. in Virg., Æn., ii., 616.)

same piece with the entire garment of which it formed a part, and it had sometimes the appearance of a scarlet or purple band upon a white ground; in other instances it resembled foliage,¹ or the scrolls and meanders introduced in architecture. A very elegant effect was produced by bands of gold thread interwoven in cloth of Tyrian purple,² and called *ληροί* or *leria*.³ Demetrius Poliorcetes was arrayed in this manner (*χρυσοπάρφοις ἀλουργίσαι*).⁴ Virgil⁵ mentions a scarf enriched with gold, the border of which was in the form of a double meander. In illustration of this account, examples of both the single and the double meander are introduced at the top of the annexed woodcut. The other eight spe-

cimens of limbi are selected to show some of the principal varieties of this ornament, which present themselves on Etruscan vases and other works of ancient art. The effect of the limbus as a part of the dress is seen in the woodcuts at pages 27, 96, 188, 208, 225, 314.

The use of the limbus was almost confined to the female sex among the Greeks and Romans, but in other nations it was admitted into the dress of men likewise.

An ornamental band, when used by itself as a fillet to surround the temples or the waist, was also called limbus.⁶ Probably the limbolarii mentioned by Plautus⁷ were persons employed in making bands of this description.

LIMEN. (Vid. JANUA, p. 524.)

LIMES. (Vid. AGRIMENSORES.)

LIMITATIO. (Vid. AGRIMENSORES.)

LINEA, dim. LINE'OLA, a linen thread or string (from *linum*, flax), a line.⁸ A string smeared with raddle (*rubrica*, *μῦλος*) and drawn tight, was used by carpenters and masons to impress a straight mark upon boards of wood, slabs of marble, &c.⁹ Hence arose the proverb *στάθμη ἀκριβεστέρος*, meaning "more exact than rectitude itself."¹⁰ Since the string made no mark unless coloured, the pursuit of an object without discrimination and distinctness of purpose was called using the *linea alba*, or *λευκή στάθμη*.¹¹ The cup or box used to hold the raddle was called *μυλῆτιον*.¹²

By an extension of the signification, any straight mark (*γραμμή*), however produced, was called *linea*,¹³ and hence the same terms, both in Latin and Greek (*linea*, *γραμμή*), were applied to a mathematical line.¹⁴ Hence, also, a narrow boundary of any kind was denoted by these terms, and especial-

ly the boundary of human life,¹ and the boundary in the stadium from which the combatants started or at which they stopped.²

Linea also meant a fishing-line; the line used in sounding (*vid. CATAPIRATER*); that employed in agriculture and gardening;³ and a measuring-line.⁴

*LINOSPARTUM (*λινόσπαρτον*), according to Stackhouse, the *Lygeum spartum*. Sprengel holds⁵ that it is either this or the *Stipa terracissima*.⁶

*LINOSPERMUM (*λινόσπερμον*), Linseed, used as an article in the ancient *Materia Medica*.⁷

LINTER, a boat similar to the *μονόβηλα πλοία*, used, according to Pliny,⁸ on the Malabar coast. The ancient British boat, at present in the courtyard of the Museum, formed of one tree, gives an excellent exemplification of the rudest form of the linter. Pliny⁹ tells us that the Germans had boats of this description that held thirty men, and the British vessel just alluded to would certainly carry nearly this complement. The passage in Tacitus¹⁰ is too corrupt to be admitted as any authority for a larger description of ships being included under this term. In Ovid¹¹ it is applied to Charon's bark, which was obviously worked by a single man. Cæsar separates the linter from the *navis*,¹² and also represents the former as one remove, in early boat-building, from the *ratis* or raft.¹³ In another passage¹⁴ he classes them with the *scaphæ*. Tibullus¹⁵ represents them to have been of light draught of water, like our wherries.

"Et qua Velabri regio patet ire solebat
Exiguus pulsa per vada linter aqua."

Ausonius¹⁶ indicates that a chain of them formed a pontoon, and also classes them with the other light boats.¹⁷ Horace¹⁸ describes the linter as a towboat worked by a single mule, which differs from the sense affixed to it by Propertius,¹⁹ who distinguishes between the swift linter and the slow *ratic* or towboat.

"Et modo tam celeres mireris currere lintres
Et modo tam tardas funibus ire rates."

These passages give a twofold sense to linter or wherry and towboat.

The name linter was also applied to a kind of tub or trough made of one block of wood, which was used by country people for various purposes, such as for conveying and pressing the grapes.²⁰

*LINUM (*λίον*), the *Linum usitatissimum*, or common Flax. "Most authors agree with Virgil," observes Martyn, "that flax burns or impoverishes the soil. Columella says it is so exceedingly noxious that it is not safe to sow it, unless you have a prospect of great advantage from it. '*Lini semen, nisi magnus est ejus in ea regione quam colis proveniunt, et pretium prorsus, serendum non est; agris enim præcipue noxiū est.*'"²¹

*LINUM VIVUM, Asbestine linen, or linen made out of Asbestos. (Vid. AMIANTHUS, ASBESTOS.)

*LIPARÆUS LAPIS, a stone of which Sir John Hill speaks as follows: "The Lipara stone is a small stone, usually about the higness of a filbert, of an irregular and uncertain shape, and porous, friable constitution, like that of the pumices, but more easily crumbling into powder between the fingers than even the softest kind of them. The colour is generally a dusky gray, and the whole ex-

ternal face of it evidently shows that it has suffered a change by fire."¹ Dr. Moore thinks that it was a kind of obsidian.²

*LITHARGYRUS (λιθαργυρος), Litharge. "The ancient Litharge, like the modern, was procured during the purification of silver from the lead with which it was usually combined in its natural state. The *scoria* or *dross* which is formed during the process, obtains the name of Litharge. In the language of modern chemistry, it is called the semi-vitrified protoxyde of lead."³

*LITHOSPERMUM (λιθόσπερμον), the *Lithospermum officinale*, or Gromwell.⁴

LITHOSTROTA. (*Vid.* HOUSE, ROMAN, p. 520.)
LITIS CONTESTATIO. "Contestari" is when each party to a suit (*uterque reus*) says, "Testes estote." Two or more parties to a suit (*adversarii*) are said contestari litem, because, when the iudicium is arranged (*ordinato iudicio*), each party is accustomed to say, "Testes estote."⁵ The Litis Contestatio was therefore so called because persons were called on by the parties to the suit to "bear witness," "to be witnesses." It is not here said what they were to be witnesses of, but it may be fairly inferred, from the use of the words contestatio and testatio in a similar sense in other passages,⁶ that this contestatio was the formal termination of certain acts, of which the persons called to be witnesses were at some future time to bear record. Accordingly, the contestatio, spoken of in the passage of Festus, must refer to the words ordinato iudicio, that is, to the whole business that has taken place in iure, and which is now completed. This interpretation seems to be confirmed by the following considerations.

When the legis actiones were in force, the procedure consisted of a series of oral acts and pleadings. The whole procedure, as was the case after the introduction of the formulæ, was divided into two parts, that before the magistratus, or in iure, and that before the iudex, or in iudicio. That before the magistratus consisted of acts and words by the parties and by the magistratus, the result of which was the determination of the form and manner of the future proceedings in iudicio. When the parties appeared before the iudex, it would be necessary for him to be fully informed of all the proceedings in iure; this was effected in later times by the formula, a written instrument under the authority of the prætor, which contained the result of all the transactions in iure in the form of instructions for the iudex. But there is no evidence of any such written instructions having been used in the time of the legis actiones, and this must therefore have been effected in some other way. The Litis Contestatio, then, may be thus explained: the whole proceedings in iure took place before witnesses, and the contestatio was the conclusion of these proceedings; and it was the act by which the litigant parties called on the witnesses to bear record before the iudex of what had taken place in iure.

This, which seems a probable explanation of the original meaning of Litis Contestatio, may be compared, to some extent, with the apparently original sense of recorder and recording in English law.⁷

When the formula was introduced, the Litis Contestatio would be unnecessary, and there appears no trace of it in its original sense in the classical jurists. Still the expressions Litis Contestatio and Lis Contestata frequently occur in the Pan-

dect, but only in the sense of the completion of the proceedings in iure, and this is the meaning of the phrases Ante litem contestatam, Post litem contestatam.¹ As the Litis Contestatio was originally and properly the termination of the proceedings in iure, it is easily conceivable that, after this form had fallen into disuse, the name should still be retained to express the conclusion of such proceedings. When the phrase Litem Contestari occurs in the classical jurists, it can mean nothing more than the proceedings by which the parties terminate the procedure in iure, and so prepare the matter in dispute for the investigation of the iudex.

It appears from the passage in Festus that the phrase Contestari litem was used because the words "Testes estote" were uttered by the parties after the iudicium ordinatum. It was therefore the uttering of the words "Testes estote" which gave rise to the phrase Litis Contestatio; but this does not inform us what the Litis Contestatio properly was. Still, as the name of a thing is derived from that which constitutes its essence, it may be that the name here expresses the thing, that is, that the Litis Contestatio was so called for the reason which Festus gives, and that it also consisted in the litigant parties calling on the witnesses to bear record. But as it is usual for the whole of a thing to take its name from some special part, so it may be that the Litis Contestatio, in the time of the legis actiones, was equivalent to the whole proceedings in iure, and that the whole was so called from that part which completed it.

The time when the proper Litis Contestatio fell into disuse cannot be determined, though it would seem that this must have taken place with the passing of the Æbutia lex and the two leges Julæ, which did away with the legis actiones except in certain cases. It is also uncertain if the proper Litis Contestatio still existed in those legis actiones which were not interfered with by the leges above mentioned; and if so, whether it existed in the old form or in a modified shape.

This view of the matter is by Keller, in his well-written treatise "Ueber Litis Contestation und Urtheil nach Classischem Römischen Recht," Zurich, 1827. Other opinions are noticed in his work. The author labours particularly to show that the expression Litis Contestatio always refers to the proceedings in iure, and never to those in iudicio.

LITRA, a Sicilian silver coin, which was equal in value to the Æginetan obol. (*Vid.* DRACHMA.) Since the word has no root in the Greek language, but is merely the Greek form of the Latin *libra*,² and since we find it forming part of an uncial system similar to that used in the Roman and Italian weights and money (*vid.* AS, LIBRA), its twelfth part being called *ὄγκια* (the Roman *uncia*), and six, five, four, three, and two of these twelfth parts being denominated respectively *ἡμίλιτρον*, *πεντόγκιον*, *τρεῖς*, *τρεῖς*, and *ἑξῆς*, it is evident that the Greeks of Sicily, having brought with them the Æginetan obol, afterward assimilated their system of coinage to that used by their Italian neighbours, making their obol to answer to the *libra*, under the name of *λίτρα*. In the same way, a Corinthian stater of 16 obols was called in Syracuse a *δεκάλιτρον*, or piece of ten litras.³

The *cotyla*, used for measuring oil, which is mentioned by Galen (*vid.* COTYLA), is also called by him *λίτρα*. Here the word is only a Greek form of *libra*. (*Vid.* LIBRA, *sub fin.*)

*LITRON. (*Vid.* NITRON.)

1. (Hill ad Theophrast., De Lapid., c. 25.)—2. (Anc. Minerology, p. 132.)—3. (Diocor., v., 102.—Adams, Append., s. v.)—4. (Diocor., iii., 148.)—5. (Festus, s. v. Contestari.)—6. (Dig. 28, tit. 1, s. 20.—Ulp., Frag., xx., i. 9.)—7. (Penny Cyclopædia, art. Recorder.)

1. (Gaius, iii., 180; iv., 114.)—2. (Festus, s. v. Lues: "Δίτρα enim libra est.")—3. (Aristot. ap. Pollux, iv., 24, 173; ix., 6, 80.—Müller, Darians, iii., 10, § 12.)

LI'TUUS. Müller¹ supposes this to be an Etruscan word signifying *crooked*. In the Latin writers it is used to denote,

1. The crooked staff borne by the augurs, with which they divided the expanse of heaven, when viewed with reference to divination (*templum*), into regions (*regiones*); the number of these, according to the Etruscan discipline, being sixteen, according to Roman practice, four.² Cicero³ describes the lituus as "*incurvum et leviter a summo inflexum bacileum*;" and Livy⁴ as "*baculum sine nodo aduncum*." It is very frequently exhibited upon works of art. The figure in the middle of the following illustrations is from a most ancient specimen of Etruscan sculpture in the possession of Inghirami,⁵ representing an augur; the two others are Roman denarii.

2. A sort of trumpet slightly curved at the extremity.⁶ It differed both from the *tuba* and the *cornu*,⁷ the former being straight, while the latter was bent round into a spiral shape. Lydus⁸ calls the lituus the sacerdotal trumpet (*ἐρατικήν σάλπιγγα*), and says that it was employed by Romulus when he proclaimed the title of his city. Acro⁹ asserts that it was peculiar to cavalry, while the *tuba* belonged to infantry. Its tones are usually characterized as harsh and shrill (*stridor lituum*;¹⁰ *sonitus acutus*¹¹). The following representation is from Fabretti.

LIXÆ. (Vid. CALONES.)

LOCATI ET CONDUCTI ACTIO. (Vid. LOCATIO.)

LOCATIO, CONDUCTIO. This contract exists when a certain sum of money (*certa merces*) is agreed to be given by one person in consideration of certain work and labour to be done by another, or in consideration of such other person allowing the use and enjoyment of a thing which is to be returned. The parties to such a contract were respectively the locator and conductor. The rules as to locatio and conductio were similar to those which concerned buying and selling (*emptio et venditio*). This being the definition, a question often arose whether the contract was one of locatio and conductio; as in the case where a thing was given to a man to be used, and he gave the lender another thing to be used. Sometimes it was doubted whether the contract was locatio and conductio or em-

tio and venditio; as in the case where a thing was let (*locata*) forever, as was done with lands belonging to municipia, which were let on the condition that, so long as the rent (*vectigal*) was paid, neither the conductor nor his heirs could be turned out of the land; but the better opinion was in favour of this being a contract of locatio and conductio. (Vid. EMPHYTEUSIS.) Other questions of a like kind are proposed by Gaius.⁴

The locator had his action for the merces and the restitution of the thing, and generally in respect of all matters that formed a part of the contract (*lex locationis*). The conductor also had his action for the enjoyment of the thing; and if the matter was something to be done (*opera*), there was an actio ex conducto, and generally there was an action in respect of all things that formed part of the conductio (*lex conductionis*).⁵

LOCHUS. (Vid. ARMY, GREEK, p. 98, 99, 100.)

LO'CULUS. (Vid. FUNUS, p. 460.)

LODIX, dim. LODI'FULA (*λόδιον*), a small shaggy blanket.³ Sometimes two lodices sewed together were used as the coverlet of a bed.⁴ The Emperor Augustus occasionally wrapped himself in a blanket of this description on account of its warmth.⁵ It was also used as a carpet (*ancilla lodiclam in pavimento diligenter extendit*⁶). The Romans obtained these blankets from Verona.⁷ The lodix was nearly, if not altogether, the same as the *sagulum* worn by the Germans.⁸ (Vid. SAGUM.)

LOGISTAI. (Vid. EUTHYNE.)

LOGOGRAPHOI (*λογόγραφοι*) is a name applied by the Greeks to two distinct classes of persons.

1. To the earlier Greek historians previous to Herodotus, though Thucydides⁹ applies the name logographer to all historians previous to himself, and thus includes Herodotus among the number. The Ionians were the first of the Greeks who cultivated history; and the first logographer, who lived about Olym. 60, was Cadmus, a native of Miletus, who wrote a history of the foundation of his native city. The characteristic feature of all the logographers previous to Herodotus is, that they seem to have aimed more at amusing their hearers or readers than at imparting accurate historical knowledge. They described in prose the mythological subjects and traditions which had previously been treated of by the epic, and especially by the cyclic poets. The omissions in the narratives of their predecessors were probably filled up by traditions derived from other quarters, in order to produce, at least in form, a connected history.¹⁰

2. To persons who wrote judicial speeches or pleadings, and sold them to those who were in want of them. These persons were called *λογοποιοί* as well as *λογόγραφοι*. Antiphon, the orator, was the first who practised this art at Athens, toward the close of the Peloponnesian war.¹¹ After this time, the custom of making and selling speeches became very general; and though the persons who practised it were not very highly thought of, and placed on a par with the sophists,¹² yet we find that orators of great merit did not scruple to write speeches of various kinds for other persons. Thus Lysias wrote for others numerous *λόγονες εἰς δικαστήριά τε καὶ βουλὰς καὶ πρὸς ἐκκλησίας εὐθέτους*, and, besides, *πανηγυρικοὺς, ἐρωτικούς, καὶ ἐπιστολικοὺς*.¹³

ΑΙΟΙΔΟΡΙΑΣ ΔΙΚΗ. (Vid. ΚΑΚΗΤ'ΟΡΙΑΣ ΔΙΚΗ.)

***LOLIUM**, Dandel, a common weed in cornfields.

Virgil applies it to the epithet of *infelix*.¹

LONCHE (λόγχη). (Vid. *HAUSTA*, p. 488.)

***LONCHITIS** (λογχίτις), a plant, a kind of Fern.

Dioscorides mentions two species, the first of which Matthioli and Sprengel make to be the *Serapius lingua*. The other, according to Sprengel, is the *Aspidium Lonchitis*, Sw.²

LOPE (λώπη), **LOPOS** (λωπος), *dim.* **LOPION** (λώπιον), the ancient Greek name of the *AMICTUS*, whether consisting of the hide of an animal or of cloth. Having fallen into disuse as a colloquial or prosaic term,³ it was retained, though employed very sparingly, by the poets.⁴ We also find it retained in *λωποδύτης*, literally, *one who puts on the amictus*, a term properly applicable to those persons who frequented the *thermae* in order to steal the clothes of the bathers⁵ (vid. *ΒΑΤΗΣ*, p. 147), but used in a more general sense to denote thieves and highwaymen of all classes. From the same root was formed the verb *ἐκλωπίζειν*, meaning to take off the amictus, to denude.⁶

LOPHOS. (Vid. *GALEA*.)

LORARII. (Vid. *FLAGRUM*.)

LORICA (θώραξ), a Cuirass.

The epithet *λινοθώραξ*, applied to two light-armed warriors in the *Iliad*,⁷ and opposed to *χαλκοχίτων*, the common epithet of the Grecian soldiers, indicates the early use of the linen cuirass. It continued to be worn to much later times among the Asiatics, especially the Persians,⁸ the Egyptians, the Phœnicians,⁹ and the Chalybes.¹⁰ Iphicrates endeavoured to restore the use of it among the Greeks,¹¹ and it was occasionally adopted by the Romans, though considered a much less effectual defence than a cuirass of metal.¹²

A much stronger material for cuirasses was horn, which was applied to this use more especially by the Sarmatæ and Quadi, being cut into small pieces, which were planed and polished, and fastened like feathers upon linen shirts.¹³ Hoofs were employed for the same purpose. Pausanias,¹⁴ having made mention of a thorax preserved in the Temple of Æsculapius at Athens, gives the following account of the Sarmatians: Having vast herds of horses, which they sometimes kill for food or for sacrifice, they collect their hoofs, cleanse and divide them, and shape them like the scales of a serpent (*φολίον*); they then bore them and sew them together,

so that the scales overlap one another, and in general appearance they resemble the surface of a green fir-cone. This author adds, that the lorica made of these horny scales are much more strong and impenetrable than linen cuirasses, which are useful to hunters, but not adapted for fighting. The preceding woodcut, taken from Meyrick's *Critical Inquiry into Ancient Armour* (plate iii.), exhibits an Asiatic cuirass exactly corresponding to this description. It consists of slices of some animal's hoof, which are stitched together, overlapping each other in perpendicular rows, without being fastened to any under garment. The projection nearest the middle must be supposed to have been worn over the breast, and the other over the back, so as to leave two vacant spaces for the arms.

This invention no doubt preceded the metallic scale armour. The Rhoxolani, a tribe allied to the Sarmatians, defended themselves by wearing a dress consisting of thin plates of iron and hard leather.¹ The Persians wore a tunic of the same description, the scales being sometimes of gold² (*θώρακα χρύσειον λεπιδωτόν*); but they were commonly of bronze (*thoraca indutus ænis squamis*).³ The method of hooking them together, so as to be imbricated, and to fit closely to the body, at the same time not hindering its free motion, is described by Heliodorus,⁴ who says that the Persians covered their horses also with this kind of armour. The basis of the cuirass was sometimes a skin, or a piece of strong linen, to which the metallic scales, or "feathers," as they are also called, were sewed.⁵ The warriors of Parthia, Dacia, and other countries, armed in this species of mail, are compared to moving statues of resplendent steel;⁷ and that this description was not the mere extravagance of poetry, is manifest from the representation of men so attired on the column of Trajan.

The epithet *λεπιδωτός*, as applied to a thorax, is opposed to the epithet *φολιδωτός*.⁸ The former denotes a similitude to the scales of fish (*λεπίσιν*), the latter to the scales of serpents (*φολίον*). The resemblance to the scales of serpents, which are long and narrow, is exhibited on the shoulders of the Roman soldier in the woodcut at page 95. These scales were imitated by long flexible bands of steel, made to fold over one another according to the contraction of the body. They appear very frequently on the Roman monuments of the times of the emperors, and the following woodcut places in

immediate contrast a *θώραξ λεπιδωτός* on the right and *φολιδωτός* on the left, both taken from Bartoli's *Arcus Triumphales*.

The Roman hastati wore cuirasses of chain-mail,

1. (Tacit., Hist., i., 79.)—2. (Herod., vii., 61.)—3. (ix., 22.)—4. (Virg., Æn., xi., 487.)—5. (ix., p. 431, 432, ed. Comm.)—6. (Virg., Æn., xi., 770.—Serv. in loc.—Justin., xli., 2, 10.)—7. (Heliodor., l. c.—Claudian in Rufin., ii., 358–363.)—8. (Arrian, Tact., p. 13, 14.)

1. e., hauberks or habergeons (*ἀλυσίδωτους θώρακας*¹). Virgil several times mentions hauberks, in which the rings, linked or hooked into one another, were of gold (*loricam consertam hamis, auroque trilecem*²). According to Val. Flaccus,³ the Sarmatæ covered both themselves and their horses with chain-mail.

In contradistinction to the flexible cuirasses, or coats of mail, which have now been described, that commonly worn by the Greeks and Romans, more especially in the earlier ages, was called *θώραξ στάδιος* or *στατός*, because, when placed upon the ground on its lower edge, it stood erect. In consequence of its firmness, it was even used as a seat to rest upon.⁴ It consisted principally of the two *γάλα*, viz., the breastplate (*pectorele*), made of hard leather, or of bronze, iron, or sometimes the more precious metals, which covered the breast and abdomen,⁵ and of the corresponding plate which covered the back.⁶ Both of these pieces were adapted to the form of the body, as may be perceived in the representation of them in the woodcuts at pages 95, 133, 418. The two figures here introduced are

designed to show the usual difference of form and appearance between the antique Greek thorax and that worn by the Roman emperors and generals. The right-hand figure is from one of Mr. Hope's fictile vases,¹ and bears a very strong resemblance to a Greek warrior painted on one of Sir W. Hamilton's.² The figure on the left hand is taken from a marble statue of Caligula found at Gabii.³ The Gorgon's head over the breast, and the two griffons underneath it, illustrate the style of ornament which was common in the same circumstances.⁴ (*Vid. ÆGIS*, p. 27.) The execution of these ornaments in relief was more especially the work of the Corinthians.⁵

The two plates were united on the right side of the body by two hinges (*vid. CARDO*, p. 215), as seen in the equestrian statue of the younger Balbus at Naples, and in various portions of bronze cuirasses still in existence. On the other side, and sometimes on both sides, they were fastened by means of buckles (*περόναι*). (*Vid. FIBULA*.) In the Temple of Diana at Ephesus was a picture representing women employed in assisting Patrocluz

to arm himself by buckling his cuirass.⁷ In Roman statues we often observe a band surrounding the waist and tied before. The breastplate and the backplate were farther connected together by leathern straps passing over the shoulders, and fastened in front by means of buttons or of ribands tied in a bow. In the last woodcut both of the connecting ribands in the right-hand figure are tied to a ring over the navel. The breastplate of Caligula has a ring over each breast, designed to fulfil the same purpose.

Bands of metal often supplied the place of the leathern straps, or else covered them so as to become very ornamental, being terminated by a lion's head or some other suitable figure appearing on each side of the breast, as in the preceding figure of Caligula. The most beautiful specimens of enriched bronze shoulder-bands now in existence are those which were found A.D. 1820, near the river

Siris in S. Italy, and which are preserved in the British Museum. They were originally gilt, and represent in very salient relief two Grecian heroes combating two Amazons. They are seven inches in length, and belong to the description of bronzes called *ἐργα σφυρήλατα*, having been beaten into form with wonderful skill by the hammer. The Chevalier Brøndsted⁷ has illustrated the purpose which they served, by showing them in connexion with a portion of another lorica, which lay upon the shoulders behind the neck. This fragment was found in Greece. Its hinges are sufficiently preserved to show most distinctly the manner in which the shoulder-bands were fastened to them (see woodcut).

"Around the lower edge of the cuirass," observes Brøndsted, "were attached straps, four or five inches long, of leather, or perhaps of felt, and covered with small plates of metal. These straps served in part for ornament, and partly, also, to protect the

1. (Polyb., vi., 21.—Athen., v., 22.—Arrian, l. c.)—2. (Virg., *Æn.*, iii., 467.—Id. ib., v., 259.—Id. ib., vii., 639.)—3. (Argon., vi., 232.)—4. (Paus., x., 27, § 2.)—5. (Hom., II., v., 99.—Id. ib., xiii., 507, 587.—Id. ib., xvii., 314.)—6. (Paus., x., 26, § 2.—Hom., II., xv., 530.)—7. (Paus., l. c.)

1. (Costumes of the Ancients, i., 102.)—2. (i., 4.)—3. (Visconti Mon. Gab., No. 38.)—4. (Mart., VII., i., 1-4.)—5. (Cic., Verr., Act. II., iv., 44.)—6. (Paus., l. c.)—7. (Bronzes of Siris, London, 1836.)

lower region of the body in concert with the belt (*ζώνη*) and the band (*μίτρα*). They are well shown in both the figures of the preceding woodcut. (See also the woodcuts at pages 86, 268, 418.)

Instead of the straps here described, which the Greeks called *πέρυρες*,¹ the Chalybes, who were encountered by Xenophon on his retreat,² had in

the same situation a kind of cordage. Appendages of a similar kind were sometimes fastened by hinges to the lorica at the right shoulder, for the purpose of protecting the part of the body which was exposed by lifting up the arm in throwing the spear or using the sword.³

Of Grecian cuirasses the Attic were accounted the best and most beautiful.⁴ The cuirass was worn universally by the heavy-armed infantry and by the horsemen (*vid.* ARMY, p. 107), except that Alexander the Great gave to the less brave of his soldiers breastplates only, in order that the defenceless state of their backs might decrease their propensity to flight.⁵ These were called half-cuirasses (*ἡμιθώρακία*). The thorax was sometimes found to be very oppressive and cumbersome.⁶

*LOTUS (*λωτός*). "The *Loti* of the ancients may be arranged under the following heads: I. The *λωτός* upon which the horses pastured was a sort of Clover; it may be confidently set down as the *Trifolium officinale*, or common Melilot. It is very probable, however, that the term may not have been restricted to it, but may have comprehended others of the trefoils. II. Under the *Lotus aquaticus* the ancients comprehended three Egyptian plants of the Water-lily tribe, namely, the *Nymphaea Lotus*, *Nymphaea nelumbo*, and *Arum colocasia*: the first two are well described by Herodotus.⁷ III. Under the *Lotus arbor* were comprehended the *Celtis Australis*, several species of Rhamnus, and the *Diospyros Lotus*.—This is the celebrated *Lotus* of the Lotophagi, an African people, whom Dionysius the geographer and Ptolemy place in the vicinity of the Great Syrtis, or Gulf of Sidra. But, according to Rennell and Park, the tree which produces the lotus-bread is widely disseminated over the edge of the Great Desert, from the locality indicated by the ancients to the borders of the Atlantic." For farther information respecting the ancient *Loti*, more especially the kind from which the Lotophagi obtained both bread and wine, see *Eustathius* in Hom., Od., p. 337, ed. Basil.—Schol. in Plat., Repub., viii.—Sprengel's Dissertation on the *Loti*.—Schweighauser ad Athen., xiv., 16.—Heeren's Researches, &c., vol. iv., c. 1; v., 4.—Fée, Flore de Virgile, p. lxxx., &c.⁸

LOUTRON, LOETRON (*λουτρόν*, *λοετρόν*), a Bath. The use of the bath in the Homic ages is explained on pages 143, 144; it remains to speak of the Greek baths in the republican period. At Athens the frequent use of the public baths was re-

garded in the time of Socrates and Demosthenes as a mark of luxury and effeminacy.¹ Accordingly, Phocion was said to have never bathed in a public bath (*ἐν βαλανείῳ δημοσιεύοντι*),² and Socrates to have made use of it very seldom.³ It was, however, only the warm baths (*βαλανεῖα*, called by Homer *θερμά λουτρά*) to which objection was made, and which in ancient times were not allowed to be built within the city.⁴ The estimation in which such baths were held is expressed in the following lines of Hermippus:⁵

Μὰ τὸν Δῖ', οὐ μέντοι μεθύειν τὸν ἄνδρα χρὴ
τὸν ἀγαθὸν, οὐδὲ θερμολουτεῖν, ἃ σὺ ποιεῖς.

In the Clouds of Aristophanes, the *δίκαιος λόγος* warns the young man to abstain from the baths (*βαλανεῖον ἀπέχεσθαι*),⁶ which passage, compared with l. 1028-1037, shows that warm baths are intended by the word *βαλανεῖα*.

The baths (*βαλανεῖα*) were either public (*δημόσια*, *δημοσιεύοντα*) or private (*ἴδια*, *ιδιωτικά*). The former were the property of the state, but the latter were built by private individuals, and were opened to the public on the payment of a fee (*ἐπιλουτρον*). Such private baths are mentioned by Plutarch⁷ and Isæus,⁸ who speak of one which was sold for 3000 drachmæ.⁹ Baths of this kind may also have been intended sometimes for the exclusive use of the persons to whom they belonged.¹⁰ A small fee appears to have been also paid by each person to the keeper of the public baths (*βαλανεῖς*), which in the time of Lucian was two oboli.¹¹

We know very little of the baths of the Athenians during the republican period, for the account of Lucian in his Hippias relates to baths constructed after the Roman model. On ancient vases, on which persons are represented bathing, we never find anything corresponding to a modern bath in which persons can stand or sit; but there is always a round or oval basin (*λουτήρ* or *λουτήριον*) resting on a stand (*ὑπόστατον*), by the side of which those who are bathing are represented standing undressed and washing themselves, as is seen in the following woodcut, taken from Sir W. Hamilton's vases.¹² The word ΔΗΜΟΣΙΑ upon it shows that it belonged to a public bath.

The next woodcut is also taken from the same work,¹³ and represents two women bathing. The one on the right hand is entirely naked, and holds a looking-glass in her right hand; the one on the left wears only a short kind of *χιτώνιον*. Eros is represented hovering over the bathing vessel.

Besides the *λουτήρες* and *λουτήρια*, there were also vessels for bathing large enough for persons to sit

n, which are called *ἀσάμνθοι* by Homer and *πύλοι* by the later Greeks,¹ and are described on page 143. In the baths there was also a kind of sudorific or vapour bath, called *πυρία* or *πυριατήριον*, which is mentioned as early as the time of Herodotus.² The Lacedæmonians also made use of a dry sudorific bath. (Vid. ΒΛΗΣ, p. 144.)

The persons who bathed probably brought with them strigils, oil, and towels. The strigil, which was called by the Greeks *στλεγγίς* or *ξύστρα*, was usually made of iron, but sometimes, also, of other materials.³ One of the figures in the preceding woodcut is represented with a strigil in his hand; several strigils are figured in page 150. The Greeks also used different materials for cleansing or washing themselves in the bath, to which the general name of *ρύμμα* was given, and which were supplied by the *βαλανεύς*.⁴ This *ρύμμα* usually consisted of a ley made of lime or wood-ashes (*κονία*), of nitrum, and of fuller's earth (*γῆ κίμωλία*).⁵

The bath was usually taken shortly before the *δεῖπνον*, or principal meal of the day. It was the practice to take first a warm or vapour, and afterward a cold bath,⁶ though in the time of Homer the cold bath appears to have been taken first, and the warm bath afterward. The cold water was usually poured on the back or shoulders of the bathers by the *βαλανεύς* or his assistants, who are called *παράχρηται*.⁷ The vessel from which the water was poured was called *ἀρύτανα*.⁸ In the first of the preceding woodcuts a *παράχρητης* is represented with an *ἀρύτανα* in his hands.

Among the Greeks a person was always bathed at birth, marriage, and after death (vid. ΦΥΝΟΣ, p. 455); whence it is said of the Dardanians, an Illyrian people, that they bathe only three in their lives, at birth, marriage, and after death.⁹ The water in which the bride was bathed (*λουτρόν νυμφικόν*), at Athens, was taken from the fountain of Kallirrhōē, which was called from the time of Peisistratus *Εὐνείκρονος*.¹¹ Compare Pollux, iii., 43.—Harpocrat., s. v. *Λουτροφόρος*, who says that the water was fetched by a boy, who was the nearest relative, and that this boy was called *λουτροφόρος*. He also states that water was fetched in the same way to bathe the bodies of those who had died unmarried, and that on the monuments of such a boy was represented holding a water-vessel (*ὕδρια*). Pollux,¹²

however, states that it was a female who fetched the water on such occasions, and Demosthenes¹ speaks of ἡ λουτροφόρος on the monument of a person who had died unmarried. In remains of ancient art we find girls represented as *λουτροφόροι*, but never boys.²

LOUTROPHORUS. (Vid. LOUTRON.)

LUCAR. (Vid. HISTRIO, p. 507.)

LUCERES. (Vid. TRIBUS.)

LUCERNA (*λύχνος*), an Oil-lamp. The Greeks and Romans originally used candles, but in later times candles were chiefly confined to the houses of the lower classes. (Vid. CANDELA.) A great number of ancient lamps has come down to us, the greater part of which are made of terra-cotta (*τροχήλατοι*), but also a considerable number of bronze. Most of the lamps are of an oval form, and flat upon the top, on which there are frequently figures in relief. (See the woodcuts, p. 114, 350, 408.) In the lamps there are one or more round holes, according to the number of wicks (*ellychnia*) burned in it; and as these holes were called, from an obvious analogy, *μνητῆρες* or *μύζαι*, literally, nostrils or nozzles, the lamp was also called *Monomyxos*, *Dimyxos*, *Trimyxos*, or *Polymyxos*, according as it contained one, two, three, or a greater number of nozzles or holes for the wicks. (Vid. ELLYCHNIUM.) The following example of a *dimyxos lucerna*, upon which there is a winged boy with a goose, is taken from the *Museo Borbonico*, iv., 14.

The next woodcut, taken from the same work,³ represents one of the most beautiful bronze lamps which has yet been found. Upon it is the figure of a standing Silenus.

The lamps sometimes hung in chains from the ceiling of the room,⁴ but generally stood upon a stand. (Vid. CANDELABRUM.) Sometimes a figure holds the lamp, as in the following woodcut,⁵ which also exhibits the needle or instrument spoken of under ELLYCHNIUM, which served to trim the wick and is attached to the figure by means of a chain.

We read of *lucernæ cubiculares, balnearies, trichi-*

ares, sepulcrales, &c.; but these names were only given to the lamps on account of the purposes to which they were applied, and not on account of a difference in shape. The *lucernæ cubiculares* burned in bedchambers all night.¹

Perfumed oil was sometimes burned in the lamps.²

LUDI is the common name for the whole variety of games and contests which were held at Rome on various occasions, but chiefly at the festivals of the gods; and as the ludi at certain festivals formed the principal part of the solemnities, these festivals themselves are called ludi. Sometimes, however, ludi were also held in honour of a magistrate or of a deceased person, and in this case the games may be considered as ludi privati, though all the people might take part in them.

All ludi were divided by the Romans into two classes, viz., *ludi circenses* and *ludi scenici*,³ accordingly as they were held in the circus or in the theatre; in the latter case they were mostly theatrical representations with their modifications; in the former, they consisted of all or a part of the games enumerated in the articles CIRCUS and GLADIATOIRES. Another division of the ludi into *statii, imperativi, and votivi*, is analogous to the division of the *feriæ*. (Vid. FERIÆ, p. 435.)

The superintendence of the games and the solemnities connected with them was in most cases intrusted to the *ædiles*. (Vid. ÆDILES.) If the lawful rites were not observed in the celebration of the ludi, it depended upon the decision of the pontiffs whether they were to be held again (*instaurari*) or not. An alphabetical list of the principal ludi is subjoined.

LUDI APOLLINARES were instituted at Rome during the second Punic war, after the battle of Cannæ (212 B.C.), at the command of an oracle contained in the books of the ancient seer Marcius (*carmina Marciana*).⁴ It was stated by some of the ancient annalists that these ludi were instituted for the purpose of obtaining from Apollo the protection of human life during the hottest season of summer; but Livy and Macrobius adopt the account founded upon the most authentic document, the *carmina Marciana* themselves, that the Apollinarian games were instituted partly to obtain the aid of Apollo in expelling the Carthaginians from Italy, and partly to preserve, through the favour of the god, the Republic from all dangers. The oracle suggested that the games should be held every year, under the

superintendence of the prætor urbanus, and that ten men should perform the sacrifices according to Greek rites. The senate, complying with the advice of the oracle, made two *senatus consulta*; one that, at the end of the games, the prætor should receive 12,000 asses to be expended on the solemnities and sacrifices, and another that the ten men should sacrifice to Apollo, according to Greek rites, a bull with gilded horns, and two white goats also with gilded horns, and to Latona a heifer with gilded horns. The games themselves were held in the Circus Maximus, the spectators were adorned with chaplets, and each citizen gave a contribution towards defraying the expenses.¹ The Roman matrons performed supplications, the people took their meals in the *propatulum* with open doors, and the whole day—for the festival lasted only one day—was filled up with ceremonies and various other rites. At this first celebration of the ludi Apollinares, no decree was made respecting the annual repetition suggested by the oracle, so that in the first year they were simply ludi votivi or indictivi. The year after (211 B.C.), the senate, on the proposal of the prætor Calpurnius, decreed that they should be repeated, and that, in future, they should be vowed afresh every year.² The day on which they were held varied every year according to circumstances. A few years after, however (208 B.C.), when Rome and its vicinity were visited by a plague, the prætor urbanus, P. Licinius Varus, brought a bill before the people to ordain that the Apollinarian games should in future always be vowed and held on a certain day (*dies status*), viz., on the sixth of July, which day henceforward remained a *dies sollemnis*.³ The games thus became votivi et stativi, and continued to be conducted by the prætor urbanus.⁴ But during the Empire the day of these solemnities appears again to have been changed, for Julius Capitolinus⁵ assigns them to the 26th of May.

LUDI AUGUSTALES. (Vid. AUGUSTALES.)

LUDI CAPITOLINI were said to have been instituted by the senate on the proposal of the dictator M. Furius Camillus, in the year 387 B.C., after the departure of the Gauls from Rome, as a token of gratitude towards Jupiter Capitolinus, who had saved the Capitol in the hour of danger. The decree of the senate at the same time intrusted the superintendence and management of the Capitoline games to a college of priests, to be chosen by the dictator from among those who resided on the Capitol and in the citadel (*in arce*), which can only mean that they were to be patricians.⁶ These priests were called Capitolini.⁷ One of the amusements at the Capitoline games, which was observed as late as the time of Plutarch, was that a herald offered the Sardi for public sale, and that some old man was led about, when, in order to produce laughter, wore a toga prætexta, and a bulla puerilis which hung down from his neck.⁸ According to some of the ancients, this ceremony was intended to ridicule the Veientes, who were subdued, after long wars with Rome, and numbers of them sold as slaves, while their king, represented by the old man with the bulla (such was said to have been the costume of the Etruscan kings), was led through the city as an object of ridicule.

The Veientes were designated by the name Sardi or Sardi, because they were believed to have come from Lydia, the capital of which was Sardes. This specimen of ancient etymology, however, is set at naught by another interpretation of the cere-

mony, given by Silius Capitolinus. According to this author, the name Sardi or Sardi had nothing to do with the Veientes, but referred to the inhabitants of Sardinia. When their island was subdued by the Romans in B.C. 238, no spoils were found, but a great number of Sardinians were brought to Rome and sold as slaves, and these proved to be slaves of the worst kind.¹ Hence arose the proverb "*Sardi venales; alius alio nequior*;"² and hence, also, the ceremony at the Capitoline games. When or at what intervals these ludi were celebrated is not mentioned. During the time of the Empire they seem to have fallen into oblivion, but they were restored by Domitian, and were henceforth celebrated every fifth year, under the name of agones Capitolini.³

LUDI CIRCE'NSES, ROMANI or MAGNI, were celebrated every year during several days, from the fourth to the twelfth of September, in honour of the three great divinities, Jupiter, Juno, and Minerva,⁴ or, according to others, in honour of Jupiter, Consus, and Neptunus Equestris. They were superintended by the curule ædiles. For farther particulars, see CIRCUS, p. 255, &c.

LUDI COMPITALI'CI. (Vid. COMPITALIA.)

LUDI FLORA'LES. (Vid. FLORALIA.)

LUDI FUNEBRES were games celebrated at the funeral pyre of illustrious persons. Such games are mentioned in the very early legends of the history of Greece and Rome, and they continued, with various modifications, until the introduction of Christianity. It was at such a ludus funebris that, in the year 264 B.C., gladiatorial fights were exhibited at Rome for the first time, which henceforward remained the most essential part in all ludi funebres (Vid. GLADIATORES, p. 475.) The duration of these games varied according to circumstances. They lasted sometimes for three, and sometimes for four days, though it may be supposed that, in the majority of cases, they did not last more than one day. On one occasion 120 gladiators fought in the course of three days, and the whole Forum was covered with triclinia and tents, in which the people feasted.⁵ It was thought disgraceful for women to be present at these games, and Publius Sempromius separated himself from his wife because she had been present without his knowledge at ludi funebres.⁶ These ludi, though on some occasions the whole people took part in them, were not ludi publici, properly speaking, as they were given by private individuals in honour of their relations or friends. (Compare FUNUS, p. 462.)

LUDI HONORARI'II are expressly mentioned only by Suetonius,⁷ who states that Augustus devoted thirty days, which had been occupied till that time by ludi honorarii, to the transaction of legal business. What is meant by ludi honorarii is not quite certain. According to Festus,⁸ they were the same as the Liberalia. Scaliger, however, in his note on Suetonius, has made it appear very probable that they were the same as those which Tertullian⁹ says were given for the purpose of gaining honours and popularity, in contradistinction to other ludi, which were intended either as an honour to the gods, or as *otia* for the dead. At the time of Augustus, this kind of ludi, which Tacitus¹⁰ seems to designate by the name *inania honoris*, were so common that no one obtained any public office without lavishing a considerable portion of his property on the exhibition of games. Augustus, there-

fore, wisely assigned thirty of the days of the year, on which such spectacles had been exhibited previously, to the transaction of business, i. e., he made these thirty days fasti.¹

LUDI LIBERA'LES. (Vid. DIONYSIA, p. 366.)

LUDI MARTIALES were celebrated every year on the first of August, in the circus, and in honour of Mars, because the Temple of Mars had been dedicated on this day.² The ancient calendaria mention also other ludi martiales, which were held in the circus on the 12th of May.

LUDI MEGALE'NSES. (Vid. MEGALESIA.)

LUDI NATALI'TII are the games with which the birthday of an emperor was generally celebrated. They were held in the circus, whence they are sometimes called circenses.³ They consisted generally of fights of gladiators and wild beasts. On one occasion of this kind, Hadrian exhibited gladiatorial combats for six days, and one thousand wild beasts.

LUDI PALATI'NI were instituted by Livia in honour of Augustus, and were held on the Palatine.⁴ According to Dion Cassius they were celebrated during three days, but according to Josephus⁵ they lasted eight days, and commenced on the 27th of December.⁶

LUDI PISCATO'RII were held every year on the 6th of June, in the plain on the right bank of the Tiber, and were conducted by the prætor urbanus on behalf of the fishermen of the Tiber, who made the day a holiday.⁷

LUDI PLEBE'I were, according to Pseudo-Asconius,⁸ the games which had been instituted in commemoration of the freedom of the plebeians after the banishment of the kings, or after the secession of the plebes to the Aventine. The first of these accounts is not borne out by the history of the plebeian order, and it is more probable that these games were instituted in commemoration of the reconciliation between the patricians and plebeians after the first secession to the Mons Sacer, or, according to others, to the Aventine. They were held on the 16th, 17th, and 18th of November, and were conducted by the plebeian ædiles.⁹ It is sufficiently clear from the ancient calendaria, that the ludi plebei were not, as some have supposed, the same as, or a part of, the ludi Romani.

LUDI PONTIFICA'LES were probably nothing but a particular kind of the ludi honorarii mentioned above. They were for the first time given by Augustus, when, after the death of Lepidus, he obtained the office of pontifex maximus.¹⁰

LUDI QUÆSTO'RII were of the same character as the preceding games. They were instituted by the Emperor Claudius,¹¹ who decreed that all who obtained the office of quæstor should, at their own expense, give gladiatorial exhibitions. Nero did away with this obligation for newly-appointed quæstors,¹² but it was revived by Domitian.¹³

LUDI SÆCULARES. If we were to judge from their name, these games would have been celebrated once in every century or sæculum; but we do not find that they were celebrated with this regularity at any period of Roman history, and the name ludi sæculares itself was never used during the time of the Republic. In order to understand their real character, we must distinguish between the time of the Republic and of the Empire, since at

these two periods these ludi were of an entirely different character.

During the time of the Republic they were called *ludi Tarentini*, *Tarentini*, or *Taurii*, while during the Empire they bore the name of *ludi sæculares*.¹ Their origin is described by Valerius Maximus, who attributes their institution to the miraculous recovery of three children of one Valerius, who had been attacked by a plague raging at that time in Rome, and were restored to health by drinking some water warmed at a place in the Campus Martius called Tarentum. Valerius afterward offered sacrifices in Tarentum to Dis and Proserpina, to whom the recovery of his children was supposed to be owing, spread lectisternia for the gods, and held festive games for three successive nights, because his three children had been saved. The account of Valerius Maximus agrees in the main with those of Censorinus² and of Zosimus,³ and all appear to have derived their information from the ancient annalist, Valerius Antias. While, according to this account, the Tarentine games were first celebrated by Valerius, another legend seems to consider the fight of the Horatians and Curiatians as connected with their first celebration. A third account⁴ ascribes their first institution to the reign of Tarquinius Superbus. A fearful plague broke out, by which all pregnant women were affected in such a manner that the children died in the womb. Games were then instituted to propitiate the infernal divinities, together with sacrifices of steril cows (*tauræ*), whence the games were called *ludi Taurii*. These games and sacrifices took place in the Circus Flaminius, that the infernal divinities might not enter the city. Festus⁵ and Censorinus ascribe the first celebration to the consul Valerius Poplicola. This account admits that the worship of Dis and Proserpina had existed long before, but states that the games and sacrifices were now performed for the first time to avert a plague, and in that part of the Campus Martius which had belonged to the last king Tarquinius, from whom the place derived its name Tarentum. Valerius Maximus and Zosimus, who knew of the celebration of these games by Valerius Poplicola, endeavour to reconcile their two accounts by representing the celebration of Poplicola as the second in chronological order. Other less important traditions are mentioned by Servius⁶ and by Varro.⁷

As regards the names Tarenti or Taurii, they are perhaps nothing but different forms of the same word, and of the same root as Tarquinius. All the accounts mentioned above, though differing as to the time at which, and the persons by whom, the Tarentine games were first celebrated, yet agree in stating that they were celebrated for the purpose of averting from the state some great calamity by which it had been afflicted, and that they were held in honour of Dis and Proserpina. From the time of the consul Valerius Poplicola down to that of Augustus, the Tarentine games were only held three times, and again only on certain emergencies, and not at any fixed time, so that we must conclude that their celebration was in no way connected with certain cycles of time (*sæcula*). The deities in whose honour they were held during the Republic, continued, as at first, to be Dis and Proserpina. As to the times at which these three celebrations took place, the commentarii of the quindecimviri and the accounts of the annalists did not agree,⁸ and the discrepancy of the statements still extant shows the vain attempts which were made in later times

to prove that, during the Republic, the games had been celebrated once in every sæculum. All these misrepresentations and distortions arose in the time of Augustus. Not long after he had assumed the supreme power in the Republic, the quindecimviri announced that, according to their books, *ludi sæculares* ought to be held, and, at the same time, tried to prove from history that in former times they had not only been celebrated repeatedly, but almost regularly once in every century. The games of which the quindecimviri made this assertion were the *ludi Tarentini*.

The celebrated jurist and antiquary Ateius Capito received from the emperor the command to determine the ceremonies, and Horace was requested to compose the festive hymn for the occasion (*carmen sæculare*), which is still extant.¹ But the festival which was now held was in reality very different from the ancient Tarentine games; for Dis and Proserpina, to whom formerly the festival belonged exclusively, were now the last in the list of the divinities in honour of whom the *ludi sæculares* were celebrated. A description of the various solemnities is given by Zosimus. Some days before they commenced, heralds were sent about to invite the people to a spectacle which no one had ever beheld, and which no one would ever behold again. Hereupon the quindecimviri distributed, upon the Capitol and the Palatine, among the Roman citizens, torches, sulphur, and bitumen, by which they were to purify themselves. In the same places, and on the Aventine in the Temple of Diana, the people received wheat, barley, and beans, which were to be offered at nighttime to the *Parcæ*, or, according to others, were given as pay to the actors in the dramatic representations which were performed during the festive days. The festival took place in summer, and lasted for three days and three nights. On the first day the games commenced in the Tarentum, and sacrifices were offered to Jupiter, Juno, Neptune, Minerva, Venus, Apollo, Mercury, Ceres, Vulcan, Mars, Diana, Vesta, Hercules, Latona, the *Parcæ*, and to Dis and Proserpina. The solemnities began at the second hour of the night, and the emperor opened them by the river side with the sacrifice of three lambs to the *Parcæ* upon three altars erected for the purpose, and which were sprinkled with the blood of the victims. The lambs themselves were burned. A temporary scene like that of a theatre was erected in the Tarentum, and illuminated with lights and fires.

In this scene festive hymns were sung by a chorus, and various other ceremonies, together with theatrical performances, took place. During the morning of the first day, the people went to the Capitol to offer solemn sacrifices to Jupiter; thence they returned to the Tarentum, to sing choruses in honour of Apollo and Diana. On the second day, the noblest matrons, at an hour fixed by an oracle, assembled on the Capitol, performed supplications, sang hymns to the gods, and also visited the altar of Juno. The emperor and the quindecimviri offered sacrifices, which had been vowed before, to all the great divinities. On the third day, Greek and Latin choruses were sung in the sanctuary of Apollo by three times nine boys and maidens of great beauty, whose parents were still alive. The object of these hymns was to implore the protection of the gods for all cities, towns, and officers of the Empire. One of these hymns was the *carmen sæculare* by Horace, which was especially composed for the occasion, and adapted to the circumstances of the time. During the whole of the three days and nights, games of every description were carried on

1. (Festus, s. v. *Sæculi ludi* and *Taurii ludi*.—Val. Max., ii., 4, § 5.)—2. (De Die Nat., c. 17.)—3. (ii., 3.)—4. (Festus, s. v. *Taurii ludi*.—Serv. ad *Æn.*, ii., 140.)—5. (s. v. *Sæculi ludi*.)—6. (ad *Æn.*, ii., 140.)—7. (ap. Censorin.)—8. (Censorin., l. c.)

in all the circuses and theatres, and sacrifices were offered in all the temples.

The first celebration of the *ludi sæculares* in the reign of Augustus took place in the summer of the year 17 B.C.¹ The second took place in the reign of Claudius, A.D. 47;² the third in the reign of Domitian, A.D. 88;³ and the last in the reign of Philippus, A.D. 248, and, as was generally believed, just 1000 years after the building of the city.⁴

LUPERCALIA, one of the most ancient Roman festivals, which was celebrated every year in honour of Lupercus, the god of fertility. All the ceremonies with which it was held, and all we know of its history, show that it was originally a shepherd-festival.⁵ Hence its introduction at Rome was connected with the names of Romulus and Remus, the kings of shepherds. Greek writers and their followers among the Romans represent it as a festival of Pan, and ascribe its introduction to the Arcadian Evander. This misrepresentation arose partly from the desire of these writers to identify the Roman divinities with those of Greece, and partly from its rude and almost savage ceremonies, which certainly are a proof that the festival must have originated in the remotest antiquity. The festival was held every year on the 15th of February, in the Lupercal, where Romulus and Remus were said to have been nurtured by the she-wolf; the place contained an altar and a grove sacred to the god Lupercus.⁶ Here the Luperci assembled on the day of the Lupercalia, and sacrificed to the gods goats and young dogs, which animals are remarkable for their strong sexual instinct, and thus were appropriate sacrifices to the god of fertility.⁷ Two youths of noble birth were then led to the Luperci (*vid. LUPERCI*), and one of the latter touched their foreheads with a sword dipped in the blood of the victims; other Luperci immediately after wiped off the bloody spots with wool dipped in milk. Hereupon the two youths were obliged to break out into a shout of laughter. This ceremony was probably a symbolical purification of the shepherds. After the sacrifice was over, the Luperci partook of a meal, at which they were plentifully supplied with wine.⁸ They then cut the skins of the goats which they had sacrificed into pieces, with some of which they covered parts of their body, in imitation of the god Lupercus, who was represented half naked and half covered with goatskin. The other pieces of the skins they cut in the shape of thongs, and, holding them in their hands, they ran with them through the streets of the city, touching or striking with them all persons whom they met in their way, and especially women, who even used to come forward voluntarily for the purpose, since they believed that the ceremony rendered them fruitful, and procured them an easy delivery in child-bearing. This act of running about with thongs of goatskin was a symbolic purification of the land, and that of touching persons a purification of men, for the words by which this act is

designated are *februare* and *lustrare*.¹ The goatskin itself was called *februum*, the festive days *dies februata*, the month in which it occurred *Februarius*, and the god himself *Februus*.

The act of purifying and fertilizing, which, as we have seen, was applied to women, was without doubt originally applied to the flocks, and to the people of the city on the Palatine.² Festus³ says the Luperci were also called *crepi* or *creppi*, from their striking with goatskins (*a crepi pellicularum*), but it is more probable that the name crepi was derived from crepa, which was the ancient name for goat.⁴

The festival of the Lupercalia, though it necessarily lost its original import at the time when the Romans were no longer a nation of shepherds, was yet always observed in commemoration of the founders of the city. Antonius, in his consulship, was one of the Luperci, and not only ran with them, half naked, and covered with pieces of goatskin, through the city, but even addressed the people in the Forum in this rude attire.⁵ After the time of Cæsar, however, the Lupercalia seem to have been neglected, for Augustus is said to have restored it,⁶ but he forbade youths (*imberbes*) to take part in the running. The festival was henceforth celebrated regularly down to the time of the Emperor Anastasius. Lupercalia were also celebrated in other towns of Italy and Gaul, for Luperci are mentioned in inscriptions of Velitræ, Præneste, Nemausus, and other places.⁷

LUPERCI were the priests of the god Lupercus. They formed a college (*sodalitas, τραιμία*), the members of which were originally youths of patrician families, and which was said to have been instituted by Romulus and Remus.⁸ The college was divided into two classes, the one called Fabii or Fabiani, and the other Quinctilii or Quinctiliani.⁹ These names, which are the same as those with which the followers of Romulus and Remus were designated in the early Roman legends, seem to show that the priesthood was originally confined to certain gentes.¹⁰ But if such were the case, this limitation does not seem to have existed for a very long time, though the two classes retained their original names, for Festus says that in course of time the number of Luperci increased, "*Quia honoris gratia multi in Lupercis adscribuntur.*" What was the original number of Luperci, and how long their office lasted, is unknown; but it is stated in inscriptions¹¹ that a person held the office of Lupercus twice, and another three times, and this fact shows, at least, that the priests were not appointed for life. Julius Cæsar added to the two classes of the college a third, with the name of Julii or Juliani,¹² and made Antonius their high-priest. He also assigned to them certain revenues (*vectigalia*), which were afterward withdrawn from them.¹³ But it is uncertain whether Cæsar assigned these revenues to the whole college, or merely to the Julii. From this time the two ancient classes of the Luperci are sometimes distinguished from the new one by the name Luperci veteres.¹⁴ Although in early times the Luperci were taken only from noble families, their strange and indecent conduct at the Lupercalia was offensive to the more refined Romans of a later age,¹⁵ and Cicero¹⁶ characterizes the college as

*LUPUS (λύκος), the Wolf, or *Canis lupus.* (*Vid. CANIS.*)

LUPUS FERREUS, the Iron Wolf used by the besieged in repelling the attacks of the besiegers, and especially in seizing the battering-ram and diverting its blows. (*Vid. ARIES*, p. 93).¹

LUSTRATIO (κάθαρσις) was originally a purification by ablution in water. But the lustrations, of which we possess direct knowledge, are always connected with sacrifices and other religious rites, and consisted in the sprinkling of water by means of a branch of laurel or olive, and at Rome sometimes by means of the aspergillum (*vid. CERNIPS*), and in the burning of certain materials, the smoke of which was thought to have a purifying effect. Whenever sacrifices were offered, it seems to have been customary to carry them around the person or thing to be purified. Lustrations were made in ancient Greece, and probably at Rome also, by private individuals when they had polluted themselves with any criminal action. Whole cities and states, also, sometimes underwent purifications, to expiate the crime or crimes committed by a member of the community. The most celebrated purification of this kind was that of Athens, performed by Epimenides of Crete, after the Cylonian massacre.² Purification also took place when a sacred spot had been unhallowed by profane use, as by burying dead bodies in it, such as was the case with the island of Delos.³

The Romans performed lustrations on many occasions on which the Greeks did not think of them; and the object of most Roman lustrations was not to atone for the commission of crime, but to obtain the blessing of the gods upon the persons or things which were lustrated. Thus fields were purified after the business of sowing was over,⁴ and before the sickle was put to the corn. (*Vid. ARVALES FRATRES*, p. 109.) The manner in which sheep were lustrated every year at the festival of the Palilia is described by Ovid.⁵ The shepherd towards evening sprinkled his flock with water, adorned the fold with branches and foliage, burned pure sulphur and various herbs, and offered sacrifices to Pales. The object of this lustration was to preserve the flock from disease, contagion, and other evils.⁶ All Roman armies, before they took the field, were lustrated;⁷ and, as this solemnity was probably always connected with a review of the troops, the word lustratio is also used in the sense of the modern review.⁸ The rites customary on such occasions are not mentioned, but they probably resembled those with which a fleet was lustrated before it set sail, and which are described by Appian.⁹ Altars were erected on the shore, and the vessels manned with their troops assembled in order close to the coast. Everybody kept profound silence, and priests standing close by the water killed the victims, and carried the purifying sacrifices (κάθαρσις) in small boats three times around the fleet. On these rounds they were accompanied by the generals, who prayed to the gods to preserve the armament from all dangers. Hereupon the priests divided the sacrifices into two parts, one of which was thrown into the sea, and the other burned upon the altars, while the multitude around prayed to the gods. (In Livy¹⁰ a prayer

is recorded, such as generals used to perform on these occasions.) When a Macedonian army was lustrated, a dog was cut in two pieces in the place where the army was to assemble, and one half of the dog was thrown at a distance on the right and the other to the left. The army then assembled in the place between the spots where the pieces had fallen.¹ But to return to the Romans. The establishment of a new colony was always preceded by a lustratio with solemn sacrifices.² The city of Rome itself, as well as other towns within its dominion, always underwent a lustratio after they had been visited by some great calamity, such as civil bloodshed, awful prodigies, and the like.³ A regular and general lustratio of the whole Roman people took place after the completion of every lustrum, when the censor had finished his census and before he laid down his office. This lustratio (also called lustrum⁴) was conducted by one of the censors,⁵ and held with sacrifices called Suovetaurilia,⁶ because the sacrifices consisted of a pig (or ram), a sheep, and an ox. This lustratio, which continued to be observed in the days of Dionysius, took place in the Campus Martius, where the people assembled for the purpose. The sacrifices were carried three times around the assembled multitude.⁷ Another regular lustration, which was observed every year in the month of February, was said to have been instituted because the god Februus was believed to be *potens lustrationum*, and because in this month the solemnities in honour of the dii manes took place.⁸

LUSTRUM (from luo, Gr. λούω) is, properly speaking, a lustration or purification, and in particular, the purification of the whole Roman people performed by one of the censors in the Campus Martius after the business of the census was over (*Vid. CENSUS, LUSTRATIO*). As this purification took place only once in five years, the word lustrum was also used to designate the time between two lustra. Varro⁹ erroneously derives the word lustrum from luo (I pay), because the vectigalia and tributa were paid every five years to the censors. The first lustrum was performed in B.C. 566, by King Servius, after he had completed his census,¹⁰ and afterward it is said to have taken place regularly every five years after the census was over. The first censors were appointed in 443 B.C., and from this year down to 294 B.C., there had, according to Livy,¹¹ only been 26 pairs of censors, and only 21 lustra or general purifications, although, if all had been regular, there would have been 30 pairs of censors and 30 lustra. We must therefore conclude that sometimes the census was not held at all, or, at least, not by the censors. We also learn from this statement that the census might take place without the lustrum, and, indeed, two cases of this kind are recorded,¹² which happened in 459 and 214 B.C. In these cases the lustrum was not performed on account of some great calamities which had befallen the Republic.

The time when the lustrum took place has been very ingeniously defined by Niebuhr.¹³ Six ancient Romulan years of 304 days each were, with the difference of one day, equal to five solar years of 365 days each, or the six ancient years made 1824 days, while the five solar years contained 1825 days. The lustrum, or the great year of the ancient Romans,¹⁴ was thus a cycle, at the end of which the

beginning of the ancient year nearly coincided with that of the solar year. As the coincidence, however, was not perfect, a month of 24 days was intercalated in every eleventh lustrum. Now it is highly probable that the recurrence of such a cycle or great year was, from the earliest times, solemnized with sacrifices and purifications, and that Servius Tullius did not introduce them, but merely connected them with his census, and thus set the example for subsequent ages, which, however, as we have seen, was not observed with regularity. At first the irregularity may have been caused by the struggles between the patricians and plebeians, when the appointment of censors was purposely neglected to increase the disorders; but we also find that similar neglects took place at a later period, when no such causes existed.¹ The last lustrum was solemnized at Rome in A.D. 74, in the reign of Vespasian.²

Many writers of the latter period of the Republic and during the Empire use the word lustrum for any space of five years, and without any regard to the census,³ while others even apply it in the sense of the Greek pentæteris or an Olympiad, which only contained four years.⁴ Martial also uses the expression lustrum ingens for sæculum.⁵

LYCAIA (Λύκεια), a festival with contests, celebrated by the Arcadians in honour of Zeus, surnamed Λυκαῖος. It was said to have been instituted by the ancient hero Lycaon, the son of Pelasgus.⁶ He is also said, instead of the cakes which had formerly been offered to the god, to have sacrificed a child to Zeus, and to have sprinkled the altar with its blood. It is not improbable that human sacrifices were offered in Arcadia to Zeus Lycæus down to a very late period in Grecian history.⁷ No further particulars respecting the celebration of the Lycæa are known, with the exception of the statement of Plutarch,⁸ that the celebration of the Lycæa in some degree resembled that of the Roman Lupercalia.

*LYCAPSUS (λύκαψος), a plant, which Sprengel makes to be the *Onosma Orientalis*. The Greek name is derived from λύκος ("a wolf") and ὄψις ("appearance"), because its flowers resembled the distended jaws of a wolf.

*LYCHNIS (λυχνίς), a plant. "The λυχνίς στεφανωματική of Dioscorides is the *Agrostemma coronarium*, L., or Rose Campion. The λυχνίς ἄγρια is referred by Sprengel and others to the *Agrostemma githago*, or Corn Cockle. But perhaps the opinion of Dodonæus, who suggested the *Lychnis divica*, is entitled to as much or greater authority."⁹

*LYCHNITES (λυχνίτης), a term applied to both a gem and a stone. The gem, according to De Laet, was a variety of our garnet. The stone would appear to have been a variety of marble. The λυχνίς of Orpheus was most probably the gem.—The marble termed *lychnites* was so called because quarried by the light of lamps (λύχνος, "a lamp"), and as Pliny, on the authority of Varro, informs us, was the same as the Parian.¹⁰

LYCHNU'CHUS. (Vid. CANDELABRUM.)

*LYCIUM (λύκιον), a medicinal substance obtained from the roots and branches of a thorny shrub growing in Lycia. "It is almost certain," observes Adams, "that the plant from which it was procured is the *Rhamnus infectorius*. This appears clear from

Pliny's account of it. Sprengel and Milligan hold the *Lygium Indicum* to have been the *Acacia catechu*, Willd., and yet, as Dr. Hill remarks, the description given by Dioscorides of the trees by no means agrees with any of those of which our catechu, or *Terra Japonica*, is made."¹¹

*LYCOPSIS (λικοψίς), a plant, which Sibthorp has proved to be the *Echium italicum*, or Italian Viper's-bugloss.

*LYDIUS LAPIS, the Touchstone. (Vid. BASANOS.)

*LYRA (λύρα), a species of Fish, the *Trigla Lyra*, L. It is called in French, *Gronau*; in English, the Piper, from a sort of hissing which it makes by the expulsion of the air through the gills when taken. Pennant says it is often caught on the western coasts of great Britain.²

LYRA (λύρα, Lat. *fides*), a Lyre, one of the most ancient musical instruments of the stringed kind. There can be scarcely any doubt that this and similar instruments were used by the Eastern nations and by the Egyptians long before the Greeks became acquainted with them, and that they were introduced among the Greeks from Asia Minor.³ The Greeks themselves, however, attributed the invention of the lyre to Hermes, who is said to have formed the instrument of a tortoise-shell, over which he placed gut-strings.⁴ As regards the original number of the strings of a lyre, the accounts of the ancients differ so widely that it is almost impossible to arrive at any definite conclusion. Diodorus⁵ states that Hermes gave his lyre three strings, one with an acute, the other with a grave, and the third with a middle sound. Macrobius⁶ says that the lyre of Mercury had four strings, which symbolically represented the four seasons of the year; while Lucian,⁷ Ovid,⁸ and others, assume that the lyre from the first had seven strings. All ancient writers who mention this invention of Hermes apply to it the name lyra, though its shape, in the description of Apollodorus and Servius, rather resembles that of the instrument which in subsequent times was designated by the name cithara (κίθαρα or κίθαρις), and in some degree resembled a modern guitar, in as far as in the latter the strings were drawn across the sounding bottom, whereas in the lyra of later times they were free on both sides. In the Homeric poems the name λύρα does not occur, with the exception of the Homeric hymn to Hermes; and from the expression which occurs in this hymn⁹ (λύρη καθαρίζειν), it appears that originally there was very little or no difference between the two instruments; that is to say, the instrument formerly used was a cithara in the later sense of the word.

The instruments which Homer mentions as used to accompany songs are the φόρμιγξ and κίθαρις.¹⁰ Now that the φόρμιγξ and the κίθαρις were the same instrument, appears to be clear from the expression φόρμιγγι κίθαρίζειν, and κίθαρι φόρμιγγειν.¹¹ The lyra is also called χέλυσ or χελώνη, and in Latin *testudo*, because it was made of a tortoise-shell.

The obscurity which hangs over the original number of strings of the lyre is somewhat removed by the statement made by several ancient writers, that Terpander of Antissa (about 650 B.C.) added to the original number of four strings three new ones, and thus changed the tetrachord into a heptachord;¹²

1. (Sueton, Octav., 37.—Clend., 16.)—2. (Censorin., l. c.)—3. (Ovid, Fast., ii., 183; iv., 701.—Id., Amor., iii., 6, 27.—Horat., Carm., ii., 4, 24; iv., 1, 6.)—4. (Ovid, Pont., iv., 6, 5, &c.—Mart., iv., 45.)—5. (Compare Scaliger, De Emend. Temp., p. 183.—Ideler, Handb. der Chronol., ii., p. 77, &c.)—6. (Paus., viii., 2, § 1.)—7. (Porphyry, De Abst., ii., 27.)—8. (Cæs., 61.)—9. (Theophrast., H. P., vi., 8.—Dioscor., iii., 104, 105.—Adams, Append., s. v.)—10. (Orpheus; De Lapid., 268.—Adams, Append., s. v.—Moore's Anc. Mineralogy, p. 77.)

Egypt., ii., p. 272, 288, &c.)—4. (Hom., Hymn. in Merc.—Apollod., iii., 10, 2.—Diod. Sic., v., 75.—Serv. ad Virg., Georg., iv., 464.)—5. (i., 16.)—6. (Sat., i., 19.)—7. (Deor. Dial., 7.)—8. (Fast., v., 106.)—9. (423.)—10. (Il., i., 603.—Od., viii., 248 and 261.)—11. (Od., i., 153, &c.)—12. (Euclid, Introd. Harm., p. 19.—Strab., xiii., p. 618.—Clem. Alex., Strom., vi., p. 814, ed. Potter.)

though it cannot be denied that there existed lyres with only three strings.¹ The following are representations of a tetrachord and a heptachord, and are both taken from the work of Blanchini.

The heptachord introduced by Terpander henceforth continued to be most commonly used by the Greeks, as well as subsequently by the Romans, though in the course of time many additions and improvements were made

which are described below. In the ancient tetrachord, the two extreme strings stood to each other in the relation of a fourth (*διὰ τεσσάρων*), i. e., the lower string made three vibrations in the time that the upper one made four. In the most ancient arrangement of the scale, which was called the diatonic, the two middle strings were strung in such a manner, that the three intervals between the four strings produced twice a whole tone and one semitone. Terpander, in forming his heptachord, in reality

added a new tetrachord to the ancient one, but left out the third string of the latter, as there was between it and the fourth only an interval of a semitone. The heptachord thus had the compass of an octave, or, as the ancients called it, a diapason (*διὰ πᾶσιν*). The intervals between the seven strings in the diatonic scale were as follow: between one and two, a whole tone; between two and three, a whole tone; between three and four, a whole tone and a semitone; between four and five and five and six, a whole tone each; between six and seven, a semitone. The seven strings themselves were called, beginning from the highest, *νήτη*, *παρανήτη*, *παραμείση*, *μέση*, *λιγανός*, *παραπύκτη*, *ὑπάτη*.² Pindar himself made use of the heptachord, though in his time an eighth string had been added. In the time of Philip and Alexander, the number of strings was increased to eleven by Timotheus of Miletus,³ an innovation which was severely censured by the Spartans, who refused to go beyond the number of seven strings.⁴ It is, however, clear that the ancients

made use of a variety of lyres, and in the representations which we still possess, the number of strings varies from three to eleven. About the time of Sappho and Anacreon, several stringed instruments, such as *magadis*, *barbiton*, and others, were used in Greece, and especially in Lesbos. They had been introduced from Asia Minor, and their number of strings far exceeded that of the lyre, for we know that some had a compass of two octaves, and others had even twenty strings, so that they must have more resembled a modern harp than a lyre.¹

It has been remarked above that the name *lyra* occurs very seldom in the earliest Greek writers, and that originally this instrument and the *cithara* were the same. But about the time of Pindar innovations seem to have been introduced, by which the *lyra* became distinct from the *cithara*, the invention of which was ascribed to Apollo, and hence the name of the former now occurs more frequently.² Both, however, had in most cases no more than seven strings. The difference between the two instruments is described above; the *lyre* had a great and full-sounding bottom, which continued, as before, to be made generally of a tortoise-shell, from which, as Lucian³ expresses it, the horns rose as from the head of a stag. A transverse piece of wood, connecting the two horns at or near their top ends, served to fasten the strings, and was called *ζύγων*, and in Latin *transillum*. The horns were called *πήγεις* or *cornua*.⁴ These instruments were often adorned in the most costly manner with gold and ivory.⁵ The *lyre* was considered as a more manly instrument than the *cithara*, which, on account of its smaller-sounding bottom, excluded full-sounding and deep tones, and was more calculated for the middle tones. The *lyre*, when played, stood in an upright position between the knees, while the *cithara* stood upon the knees of the player. Both instruments were held with the left hand, and played with the right.⁶ It has generally been supposed that the strings of these instruments were always touched with a little staff called *plectrum* (*πλήκτρον*) (see woodcut, p. 188), but among the paintings discovered at Herculaneum, we find several instances where the persons play the *lyre* with their fingers.⁷ The *lyre* was at all times only played as an accompaniment to songs.

The Latin name *fides*, which was used for a *lyre* as well as a *cithara*, is probably the same as the Greek *οπίδες*, which, according to Hesychius,⁸ signifies gut-string; but Festus⁹ takes it to be the same as *fides* (faith), because the *lyre* was the symbol of harmony and unity among men.

The *lyre* (*cithara* or *phorminx*) was at first used in the recitations of epic poetry, though it was probably not played during the recitation itself, but only as a prelude before the minstrel commenced his story, and in the intervals or pauses between the several parts. The *lyre* has given its name to a species of poetry called *lyric*; this kind of poetry was originally never recited or sung without the accompaniment of the *lyre*, and sometimes, also, of an appropriate dance. (Compare the article *MUSICA*.—Plutarch, *De Musica*.—Böckh, *De Metris Pindari*.—Driberg, *Musikalische Wissenschaften der Griechen*; and by the same author, *Aufschlüsse über die Musik der Griechen*.—Müller, *Hist. of Gr. Lit.*, i. p. 148, &c.)

***LYSIMACHIUM** (*λυσιμάχιον*) or **LYSIMACHIA** (*λυσιμάχιν*), a plant, which Woodville holds to be the *Lysimachia nummularia*, or Moneywort.

(*VID. SENATUS CONSULTUM*.)

MACCHUS. (*VID. ATELLANÆ FABULÆ*, p. 119.)

MACELLUM (*ὄψωπῶλλα*; ² *ὄψωπῶλειον*, *κρεοπωλεῖον*), a provision-market, frequented by cooks, fishermen, poulterers, confectioners, butchers, and men of similar occupations.³ (*VID. FORUM*, p. 451) From *macellum*, a provision-merchant was called *macellarius* (*ὄψωπῶλης*, *κρεοπῶλης*). The Athenians called their *macellum* *εἰς τὸν ψον*, just as they called their slave-market *εἰς τὰ ἀνδράποδα*, their wine-market *εἰς τὸν οἶνον*, and other markets by the names of the commodities sold in them.⁵

*MACER (*μάκερ*), according to Moses Charrias, the same as Mace. "This, however, is denied by Matthiolus," observes Adams, "with whom Sprengel agrees, although he admits that the Arabians confounded them together. He is disposed to believe it the bark of a Malabar tree described by Costa, and said to be called *Macre*."⁶

MAGADIS. (*VID. LYRA*; *MUSICA, GREEK*.)

MAGISTER, which contains the same root as *mag-is* and *mag-nus*, was applied at Rome to persons possessing various kinds of offices, and is thus explained by Festus: "Magisterare, moderari. Unde magistri non solum doctores artium, sed etiam pagorum, societatum, vicorum, collegiorum, equitum dicuntur; quia omnes hi magis ceteris possunt." Paulus⁸ thus defines the word: "*Quibus præcipua cura rerum incumbit, et qui magis quam ceteri diligentiam et sollicitudinem rebus, quibus præsent, debent, hi magistri appellantur*." The following is a list of the principal magistri:

MAGISTER ADMISSIONUM. (*VID. ADMISSIONALES*.)

MAGISTER ARMORUM appears to have been the same officer as the *magister militum*.⁹

MAGISTER AUCTIONIS. (*VID. BONORUM EMPTIO*.)

MAGISTER BIBENDI. (*VID. SYMPOSIUM*.)

MAGISTER COLLEGII was the president of a collegium or corporation. (*VID. COLLEGIUM*.)

MAGISTER EPISTOLARUM answered letters on behalf of the emperor.¹⁰

MAGISTER EQUITUM. (*VID. DICTATOR*, p. 361.)

MAGISTER LIBELLORUM was an officer or secretary who read and answered petitions addressed to the emperors. (*VID. LIBELLUS*, 4, c.) He is called in an inscription "*Magister libellorum et cognitionum sacrarum*."¹¹

MAGISTER MEMORIE, an officer whose duty it was to receive the decision of the emperor on any subject, and communicate it to the public or the persons concerned.¹²

MAGISTER MILITUM. (*VID. ARMY, ROMAN*, p. 106.)

MAGISTER NAVIS. (*VID. EXERCITORIA ACTIO*.)

MAGISTER OFFICIORUM was an officer of high rank at the imperial court, who had the superintendence of all audiences with the emperor, and also had extensive jurisdiction over both civil and military officers.¹³

MAGISTER POPULI. (*VID. DICTATOR*, p. 360.)

MAGISTER SCRINIORUM had the care of all the papers and documents belonging to the emperor.¹

MAGISTER SOCIETATIS. The equites, who farmed the taxes at Rome, were divided into certain societies; and he who presided in such a society was called *magister societatis*.²

MAGISTER VICORUM. Augustus divided Rome into certain regiones and vici, and commanded that the people of each vicus should choose *magistri* to manage its affairs.³ From an inscription on an ancient stone referred to by Pitiscus,⁴ it appears that there were four such *magistri* to each vicus. They were accustomed to exhibit the *Ludi Compitalitii* dressed in the *prætecta*.⁵

MAGISTRATUS. A definition of *magistratus* may be collected from Pomponius, *De Origine Juris*.⁶ *Magistratus* are those "*qui juri dicundo præsumt*." The king was originally the sole *magistratus*; he had all the potestas. On the expulsion of the kings, two consuls were annually appointed, and they were *magistratus*. In course of time other *magistratus* were appointed, so that Pomponius enumerates as the *magistratus* of his time "*qui in civitate jura reddebant*," ten *tribuni plebis*, two consuls, eighteen prætors, and six ædiles. He adds that the præfecti annonæ et vigillum were not *magistratus*. The dictator was also a *magistratus*; and the censors; and the *decemviri litibus judicandis*. The governors of provinces with the title of *proprætor* or *proconsul* were also *magistratus*. Gaius attributes the *jus edicendi* to the *magistratus populi Romani*, without any restriction; but he says that the chief edictal power was possessed by the prætor urbanus and the prætor peregrinus, whose jurisdiction in the provinces was exercised by the præsides of provinces, and also by the *curule ædiles*, whose jurisdiction in the provincie populi Romani was exercised by the *quæstors* of those provinces.

The word *magistratus* contains the same element as *mag(ister)* and *mag(nus)*; and it signifies both the person and the office, as we see in the phrase "*se magistratu abdicare*."⁷ According to Festus, a *magistratus* was one who had "*judicium auspiciumque*."

According to M. Messala the *augur*, quoted by Gellius,⁸ the *auspicia maxima* belonged to the consuls, prætors, and censors, and the *minora auspicia* to the other *magistratus*; accordingly, the consuls, prætors, and censors were called *majores*, and they were elected at the *comitia centuriata*; the other *magistratus* were called *minores*. The *magistratus* were also divided into *curules* and those who were not *curules*: the *magistratus curules* were the dictator, consuls, prætors, censors, and the *curule ædiles*, who were so called because they had the *jus sellæ curulis*. The *magistrates* were chosen only from the patricians in the early Republic, but in course of time the plebeians shared these honours, with the exception of that of the *interrex*: the plebeian *magistratus*, properly so called, were the plebeian ædiles and the *tribuni plebis*.

The distinction of *magistratus* into *majores* who had the imperium, and the *minores* who had not, had a reference to jurisdiction also. The former term comprised prætors and governors of provinces; the latter, in the republican time, comprised ædiles and *quæstors*, and, under the Empire, the numerous body of municipal *magistrates*. The want of the imperium limited the power of the *magistratus mi-*

1. (*Cod.*, 12, tit. 9.—*Spartian.*, *Æl. Ver.*, 4.—*Lamprid.*, *Alex. Sev.*, 26.)—2. (*Cic.*, *Verr.*, U., ii., 74.—*Id.*, *ad Fam.*, xiii., 9.—*Id.*, *Pro Planc.*, 13.)—3. (*Liv.*, xxiii., 23)—8. (*xiii.*, 15.)

ores in various matters which came under their cognizance, and the want of it also removed other matters entirely from their jurisdiction (taking the word in its general sense). Those matters which belonged to jurisdiction in its limited sense were within the competence of the magistratus minores (*vid. JURISDICTION*); but those matters which belong to the imperium were, for that reason, not within the competence of the magistratus minores. As proceeding from the imperium, we find enumerated the prætoriae stipulationes, such as the cautio damni infecti, and ex novi operis nuntiatio; and also the missio in possessionem, and the in integrum restitutio. Thus it appears that the limited jurisdiction was confined to the ordo iudiciorum privatorum, and all the proceedings extra ordinem were based on the imperium: consequently, a minor magistratus could not exercise cognitio, properly so called, and could not make a decretum. This consideration explains the fact of two prætors for questions as to fideicommissa being appointed under Claudius: they had to decide such matters for all Italy, inasmuch as such matters were not within the competence of the municipal magistrates. The jurisdiction of the municipal magistrates of Cisalpine Gaul was limited, in many cases, to a certain sum of money, and this limitation was afterward extended to all Italy. Added to this, these magistrates had not the imperium, which, as already observed, limited their jurisdiction.

The magistratus minores could take cognizance of matters which were not within their jurisdiction, by delegatio from a superior magistratus. Thus, in the case of *damnum infectum*, inasmuch as delay might cause irreparable mischief, the prætor could delegate to the municipal magistratus, who were under him, the power of requiring the cautio.¹

It became necessary to reorganize the administration of Gallia Cisalpina on its ceasing to be a province; and, as the jurisdiction was placed in the hands of municipal magistratus who had no imperium, it was farther necessary to determine what should be the form of procedure before these magistratus in all matters that were extra ordinem, that is, in such matters as did not belong to their competence because they were magistratus minores, but were specially given to them by a lex. The determining of this form of procedure was the object of the lex Rubria. (*VID. LEX RUBRIA*.)²

The case of adoption (properly so called) illustrates the distinction of magistratus into majores and minores, as founded on the possessing or not possessing the imperium.³ This adoption was effected "*imperio magistratus*," as, for instance, before the prætor at Rome: in the provinciæ the same thing was effected before a proconsul or legatus, both of whom, therefore, had the imperium. The municipal magistratus, as they had not the imperium, could not give validity to such an act of adoption.

*MAGNES (μάγνης, μαγνήτης, and μαγνίτις λίθος), the Loadstone or Magnet. "The story of the discovery of this stone by one Magnes, a shepherd on Mount Ida, who found his hob-nailed shoes and iron-pointed staff cling to the rock upon which he trod, seems to be a poetical fiction, derived by Pliny from Nicander. The name is undoubtedly derived from the locality where the stone was first found." (*Consult the following article*.)⁴

*MAGNESIUS LAPIS, a stone found both at Magnesia in Thessaly, and near a city of the same name in Asia Minor. "As one and the same mineral substance," observes Dr. Moore, "received among the ancients different names, according as

it was procured by different methods from different places, or from substances apparently unlike; so, on the other hand, things of dissimilar nature were called by the same name, merely because of some accidental agreement in colour, place of origin, or use to which they were applied. Thus the name 'magnet' (or Magnesian stone) was given, not only to what we call the native magnet, magnetic oxide of iron, but to a substance wholly different, and which appears to have been some variety of steatite. It is highly probable that these two minerals, so different in character, were both denominated the magnetic (or Magnesian) stone, from their being both found in a country named Magnesia; for, of the five localities specified by Pliny, whence as many varieties of magnet were obtained, one is Magnesia in Thessaly, and another a city of Asia bearing the same name. And it was here, he says, a magnet was found, of a whitish colour, somewhat resembling pumice, and not attracting iron; which, taken in connexion with what Theophrastus says of the magnet, that it was suited for turning in the lathe, and of a silvery appearance, leads to the inference that this magnet was talc or steatite. This mineral contains a large proportion of the earth called *magnesia*, a name of which we may thus trace the origin, though perhaps a much purer form than this steatite affords, of the earth now called *magnesia*, may have been sometimes designated as the magnesian stone; for, when Hippocrates prescribes the use of it as a cathartic, it seems highly probable that he meant the native carbonate of Magnesia. He certainly does not intend the magnet, as well because it is not purgative, as because he elsewhere describes that differently as the stone which draws iron, and would have named it, not the Magnesian, but the Heracleian stone."⁵

*MAGU'DARIS (μαγύδαρις). Dioscorides applies this name to the root of the plant which produces asafetida. Theophrastus, however, would seem to make it a distinct species or variety. (*VID. SILEPHIUM*.)⁶

*MAIA (μαία), a sort of Crab-fish described by Aristotle. Gesner says it is called *Araignée de mer*, or Sea Spider. It is probably, says Adams, the *Cancer araneus*, L.⁷

*MAINIS (μαίνις), a species of fish, the *Sparus mana*, called in French *Mendole*; and in modern Greek, according to Coray, *κερούλα*.⁸

MAJESTAS is defined by Ulpian⁹ to be "*crimen illud quod adversus populum Romanum vel adversus securitatem ejus committitur*." He then gives various instances of the crime of majestas, some of which pretty nearly correspond to treason in English law; but all the offences included under majestas comprehend more than the English treason. One of the offences included in majestas was the effecting, aiding in, or planning the death of a magistratus populi Romani, or of one who had imperium or potestas. Though the phrase "*crimen majestatis*" was used, the complete expression was "*crimen læsæ, imminutæ, diminutæ, minutæ, majestatis*."¹⁰

The word majestas, consistently with its relation to mag(nus), signifies the magnitude or greatness of a thing. "*Majestas*," says Cicero,¹¹ "*est quadam magnitudo populi Romani*;" "*majestas est in imperii atque in nominis populi Romani dignitate*." Accordingly, the phrases "*majestas populi Romani*," "*imperii majestas*," signify the whole of that which

constituted the Roman state; in other words, the sovereign power of the Roman state. The expression *minuere majestatem* consequently signifies any act by which this majestas is impaired; and it is thus defined by Cicero:¹ "*Majestatem minuere est de dignitate, aut amplitudine, aut potestate populi aut eorum quibus populus potestatem dedit, aliquid derogare.*"² The phrase *majestas publica* in the Digest is equivalent to the *majestas populi Romani*. In the republican period, the term *majestas læsa* or *minuta* was most commonly applied to cases of a general betraying or surrendering his army to the enemy, exciting sedition, and generally by his bad conduct in administration impairing the *majestas* of the state.³

The laws of the Twelve Tables punished with death a person who stirred up an enemy against Rome, or surrendered a Roman citizen to an enemy.⁴ The *leges majestatis* seem to have extended the offence of *majestas* generally to all acts which impaired the *majestas publica*; and several of the special provisions of the *lex Julia* are enumerated in the passage just referred to.

It seems difficult to ascertain how far the *lex Julia* carried the offence of *majestas* with respect to the person of the princeps. Like many other *leges*, it was modified by *senatus consulta* and imperial constitutions; and we cannot conclude from the title in the Digest, "*Ad Legem Juliam Majestatis*," that all the provisions enumerated under that title were comprehended in the original *lex Julia*. It is stated by Marcianus, as there cited, that it was not *majestas* to repair the statues of the Cæsar which were going to decay; and a rescript of Severus and his son Antoninus Caracalla declared that if a stone was thrown and accidentally struck a statue of the emperor, that also was not *majestas*; and they also graciously declared that it was not *majestas* to sell the statues of the Cæsar before they were consecrated. Here, then, is an instance, under the title *Ad Legem Juliam Majestatis*, of the imperial rescripts declaring what was not *majestas*. But there is also an extract from Saturninus, De Judiciis, who says that if a person melted down the statues or *imagines* of the emperor which were already consecrated, or did any similar act, he was liable to the penalties of the *lex Julia Majestatis*. But even this does not prove that this provision was a part of the *Julia lex* as originally passed, for a *lex*, after being amended by *senatus consulta* or imperial constitutions, still retained its name.

The old punishment of *majestas* was perpetual interdiction from fire and water; but now, says Paulus,⁵ that is, in the later imperial period, persons of low condition are thrown to wild beasts, or burned alive; persons of better condition are simply put to death. The property of the offender was confiscated, and his memory was infamous.

In the early times of the Republic, every act of a citizen which was injurious to the state or its peace was called *perduellio*, and the offender (*perduellus*) was tried before the *populus* (*populi judicio*), and, if convicted, put to death.⁶ Cn. Fulvius⁷ was charged with the offence of *perduellio* for losing a Roman army. According to Gaius, "*perduellus*" originally signified "*hostis*;"⁸ and thus the old offence of *perduellio* was equivalent to making war on the Roman state. The trial for *perduellio* (*perduellionis judicium*) existed to the later times of the Republic; but the name seems to have almost fallen into disuse, and various *leges* were passed for the purpose of determining more accurately what should be ma-

jestas. These were a *lex Apuleia*, probably passed in the fifth consulship of Marius, the exact contents of which are unknown;¹ a *lex Varia*, B.C. 91; a *lex Cornelia*, passed by L. C. Sulla,² and the *lex Julia* already mentioned, and which, as we have seen, continued under the Empire to be the fundamental enactment on this subject. This *lex Julia* is by some attributed to C. J. Cæsar, and assigned to the year B.C. 48, and this may be the *lex* referred to in the Digest; some assume a second *lex Julia*, under Augustus, but perhaps without sufficient grounds.

Under the Empire the term *majestas* was applied to the person of the reigning Cæsar, and we find the phrases *majestas Augusta*, *imperatoria*, and *regia*. It was, however, nothing new to apply the term to the emperor, considered in some of his various capacities, for it was applied to the magistratus under the Republic, as to the consul and prætor.³ Horace even addresses Augustus⁴ in the terms "*majestas tua*," but this can hardly be viewed otherwise than as a personal compliment, and not as said with reference to any of the offices which he held. The extension of the penalties to various new offences against the person of the emperor belongs, of course, to the imperial period. Augustus availed himself of the *lex* for prosecuting the authors of *famosi libelli* (*cognitioem de famosis libellis, specie legis ejus, tractavit*): the proper inference from the passage of Tacitus is, that the *leges majestatis* (for they all seem to be comprised under the term "*legem majestatis*") did not apply to words or writings, for these were punishable otherwise. The passage of Cicero⁵ is manifestly corrupt, and, as it stands, inconsistent with the context; it cannot be taken as evidence that the *lex Majestatis* of Sulla contained any provisions as to libellous words, as to which there were other sufficient provisions. (*Vid. INJURIA*.) Sigonius has attempted to collect the capita of the *lex Majestatis* of Sulla. Under Tiberius, the offence of *majestas* was extended to all acts and words which might appear to be disrespectful to the princeps, as appears from various passages in Tacitus.⁷ The term *perduellio* was in use under the Empire, and seems to have been equivalent to *majestas* at that period.

An inquiry might be made into an act of *majestas* against the emperor even after the death of the offender; a rule which was established (as we are informed by Paulus) by M. Anrelius in the case of Druncianus, a senator who had taken part in the outbreak of Cassius, and whose property was claimed by the fiscus after his death. (Perhaps the account of Capitolinus,⁸ and of Vukatinus Gallicanus,⁹ is not inconsistent with the statement of Paulus.) A constitution of S. Severus and Antoninus Caracalla declared that, from the time that an act of *majestas* was committed, a man could not alienate his property or manumit a slave, to which the great (*magnus*) Antoninus (probably Caracalla is still meant) added, that a debtor could not, after that time, lawfully make a payment to him. In the matter of *majestas*, slaves could also be examined by torture in order to give evidence against their master: this provision, though comprehended in the code under the title *Ad Legem Juliam Majestatis*, was perhaps not contained in the original law, for Tiberius sold a man's slaves to the actor publicus,¹⁰ in order that they might give evidence against their master, who was accused of *repetundæ* and also of *majestas*. Women were admitted

as evidence in a case of *læsa majestas*, and the case of Fulvia is cited as an instance.¹

As to the phrase *patria majestas*, see *PATRIA POTESTAS*.

***MALABATHRUM** (μαλάβαθρον). The Indian *μαλάβαθρον*, described in the *Periplus of Arrian*, is indisputably, according to Adams, the Betel, or, rather, the Aræca-nut enveloped in the leaves of the Betel. There are three species of Betel, namely, *Malabathron hydrosphærum*, *mesosphærum*, and *microsphærum*. Horace applies the word to an ointment or perfume, "*perfusus nitentes Malabathro Syrio capillos*," on which passage Porphyrius remarks, "*Malabathrum unguenti speciem esse scimus*." Isidorus says of it, "*Folium dictum, quod sine ulla radice innatans in Indiæ litoribus colligitur*." It is uniformly called *folium* by Apicius. According to Geoffroy, it is the leaf of a kind of wild cinnamon-tree. Sprengel, in like manner, holds it to be a cassia-leaf. From this conflict of authorities, it would appear that the term, though properly signifying what we have mentioned in the beginning of this article, became gradually applied to other and different aromatics.²

***MAL'ACHE** (μαλάχη). Sprengel, on the authority of Walpole, decides that the edible *μαλάχη* of the Greeks, or *μ. κηπευτή* of Dioscorides, was the *Malva sylvestris*. The *δενδρομαλάχη* of Galen he sets down as the *Althæa rosea*. According to Sibthorp, this is the official mallows of the modern Greeks. "As emollients, mallows are well known in medical practice, the Marsh-mallow (*Althæa officinalis*) being one of the most useful among this kind of remedial substances."³

***MALACIA** (μαλάκια). "One of the inferior classes of animals, according to the Aristotelian arrangement, which nearly corresponds to that of Cuvier. The cuttle-fish and a few others were placed in this class. They are called *Mollia* by Pliny, who, however, is guilty of inconsistency in applying this term to the *μαλακόστρακα* on one or more occasions."⁴

***MALACOCRANEUS** (μαλακοκρᾶνεύς), a bird briefly noticed by Aristotle. Gesner concludes that it is the "*Pica glandaria*" of Pliny, namely, the Jay, or *Garrulus glandarius*, Brisson, the same as the *Corvus glandarius*, L.⁵

MALLEUS, *dim.* **MALLE'OLUS** (μαίσθηρ: σφύρα, *dim.* σφύριον), a Hammer, a Mallet. In the hands of the farmer, the mallet of wood served to break down the clods (*occare*) and to pulverize them.⁶ The butcher used it in slaying cattle by striking the head, and we often read of it as used by the smith upon the anvil.⁷ When several men were employed at the same anvil, it was a matter of necessity that they should strike in time, and Virgil accordingly says of the Cyclopes, "*Inter se brachia tollunt in numerum*."⁸ The scene which he describes is represented in the annexed woodcut, taken from an ancient bas-relief, in which Vulcan, Brontes, and Steropes are seen forging the metal, while the third Cyclops, Pyracmon, blows the bellows.⁹ Beside the anvil-stand (*vid. INCUS*) is seen the vessel of water in which the hot iron or bronze was immersed.¹⁰

But, besides the employment of the hammer upon the anvil for making all ordinary utensils, the smith

(*χαλκός*) wrought with this instrument figures called *εργα σφυρήλατα* (or *όλοσφύρητα*), which were either small and fine, some of their parts being beaten as thin as paper, and being in very high relief, as in the bronzes of Siris (*vid. LORICA*, p. 598), or of colossal proportions, being composed of separate plates riveted together; of this, the most remarkable example was the statue of the sun of wrought bronze (*σφυρήλατος κολοσσός*; ² *βασιτροκοπία*), seventy cubits high, which was erected in Rhodes. Another remarkable production of the same kind was the golden statue of Jupiter,⁴ which was erected at Olympia by the sons of Cypselus. The right-hand figure of Hercules, in the woodcut at page 93, is taken from the remains of a very ancient bronze candelabrum, found in 1812 near Perugia, and now preserved in the Glyptotek at Munich. It consists of embossed plates, finely wrought with the hammer, and the small rivets for holding them together are still visible.

By other artificers the hammer was used in conjunction with the chisel (*vid. DOLABRA*), as by the carpenter (*pulsans malleus*; ⁵ woodcut, p. 62) and the sculptor.

The term *malleolus* denoted a hammer, the transverse head of which was formed for holding pitch and tow, which, having been set on fire, was projected slowly, so that it might not be extinguished during its flight, upon houses and other buildings in order to set them on fire, and which was, therefore, commonly used in sieges, together with torches and falariae.⁶ (*Vid. HASTA*, p. 489.)

When the shoot of a vine was cut in order to be set in the ground, part of the stem was also cut away with it, and bore a resemblance to the head of a hammer; hence such cuttings were called *malleoli*.⁷

***MALINOTHALLE** (μαλινοθάλλη), a plant which, according to Bauhin, some had taken for the *Cyperus csesulentus*. Stackhouse adopts this opinion.⁸

***MALTHE** (μάλθη), a fish mentioned by Oppian, Athenæus, and Ælian. All that we can ascertain of it, remarks Adams, is, that it was of the Cetaceous tribe.⁹

***MALVA**. (*Vid. MALACKE*.)

***MALUM** (μήλον). "According to Macrobius the ancients applied the term *mala* to all kinds of fruit which have the hard part or kernel within, and the esculent part outside. The various kinds treated of by ancient authors will be found under their several heads."¹⁰

MALUS (ἴστος). The ancients had vessels with

1. (Dig. 48, tit. 4.—Cod. ix., tit. 8.)—2. (Dioscor., i., 11.—Isid., Orig., xviii., 9.—Adams, Append., s. v.)—3. (Theophrast., H. P., l. 3.—Dioscor., ii., 144.—Adams, Append., s. v.)—4. one two, and three masts. The inscriptions recently discovered at Athens contain a perfect inventory of all the gear issued to trieres and tetieres, and they have been illustrated and deciphered by Böckh.¹ From this work we perceive that two masts were issued from the *νεώριον* for every trieres, and are enabled to correct Hesychius, who calls the first or mainmast *ἀκάτειος*, whereas this is unquestionably the foremast. The other lexicographers either omit the word, or give an imperfect sense to it. These inscriptions enable us to give it an exact signification. In II., 92, they give *ιστοῦ μέγαν* and *ιστοῦ ἀκατείου* as distinct gear. The masts of the tetieres are similarly termed *ιστούς*, XI., c. For a triakonto, two masts, both termed *ιστοί*, appear, XVII., sub init. In two-masted ships the smaller mast was usually near the prore. In three-masted ships the size of the masts decreased as they approached the stem; the largest was the nearest to the stern. The mast was of one entire piece. Pliny² tells us the mast and the yards were usually of fir. Respecting the mode in which the yard was affixed to the mast, see the article ANTENNA. We do not find in the inscriptions alluded to, and which are mostly of the æra of Demosthenes, who is named in them, any terms by which parts of the mast are described. It seems to have been always issued to the trierarch as a piece of solid gear. The price of the large mast is given in these inscriptions (probably, as Böckh conjectures, with hoops, &c.) at 37 drachmæ. Pliny³ attributes the invention of the mast to Dædalus.

MALUS OCULUS. (Vid. FASCINUM.)

MANCEPS has the same relation to mancipium that auspex has to auspicius. It is properly qui manu capit. But the word has several special significations. Mancipes were those who bid at the public lettings of the censors for the purpose of farming any part of the public property.⁴ Sometimes the chief of the publicani generally are meant by this term, as they were no doubt the bidders and gave the security, and then they shared the undertaking with others, or underlet it.⁵ The mancipes would accordingly have distinctive names, according to the kind of revenue which they took on lease, as decumani, portitores, pecuarii. Suetonius⁶ says that the father of Petro was a mancipes of labourers (*opera*) who went yearly from Umbrium to Sabinum to cultivate the land; that is, he hired them from their masters, and paid so much for the use of them, as is now often done in slave countries. The terms mancipes thermarum et salinarum occur in the Theodosian Code.⁷

MANCIPATIO (Vid. MANCIPIUM.)

MANCIPII RES. (Vid. DOMINIUM.)

MANCIPII CAUSA. The three expressions by which the Romans indicated the status in which a free person might be with respect to another, were in potestate, in manu, and in mancipio ejus esse.⁸ In consequence of his potestas, a father could mancipate his child to another person, for in the old times of the Republic his patria potestas was hardly distinguished from property; the act of begetting was equivalent to the acquisition of ownership. A husband had the same power over a wife in manu, for she was "filiae loco." Accordingly, a child in potestate and a wife in manu were properly res mancipi, and they were said to be in mancipio. Still such persons, when mancipated, were not exactly in the relation of slaves to the persons to whom they were mancipated, but they occupied a status between free persons and slaves, which was

expressed by the words mancipii causa. Such persons as were in mancipii causa were not sui juris,¹ and all that they acquired was acquired for the persons to whom they were mancipated. But they differed from slaves in not being possessed; they might also have an injuriarum actio for ill-treatment from those who had them in mancipio, and they did not lose the rights of ingenui, but these rights were only suspended. As to contracts, the person with whom they contracted might obtain the sale of such property (*bona*) as would have been theirs if they had not been in mancipii causa, as Gaius expresses it.² Persons in mancipii causa might be manumitted in the same way as slaves, and the limitations of the lex Ælia Sentia and Furia Caninia did not apply to such manumissions. The person who effected the manumission thereby acquired a kind of patronal right, which was of some importance in the matters of hereditas and tutela.

The strict practice of mancipio had fallen into disuse in the time of Gaius, and probably still earlier, and it had then become a mere legal form by which the patria potestas was dissolved (*vid. EMANCIPATIO*), except a person was mancipated ex noxali causa. In case of delicts by the son, the father could mancipate him (*ex noxali causa mancipio dare*), and one act of mancipatio was considered sufficient;³ but the son had a right of action for recovering his freedom, when he had worked out the amount of the damage.⁴ Justinian put an end to the noxæ datio in the case of children, which, indeed, before his time had fallen into disuse.⁵

In his time, Gaius remarks,⁶ that men were not kept in mancipii causa (*in eo jure*) for any long time, the form of mancipatio being only used (except in the case of a noxalis causa) for the purpose of emancipation. But questions of law still arose out of this form; for the three mancipationes, which were necessary in the case of a son, might not always have been observed. Accordingly, a child begotten by a son who had been twice mancipated, but born after the third mancipatio of his father, was still in the power of his grandfather. A child begotten by a son who was in his third mancipio, came into his father's power if he was manumitted after that mancipatio; but if the father died in mancipio, the child became sui juris.⁷

Coemptio, by which a woman came in manum, was effected by mancipatio, and the coemptio might be either matrimonii causa or fiducia causa. The fiducia causa coemptio was a ceremony which was necessary when a woman wished to change her tutores, and also when she wished to make a will; but a senatus consultum of Hadrian dispensed with the ceremony in the latter case.⁸

Dion Cassius⁹ says that Tiberius Nero transferred or gave (*ἐξέδωκε*) his wife to Octavianus, as a father would do; and the transfer of his wife Marcia by the younger Cato to Quintus Hortensius¹⁰ is a well-known story. It is probable that in both these cases the wife was in manu, and, accordingly, might be mancipated, and her children born to her new husband would be in his power.

The situation of a debtor who was adjudicated to his creditor resembled that of a person who was in mancipii causa.

MANCIPIUM. The etymology of this word is the same as that of the word mancipatio, of which Gaius¹¹ says, "*Mancipatio dicitur quia manu res capitur.*" The term mancipium, then, is derived from the act of corporeal apprehension of a thing; and this corporeal apprehension is with reference to the transfer of the ownership of a thing. It was not a

1. (Gaius, ii., 48-50.)—2. (iv., 80.)—3. (Gaius, iv., 75-78.—Liv., viii., 28.)—4. (Mos. et Rom. Leg. Coll., ii., 3.)—5. (Inst., iv., tit. 8, s. 7.)—6. (i., 141.)—7. (Gaius, i., 135.)—8. (Gaius, i., 115, &c.)—9. (xlviii., 44.)—10. (Plut., Cat. Min., c. 25.)—11. (i., 121.)

simple corporeal apprehension, but one which was accompanied by certain forms described by Gaius: "Mancipatio is effected in the presence of not less than five witnesses, who must be Roman citizens and of the age of puberty (*puberes*), and also in the presence of another person of the same status, who holds a pair of brazen scales, and hence is called *Libripens*. The purchaser (*qui mancipio accipit*), taking hold of the thing, says, I affirm that this slave (*homo*) is mine ex jure Quiritium, and he is purchased by me with this piece of money (*æs*) and brazen scales. He then strikes the scales with the piece of money, and gives it to the seller as a symbol of the price (*quasi pretii loco*).¹ The same account of the matter is given more briefly by Ulpian.² This mode of transfer applied to all *res mancipi*, whether free persons or slaves, animals or lands. Lands (*prædia*) might be thus transferred, though the parties to the mancipatio were not on the lands; but all other things, which were objects of mancipatio, were only transferable in the presence of the parties, because corporeal apprehension was a necessary part of the ceremony. Gaius calls mancipatio "*imaginaria quedam venditio*;" for, though the law required this form for the transfer of the quiritarian ownership, the real contract of sale consisted in the agreement of the parties as to the price. The party who transferred the ownership of a thing pursuant to these forms was said "*mancipio dare*;" he who thus acquired the ownership was said "*mancipio accipere*." The verb "*mancipare*" is sometimes used as equivalent to "*mancipio dare*." Horace³ uses the phrase "*mancipal usus*," which is not an unreasonable license: he means to say that "*usus*" or usufruct has the same effect as mancipatio, which is true; but *usus* only had its effect in the case of *res mancipi*, where there had been no mancipatio or in *jure cessio*.

Mancipatio is used by Gaius to express the act of transfer, but in Cicero the word mancipium is used in this sense.⁴

The division of things into *res mancipi* and *res mancipi* had reference to the formalities requisite to be observed in the transfer of ownership. It is stated in the article DOMINIUM what things were things mancipi. To this list may be added children of Roman parents, who were, according to the old law, *res mancipi*. (*Vid. MANCIPII CAUSA*.) The quiritarian ownership of *res mancipi* could only be immediately transferred by mancipatio or in *jure cessio*; transfer by tradition only made such things in bonis. The quiritarian ownership of *res nec mancipi* was acquired by tradition only. Quiritarian ownership is called mancipium by the earlier Roman writers: the word dominium is first used by later writers, as, for instance, Gaius. Mancipatio could only take place between Roman citizens or those who had the commercium; which, indeed, appears from the words used by the purchaser.⁵

The old word, then, by which this formal transfer of ownership was made, was mancipium, which occurs in the Twelve Tables.⁶ The word nexum or nexu is also sometimes used in the same sense. Cicero⁷ defines "*abalienatio*" to be "*ejus rei quæ mancipi est*;" and this is effected either by "*traditio alteri nexu aut in jure cessio inter quos ea jure civili fieri possunt*." According to this definition, "*abalienatio*" is of a *res mancipi*, a class of things determinate; and the mode of transfer is either by "*traditio nexu*" or by "*in jure cessio*." The two modes correspond respectively to the "*mancipatio*" and "*in jure cessio*" of Gaius,⁸ and, accordingly, man-

patio, or the older term mancipium, is equivalent to "*traditio nexu*;" in other words, mancipium was a nexum or nexum. Cicero¹ uses both words in the same sentence, where he speaks of various titles to property, and among them he mentions the *jus mancipii* and *jus nexi*. He may mean here to speak of the *jus mancipii* in its special sense, as contrasted with the *jus nexi*, which had a wider meaning; in another instance he uses both words to express one thing.² According to Elius Gallus, everything was "*nexum*" "*quodcumque per æs et libram geritur*;" and as mancipatio was effected per æs et libram, it was consequently a nexum. The form of mancipatio by the æs and libra continued probably till Justinian abolished the distinction between *res mancipi* and *res nec mancipi*. It is alluded to by Horace,³ and the libra, says Pliny,⁴ is still used in such forms of transfer.

When things were transferred mancipio, the venditor was bound to warranty in double of the amount of the thing sold.⁵ A vendor, therefore, who had a doubtful title, would not sell by mancipium, but would merely transfer by delivery, and leave the purchaser to obtain the quiritarian ownership of the thing by usufruct.⁶ Accordingly, Varro observes,⁷ that if a slave was not transferred by mancipium, the seller entered into a stipulatio dupli, to be enforced by the buyer in the case of eviction; when the transfer was by mancipium, this stipulation was not necessary. The terms of the contract were called *lex mancipii*, but it is not necessary to infer from the passage of Cicero⁸ that the *lex* contained the penalty, but merely that it contained what the seller warranted.⁹

It will easily result from what has been said, that mancipium may be used as equivalent to complete ownership, and may thus be opposed to *usus*, as in a passage of Lucretius that has been often quoted,¹⁰ and to *fructus*.¹¹ Sometimes the word mancipium signifies a slave, as being one of the *res mancipi*: this is probably the sense of the word in Cicero,¹² and certainly in Horace.¹³ Sometimes mancipia is used generally for *res mancipi*,¹⁴ unless *rem mancipi* is the right reading in that passage.

The subject of mancipium and mancipatio is discussed by Corn. Van Bynkershoek, *Opusculum de Rebus Mancipi et Nec Mancipi*.

MANDATI ACTIO. (*Vid. MANDATUM*.)

MANDATUM exists when one person commissions another to do something without reward, and that other person undertakes to do it: and generally it may be stated, that whenever a man gives a thing to another to do, which, if the thing were to be done for pay (*merces*), would make the transaction a contract of locatio and conductio, the right to the actio mandati arises; as, if a man gives clothes to a fullo to be furnished up and cleaned, or to a tailor (*sarcinator*) to mend. The person who gave the commission was the mandator, he who received it was the mandatarius. The mandatum might be either on the sole account of the mandator, or on another person's account, or on the account of the mandator and another person, or on account of the mandator and mandatarius, or on the account of the mandatarius and another person. But there could be no mandatum on the account (*gratia*) of the mandatarius only; as if a man were to advise another to put his money out to interest, and it were lost, the loser would have no mandati actio against his adviser. If the advice were to lend the money to Titius, and the loan had the like result, it was a

question whether this was a case of *mandatum*; but the opinion of Sabinus prevailed that it was. It was not *mandatum* if the thing was *contra bonos mores*, or, in other words, if the object of the *mandatum* was an illegal act. A *mandatum* might be general or special: and the *mandatarius* was bound to keep within the limits of the *mandatum*. The *mandator* had an *utilis actio* against such persons as the *mandatarius* contracted with; and such persons had the like action against the *mandator*, and a *directa actio* against the *mandatarius*. The *mandator* and *mandatarius* had also respectively a *directa actio* against one another in respect of the *mandatum*: the *actio* of the *mandatarius* might be for indemnity generally in respect of what he had done *bona fide*. If the *mandatarius* exceeded his commission, he had no action against the *mandator*; but the *mandator*, in such case, had an action for the amount of damage sustained by the non-execution of the *mandatum*, provided it could have been executed. The *mandatum* might be recalled so long as no part of it was performed (*dum adhuc integra res est*). In the like case, it was also dissolved by the death of either party; but if the *mandatarius* executed the *mandatum* after the death of the *mandator*, in ignorance of his death, he had his action, of course, against the *heres*. According to Cicero, a *mandati iudicium* was "*non minus turpe quam furti*";¹¹ which, however, would obviously depend on circumstances. (*Vid. INFAMIA.*)

Mandatum is sometimes used in the sense of a command from a superior to an inferior. Under the Empire, the *mandata principum* were the commands and instructions given to governors of provinces and others. Frontinus⁷ classes the *mandata principum* with *lex* and *senatus consulta*.³

MANDRÆ. (*Vid. LATRUNCULI.*)

*MANDRAGORAS (*μανδραγόρας*), the Mandrake. "It is to be remarked," observes Adams, "that the *μανδραγόρας* of Theophrastus is different from that of Dioscorides. Dodonæus determines the former to be the *Atropa Belladonna*. According to Sprengel, the *M.* of Dioscorides is the *Mandragora vernalis*, Bertol., and the *M. fœmina* the *M. autumnalis*. On the *Mandragora*, see an interesting disquisition in the *Hierobotanicon* of Celsius."¹⁴

MANDYAS. (*Vid. LACERNA.*)

MANICA, a Sleeve. Besides the use of sleeves sewed to the tunic, which, when so manufactured, was called *CHIRIDOTA*, or "*manicata tunica*,"¹⁵ sleeves were also worn as a separate part of the dress. Palladius⁶ mentions the propriety of providing "*ocreas manicæque de pellibus*," i. e., leggings and sleeves made of hides, as useful both to the huntsman and to the agricultural labourer. The Roman gladiators wore, together with greaves, a sleeve of an appropriate kind on the right arm and hand,⁷ as is exhibited in the woodcuts at page 477.

These parts of dress are mentioned together even as early as the Homeric age.⁸ In this passage the *manicæ* (*χειρίδες*) seem to be mittens, worn on the hands to protect them from briars and thorns: and Eustathius, in his commentary on the passage, distinguishes between simple mittens, such as our labourers use in hedging, and gloves, which he calls *χειρίδες δακτυλῶται*.⁹

Gloves with fingers (*digitalia*¹⁰) were worn among the Romans for the performance of certain manual operations. Pliny the younger refers also to the use of *manicæ* in winter to protect the hands from cold.¹¹ Those used by the Persians were probably

made of fur, perhaps resembling muffs; the Persians also wore gloves in winter (*δακτυλῆσρας*). In an enumeration of the instruments of torture used in the fourth century of the Christian era, we observe "the glove,"¹² but its construction or material is not described.

Handcuffs were called *manicæ*.³

Besides the *tunica manicata* with sleeves reaching either to the elbow or to the wrist, of which a description is given under *CHIRIDOTA*, there was another variety, in which the sleeves came down only a little below the shoulder (see woodcut, page 332). The *EXOMIS* had a short sleeve for the left arm only. The sleeves of the Persian tunic (*CANORS*) were exceedingly wide.

MANIPULUS. The original meaning of the word, which is clearly derived from *manus*, was a *handful* or *wisp* of hay, straw, fern, or the like;⁴ and this, according to Roman tradition, affixed to the end of a pole, formed the primitive military standard in the days of Romulus;⁵ hence it was applied to a detachment of soldiers serving under the same ensign (see Varro, *Ling. Lat.*, v., 88; vi., 85, who connects it in this sense directly with *manus*); and when the ponderous mass of the phalanx was resolved into small battalions marshalled in open order, these were termed *manipuli*,⁶ and varied in numbers at different periods according to the varying constitution of the legion.

1. The earliest account of their formation is given in Livy,⁷ where the narrative is in itself sufficiently intelligible, although the whole chapter has been elaborately corrupted by Lipsius and others, who were determined to force it into accordance with the statements of Polybius, which refer to the Roman army as it existed 200 years later. According to the plain sense of the passage in question, the legion, in the year B. C. 377, was drawn up in three lines, as described on page 103. The front line, or *hastati*, consisted of 15 manipuli, each manipulus containing 62 soldiers, a centurion, and a vexillarius. The second line, or *principes*, consisted, in like manner, of 15 manipuli, this combined force of 30 manipuli being comprehended under the general appellation of *antepilani*. The third line, or *triarii*, was also drawn up in 15 divisions, but each of these was triple, containing 3 manipuli, 3 vexilla, and 186 men. In these triple manipuli the veterans, or *triarii* proper, formed the front ranks; immediately behind them stood the *rorarii*, inferior in age and renown, while the *accensi*, less trustworthy than either, were posted in the extreme rear. The battle array may be represented as in the woodcut in the following page.

If the *hastati* and *principes* were successively repulsed, they retired through the openings left between the maniples of the *triarii*, who then closed up their ranks so as to leave no space between their maniples, and presented a continuous front and solid column to the enemy: the heavy-armed veterans in the foremost ranks, with their long *pila*, now bore the brunt of the onset, while the *rorarii* and *accensi* behind gave weight and consistency to the mass, an arrangement bearing evidence to a lingering predilection for the principle of the phalanx, and representing, just as we might expect at that period, the Roman tactics in their transition state. The only change made in the common reading of Livy, according to the above explanation, is the substitution suggested by Stroth, of "*Ordo scx-*

Accensi	{					
						15 triple Manipuli of Triarii.

agenos milites et duos, centurionem et vexillarium unum," for "*Ordo sexagenos milites, duos centuriones,*" &c., an emendation, the truth of which seems to be demonstrated by the context in the subsequent paragraph, where the triple vexillum or manipulus is said to have contained 186 men, i. e., 3×62 . It must be observed that the words *ordo*, *manipulus*, *vexillum*, are throughout the chapter employed as synonymous, and they continued to be used indifferently even in the time of Polybius,¹ *Kaì τὸ μὲν μέρος ἑκαστον ἐκάλεσαν καὶ τάγμα καὶ σπεῖραν καὶ σημαίαν*. The numbers of the legion thus described are stated by Livy at 5000; the calculation will stand as follows:

Hastati	$15 \times 62 = 930$
Principes	$15 \times 62 = 930$
Triarii	$15 \times 186 = 2790$
Centuriones et Vexillarii	$= 150$
	4800

The remaining 200 may have been skirmishers not included in the manipular battalions; or we may suppose that Livy spoke in round numbers, in which case, instead of "*Scribebantur autem quatuor fere legiones quinīs millibus peditum,*" we should adopt the almost necessary correction, "*Scribebantur autem quatuor legiones quinīs fere millibus peditum.*"

2. In the time of Polybius (B.C. 150) the legion contained 4200 men, except in cases of great emergency, when it was augmented to 5000.² It was divided into 1200 hastati, 1200 principes, 600 triarii, the remaining 1200 being velites, who were distributed equally among the three lines. When the legion exceeded 4200, the numbers of the hastati, principes, and velites were increased in proportion, the number of triarii always remaining the same (600). The hastati, principes, and triarii were subdivided each into 10 *manipuli* or *ordines*, and in each manipulus there were two *centuriones*, two *optiones*, and two *signiferi*: hence, when the legion consisted of 4200, a manipulus of the hastati or of the principes would contain 120 men, including officers, and a manipulus of the triarii in all cases 60 men only.

3. At a subsequent period, probably during the wars of Marius, certainly before the time of Cæsar, the practice of marshalling an army in three lines was changed, and the terms hastati, principes, and triarii fell into disuse. The legion, as explained under ARMY, p. 104, was now divided into 10 *cohortes*, each *cohors* into three *manipuli*, and each manipulus into two *centuriæ*, the manipulus thus constituting $\frac{1}{30}$ th part of the whole. It ought to be remarked, that the locus classicus on this subject (see p. 104) is a quotation by Aulus Gellius from "*Cincius, De Re Militari*." This Cincius is generally supposed to be the same person as Cincius Alimentus the annalist; but this is manifestly impossible, for Alimentus served during the second Punic war, and Polybius, who flourished full fifty years later, gives no hint of any such arrangement of the Roman troops.

4. We may infer that manipulus maintained its last-mentioned signification under the first emperors from Tacitus,¹ where Germanicus, when haranguing the mutinous legions "*Adsisentem contionem quia permixta videbatur, discedere in manipulos jubet. . . vexilla præferri, ut id saltem discerneret cohortes;*" but in *Ann.*, xiv., 58, the word is applied more loosely to a detachment of 60 men, who were despatched under the command of a centurion to Asia for the purpose of putting Plautus to death.

5. Vegetius² (A.D. 375) employs *manipulus* as an antiquated term, equivalent to *contubernium*, indicating a company of 10 soldiers who messed together in the same tent.

Isidorus³ defines a manipulus to be a body of 200 soldiers, which will apply to the period when the legion contained 6000 men. See, on the whole of this subject, Le Beau, *Mémoire du Manipule et ses parties* in the *Mémoires de l'Académie des Inscriptions*, &c., t. xxxii., p. 279. The views, however, of this writer are far from being uniformly correct.

MA'NSIO (σταθμός), a post-station at the end of a day's journey.

The great roads, which were constructed first by the kings of Persia and afterward by the Romans, were provided, at intervals corresponding to the length of a day's journey, with establishments of the same kind with the khans or caravanseras which are still found in the East. There were 111 such stations on the road from Sardes to Susa,⁴ their average distance from one another being something less than 20 English miles. The khan, erected at the station for the accommodation of travellers, is called by Herodotus *κατάλυσσις* and *καταγωγὴ*. To stop for the night was *καταλύειν*.⁵ As the ancient roads made by the kings of Persia are still followed to a considerable extent,⁶ so also there is reason to believe that the modern khan, which is a square building enclosing a large open court, surrounded by balconies with a series of doors entering into plain, unfurnished apartments, and having a fountain in the centre of the court, has been copied by uninterrupted custom from the Persian *κατάλυσσις*, and that, whether on occasion of the arrival of armies or of caravans, they have also served to afford a shelter during the night both to man and beast.

The Latin term *mansio* is derived from *manere*, signifying to pass the night at a place in travelling. On the great Roman roads the mansiones were at the same distance from one another as on those of the Persian empire. They were originally called *castra*, being probably mere places of encampment formed by making earthen intrenchments. In process of time they included not only barracks and magazines of provisions (*horrea*) for the troops, but commodious buildings adapted for the reception of travellers of all ranks, and even of the emperor himself, if he should have occasion to visit them. At these stations the *cisiarii* kept gigs for hire and

1. (*Ann.*, i., 34.)—2. (*ii.*, 13.)—3. (*ix.*, 3.)—4. (*Herod.*, v., 52, 53; vi., 118.)—5. (*Xen.*, *Anab.*, i., 8.—*Eliau*, V. H., i., 32.)—6. (*Heeren*, *Ideen*, i., 2, p. 193-203, 713-720.)

for conveying government despatches. (*Vid. Cisi-um.*) The *mansio* was under the superintendence of an officer called *mansionarius*.

Besides the post-stations at the end of each day's journey, there were on the Roman military ways others at convenient intervals, which were used merely to change horses or to take refreshment, and which were called *mutationes* (ὑλλάγαι). There were four or five mutations to one mansio. The *litterarium a Burdigala Hierusalem usque*, which is a road-book drawn up about the time of Constantine, mentions in order the mansiones from Bordeaux to Jerusalem, with the intervening *mutationes*, and other more considerable places, which are called either *civitates*, *vici*, or *castella*. The number of leagues (*leuga*) or of miles between one place and another is also set down.

MANTELE (χειρόμακτρον, χειρεκμαγεῖον), a napkin. The circumstance that forks were not invented in ancient times, gave occasion to the use of napkins at meals to wipe the fingers;¹ also, when the meal was finished, and even before it commenced, an apparatus was carried round for washing the hands. A basin, called in Latin *malluvium*,² and in Greek χέρνυψ, χέρνιβον, or χειρόνιπτρον (*vid. Chernes*), was held under the hands to receive the water, which was poured upon them out of a ewer (*urceolus*). Thus Homer describes the practice, and, according to the account of a recent traveller, it continues unchanged in the countries to which his description referred.³ The boy or slave who poured out the water also held the napkin or towel for wiping the hands dry. The word *mappa*, said to be of Carthaginian origin,⁴ denoted a smaller kind of napkin, or a handkerchief, which the guests carried with them to table.⁵ The *mantele*, as it was larger than the *mappa*, was sometimes used as a table-cloth.⁶ (*Vid. Cœna*, p. 275.) An anecdote is preserved of Lucilius the satirist, stating that, after he had been dining with Lælius, he ran after him in sport with a twisted napkin or handkerchief, as if to strike him (*obtulit mappa*).⁷

The napkins thus used at table were commonly made of coarse unbleached linen (ζωλινὸν⁸). Sometimes, however, they were of fine linen (ἐκρίσματα λαμπρὰ σινδονή⁹). Sometimes they were woolen, with a soft and even nap (*tensis mantelia villis*¹⁰). Those made of *Asbestos* must have been rare. The Romans, in the time of the emperors, used linen napkins embroidered or interwoven with gold,¹¹ and the traveller already quoted informs us that this luxury still continues in the East. Napkins were also worn by women as a headdress, in which case they were of fine materials and gay colours.¹² These were no doubt put on in a variety of elegant ways, resembling those which are in use among the females of Italy, Greece, and Asia Minor at the present day.

*MANTICHORA (μαντιχώρας, or, as some read it, μαντιχώρας), "an animal briefly noticed by Aristotle and Ctesias. Gesner concludes that it was the Hyena, or nearly allied to it. Schneider inclines to the opinion that it was some species of Porcupine. Heeren contends that the description of Ctesias is taken from one of the monstrous figures of animals on the ruins of Persepolis." The Mantichoras is said to have had the face and ears of a human being, the body of a lion, and the tail of a serpent, terminating like a scorpion's. Its cry re-

sembled the blended notes of a pipe and trumpet.¹

*MANTIS (μαντις). The *μαντις* of Theocritus, according to Adams, was most probably the *Cicada*; and the same authority considers it doubtful if the term ever stands for the *Cancer mantis*, L. The name is now applied to a genus of insects, the largest of which is the *M. precaria*, or Camel-crick-et.² "Another amusing insect," observes Dodwell, "which is not uncommon in warm climates, is the *Mantis*; it is called *la morte* by the Italians, and *baton marchant* and *prie dieu* by the French. There are various kinds of them. The most common and the most beautiful are of a light green colour, with long wings, which they fold up in several plaits. They are, in general, about three inches in length, with long legs and claws, which they use with great dexterity in seizing their prey: This consists of any kind of insect which they can master. I have seen them catch wasps and bees. If, when they are in possession of their prey, any other insect settles within their reach, they first stick the former on some sharp spikes with which their legs are provided, and then catch the other."

MANTICE (μαντικῆ). (*Vid. DIVINATIO.*)

MANUBŒE. (*Vid. SPOLIA.*)

MANULEA'TUS. (*Vid. CHIRIDOTA.*)

MANUM, CONVENTIO IN. (*Vid. MARRIAGE, ROMAN.*)

MANUMISSIO was the form by which slaves and persons in mancipii causa were released from those conditions respectively.

There were three modes of effecting a justa et legitima manumissio, namely, vindicta, census, and testamentum, which are enumerated both by Gaius and Ulpian¹ as existing in their time.² Of these the manumissio by vindicta is probably the oldest, and, perhaps, was once the only mode of manumission. It is mentioned by Livy as in use at an early period,³ and, indeed, he states that some persons refer the origin of the vindicta to the event there related, and derive its name from Vindicus; the latter part, at least, of the supposition is of no value.

The ceremony of the manumissio by the vindicta was as follows: The master brought his slave before the magistratus, and stated the grounds (*causa*) of the intended manumission. The lictor of the magistratus laid a rod (*festuca*) on the head of the slave, accompanied with certain formal words, in which he declared that he was a free man ex jure Quiritium, that is, "*vindicavit in libertatem*." The master in the mean time held the slave, and after he had pronounced the words "*hunc hominem liberum volo*," he turned him round (*momento turbinis exit Marcus Dama*)⁴ and let him go (*emisit e manu*), whence the general name of the act of manumission. The magistratus then declared him to be free, in reference to which Cicero⁵ seems to use the word "*adiciere*." The word vindicta itself, which is properly the *res vindicata*, is used for *festuca* by Horace.⁶ Plautus⁷ uses *festuca*.

It seems highly probable that this form of manumissio was framed after the analogy of the *jure vindicationes*,⁸ and that the lictor in the case of manumission represented the opposite claimant in the vindicatio.¹¹

As for the explanation of the word vindicta, see VINDICŒE and VINDICATIO.

Unterholzner*, Von den formen der Manumissio per Vindicam und Emancipatio, *Zeitschrift*, ii., 139.)

The manumissio by the census is thus briefly described by Ulpian: "Slaves were formerly manumitted by census, when at the lustral census (*lustrali censu*) at Rome they gave in their census (some read *nomen* instead of census) at the bidding of their masters." Persons in mancipio might also obtain their manumission in this way.¹

In the absence of decisive testimony as to the origin of these two modes of manumission, modern writers indulge themselves in a variety of conjectures. It may be true that originally the manumission by vindicta only gave *libertas* and not *civitas*; but this opinion is not probable. It may easily be allowed, that in the earliest period the *civitas* could only be conferred by the sovereign power, and that, therefore, there could be no effectual manumission except by the same power. But the form of the vindicta itself supposes, not that the person manumitted was a slave, but that he was a free person, against whose freedom his master made a claim. The proceeding before the magistratus was in form an assertion of the slave's freedom (*manu asserere liberali causa*), to which the owner made no defence, but he let him go as a free man. The proceeding then resembles the in *jure cessio*, and was, in fact, a fictitious suit, in which freedom (*libertas*) was the matter in issue. It followed as a consequence of the fiction, that when the magistratus pronounced in favour of freedom ex *jure Quiritium*, there could be no dispute about the *civitas*.

In the case of the census the slave was registered as a citizen with his master's consent. The assumption that the vindicta must have originally preceded the census, for which there is no evidence at all, is inconsistent with the nature of the proceeding, which was a registration of the slave, with his master's consent, as a citizen. A question might arise whether he should be considered free immediately on being entered on the censors' roll, or not until the lustrum was celebrated;² and this was a matter of some importance, for his acquisitions were only his own from the time when he became a free man.

The law of the Twelve Tables confirmed freedom which was given by will (*testamentum*). Freedom (*libertas*) might be given either *directo*, that is, as a legacy, or by way of fideicommissum. The slave who was made free directly was called *oreinus libertus* (or *horcinus*, as in Ulp., *Frag.*), for the same reason, perhaps, that certain senators were called *oreini*.⁴ He who received his *libertas* by way of fideicommissum was not the *libertus* of the testator, but of the person who was requested to manumit him (*manumissor*): if the heres who was requested to manumit refused, he might be compelled to manumit on application being made to the proper authority. *Libertas* might be given by fideicommissum to a slave of the testator, of his heres, or of his legatee, and also to the slave of any other person (*extraneus*). In case of *libertas* being thus given to the slave of any other person, the gift of *libertas* was extinguished if the owner would not sell the slave at a fair price. A slave who was made conditionally free by testament, was called *statu liber*, and he was the slave of the heres until the condition was fulfilled. If a *statu liber* was sold by the heres, or if the ownership of him was acquired by usucapion, he had still the benefit of the condition: this provision was contained in the law of the Twelve Tables. If a slave was made free and heres by the testator's will, on the death of the testator he became both free and heres, whether he wished it or not. (*Vid. HERES.*)

The lex *Ælia Sentia* laid various restrictions on

manumission. Among other things, it enacted that a slave under thirty years of age should not become a Roman citizen by manumission, unless the grounds of manumission were approved before a body called *consilium*, and the ceremony of vindicta was observed. This *consilium* at Rome consisted of five senators and five equites, all puberes; and in the provinces of twenty recuperatores, who were Roman citizens. If an insolvent master manumitted by testament a slave under thirty years, and at the same time made him his heres, the lex did not apply. This lex also annulled all manumissions made for the purpose of cheating creditors and defrauding patrons of their rights. The ceremony of manumitting slaves above thirty years of age had become very simple in the time of Gaius: it might be in the public road (*in transitu*), as when the prætor or proconsul was going to the bath or the theatre. In fact, it was not the place which determined the validity of such an act, but it was the circumstance of its being done before a competent authority: hence it could take place before municipal magistratus who had the *legis actio*. The Romans never lost sight of the real groundwork of their institutions, whatever changes might be made in mere forms. The lex *Ælia Sentia* also prevented persons under twenty years of age from manumitting slaves, except by the vindicta, and with the approbation of the *consilium*. (*Vid. ÆLIA SENTIA.*)

The lex *Furia* or *Fusia Caninia* fixed limits to the number of slaves who could be manumitted by will. The number allowed was a half, one third, one fourth, and one fifth of the whole number that the testator possessed, according to a scale fixed by the lex. As its provisions only applied to cases where a man had more than two slaves, the owner of one slave or of two slaves was not affected by this lex. It also provided that the slaves to whom freedom was given should be named. This lex only applied to manumission by testament. It was passed about A.D. 7, and several *senatus consulta* were made to prevent evasions of it.² This lex was repealed by Justinian.³

A form of manumission "*inter amicos*" is alluded to by Gaius. This was, in fact, no legal manumission, but it was a mere expression of the master's wish, which would have been sufficient in the absence of all positive law. This might be done by inviting the slave to table, writing him a letter, or in any other less formal way. It is stated that originally such a gift of freedom could be recalled, as to which there can be no doubt, as it was not legal freedom; but ultimately the prætor took persons who had been made free in this manner under his protection, and the lex *Junia Norbana* gave them the status called *Latinitas*.

A manumissio *sacrorum causa* is sometimes mentioned as a kind of manumission, whereas the words *sacrorum causa* point rather to the grounds of the manumission: the form might be the usual form.⁴

Besides the due observance of the legal forms, it was necessary, in order to effect a complete manumission, that the manumissor should have the *quiritarian* ownership of the slave. If the slave was merely in *bonis*, he only became a *Latinus* by manumission. A woman in *tutela*, and a *pupillus* or *pupilla*, could not manumit. If several persons were joint owners (*socii*) of a slave, and one of them manumitted the slave in such form as would have effected complete manumission if the slave had been the sole property of the manumissor, such manumissor lost his share in the slave, which accrued to the other joint owner or joint owners. Justinian enacted

1. (Gaius, i., 140.)—2. (Plaut., *Poen.*, iv., 2, 83, &c.)—3. (Cic., *De Or.*, i., 40.)—4. (Sueton., *Octav.*, 35.)

1. (i., 20.)—2. (Suet., *Octav.*, 40.—Gaius, i., 46.)—3. (Cod. v., tit. 3: "De Lege Fus. Can. tollenda.")—4. (Festus, s. v. Manumitti, *Puri.*—Savigny, *Zeitschrift*, iii., 402.)

that, if only one joint owner was willing to manumit a slave, the other might be compelled to manumit on receiving the price fixed by law for their shares. If one person had the usufructus and another the property of a slave, and the slave was manumitted by him who had the property, he did not become free till the usufructus had expired: in the mean time, however, he had no legal owner (*dominus*).

The act of manumission established the relation of patronus and libertus between the manumissor and the manumitted. When manumitted by a citizen, the libertus took the prænomen and the gentile name of the manumissor, and became, in a sense, a member of the gens of his patron. To these two names he added some other name as a cognomen, either some name by which he was previously known, or some name assumed on the occasion: thus we find the names M. Tullius Tiro, P. Terentius Afer, and other like names. If he was manumitted by the state as a servus publicus, he received the civitas and a prænomen and gentile name, or he took that of the magistratus before whom he was manumitted. The relation between a patronus and libertus is stated under PATRONUS.

At the time when Gaius wrote, the peculiar rights of Roman citizens were of less importance than they had been under the Republic. He states that all slaves who were manumitted in the proper form, and under the proper legal conditions, became complete Roman citizens. But this could not have been so in the earliest ages. The liberti of the plebeians, for instance, before their masters obtained the honores, could not be in a better condition than those who manumitted them, and their masters had not then the complete civitas. The want of ingenuitas also affected their status; but this continued to be the case even under the Empire. (*Vid. INGENUIT.*)

Before the year B.C. 311, the libertini had not the suffragium, but in that year the censor Appius Claudius gave the libertini a place in the tribes, and from this time the libertini had the suffragium after they were duly admitted on the censors' roll.¹ In the year B.C. 304 they were placed in the tribus urbanae, and not allowed to perform military service. In the censorship of Tiberius Gracchus, B.C. 169, they were placed in one of the tribus urbanae determined by lot,² or, as Cicero³ expresses it, the father of Tiberius and Caius Sempronius transferred the libertini (*nutu atque verbo*) into the tribus urbanae. Subsequently, by a law of Æmilius Scaurus, about B.C. 116, they were restored to the four city tribes, and this remained their condition to the end of the Republic, though various attempts were made to give them a better suffrage.

A tax was levied on manumission by a lex Manlia, B.C. 357: it consisted of the twentieth part of the value of the slave, hence called *vicesima*.⁴

MANUS FERREA. (*Vid. HARPA.*)

MANUS INJECTIO is one of the five modi or forms of the legis actio according to Gaius.⁵ It was, in effect, in some cases, a kind of execution. The *judicati manus injectio* was given by the Twelve Tables. The plaintiff (*actor*) laid hold of the defendant, using the formal words "*Quod tu mihi *judicatus* sive *damnatus* es *sestertium* x milia *quæ dolo malo non solvisi* ob *eam rem* ego tibi *sestertium* x milia *judicati manus injicio*."* The defendant, who had been condemned in a certain sum, had thirty days allowed him to make payment in, and after that time he was liable to the *manus injectio*. The defendant was not permitted to make any resistance, and his only mode of defence was to find some responsible person (*vindex*) who would undertake his defence (*pro eo lege*

agere). If he found no *vindex*, the plaintiff or creditor, for such the judgment really made him, might carry the defendant to his house, and keep him in confinement for sixty days, during which time his name and the amount of his debt were proclaimed at three successive *nundinæ*. If no one paid the debt, the defendant might be put to death or sold.¹ According to the words of the Twelve Tables, the person must be brought before the prætor (*in jus*), which, of course, means that he must be seized first: if, when brought before the prætor, he did not pay the money (*ni *judicatum solvit**) or find a *vindex*, he might be carried off and put in chains, apparently without the formality of an *addictio*. The *lex Publilia*, evidently following the analogy of the Twelve Tables, allowed the *manus injectio* in the case of money paid by a sponsor, if the sponsor was not repaid in six months. The *lex Furia de Sponsu* allowed it against him who had exacted from a sponsor more than his just proportion (*virilis pars*). These and other *leges* allowed the *manus injectio pro judicato*, because in these cases the claim of the plaintiff was equivalent to a claim of a *res judicata*. Other *leges* granted the *manus injectio pura*, that is, non *pro judicato*, as the *lex Furia Testamentaria* and the *Marcia adversus feneratores*. But in these cases the defendant might withdraw himself from the *manus injectio* (*manum sibi depellere*), and defend his cause; but it would appear that he could only relieve himself from this seizure by actually undertaking to defend himself by legal means. Accordingly, if we follow the analogy of the old law, it was in these cases an execution if the defendant chose to let it be so; if he did not, it was the same as serving him with process to appear before the prætor. A *lex*, the name of which is obliterated in Gaius, allowed the person seized to defend his own cause except in the case of a "*judicatus*," and "*is pro quo *depensum* est*;" and, consequently, in the two latter cases, even after the passing of this *lex*, a man was bound to find a *vindex*. This continued the practice so long as the *legis actiones* were in use; "whence," says Gaius,² "in our time, a man '*cum quo *judicati* *depensive* agitur*' is compelled to give security '*judicatum solvi*.'" From this we may conclude that the *vindex* in the old time was liable to pay, if he could find no good defence to the plaintiff's claim; for, as the *vindex* could "*lege agere*," though the defendant could not, we must assume that he might show, if he could, that the plaintiff had no ground of complaint; as, for instance, that he had been paid; and that, if he had no good defence, he must pay the debt himself.

MAPPÆ. (*Vid. MANTELE.*)

*MAR'ATHRUM (*μάραθρον*), the Fennel, or *Anethum fæniculum*. Thus Apuleius remarks, "*Græci Marathron, Latini Fæniculum vocant*."³

*MARGARI'TA (*μαργαρίτης, μάργαρος, &c.*), the Pearl. "The fullest account of Pearls contained in any Greek author is to be found in Ælian.⁴ The Indian pearl-fish of which he speaks is, no doubt, the *Avicula Margaritifera*. The shell which produces the finest pearls in Britain is the *Mya Margaritifera*, L., now called *Alasmodon Margaritifera*." "The Pearl," observes Sir John Hill, "was in great esteem among the ancients even as early as the time of Job. By the Romans it was allowed the second rank among jewels. Pearls are produced in many kinds of shell-fish, but the finest, and what are properly the genuine Pearl, are bred in the *Concha Margaritifera plerisque, Berberi antiquis Indis dicta*." Theophrastus seems to have been very well acquainted with the history of the Pearl, and doubt-

1. (Plut., Poplic., 7.—Liv., ix., 46.—Diod. Sic., xx., 36.)—2. (Liv., xiv., 15.)—3. (De Or., i., 9.)—4. (Liv., vii., 16.—Id., xxvii., 10.—Cic. ad Att., ii., 16.)—5. (iv., 12.)

1. (Gell., xx., 1.)—2. (iv., 25.)—3. (Theophrast., H. F., i., 11.—Dioscor., iii., 84.—Adams, Append., s. v.)—4. (N. A., xv., 8.)—5. (Liet., Hist. Conch.)

less means this very shell by his *ὀστρεῖω τιμί*. Androstenes also confirms its being this very shell that the fine *Γοιόρτα* pearls are found in: *ἐν δὲ ἰδίῳν καλοῦσιν ἐκείνῳ Βερνερῶν, ἐξ οὗ ἡ μαργαρίτις λήθεται*. The Pearl is no more than a morbid excrescence from the animal in which it is found."¹ "The commerce of pearls appears to be of the highest antiquity. History, in fact, apprizes us that, from time immemorial, the princes of the East have sought after this kind of ornament with a sort of passion, and have employed it in all parts of their dress, and even in decorating instruments, furniture, &c. The Persians, according to Athenæus, paid for pearls with their weight in gold. The pearl mussels, therefore, must be like our common mussels, which, in spite of the prodigious quantity that have been eaten for so many years, do not appear to suffer any sensible diminution."² "The art of forcing shell-fish to produce pearls was known in the first centuries of the Christian era to the inhabitants of the coasts of the Red Sea, as we are told by the philosopher Apollonius, who thought that circumstance worthy of particular notice. The Indians dived into the sea after they had rendered it calm, and perhaps clearer, by pouring oil upon it. They then enticed the fish, by means of some bait, to open their shells, and having pricked them with a sharp-pointed instrument, received the liquor that flowed from them in small holes made in an iron vessel, in which they hardened into real pearls." For farther remarks on this subject, as well as on the invention of Linnæus for producing pearls, consult the remarks of Beckmann,³ from whom the above has been taken.

MARIS or MARES (*μάρης* or *μάρης*) (Hesych., *μάριστον*), a Greek measure of capacity, which, according to Pollux⁴ and Aristotle,⁵ contained 6 cotylæ, = 2.973 pints. Polyænus mentions a much larger measure of the same name, containing 10 congii, = 7 galls. 3.471 pints.⁶

*MARMOR (*μάρμαρος*), Marble. "Strictly speaking," observes Adams, "the term *Marble* should be confined to those varieties of carbonate of lime which are susceptible of a polish; but the term was applied by the ancients to all stones susceptible of a good polish." The most celebrated of the antique marbles were the Parian, Pentelican, Chian, and Theban, for an account of which consult the several heads.⁷

MARRIAGE (GREEK) (*γάμος*). The ancient Greek legislators considered the relation of marriage as a matter not merely of private, but also of public or general interest. This was particularly the case at Sparta, where the subordination of private interests and happiness to the real or supposed exigencies of the state was strongly exemplified in the regulations on this subject. For instance, by the laws of Lycurgus, criminal proceedings might be taken against those who married too late (*γραφὴ ὀψιγαμίου*) or unsuitably (*γραφὴ κακογαμίου*), as well as against those who did not marry at all (*γραφὴ ἀγαμίου*).⁸ These regulations were founded on the generally recognised principle that it was the duty of every citizen to raise up a strong and healthy progeny of legitimate children to the state.⁹ So entirely, in fact, did the Spartans consider the *τεκνοποία*, or the production of children, as the main object of marriage, and an object which the state was bound to promote, that whenever a woman had no children by her own husband, she was not only allowed, but even required by the laws to cohabit with another man.¹⁰ On the same principle, and for

the purpose of preventing the extinction of his family, the Spartan king Anaxandrides was allowed to cohabit with two wives, for whom he kept two separate establishments: a case of bigamy which, as Herodotus¹ observes, was not at all consistent with Spartan, nor, indeed, with Hellenic customs. Thus the heroes of Homer appear never to have had more than one *κοιῶντή ἀλοχος*,² though they are frequently represented as living in concubinage with one or more *παλλακαί*. Solon also seems to have viewed marriage as a matter in which the state had a right to interfere, for we are told that his laws allowed of a *γραφὴ ἀγαμίου*, though the regulation seems to have grown obsolete in later times; at any rate, there is no instance on record of its application.³ Plato, too, may be quoted to prove how general was this feeling; for, according to his laws,⁴ any one who did not marry before he was thirty-five was punishable not only with *ἀργία*, but also with pecuniary penalties; and he expressly states that, in choosing a wife, every one ought to consult the interests of the state, and not his own pleasure.⁵

But, independent of any public considerations, there were also private or personal reasons (peculiar to the ancients) which made marriage an obligation. Plato⁶ mentions one of these, viz., the duty incumbent upon every individual to provide for a continuance of representatives to succeed himself as ministers of the Divinity (*τῷ Θεῷ ὑπηρετάς ἐνθ' αὐτοῦ παραδιδόναι*). Another was the desire felt by almost every one, not merely to perpetuate his own name, but also to prevent his "heritage being desolate, and his name being cut off" (*ὅπως μὴ ἐξηρημώσωσι τοὺς σφετέρων αὐτῶν οἴκους*), and to leave some one who might make the customary offerings at his grave (*ἀλλ' ἔσται τις καὶ ὁ ἐναγών*). We are told that, with this view, childless persons sometimes adopted children.

The choice of a wife among the ancients was but rarely grounded upon affection, and scarcely ever could have been the result of previous acquaintance or familiarity. In many cases a father chose for his son a bride whom the latter had never seen, or compelled him to marry for the sake of checking his extravagances. Terence⁸ thus illustrates the practice:

"*Pater præteriens modo*

Mihi apud forum, uxor tibi ducenda est, Pamphile, hodie inquit: pura."

In Plautus⁹ a son promises his father that he will marry in these words:

"*Ego ducam, pater: etiam si quam aliam jubebis.*" Representations of this sort may indeed be considered as exaggerations, but there must have been scenes in real life to which they in some measure correspond. Nor was the consent of a female to a match proposed for her generally thought necessary: she was obliged to submit to the wishes of her parents, and receive from them, it might be, a stranger for her husband and lord. Sophocles thus describes the lot of women in this respect: "When we are grown up (he makes a female say) we are driven away from our parents and paternal gods."

*καὶ ταῦτ', ἐπειδὴν εὐφρονὴν ζεύξω μίαν, χρεῶν ἐπαίνειν, καὶ δοκεῖν καλῶς ἔχειν.*¹⁰

So also in Euripides,¹¹ Hermione declares that it is her father's business to provide a husband for her. The result of marriages contracted in this manner would naturally be a want of confidence and mutual understanding between husband and wife, until they

became better acquainted with, and accustomed to, each other. Xenophon¹ illustrates this with much *παῖνέτι* in the person of Ischomachus, who says of his newly-married wife: "When at last she was manageable (*χειροθήνη*), and getting tame, so that I could talk with her, I asked her," &c., &c. By the Athenian laws, a citizen was not allowed to marry with a foreign woman, nor conversely, under very severe penalties;² but proximity by blood (*ἀγχιστεία*), or consanguinity (*συγγένεια*), was not, with some few exceptions, a bar to marriage in any part of Greece; direct lineal descent was.³ Thus brothers were permitted to marry with sisters even, if not *ομομήτριοι*, or born from the same mother, as Cimon did with Elpinice, though a connexion of this sort appears to have been looked on with abhorrence.⁴ In the earlier periods of society, indeed, we can easily conceive that a spirit of caste or family pride, and other causes, such as the difficulties in the way of social intercourse, would tend to make marriages frequent among near relatives and connexions.⁵ At Athens, however, in the case of a father dying intestate and without male children, his heiress had no choice in marriage; she was compelled by law to marry her nearest kinsman not in the ascending line; and if the heiress were poor (*θῆσσα*), the nearest unmarried kinsman either married her or portioned her suitably to her rank. When there were several coheiresses, they were respectively married to their kinsmen, the nearest having the first choice. (*Vid.* EPICLERUS.) The heiress, in fact, together with her inheritance, seems to have belonged to the kinsmen of the family, so that, in early times, a father could not give his daughter (if an heiress) in marriage without their consent.⁶ But this was not the case according to the later Athenian law,⁷ by which a father was empowered to dispose of his daughter by will or otherwise, just as widows also were disposed of in marriage by the will of their husbands, who were considered their rightful guardians (*κύριοι*).⁸

The same practice of marrying in the family (*οἶκος*), especially in the case of heiresses, prevailed at Sparta: thus Leonidas married the heiress of Cleomenes, as being her *ἀγχιστεῖς* or next of kin, and Anaxandrides his own sister's daughter. Moreover, if a father had not determined himself concerning his daughter, it was decided by the king's court who among the privileged persons or members of the same family should marry the heiress.⁹ A striking resemblance to the Athenian law respecting heiresses is also found in the Jewish code, as detailed in *Numbers*,¹⁰ and exemplified in *Ruth*.¹¹

But match-making among the ancients was not, in default of any legal regulations, entirely left to the care and forethought of parents, for we read of women who made a profession of it, and who were therefore called *προμήστριαι* or *προμηστρίδες*.¹² The profession, however, does not seem to have been thought very honourable, nor to have been held in repute, as being too nearly connected with, or likely to be prostituted to, *πρᾶσιναγεία*.¹³

Particular days and seasons of the year were thought auspicious and favourable for marriage among the Greeks. Aristotle¹⁴ speaks of the winter generally as being so considered, and at Athens the month *Γαμηλιών*, partly corresponding to our January, received its name from marriages being frequently celebrated in it. Hesiod¹⁵ recommends marrying on the fourth day of the month:

Ἐν δὲ τετάρτῃ μηνὸς ἄγεσθαι ἐς οἶκον ἄκοιτιν.

but whether he means the fourth from the beginning or end of the month is doubtful. Euripides¹ speaks as if the time of the full moon were thought favourable,

ὅταν σελήνης εὐτυχὴς ἔλθῃ κύκλος,

in which he is confirmed by the expression *διχομήνιδες ἑσπερα*, or the full-moon nights in Pindar.² That this prepossession, however, was not general and permanent, appears from Proclus,³ who informs us that the Athenians selected for marriages the times of new moon (*τὰς πρὸς σύνοδον ἡμέρας*), i. e., when the sun and moon were in conjunction.

There was also some difference of opinion, on which it is not worth while to dilate, about the proper age for marrying; but, generally speaking, men were expected to marry between 30 and 35, and women about 20, or rather before.⁴

We proceed now to explain the usual preliminaries and accompaniments of marriage in various parts of Greece. The most important preliminary at Athens was the *ἐγγύησις* or betrothal, which was, in fact, indispensable to the complete validity of a marriage contract. It was made by the natural or legal guardian (*ὁ κύριος*) of the bride elect, and attended by the relatives of both parties as witnesses. The law of Athens ordained that all children born from a marriage legally contracted in this respect should be *γνήσιοι*,⁵ and consequently, if sons, *ισόμοιροι*, or entitled to inherit equally or in gavelkind. It would seem, therefore, that the issue of a marriage without espousals would lose their heritable rights, which depended on their being born *ἐξ ὁσῆς καὶ ἐγγνητῆς γυναίκος*: i. e., from a citizen and a legally betrothed wife. The wife's dowry was also settled at the espousals.⁶

But there were also several ceremonies observed either on or immediately before the day of marriage. The first of these were the *προτέλεια γάμων* or *προγάμεια*,⁷ and consisted of sacrifices or offerings made to the *Θεοὶ γαμήλιοι*, or divinities who presided over marriage. They are generally supposed to have been made on the day before the *γάμος* or marriage; but there is a passage in Euripides⁸ which makes it probable that this was not always the case. The sacrificer was the father of the bride elect; the divinities to whom the offering was made were, according to Pollux,⁹ Hera, and Artemis, and the Fates, to whom the brides elect then dedicated the *ἀπαρχαί* of their hair. According to Diodorus Siculus¹⁰ they were Zeus and Hera *τελεία* (Juno pronuba); but they probably varied in different countries, and were sometimes the *Θεοὶ ἐγχώριοι* or local deities. The offerings to Artemis were probably made with a view of propitiating her, as she was supposed to be averse to marriage. (*Vid.* BRAURONIA, p. 172.) We may also observe that Pollux uses *προγάμεια* as synonymous with *προτέλεια*, making *γάμος* identical with *τέλος*, as if marriage were the *τέλος* or perfection of man's being: whence *τέλειος*, connected with or presiding over marriage or a married person, and *δῶμος ἡμιτέλης*, a house without a husband, or incomplete.¹¹ Another ceremony of almost general observance on the wedding-day was the bathing of both the bride and bridegroom in water fetched from some particular fountain, whence, as some think, the custom of placing the figure of a *λουτροδόρος*, or "water-carrier," over the tombs of those who died unmarried. (*Vid.* ΛΟΥΤΡΟΝ, p. 599.) After these preliminaries, the bride was generally conducted from her father's to the house of the

bridegroom at nightfall, in a chariot (*ἐφ' ἀμάξης*) drawn by a pair of mules or oxen, and furnished with a *κλινίς* or kind of couch as a seat. On either side of her sat the bridegroom and one of his most intimate friends or relatives, who, from his office, was called *παρόνυμφος* or *νυμφεύτης*; but, as he rode in the carriage (*ὄχημα*) with the bride and bridegroom, he was sometimes called the *πάροχος* (*ὁ ἐκ τρίτον δ παροχούμενος πάροχος ἐκλήθη*).¹ Hence Aristophanes² speaks of the "blooming Love guiding the supple reins," when Zeus was wedded to Hera, as the *Ζηρὸς πάροχος γάμων τῆς τ' εὐδαίμονος Ἥρας*.

The nuptial procession was probably accompanied, according to circumstances, by a number of persons, some of whom carried the nuptial torches (*ὄλαδες νυμφικαί*)³; and in some places, as in Boeotia, it was customary to burn the axle of the carriage on its arrival at the bridegroom's house, as a symbol that the bride was to remain at home and not go abroad.⁴ If the bridegroom had been married before, the bride was not conducted to his house by himself, but by one of his friends, who was therefore called *νυμφαγωγός*.⁵

Both bride and bridegroom (the former veiled) were of course decked out in their best attire, with chaplets on their heads,⁶ and the doors of their houses were hung with festoons of ivy and bay.⁷ As the bridal procession moved along, the hymenæan song was sung to the accompaniment of Lydian flutes, even in olden times, as beautifully described by Homer⁸ (*vid. Chorus*, p. 246), and the married pair received the greetings and congratulation of those who met them.⁹ After entering the bridegroom's house, into which the bride was probably conducted by his mother, bearing a lighted torch,¹⁰ it was customary to shower sweetmeats upon them (*καταγύσματα*) as emblems of plenty and prosperity.¹¹

After this came the *γάμος* or nuptial feast, the *θωὴν γαμικήν*, which was generally¹² given in the house of the bridegroom or his parents; and, besides being a festive meeting, served other and more important purposes. There was no public rite, whether civil or religious, connected with the celebration of marriage among the ancient Greeks, and therefore no public record of its solemnization. This deficiency, then, was supplied by the marriage feast, for the guests were of course competent to prove the fact of a marriage having taken place; and Demosthenes¹³ says they were invited partly with such views. To this feast, contrary to the usual practice among the Greeks, women were invited as well as men; but they seem to have sat at a separate table, with the bride still veiled among them.¹⁴ At the conclusion of this feast she was conducted by her husband into the bridal chamber; and a law of Solon¹⁵ required that they should eat a quince together, as if to indicate that their conversation ought to be sweet and agreeable. The song called the Epithalamium was then sung before the doors of the bridal chamber, as represented by Theocritus in his 18th Idyl, where, speaking of the marriage of Helen, he says:

Twelve Spartan virgins, the Laconian bloom,
Chaired before fair Helen's bridal room;
To the same time with cadence true they heat
The rapid round of many twinkling feet,

One measure tripp'd, one song together sung,
Their hymenean all the palace rung.

CHAPMAN.

On which passage the scholiast remarks that epithalamia are of two kinds; some sung in the evening, and called *κατακοιμητικά*, and others in the morning (*ὄρθρια*), and called *διεγερτικά*.

The day after the marriage, the first of the bride's residence in her new abode, was called the *ἐπαύλια*; on which their friends sent the customary presents to the newly-married couple. On another day, the *ὑπαύλια*, perhaps the second after marriage, the bridegroom left his house to lodge apart from his wife at his father's-in-law, and the bride presented him with a garment called *ὑπανύπτια*, in connexion with which, Pollux¹ observes, that the gifts made to the bride after the marriage were called *ὑπαύλια*. Some of the presents made to the bride by her husband and friends were called *ὑνακαλύπτια*, as being given on the occasion of the bride first appearing unveiled:² they were probably given on the *ἐπαύλια*, or day after the marriage.

Another ceremony observed after marriage was the sacrifice which the husband offered up on the occasion of his bride being registered among his own phratores (*γαμηλίαν σελ. θυσίαν τοῖς φράτορσιν εἰσήνεγκεν*).³

The statement above made of the solemnities connected with marriage cannot, of course, be considered as applicable to all ages and circumstances, but rather as a representation of the customs generally observed at Athens in later times.

At Sparta the betrothal of the bride by her father or guardian (*κύριος*) was requisite as a preliminary of marriage, as well as at Athens.⁴ Another custom peculiar to the Spartans, and a relic of ancient times, was the seizure of the bride by her intended husband,⁵ but, of course, with the sanction of her parents or guardians.⁶ She was not, however, immediately domiciled in her husband's house, but cohabited with him for some time clandestinely, till he brought her, and frequently her mother also, to his home.⁷ A similar custom appears to have prevailed in Crete, where, as we are told,⁸ the young men, when dismissed from the *ἀγέλῃ* of their fellows, were immediately married, but did not take their wives home till some time afterward. Müller suggests that the children of this furtive kind of intercourse were called *παρθένιοι*.

We subjoin some particulars concerning the relation between man and wife among the ancient Greeks, prefacing them with a description of domestic married life from Lysias.⁹ The speaker there says, "I have a small two-story house, of equal dimensions on the basement and first floor, both in the male and female apartments (*κατὰ τὴν γυναικωνίτιν, κ. τ. λ.*). Now, after our little boy was born, his mother used to suckle it; and that she might not meet with any accident in going down the ladder (*ἡ κλίμαξ*), whenever she wanted to wash, I lived up stairs, and the women below. And it was usual for my wife to leave me very frequently and sleep down stairs with the child, to give it the breast and keep it from crying. And one day, after dinner, the little fellow cried and fretted, and I told my wife to go and suckle it; now at first she would not, but at last I got angry with her, and ordered her to go: 'yes,' said she, 'that you may play with the servant-maid,' &c."

Now, though the wife, as appears by this tale, usually took her meals with her husband, she did

not go out with him to dinner, nor sit at table with his guests when he had company.¹

The duties of a good housewife are summed up by Plato² under the heads of *ταμεία*, *θεραπεία*, and *παιδοτροφία*. The first of these included the domestic arrangements of the house and superintendence of the furniture, provisions, cookery, and servants; in fact, everything that came under the name of housekeeping.³ But a trust of this kind was not reposed in a young wife till she had gained some experience; for what, says Xenophon,⁴ could a wife, married at fifteen, be likely to know, who had lived in complete seclusion, and had only been taught by her mother to conduct herself virtuously (*σωφρονεῖν*)? The *θεραπεία* included the attendance upon the sick inmates of the house, whether free or slaves.⁵ The *παιδοτροφία* was the physical education of the children, on which Plutarch⁶ observes that mothers ought themselves to nurture and suckle their children, though frequently female citizens were hired as wet nurses.⁷ The Spartan nurses were so famous that they were engaged even in foreign states; thus Alcibiades, we are told, was suckled by a Laconian nurse.⁸ It is scarcely necessary to remark, that we have been speaking of a citizen in good circumstances, to which only our observations can apply.

The consideration in which women were held by their husbands, and the respect paid to them in ancient Greece, would naturally depend, in some degree, on their intellectual and moral character; but, generally speaking, the Greeks entertained comparatively little regard for the female character. They considered women, in fact, as decidedly inferior to men, qualified to discharge only the subordinate functions in life, and rather necessary as helpmates than agreeable as companions. To these notions female education for the most part corresponded, and, in fact, confirmed them; it did not supply the elegant accomplishments and refinement of manners which permanently engage the affections when other attractions have passed away. Aristotle⁹ states that the relation of man to woman is that of the governor to the subject; and Plato,¹⁰ that a woman's virtues may be summed up in a few words, for she has only to manage the house well, keeping what there is in it, and obeying her husband. Nor is it unimportant to remark, that Athenians, in speaking of their wives and children, generally said *τέκνα καὶ γυναῖκας*, putting their wives last: a phrase which indicates pretty clearly what was the tone of feeling on this subject. Moreover, before marriage, Grecian women were kept in a state of confinement, which amounted to little short of a deprivation of liberty, so that they are even said to have been watched and guarded in strong apartments,

*ὁχρῶσαι παρθενῶσι φρουροῦνται καλῶς*¹¹

nor was it thought becoming in them to be seen in public,¹² except on some particular occasions, when they appeared as spectators of, or participants in, religious processions; of which, young men desirous of getting married would naturally avail themselves to determine the object of their choice. Even after marriage the restrictions imposed upon young women of the middle and higher classes were of a very jealous and almost Oriental character. They occupied, as is well known, a separate part of the house, and in the absence of their husband it was thought highly improper for a man

even to enter where they were.¹ From various passages of the Attic comedians, it would also seem that married women were required to keep at home (*οἰκνυεῖν*), and not allowed to go out of doors without the permission of their husbands. Thus, in a fragment of Menander,² we are told that married women are not allowed to pass the gate of the courtyard of the house,

*πέραι γὰρ αὐλίου θύρα
ἔλευθερά γυναικὶ νενόμισται οἰκίας.*

and Aristophanes³ speaks of their husbands forbidding them to go out. Again, on occasions of great public alarm (*c. g.*, when the news of the defeat at Chæroneia reached Athens), the women are spoken of, not as leaving their houses, but standing at their doors and inquiring after the fate of their husbands, a circumstance that is described as being discreditable to themselves and the city (*ἀναξίαν αὐτῶν καὶ τῆς πόλεως*).⁴ From a passage in Plutarch,⁵ it appears that on this subject there was the same feeling at Thebes as well as at Athens; and the same writer⁶ informs us that one of Solon's laws specified the conditions and occasions upon which women were to be allowed to leave their houses. In later times there were magistrates at Athens (the *γυναϊκονόμοι*), charged, as their name denotes, with the superintendence of the behaviour of women. (*Vid. ΓΥΝΑΙΚΟΝΟΜΟΙ*.)

But we must observe that the description given above of the social condition and estimation of women in Greece, does not apply to the heroic times as described by Homer, nor to the Dorian state of Sparta. With respect to the former, we have only space to remark, that the women of the Homeric times enjoyed much more freedom and consideration than those of later ages, and that the connexion between the sexes was then of a more generous and affectionate character than afterward. For another important distinction, see *DOS, GREEK*.⁷

Among the Dorians generally, and in Sparta especially, the relation of the wife to the husband, and the regard paid to women, were for the most part the same as that represented by Homer to have prevailed universally among the ancient Greeks and as such, presented a strong contrast to the habits and principles of the Ionic Athenians, with whom the ancient custom of Greece, in this respect, was in a great measure supplanted by that of the East. At Sparta, for instance, the wife was honoured with the title of *δέσποινα*, or "mistress," an appellation not used unmeaningly or ironically, and which was common among the Thessalians and other nations of northern Greece.⁸ Moreover, the public intercourse permitted by the Dorians between the sexes was (comparatively at least) of so free and unrestricted a character as to have given occasion for the well-known charges of licentiousness (*ἀνεσσις*) against the Spartan women.⁹ The influence, too, which the Lacedæmonian women enjoyed was so great, that the Spartans were blamed for submitting to the yoke of their wives; and even Aristotle¹⁰ thought it necessary to account for the circumstance by the supposition that Lycurgus had failed in his attempt to regulate the life and conduct of the Spartan women as he had wished. In short, there was a great contrast and difference between the treatment of women in the Dorian and Ionian states of Greece, which is well described by Müller¹¹ in the following words: "Among the Ionians women were merely considered in an inferior and sensual light; and though the Æolians allowed their

feelings a more exalted tone, as is proved by the amatory poetesses of Lesbos, the Dorians, as well at Sparta as in the south of Italy, were almost the only nation who considered the higher attributes of the female mind as capable of cultivation." In Sparta, too, the unmarried women lived more in public than the married. The former appeared with their faces uncovered, the latter veiled; and at Sparta, in Crete, and at Olympia, virgins were permitted to be spectators of the gymnastic contests, and married women only were excluded. The reverse of this was the case in Ionia.¹

The preceding investigation will have prepared the reader for the fact, that the strictest conjugal fidelity was required, under very severe penalties, from the wife (*vid. ADULTERIUM*), while great laxity was allowed to the husband. The general practice is thus illustrated by Plautus :²

"*Nam si vir scortum duxit clam uxorem suam,
Id si rescivit uxor, impune est viro.
Uxor viro si clam domo egressa est foras,
Viro fit causa, exigitur matrimonio.*"

In cases of adultery by the wife, the Athenian law subjected the husband to ἀρμία if he continued to cohabit with her; so that she was *ipso facto* divorced.³ But a separation might be effected in two different ways: by the wife leaving the husband, or the husband dismissing the wife. If the latter supposed her husband to have acted without sufficient justification in such a course, it was competent for her after dismissal, or, rather, for her guardians, to bring an action for dismissal (δική ἀποτέμψεως or ἀποπομπής): the corresponding action, if brought by the husband, was a δική ἀπολείψεως.⁴ If, however, a wife were ill used in any way by her husband, he was liable to an action called a δική κακώσεως,⁵ so that the wife was not entirely unprotected by the laws: a conclusion justified by a fragment in Athenæus,⁶ in which married women are spoken of as relying on its protection. But a separation, whether it originated from the husband or wife, was considered to reflect discredit on the latter (ὁ γὰρ διαυλός ἐστιν αἰσχύνῃ ἔχων⁷), independent of the difficulties and inconveniences to which she was subjected by it. At Sparta, barrenness on the part of a wife seems to have been a ground for dismissal by the husband;⁸ and from a passage in Chrysostom,⁹ it has been inferred that women were in the habit of imposing supposititious children with a view of keeping (κατασχεῖν) their husbands: not but that the word admits of, if, indeed, it does not (from the tense) require, a different interpretation.

This article has been mainly composed from Becker's *Charikles*.⁹ The duties of an Athenian wife are stated somewhat in detail by Xenophon.¹⁰

MARRIAGE (ROMAN), MATRIMONIUM, NUPTIÆ. A legal Roman marriage was called justæ nuptiæ, justum matrimonium, as being conformable to jus (*civile*) or to law. A legal marriage was either cum conventione uxoris in manum viri, or it was without this conventio. But both forms of marriage agreed in this: there must be connubium between the parties, and consent: the male must also be pubes, and the woman viri potens. The legal consequences as to the power of the father over his children were the same in both.

A Roman marriage may be viewed, first, with reference to the conditions required for a justum matrimonium; secondly, with reference to the forms of the marriage; thirdly, with reference to its legal consequences.

Unless there was connubium, there could be no Roman marriage. Connubium is defined by Ulpian to be "*uxoris jure ducendæ facultas*," or the faculty by which a man may make a woman his lawful wife. But, in truth, this is no definition at all, nor does it give any information. Connubium is merely a term which comprehends all the conditions of a legal marriage. Accordingly, the term is explained by particular instances: "Roman men citizens," says Ulpian, "have connubium with Roman women citizens (*Romana civēs*); but with Latinæ and Peregrinæ, only in those cases where it has been permitted. With slaves there is no connubium."

Sometimes connubium, that is, the faculty of contracting a Roman marriage, is viewed with reference to one of its most important consequences, namely, the patria potestas: "for," says Gaius, "since it is the effect of connubium that the children follow the condition of their father, it results that, when connubium exists, the children are not only Roman citizens, but are also in the power of their father." Generally, it may be stated that there was only connubium between Roman citizens: the cases in which it at any time existed between parties, not both Roman citizens, were exceptions to the general rule. Originally, or, at least, at one period of the Republic, there was no connubium between the patricians and the plebeians; but this was altered by the lex Canuleia, which allowed connubium between persons of those two classes.

There was no connubium between many persons with respect to one another, who had severally connubium with respect to other persons. Thus there were various degrees of consanguinity within which there was no connubium. There was no connubium between parent and child, whether the relation was natural or by adoption; and a man could not marry an adopted daughter or granddaughter, even if he had emancipated her. There was no connubium between brothers and sisters, whether of the whole or of the half blood; but a man might marry a sister by adoption after her emancipation, or after his own emancipation. It became legal to marry a brother's daughter after Claudius had set the example by marrying Agrippina; but the rule was not carried farther than the example, and in the time of Gaius it remained unlawful for a man to marry his sister's daughter.¹

There was no connubium, also, between persons within certain relations of affinity, as between a man and his socrus, nurus, privigna, and noverca.

Any illegal union of a male and female, though affecting to be, was not a marriage: the man had no legal wife, and the children had no legal father; consequently, they were not in the power of their reputed father. These restrictions as to marriage were not founded on any enactments: they were a part of that large mass of Roman law which belongs to jus moribus constitutum.

The marriage of Domitius, afterward the Emperor Nero, with Octavia, the daughter of Claudius, seems at first sight somewhat irregular. Nero was adopted by Claudius by a lex Curia,² but he was already his son-in-law; at least, the sponsalia were mentioned before the adoption.³ There seems to be no rule of law which would prevent a man from adopting his son-in-law; though, if the adoption took place before the marriage, it would be illegal, as stated by Gaius.

Persons who had certain bodily imperfections, as eunuchs, and others who, from any cause, could

never attain to puberty, could not contract marriage; for, though *pubertas* was in course of time fixed at a positive age (*vid. IMPUBES*), yet, as the foundation of the notion of *pubertas* was physical capacity for sexual intercourse, there could be no *pubertas* if there was a physical incapacity.

The essence of marriage was consent, and the consent, says Ulpian, "both of those who come together, and of those in whose power they are;" and "marriage is not effected by sexual union, but by consent." Those, then, who were not *sui juris*, had not, strictly speaking, *connubium*, or the "*uxoris jure ducenda facultas*;" though, in another sense, they had *connubium*, by virtue of the consent of those in whose power they were, if there was no other impediment. According to the old law, there is no doubt that a father could give his child in marriage, unless the child was emancipated, without asking the child's consent.

The *lex Julia et Papia Poppæa* placed certain restrictions on marriage as to the parties between whom it could take place. (*Vid. JULIA ET PAPIA POPPÆA*; *INFAMIA*.)

A man could only have one lawful wife at a time; and, consequently, if he were married, and divorced his wife, a second marriage would be no marriage unless the divorce were effectual.

The marriage *cum conventione* differed from that *sine conventione*, in the relationship which it effected between the husband and the wife; the marriage *cum conventione* was a necessary condition to make a woman a *materfamilias*. By the marriage *cum conventione*, the wife passed into the familia of her husband, and was to him in the relation of a daughter, or, as it was expressed, "*in manum convenit*."¹ In the marriage *sine conventione*, the wife's relation to her own familia remained as before, and she was merely *uxor*. "*Uxor*," says Cicero,² "is a genus of which there are two species; one is *materfamilias*, '*quæ in manum convenit*;' the other is *uxor* only." Accordingly, a *materfamilias* is a wife who is in manu, and in the familia of her husband, and, consequently, one of his *sui heredes*, or in the manus of him in whose power her husband is. A wife not in manu was not a member of her husband's familia, and, therefore, the term could not apply to her. Gellius³ also states that this was the old meaning of *materfamilias*. *Matrona* was, properly, a wife not in manu, and equivalent to Cicero's "*tantummodo uxor*;" and she was called *matrona* before she had any children. But these words are not always used in these their original and proper meanings.*

It does not appear that any forms were requisite in the marriage *sine conventione*; and, apparently, the evidence of such marriage was cohabitation *matrimonii causa*. The *matrimonii causa* might be proved by various kinds of evidence.

In the case of a marriage *cum conventione*, there were three forms, *usus*, *farreum*, and *coemptio*.

Marriage was effected by *usus* if a woman lived with a man for a whole year as his wife; and this was by analogy to *usucapion* of movables generally, in which *usus* for one year gave ownership. The law of the Twelve Tables provided that, if a woman did not wish to come into the manus of her husband in this manner, she should absent herself from him annually for three nights (*trinoctium*), and so break the *usus* of the year. The Twelve Tables probably did not introduce the *usus* in the case of a woman cohabiting with a man *matrimonii causa*, any more than they probably did in the case of other things; but, as in the case of other things, they fixed the time within which the *usus* should have its full ef-

fect, so they established a positive rule as to what time should be a sufficient interruption of *usus* in the case of matrimonial cohabitation, and such a positive rule was obviously necessary in order to determine what should be a sufficient legal interruption of *usus*.

Farreum was a form of marriage, in which certain words were used in the presence of ten witnesses, and were accompanied by a certain religious ceremony, in which *panis farreus* was employed; and hence this form of marriage was also called *confarreatio*. This form of marriage must have fallen generally into disuse in the time of Gaius, who remarks⁴ that this legal form of marriage (*hoc jus*) was in use even in his time for the marriages of the *flamines majores* and some others. This passage of Gaius is defective in the MS., but its general sense may be collected from comparing it with Tacitus⁵ and Servius.⁶ It appears that certain priestly offices, such as that of *flamen dialis*, could only be held by those who were born of parents who had been married by this ceremony (*confarreati parentes*). Even in the time of Tiberius, the ceremony of *confarreatio* was only observed by a few. As to divorce between persons married by *confarreatio*, see *DIVORTIUM*.

Coemptio was effected by *mancipatio*, and, consequently, the wife was in *mancipio*.⁷ A woman who was cohabiting with a man as *uxor*, might come into his manus by this ceremony, in which case the *coemptio* was said to be *matrimonii causa*, and she who was formerly *uxor* became *apud maritum filia loco*. The other *coemptio*, which was called *fiduciæ causa*, and which was between a woman and a man not her husband, is considered under *TESTAMENTUM* and *TUTELA*. If, however, an *uxor* made a *coemptio* with her husband, not *matrimonii causa*, but *fiduciæ causa*, the consequence was that she was in manu, and thereby acquired the rights of a daughter. It is stated by a modern writer, that the reason why a woman did not come in *mancipio* by the *coemptio*, but only in manu, is this, that she was not *mancipata*, but *mancipata* herself, under the authority of her father if she was in his power, and that of her tutors if she was not in the power of her father; the absurdity of which is obvious, if we have regard to the form of *mancipatio* as described by Gaius,⁸ who also speaks⁹ of *mancipatio* as being the form by which a parent released his daughter from the *patria potestas* (*e suo jure*), which he did when he gave his daughter in manu *viril*. The *mancipatio* must in all cases have been considered as legally effected by the father or the tutors.

Sponsalia were not an unusual preliminary of marriage, but they were not necessary. "*Sponsalia*," according to Florentinus,¹⁰ "*sunt mentio et repromissio nuptiarum futurarum*." Gellius has preserved¹¹ an extract from the work of Servius Sulpicius Rufus de *Dotibus*, which, from the authority of that great jurist, may be considered as unexceptionable.¹² *Sponsalia*, according to Servius, was a contract by stipulationes and sponsiones, the former on the part of the future husband, the latter on the part of him who gave the woman in marriage. The woman who was promised in marriage was accordingly called *sponsa*, which is equivalent to *promissa*; the man who engaged to marry was called *sponsus*. The *sponsalia*, then, were an agreement to marry, made in such form as to give each party a right of action in case of non-performance, and the offending party was condemned in such damages as to the *judex* seemed just. This was the law (*jus*) of

1. (Cic., *Top.*, 3.—2. (*Top.*, 3.)—3. (*xviii.*, 6.)—4. (*Vid. Ulp.*, *Fræg.*, *iv.*)

1. (i., 112.)—2. (*Ann.*, *iv.*, 16.)—3. (*ad Æn.*, *iv.*, 104, 374.)—4. (*Gaius*, *i.*, 118.)—5. (i., 119.)—6. (i., 118.)—7. (*Dig.* 23, tit. 1, s. 1.)—8. (i., 4.)—9. (*Compare Varro, De Ling. Lat.*, vi., 70.)

sponsalia, adds Servius, to the time when the lex Julia gave the civitas to all Latium; whence we may conclude that alterations were afterward made in it. The sponsalia were, of course, not binding, if the parties consented to waive the contract; and either party could dissolve the contract, as either could dissolve a marriage, subject, however, to the right of action which the non-consenting party might have. If a person was in the relation of double sponsalia at the same time, he was liable to infamia. (Vid. INFAMIA.) Sometimes a present was made by the future husband to the future wife by way of earnest (*arraha*, *arraha sponsalitia*), or, as it was called, propter nuptias donatio.¹ Sponsalia might be contracted by those who were not under seven years of age. (Vid. INFANS, IMPUBES.)

The consequences of marriage were :

1. The power of the father over the children of the marriage, which was a completely new relation; an effect, indeed, of marriage, but one which had no influence over the relation of the husband and wife. (Vid. PATRIA POTESTAS.)

2. The liabilities of either of the parties to the punishments affixed to the violation of the marriage union. (Vid. ADULTERIUM, DIVORTIUM.)

3. The relation of husband and wife with respect to property, to which head belong the matters of dos, donatio inter virum et uxorem, donatio propter nuptias, &c. Many of these matters, however, are not necessary consequences of marriage, but the consequence of certain acts which are rendered possible by marriage.

In the later Roman history we often read of marriage contracts which have reference to dos, and generally to the relation of husband and wife viewed with reference to property. A title of the Digest² treats De Pactis Dotibus, which might be made either before or after marriage.

The Roman notion of marriage was that of a complete personal union of the husband and wife (*consortium omnis vitæ*), as shown by a continuous cohabitation, the evidence of continuing consent; for the dissent of either party, when formally expressed, could dissolve the relation. (Vid. DIVORTIUM.) Neither in the old Roman law nor in its later modifications was a community of property an essential part of the notion of marriage, unless we assume that originally all marriages were accompanied by the conventio in manum, for in that case, as already observed, the wife became filiafamilias loco, and passed into the familia of her husband; or if her husband was in the power of his father, she became to her husband's father in the relation of a granddaughter. The legal deduction from this is, that her legal personality was merged in that of her husband, all her property passed to him by a universal succession,³ and she could not thenceforward acquire property for herself. Thus she was entirely removed from her former family as to her legal status, and became as the sister to her husband's children. In other words, when a woman came in manum, there was a blending of the matrimonial and the filial relation. It was a good marriage without the relation expressed by in manum, which was a relation of parent and child superadded to that of husband and wife. It is a legitimate consequence that she could not divorce her husband, though her husband might divorce her; and if we assume that the marriage cum conventione was originally the only form of marriage (of which, however, we believe there is no proof), the statement of Plutarch (vid. DIVORTIUM), that the husband alone had originally the power of effecting a divorce, will consist with this strict legal deduction. It is pos-

sible, however, that, even if the marriage cum conventione was once the only form, there might have been legal means by which a wife in manum could effect a dissolution of the marriage, just as a person in mancipii causa had still certain personal rights against his legal owner. But conjecture is beyond our province, which is confined to matters of which there is evidence.

When there was no conventio, the woman remained a member of her own familia: she was to her husband in the same relation as any other Roman citizen, differing only in this, that her sex enabled her to become the mother of children who were the husband's children and citizens of the state, and that she owed fidelity to him so long as the matrimonial cohabitation continued by mutual consent. But her legal status continued as it was before: if she was not in the power of her father, she had for all purposes a legal personal existence independently of her husband, and, consequently, her property was distinct from his. It must have been with respect to such marriages as these that a great part, at least, of the rules of law relating to dos were established; and to such marriages all the rules of law relating to marriage contracts must have referred, at least so long as the marriage cum conventione existed and retained its strict character.

When marriage was dissolved, the parties to it might marry again; but opinion considered it more decent for a woman not to marry again. A woman was required by usage (*mos*) to wait a year before she contracted a second marriage, on the pain of infamia. (Vid. INFAMIA.)

The above is only an outline of the law of marriage, but it is sufficient to enable a student to carry his investigations farther.

It remains to describe the customs and rites which were observed by the Romans at marriages (*ritus nuptiales* or *nuptiarum solemnia iusta*, τὰ νομιζόμενα τῶν γάμων). After the parties had agreed to marry, and the persons in whose potestas they were had consented, a meeting of friends was sometimes held at the house of the maiden for the purpose of settling the marriage contract, which was called sponsalia, and written on tablets (*tabula legitima*), and signed by both parties.¹ The woman, after she had promised to become the wife of a man, was called sponsa, pacta, dicta, or sperata.² From Juvenal³ it appears that, at least during the imperial period, the man put a ring on the finger of his betrothed as a pledge of his fidelity. This ring was probably, like all rings at this time, worn on the left hand, and on the finger nearest to the smallest.⁴ The last point to be fixed was the day on which the marriage was to take place. Towards the close of the Republic it had become customary to betroth young girls when they were yet children; Augustus therefore limited the time during which a man was allowed to continue betrothed to a girl,⁵ and forbade men to be betrothed to girls before the latter had completed their tenth year, so that, the age of puberty being twelve years, a girl might not be compelled to be betrothed longer than two years.⁶

The Romans believed that certain days were unfortunate for the performance of the marriage rites, either on account of the religious character of those days themselves, or on account of the days by which they were followed, as the woman had to perform certain religious rites on the day after her wedding, which could not take place on a dies ater. Days not suitable for entering upon matrimony were the Calends, Nones, and Ides of every month, all dies

atri, the whole months of May,¹ and February, and a great number of festivals.² Widows, on the other hand, might marry on days which were inauspicious for maidens.³

On the wedding-day, which in the early times was never fixed upon without consulting the auspices,⁴ the bride was dressed in a long white robe with a purple fringe, or adorned with ribands.⁵ This dress was called *tunica recta*,⁶ and was bound round the waist with a girdle (*corona, cingulum, or zona*),⁷ which the husband had to untie in the evening. The bridal veil, called *flammeum*, was of a bright yellow colour,⁸ and her shoes likewise.⁹ Her hair was divided on this occasion with the point of a spear.¹⁰

The only form of marriage which was celebrated with solemn religious rites was that by *confarreatio*; the other forms, being mere civil acts, were probably solemnized without any religious ceremony. In the case of a marriage by *confarreatio*, a sheep was sacrificed, and its skin was spread over two chairs, upon which the bride and bridegroom sat down with their heads covered.¹¹ Hereupon the marriage was completed by pronouncing a solemn formula or prayer, after which another sacrifice was offered. A cake was made of *far* and the *mola salsa* prepared by the vestal virgins,¹² and carried before the bride when she was conducted to the residence of her husband. It is uncertain whether this cake is the same as that which is called *mustaceum*,¹³ and which was in the evening distributed among the guests assembled at the house of the young husband.

The bride was conducted to the house of her husband in the evening. She was taken with apparent violence from the arms of her mother, or of the person who had to give her away. On her way she was accompanied by three boys dressed in the *prætexta*, and whose fathers and mothers were still alive (*patrini et matrimi*). One of them carried before her a torch of white thorn (*spina*), or, according to others, of pine wood; the two others walked by her side, supporting her by the arm.¹⁴ The bride herself carried a distaff and a spindle with wool.¹⁵ A boy, called *camillus*, carried in a covered vase (*cumera, cumerum, or camillum*) the so-called utensils of the bride and playthings for children (*crepundia*).¹⁶ Besides these persons who officiated on the occasion, the procession was attended by a numerous train of friends both of the bride and the bridegroom, whose attendance was called *officium* and *ad officium venire*.¹⁷ Plutarch¹⁸ speaks of five wax candles which were used at marriages; if these were borne in the procession, it must have been to light the company which followed the bride; but it may also be that they were lighted during the marriage ceremony in the house of the bride.

When the procession arrived at the house of the bridegroom, the door of which was adorned with garlands and flowers, the bride was carried across the threshold by *pronubi, i. e.*, men who had only been married to one woman, that she might not knock against it with her foot, which would have been an evil omen.¹⁹ Before she entered the house,

she wound wool around the door-posts of her new residence, and anointed them with lard (*adeps suillus*) or wolf's fat (*adeps lupinus*).²⁰ The husband received her with fire and water, which the woman had to touch. This was either a symbolic purification (for Servius² says that the newly-married couple washed their feet in this water), or it was a symbolic expression of welcome, as the *interdicere aqua et igni* was the formula for banishment. The bride saluted her husband with the words *ubi tu Caius, ego Caia*.²¹ After she had entered the house with distaff and spindle, she was placed upon a sheepskin, and here the keys of the house were delivered into her hands.²² A repast (*cæna nuptialis*), given by the husband to the whole train of relatives and friends who accompanied the bride, generally concluded the solemnity of the day.²³ Many ancient writers mention a very popular song, *Talasius* or *Talassio*, which was sung at weddings;²⁴ but whether it was sung during the repast or during the procession is not quite clear, though we may infer, from the story respecting the origin of the song, that it was sung while the procession was advancing towards the house of the husband.

It may easily be imagined that a solemnity like that of marriage did not take place among the merry and humorous Italians without a variety of jests and railleries, and Ovid⁷ mentions obscene songs which were sung before the door of the bridal apartment by girls after the company had left. These songs were probably the old *Fescennina* (*vid. Fescennina*), and are frequently called *Epithalamia*. At the end of the repast the bride was conducted, by matrons who had not had more than one husband (*pronubæ*), to the lectus genialis in the atrium, which was on this occasion magnificently adorned and strewn with flowers. On the following day the husband sometimes gave another entertainment to his friends, which was called *repotia*,²⁵ and the woman, who on this day undertook the management of the house of her husband, had to perform certain religious rites,²⁶ on which account, as was observed above, it was necessary to select a day for the marriage which was not followed by a dies ater. These rites probably consisted of sacrifices to the *Dii Penates*.²⁷

The rites and ceremonies which have been mentioned above are not described by any ancient writer in the order in which they took place, and the order adopted above rests in some measure merely upon conjecture. Nor is it, on the other hand, clear which of the rites belonged to each of the three forms of marriage. Thus much only is certain, that the most solemn ceremonies, and those of a religious nature, belonged to *confarreatio*.

The position of a Roman woman after marriage was very different from that of a Greek woman. The Roman presided over the whole household; she educated her children, watched over and preserved the honour of the house, and, as the mater familias, she shared the honours and respect shown to her husband. Far from being confined, like the Greek women, to a distinct apartment, the Roman matron, at least during the better centuries of the Republic, occupied the most important part of the house, the atrium.²⁸

*MARRUBIUM, Horehound. The white Horehound is the *Marrubium vulgare*, or the *M. album* of the shops. The modern Greeks term it *σκολόχοπος*.

τον. Sibthorp found it in the Greek islands. The *πράσιον* of Theophrastus and Dioscorides is not only the same as this, but is also applied to other species. The *πράσιον ἀχμῶδες* of Theophrastus is the *M. Africanum*. The *ψευδοῖκαμνον* (false *ἰκαμνον*) is the *M. pseudo dictamnus*, called in Attica, at the present day, *μαδρομάργο*, and in Laconia, *ἀσπρι- κροσάνδον*.¹

MARSUPIUM (μαρούπιον, βαλάντιον), a Purse.²

The purse used by the ancients was commonly a small leathern bag, and was often closed by being drawn together at the mouth (*συσπαστα βαλάντια*). Mercury is commonly represented holding one in his hand, of which the annexed woodcut from an intaglio in the Stosch collection at Berlin

presents an example.

MARTIALIS FLAMEN. (Vid. FLAMEN.)

MARTIALES LUDI. (Vid. LUDI MARTIALES.)

MARTYRIA (μαρτυρία) signifies strictly the deposition of a witness in a court of justice, though the word is applied metaphorically to all kinds of testimony. We shall here explain, 1, what persons were competent to be witnesses at Athens; 2, what was the nature of their obligation; 3, in what manner their evidence was given; 4, what was the punishment for giving false evidence.

None but freemen could be witnesses. The incapacity of women may be inferred from the general policy of the Athenian law, and the absence of any example in the orators where a woman's evidence is produced. The same observation applies to minors.

Slaves were not allowed to give evidence, unless upon examination by torture (*βίσανος*). There appears to have been one exception to this rule, viz., that a slave might be a witness against a freeman in case of a charge of murder,³ though Platner⁴ thinks this only applied to the giving information. The party who wished to obtain the evidence of a slave belonging to his opponent challenged him to give up the slave to be examined (*ἐξήγει τον δούλον*). The challenge was called *πρόκλησις*. The owner, if he gave him up, was said *ἐκδοῖναι* or *παράδοῦναι*. But he was not obliged so to do, and the general practice was to refuse to give up slaves, which, perhaps, arose from humanity, though the opponent always ascribed it to a fear lest the truth should be elicited. The orators affected to consider the evidence of slaves, wrung from them by torture, more valuable and trustworthy than that of freemen; but it must be observed, they always use this argument when the slave had not been examined.⁵

Citizens who had been disfranchised (*ἡτιμωμένοι*) could not appear as witnesses (any more than as jurors or plaintiffs) in a court of justice; for they had lost all honourable rights and privileges.⁷ But there was no objection to alien freemen.⁸ We learn from Harpocration,⁹ that in actions against freedmen for neglect of duty to their patrons (*ἀποστασίον δίκαι*), foreigners were not allowed to put in an affidavit that the action was not maintainable (*μὴ εἰσαγωγίων εἶναι*). But this can hardly be considered

an exception, for such affidavits gave an undue advantage to the party for whom they were made.

Neither of the parties to a cause was competent to give evidence for himself, though each was compelled to answer the questions put by the other. The law declared *τοῖν ἀντιδίκων ἐπανάγκης εἶναι ἀποκρίνασθαι ἀλλήλους τὸ ἐρωτώμενον, μαρτυρεῖν δὲ μὴ*.¹ That the friends of the party who pleaded for him (called *συνήγοροι*) were not incompetent to give evidence, appears from the fragment of Isæus, *Pro Euphil.*, and also from Æschines, who, on his trial for misconduct in the embassy, calls Phocion to assist him both as a witness and an advocate.²

The obligation to attend as a witness, both in civil and criminal proceedings, and to give such evidence as he is able to give, arises out of the duty which every man owes to the state; and there is no reason to believe that any persons (except the parties themselves) were exempted from this obligation. The passages which Platner³ and Schömann⁴ cite in support of the contrary view prove nothing more than that the near relations of a party were *reluctant* to give evidence against him, whereas the fact that they were bound by law to give evidence may be inferred from Demosthenes.⁵

The party who desired the evidence of a witness summoned him to attend for that purpose. The summons was called *πρόσκλησις*.⁶ If the witness promised to attend, and failed to do so, he was liable to an action called *δίκη λειπομαρτυρίων*. Whether he promised or not, he was bound to attend; and if his absence caused injury to the party, he was liable to an action (*δίκη βλάβης*). This is the probable distinction between these forms of action, as to which there has been much doubt.⁷

The attendance of the witness was first required at the *ἀνάκρισις*, where he was to make his deposition before the superintending magistrate (*ἡγεμῶν δικαστηρίου*). The party in whose favour he appeared generally wrote the deposition at home upon a whitened board or tablet (*λελευκωμένον γραμματεῖον*), which he brought with him to the magistrate's office, and, when the witness had deposited thereto, put into the box (*ἐχίνος*) in which all the documents in the cause were deposited. If the deposition was not prepared beforehand, as must always have been the case when the party was not exactly aware what evidence would be given, or when anything took place before the magistrate which could not be foreseen, as, for instance, a challenge, or question and answer by the parties; in such a case it was usual to write down the evidence upon a waxen tablet. The difference between these methods was much the same as between writing with a pen on paper, and with a pencil on a slate; the latter could easily be rubbed out and written over again if necessary.⁸ If the witness did not attend, his evidence was, nevertheless, put into the box; that is, such evidence as the party intended him to give, or thought he might give, at the trial. For all testimonial evidence was required to be in writing, in order that there might be no mistake about the terms, and the witness might leave no subterfuge for himself when convicted of falsehood.⁹ The *ἀνάκρισις* might last several days, and, so long as it lasted, fresh evidence might be brought, but none could be brought after the last day, when the box was sealed by the magistrate, and kept so by him till the day of trial.¹⁰

The form of a deposition was simple. The following example is from Demosthenes.¹ Archenomides, son of Archdamas of Anagyrus, testifies that articles of agreement were deposited with him by Androcles of Sphectus, Nausicrates of Carystus, Artemon and Apollodorus, both of Phaselus, and that the agreement is still in his hands.² Here we must observe that, whenever a document was put in evidence at the trial, as an agreement, a will, the evidence of a slave, a challenge, or an answer given by either party at the *ἀνάκρισις*, it was certified by a witness, whose deposition was at the same time produced and read.³

The witness, whether he had attended before the magistrate or not, was obliged to be present at the trial, in order to confirm his testimony. The only exception was when he was ill or out of the country, in which case a commission might be sent to examine him. (*Vid.* ΕΚΜΑΡΤΥΡΙΑ.) All evidence was produced by the party during his own speech, the *κλητύδρα* being stopped for that purpose.⁴ The witness was called by an officer of the court, and mounted on the raised platform (*βήμα*) of the speaker while his deposition was read over to him by the clerk; he then signified his assent, either by express words, or bowing his head in silence.⁵ In the editions that we have of the orators, we see sometimes *Μαρτυρία* written (when evidence is produced) and sometimes *Μάρτυρες*. The student must not be deceived by this, and suppose that sometimes the deposition only was read, sometimes the witnesses themselves were present. The old editors merely followed the language of the orators, who said, "call the witnesses," or "mount up, witnesses," or "the clerk shall read you the evidence," or something to the same effect, varying the expression according to their fancy.⁶

If the witness was hostile, he was required either to depose to the statement read over to him, or to take an oath that he knew nothing about it (*μαρτυρεῖν ἢ ἐξομνέειν*). One or the other he was compelled to do, or, if he refused, he was sentenced to pay a fine of a thousand drachma to the state, which sentence was immediately proclaimed by the officer of the court, who was commanded *κλητεῖν* or *ἐκκλητεῖν αὐτόν*, i. e., to give him notice that he was in contempt and had incurred the fine.⁷

An oath was usually taken by the witness at the *ἀνάκρισις*, where he was sworn by the opposite party at an altar (*πρὸς τὸν βωμὸν ἐξουκίσθη*). If he had not attended at the *ἀνάκρισις*, he might be sworn afterward in court, as was always the case when a witness took the oath of denial (*ἐξώμοσε*). In the passage just cited from Lysurgus, the expression *λαβόντας τὰ ἱερὰ* means nothing more than touching the altar or its appurtenances, and has no reference to victims.⁸ Whether the witness was always bound to take an oath is a doubtful point.⁹

The oath of the witness (the ordinary *νόμιμος ὅρκος*) must not be confounded with the oath taken by one of the parties, or by some friend or other person, out of court, with a view to decide the cause or some particular point in dispute. This

was taken by the consent of the adversary, upon a challenge given and accepted; it was an oath of a more solemn kind, sworn by (or upon the heads of) the children of the party swearing (*κατὰ τῶν παίδων*), or by perfect or full-grown victims (*καθ' ἱερὸν τελεῖν*), and often with curses upon himself or his family (*κατ' ἐξώλειας*), and sometimes was accompanied with peculiar rites, such as passing through fire (*διὰ τοῦ πυρός*). The mother, or other female relative of the party (who could not be a witness), was at liberty to take this oath.¹

On some extraordinary occasions we find that freemen were put to the torture by a special decree of the people or the senate, as on the occasion of the mutilated Hermes busts,² and they were less scrupulous about aliens than about citizens; but (as a general rule) it is certain that freemen could not be tortured in courts of justice, and even an emancipated slave, Demosthenes says, it would be an act of impiety (*οὐδ' ὀσιον*) to give up for such a purpose.³

With respect to hearsay evidence, see Ε ΜΑΡΤΥΡΙΑ; and with respect to the affidavit called *διαμαρτυρία*, see ΗΕΡΕΣ, GREEK, p. 496.

We have hitherto spoken only of causes which came before the dicasts in the ordinary way, and have said nothing of those which were decided by the public arbitrators. The above remarks, however, will equally apply to the latter, if the reader will bear in mind that the arbitrator performed the duties of the magistrate at the *ἀνάκρισις* as well as those of the *δικασταί* at the trial. He heard the witnesses and received the depositions from day to day, as long as he sat, and kept the *ἐχίνος* open until the last day (*κυρίαν ἡμέραν*).⁴

If the witness in a cause gave false evidence, the injured party was at liberty to bring an action against him (*δίκη ψευδομαρτυριῶν*) to recover compensation. The proceeding was sometimes called *ἐπισκεψίς*, and the plaintiff was said *ἐπισκέπτεσθαι τὴ μαρτυρίαν* or *τὴ μάρτυρι*.⁵ This cause was probably tried before the same presiding magistrate as the one in which the evidence was given.⁶ The form of the plaintiff's bill, and of the defendant's plea in denial, will be found in Demosthenes.⁷ From the same passage we also learn that the action for false testimony was a *τιμὴ πρὸς ἄγῶν*, in which the plaintiff laid his own damages in the bill; and from Demosthenes⁸ it appears that the dicasts had power not only to give damages to the plaintiff, but also to inflict the penalty of *ἀτιμία* by a *προστίμησις*.⁹ A witness who had been a third time convicted of giving false testimony was *ipso jure* disfranchised.¹⁰ The main question to be tried in the cause against the witness was, whether his evidence was true or false; but another question commonly raised was, whether his evidence was material to the decision of the previous cause.¹¹

When a witness, by giving false evidence against a man upon a criminal trial, had procured his conviction, and the convict was sentenced to such a punishment (for instance, death or banishment) as rendered it impossible for him to bring an action, any other person was allowed to institute a public

prosecution against the witness, either by a γραφή, or perhaps by an εἰσαγγελία or προβολή.¹

After the conviction of the witness, an action might be maintained against the party who suborned him to give false evidence, called δίκη κακοτεχνιών.² And it is not improbable that a similar action might be brought against a person who had procured false evidence to be given of a defendant having been summoned, after the conviction of the witness in a γραφή ψευδοκλητίας.³

It appears that, in certain cases, a man who had lost a cause was enabled to obtain a reversal of the judgment (δίκη ἀνάδικος) by convicting a certain number of the adverse witnesses of false testimony. Thus, in inheritance causes, the law enacted ἐὰν ἀλώ τις τῶν ψευδομαρτυριῶν, πάλιν ἐξ ἀρχῆς εἶναι περὶ αὐτῶν τὰς λήξεις.⁴ This was the more necessary, on account of the facility afforded to the parties to stop the progress of these causes by affidavits (vid. ΔΙΑΜΑΡΤΥΡΙΑ), and also because no money could compensate an Athenian for the loss of an inheritance. The same remedy was given by the law to those who had been convicted in a δίκη ψευδομαρτυριῶν or in a γραφή ξενίας. In the last case, the convicted person who proceeded against the witness was compelled to remain in prison until the determination of his suit.⁵ We are informed that these are the only cases in which a judgment was allowed to be reversed in this way; but whether there were not more cases than these has been justly doubted by Schömann.⁶ The scholiast on Plato⁷ is evidently wrong in supposing that it was necessary, under the Athenian law, to convict more than half the number of the witnesses. This appears from the passage above cited from Isæus on the estate of Hagnias.

We conclude by noticing a few expressions. *Μαρτυρεῖν τι* is to testify in favour of a man, *καταμαρτυρεῖν τινος* to testify against. *Μαρτύρεσθαι* to call to witness (a word used poetically), *διαμαρτυροῦσθαι*, and sometimes *ἐπιμαρτυροῦσθαι*, *τοὺς παρόντας*, to call upon those who are present to take notice of what passes, with a view to give evidence.⁸ *Ψευδομαρτυρεῖν* and *ἐπιορκεῖν* are never used indifferently, which affords some proof that testimony was not necessarily on oath. The *μάρτυς* (witness in the cause) is to be distinguished from the *κλητήρ* or *κλητήρ*; who merely gave evidence of the summons to appear.

MASTĒRES (μαστήρες). (Vid. ZETETAL.)

*MASTICHE (μαστήχη), Gum Mastich. "This is correctly described as the resin of the Lentiscus by Dioscorides and Pliny. It is the *Pistachia Lentiscus*. The Chian Mastich is particularly commended by Galen."⁹ The wood of the *Pistachia Lentiscus*, according to Sibthorp, is much esteemed by the Greeks at the present day for fuel. They call the tree *σχίνος*. The mastich or gum is only collected in Scio. The ashes of the wood are used by the Athenian soap-boilers for making the ley for the manufacture of soap. In Zante it is also considered as furnishing the best lixivium. The tanners employ it with valanida in the preparation of leather. In Ithaca an oil (*σχινολάδι*) is expressed from the berry. The *σχίνος* of the modern Greeks is also the *σχίνος* of Theophrastus. The ancient verb *σχινίζεσθαι* signifies "to chew mastich" or "the wood of the mastich-tree," in order to sweeten the breath and cleanse the teeth. The gum is now

much used by the women of Turkey for the same purpose.¹

MASTĒGIA. (Vid. FLAGRUM.)

MATERFAMILIAS. (Vid. MARRIAGE, ROMAN, p. 623.)

MATRA'LIA, a festival celebrated at Rome every year on the 11th of June, in honour of the goddess Mater Matuta, whose temple stood in the Forum Boarium. It was celebrated only by Roman matrons, and the sacrifices offered to the goddess consisted of cakes baked in pots of earthenware.² Slaves were not allowed to take part in the solemnities or to enter the temple of the goddess. One slave, however, was admitted by the matrons, but only to be exposed to a humiliating treatment, for one of the matrons gave her a blow on the cheek, and then sent her away from the temple. The matrons on this occasion took with them the children of their sisters, but not their own, held them in their arms, and prayed for their welfare.³ The statue of the goddess was then crowned with a garland by one of the matrons who had not yet lost a husband.⁴ The Greek writers and their Roman followers, who identify the Mater Matuta with Leucothea or Ino, explain the ceremonies of the Matralia by means of the mythological stories which relate to this Greek goddess. But the real import of the worship of the Mater Matuta appears to have been to inculcate upon mothers the principle that they ought to take care of the children of their sisters as much as of their own, and that they should not leave them to careless slaves, the contempt for whom was symbolically expressed by the infliction of a blow on the cheek of the one admitted into the temple.⁵

MATRIMONIUM. (Vid. MARRIAGE, ROMAN.)

MATRONA. (Vid. MARRIAGE, ROMAN, p. 623.)

MAUSOLEUM. (Vid. FUNUS, p. 461.)

MAZONOMUS (μαζονόμος, dim. μαζονόμους), from μάζα, a loaf or a cake; properly a dish for distributing bread; but the term is applied also to any large dish used for bringing meat to table.¹ (Vid. CÆNA, p. 274.) These dishes were made either of wood,² of bronze,³ or of gold.¹⁰

MEDIAS'TINI, the name given to slaves used for any common purpose, and are said by the scholiast upon Horace¹¹ to be those "*qui in medio stant ad quævis imperata parati*." The name is chiefly given to certain slaves belonging to the familia rustica,¹² but is also applied sometimes to slaves in the city.¹³

*MEDICA (Μηδική), a plant, the Lucerne or Purple Medick (*Medicago sativa*). It has its name from Media, according to the ancient authorities, because it was brought from that country into Greece at the time of the Persian war under Darius. It passed into England from France and Switzerland. Some of the English botanists, according to Martyn, called it *Burgundy trefoil* and *Medick fodder*.¹⁴

*MEDICA MALA (Μηδικὰ μῆλα), the fruit of the Citron-tree, or *Citrus Medica*, L. Sprengel and Stackhouse think that the Orange (*Citrus aurantium*) was also comprehended under the term. (Vid. CITRUS.)¹⁵

MEDICINA (Ἱατρική), the name of that science which, as Celsus says,¹⁶ "*Sanitatem ægris promittit*,"

and whose object Hippocrates defines¹ to be "the delivering sick persons from their diseases, and the diminishing the force of sicknesses, and the not undertaking the treatment of those who are quite overcome by sickness, as we know that medicine is here of no avail." For other definitions of the art and science of Medicine given by the ancients, see Pseudo-Galen.² The invention of medicine was almost universally attributed by the ancients to the gods.³ Another source of information was the observing the means resorted to by animals when labouring under disease. Pliny⁴ gives many instances in which these instinctive efforts taught mankind the properties of various plants, and the more simple surgical operations. The wild goats of Crete pointed out the use of the Dictamnus and vulnerary herbs; dogs, when indisposed, sought the *Triticum repens*, and the same animal taught to the Egyptians the use of purgatives, constituting the treatment called Syrmiasm. The hippopotamus introduced the practice of bleeding, and it is affirmed that the employment of clysters was shown by the ibis.⁵ Sheep with worms in their liver were seen seeking saline substances, and cattle affected with dropsy anxiously looked for chalybeate waters. We are told⁶ that the Babylonians and Chaldeans had no physicians, and in cases of sickness the patient was carried out and exposed on the highway, that any persons passing by who had been affected in a similar manner might give some information respecting the means that had afforded them relief. Shortly afterward, these observations of cures were suspended in the temples of the gods, and we find that in Egypt the walls of their sanctuaries were covered with records of this description. The priests of Greece adopted the same practice, and some of the tablets suspended in their temples are of a curious character, which will illustrate the custom. The following votive memorials are given by Hieron. Mercurialis:⁷ "Some days back, a certain Cains, who was blind, learned from an oracle that he should repair to the temple, put up his fervent prayers, cross the sanctuary from right to left, place his five fingers on the altar, then raise his hand and cover his eyes. He obeyed, and instantly his sight was restored, amid the acclamations of the multitude. These signs of the omnipotence of the gods were shown in the reign of Antoninus." "A blind soldier named Valerius Apes, having consulted the oracle, was informed that he should mix the blood of a white cock with honey, to make up an ointment to be applied to his eyes for three consecutive days: he received his sight, and returned public thanks to the gods." "Julian appeared lost beyond all hope from a spitting of blood. The god ordered him to take from the altar some seeds of the pine, and to mix them with honey, of which mixture he was to eat for three days. He was saved, and came to thank the gods in presence of the people."

The whole science of medicine was divided into five parts; viz.: *Φυσιολογική*, Physiology and Anatomy (*vid.* *PHYSIOLOGIA*); *Αιτιολογική*, Etiology, or the doctrine of the causes of disease; *Παθολογική*, Pathology (*vid.* *PATHOLOGIA*); *Υγιεινόν*, Hygiene, or the art of preserving health; *Σημειωτική*, Semeiology, or the knowledge of the symptoms of disease, including Diagnosis (*vid.* *SEMEIOTICA*); and *Θεραπευτική*, Therapeutics, or the art of healing (*vid.* *THERAPEUTICA*). With regard to the medical liter-

ature of the ancients, "When," says Littré,¹ "one searches into the history of medicine and the commencement of the science, the first body of doctrine that one meets with is the collection of writings known under the name of the works of Hippocrates. The science mounts up directly to that origin, and there stops. Not that it had not been cultivated earlier, and had not given rise to even numerous productions, but everything that had been made before the physician of Cos has perished. We have only remaining of them scattered and unconnected fragments; the works of Hippocrates have alone escaped destruction; and, by a singular circumstance, there exists a great gap after them as well as before them. The medical works from Hippocrates to the establishment of the school of Alexandria, and those of that school itself, are completely lost, except some quotations and passages preserved in the later writers; so that the writings of Hippocrates remain alone among the ruins of an ancient medical literature." The Asclepiadæ, to which family Hippocrates belonged, were the supposed descendants of Æsculapius (*Ἀσκληπίος*), and were, in a manner, the hereditary physicians of Greece. They professed to have among them certain secrets of the medical art, which had been handed down to them from their great progenitor, and founded several medical schools in different parts of the world. Galen mentions² three, viz., Rhodes, Cnidos, and Cos. The first of these appears soon to have become extinct, and has left no traces of its existence behind. From the second proceeded a collection of observations called *Κνιδίαι Γνώμαι*, "Cnidian Sentences," a work of much reputation in early times, which is often mentioned by Hippocrates,³ and which appears to have existed in the time of Galen.⁴ The school of Cos, however, is by far the most celebrated, on account of the greater number of eminent physicians that sprang from it, and especially from having been the birthplace of the great Hippocrates. We learn from Herodotus⁵ that there were also two celebrated medical schools at Crotona in Magna Græcia, and Cyrene in Africa, of which he says that the former was in his time more esteemed in Greece than any other, and in the next place came that of Cyrene. But neither of these require any particular notice here, nor will it be necessary to do more than mention the more celebrated medical sects, referring for farther particulars to their names in this work. The oldest, and perhaps the most influential of these, was that of the *Δωγματικοί*, founded about B.C. 400 by Thessalus, the son, and Polybus, the son-in-law of Hippocrates, and thence called also the *Hippocratici*. These retained their influence till the rise of the *Εμπειρικοί*, founded by Serapion of Alexandria and Philinus of Cos in the third century B.C., after which time every member of the medical profession, during a long period, ranged himself in one of these two sects. In the first century B.C., Themison founded the sect of the *Μεθοδικοί*, who held doctrines nearly intermediate between those of the two sects already mentioned. About two centuries later, the Methodici were divided into numerous sects, as the doctrines of particular physicians became more generally received. The chief of these sects were the *Πνευματικοί* and *Εκλεκτικοί*; the former founded by Athenæus about the middle or end of the first century A.D.; the latter about the same time, either by Agathinus of Sparta or his pupil Archigenes. The *Επισυνθητικοί* (called also *Ηλεκτικοί*) are supposed to have agreed very nearly in their tenets with those of the Eclectici.

It only remains to mention the principal medical authors after Hippocrates whose works are still extant, referring for more particulars respecting their writings to the articles on CHIRURGIA, DIETETICA, PATHOLOGIA, PHARMACEUTICA, PHYSIOLOGIA, SEMEIOLOGICA, and THERAPEUTICA. Celsus is supposed to have lived in the Augustan age, and deserves to be mentioned more for the elegance of his style, and the neatness and judiciousness of his compilation, than for any original contributions to the science of Medicine. Indeed, many persons have doubted whether Celsus were really a professional man, or whether he only wrote his work "De Medicina" as a sort of rhetorical exercise.¹ Dioscorides of Anazarba, who lived in the first century after Christ, was for many centuries the greatest authority in Materia Medica, and was almost as much esteemed as Galen in Medicine and Physiology, or Aristotle in Philosophy. Aretæus, who probably lived in the time of Nero, is an interesting and striking writer, both from the beauty of his language and from the originality of his opinions. The next in chronological order, and perhaps the most valuable, as he is certainly the most voluminous, of all the medical writers of antiquity, is Galen, who reigned supreme in all matters relating to his art till the commencement of modern times. He was born at Pergamus A.D. 131, came early in life to Rome, where he lived in great honour, and passed great part of his days, and died A.D. 201. After him, the only writers deserving particular notice are Oribasius of Pergamus, physician to the Emperor Julian in the fourth century after Christ; Aëtius of Amida, who lived probably in the sixth century; Alexander Trallianus, who lived something later; and Paulus Ægineta, who belongs to the end of the seventh.

MEDICUS (*ἰατρός*), the name given by the ancients to every professor of the healing art, whether physician or surgeon, and, accordingly, both divisions of the medical profession will here be included under that term. In Greece and Asia Minor physicians seem to have been held in high esteem; for, not to mention the apotheosis of Æsculapius, who was considered as the father of it, there was a law at Athens that no female or slave should practise it.² Ælian mentions one of the laws of Zaleucus among the Epizephyrian Locrians, by which it was ordered that if any one, during his illness, should drink wine contrary to the orders of his physician, even if he should recover, he should be put to death for his disobedience;³ and, according to Mead, there are extant several medals struck by the people of Smyrna in honour of different persons belonging to the medical profession.⁴ The following observation concerning these medals is given by Kühn: *"Alii, idque haud dubie rectius, verosimiliter existimabant nomina in hisce nummis obvia minime significare medicos, qui de Smyrncis suæ medicæ artis cognitione bene meruerint, sed potius summos illius urbis magistratus. Vid. partim Cl. Wise, in Mus. Bodici, p. 140, qui Meadianæ sententiæ acerbis existit censor, partim Jos. Eckhel, in Doctr. Num. Veler., to. ii., p. 539, et Jo. Cph. Raschen, in Lex Univ. Rei Num. Vet., to. iv., p. 2, Lips., 1790-8, qui p. 1219, plures scriptores de Smyrnæorum nummis adduxit."* (In voce "Apollonophanes.") If the decree of the Athenians (published among the letters of Hippocrates) be genuine, and if Soranus⁵ can be depended on, the same honours were conferred upon

that physician as had before been given to Hercules; he was voted a golden crown, publicly initiated into the Eleusinian mysteries, and maintained in the Prytaneum at the state's expense.¹

As there were no hospitals among the ancients, the chief places of study for medical pupils were the *Ἀσκληπιεία*, or temples of Æsculapius, where the votive tablets furnished them with a collection of cases. The Asclepiadæ (*vid. MEDICINA*) were very strict in examining into and overlooking the character and conduct of their pupils, and the famous Hippocratic oath (which, if not drawn up by Hippocrates himself, is certainly almost as ancient) requires to be inserted here, as being the most curious medical monument of antiquity. "I swear by Apollo the physician, by Æsculapius, by Hygeia, and Panacea, and all the gods and goddesses, calling them to witness that I will fulfil religiously, according to the best of my power and judgment, the solemn promise and the written bond which I now do make. I will honour as my parents the master who has taught me this art, and endeavour to minister to all his necessities. I will consider his children as my own brothers, and will teach them my profession, should they express a desire to follow it, without remuneration or written bond. I will admit to my lessons, my discourses, and all my other methods of teaching, my own sons, and those of my tutor, and those who have been inscribed as pupils and have taken the medical oath; but no one else. I will prescribe such a course of regimen as may be best suited to the condition of my patients, according to the best of my power and judgment, seeking to preserve them from anything that might prove injurious. No inducement shall ever lead me to administer poison, nor will I ever be the author of such advice: neither will I contribute to an abortion. I will maintain religiously the purity and integrity both of my conduct and of my art. I will not cut any one for the stone, but will leave that operation to those who cultivate it (*ἐκχωρήσω δὲ ἐργάσθαι ἀνδράσι πρόξιος τῆσδε*). Into whatever dwellings I may go, I will enter them with the sole view of succouring the sick, abstaining from all injurious views and corruption, especially from any immodest action towards women or men, freemen or slaves. If during my attendance, or even unprofessionally in common life, I happen to hear of any circumstances which should not be revealed, I will consider them a profound secret, and observe on the subject a religious silence. May I, if I rigidly observe this my oath, and do not break it, enjoy good success in life, and in [the practice of] my art, and obtain general esteem forever; should I transgress and become a perjurer, may the reverse be my lot." As regards the passage of the oath, given above in the original Greek (*ἐκχωρήσω δὲ, κ. τ. λ.*), though the writer has translated it thus, both here and also in page 241, he does not feel at all sure that the other construction, viz., making *πρόξιος τῆσδε* depend on *ἐκχωρήσω*, is not preferable. With regard to the oath itself, it is generally considered to be spurious;² but M. Littré, the editor of the new Paris edition of Hippocrates, believes it to be genuine. For a copious and learned explanation of every clause of the oath, see Meibom's edition, Gr. and Lat., Lugd. Bat., 4to, 1643.

Some idea of the income of a physician in those times may be formed from the fact mentioned by Herodotus,³ that the Æginetans (about the year B.C. 532) paid Democedes from the public treasury one talent per annum for his services, *i. e.* (if we reckon, with Hussey,⁴ the Æginetan drachma to be worth

1. (*Vid.* Mich. Christ. Just. Eschenbach, *Epistola*, &c., ubi "De Celsi non Medico Practico dissertur." Lips., 4to, 1772; also Le Clerc's and Sprengel's *Histories of Medicine*.)—2. (*Hyginus*, Fab., 274.)—3. (*Var. Hist.*, ii., 37.)—4. (*Dissertatio de Nummis quibusdam a Smyrncis in Medicorum honorem percussis*, 4to, Lond., 1724.)—5. (*Additum ad Elench. Medicor. Veler.* a Jo. A. Fabricio, in *Biblioth. Græca exhibitum*, 4to, Lips., 1826-9.)—6. (*In Vita Hippocr.*)

1. (*Compare* Plin., H. N., vii., 37.)—2. (*Vid.* J. C. Ackermann, *Hist. Liter. Hippocr.*, in *Fabr. Bibl. Gr.*, ed. Harles, or in Kühn's ed. of Hippocr.)—3. (iii., 131.)—4. (*Ancient Weights and Money*, &c.)

1s. 1½d.), not quite 344l.; he afterward received from the Athenians one hundred minæ, i. e. (reckoning, with Hussey, the Attic drachma to be worth 9½d.), rather more than 406l.; and he was finally attracted to Samos by being offered by Polycrates a salary of two talents, i. e. (if the Attic standard be meant) 497l. 10s. It should, however, be added, that Valckenaer doubts the accuracy of this statement of Herodotus with respect to the Æginetans and Athenians (and apparently with reason), on the ground that the latter people, at the time of their greatest wealth, only allowed their ambassadors two drachmæ (or 1s. 7½d.) per day, i. e., somewhat less than thirty pounds per annum.¹ A physician, called by Pliny both Erasistratus² and Cleombrotus,³ is said by him to have received one hundred talents for curing King Antiochus, which (if we suppose the Attic talents of the standard of Alexander's coinage to be meant, which, according to Hussey, was worth 243l. 15s.) would amount to 24,375l. If, however, the Alexandrian standard, which is found in the coins of the Ptolemies, be meant, it would amount (reckoning the drachma as 1s. 3½d.) to 39,375l.; an almost incredible sum. It seems to have been not uncommon among the Greeks in those times (as afterward in the later Roman Empire: see ARCHIATER) for states to maintain physicians, who were paid at the public cost;⁴ and these, again, had attendants, for the most part slaves, who exercised their calling among people of low condition.⁵

The Romans derived their knowledge of medicine at first from the Etrurians and afterward from the Greeks. In the most ancient times the haruspices practised medicine in connexion with the augurs, and, in the opinion of Sprengel,⁶ who regarded the ancient Roman legends as historical facts, it was probably some of these that Amulius sent to Rhea Silva, when she was pregnant, to examine the nature of her mysterious disease.⁷ One of the most ancient customs at Rome, in order to ward off epidemic diseases, and to appease the anger of the gods, was the interrogating the books bought by Tarquin of the Sibyl. In the earlier times of the Roman Republic, physicians are said by Pliny to have been unknown,⁸ and for some time afterward the exercise of the profession was in a great measure confined to persons of servile rank; for the richer families, having slaves who were skilled in all sorts of trades, &c., generally possessed one or more that understood medicine and surgery.⁹ To this practice, however, there were many exceptions: e. g., the physician who was taken prisoner with Julius Cæsar by the pirates at the island of Pharos, and who is called his friend by Plutarch;¹⁰ Archagathus, who, being the first foreign surgeon that settled at Rome, had a shop bought for him at the public expense, and was presented with the jus Quiritium B.C. 219;¹¹ Artorius, who is known to have been a physician,¹² and who is called the friend of Augustus;¹³ Asclapio, whom Cicero calls his friend;¹⁴ Asclepiades, the friend of Crassus the orator;¹⁵ Eudemus, who is called by Tacitus¹⁷ the friend and physician of Livia; and others. The hatred borne by Cato the censor against the Greek physicians, as well as the Greek philosophers at Rome,

is well known, but it is not true that he caused them to be expelled from Rome.¹ With respect to the income made by eminent physicians in the early times of Rome, the writer is not aware of any data for ascertaining it; at the beginning of the Empire, we learn from Pliny² that Albius, Arruntius, Calpetanus, Cassius, and Rubrius gained 250,000 sesterces per annum, i. e. (reckoning, with Hussey, the mille nummi (*sestertium*) to be worth, after the reign of Augustus, 7l. 16s. 3d.), 1953l. 2s. 6d.; that Quintus Stertinius made it a favour that he was content to receive from the emperor 500,000 sesterces per annum (or 3906l. 5s.), as he might have made 600,000 sesterces (or 4687l. 10s.) by his private practice; and that he and his brother, who received the same annual income from the Emperor Claudius, left between them at their death, notwithstanding large sums that they had spent in beautifying the city of Naples, the sum of thirty millions of sesterces (or 234,375l.).

Of the previous medical education necessary to qualify a physician at Rome for the legal practice of his profession in the early times, we know nothing; afterward, however, this was under the superintendence of the archiatri. (*Vid. ARCHIATER*.)

Two other medical titles that we meet with under the emperors were *Iatrosophista* (see the word) and *Actuarius*, Ἀκτουάριος. The latter was a title at the court of Constantinople, given apparently only to physicians, and quite distinct from the use of the word found in the earlier Latin authors.³ Besides Joannes the son of Zacharias, who is better known by his title of Actuarius than by his real name, several other physicians are recorded as having arrived at this dignity.

MEDIMNUS (μέδιμνος or μέδιμνος σιτηρός), the principal dry measure of the Greeks. It was used especially for measuring corn. It had different sizes in the different states of Greece. The Attic medimnus was equal to six Roman modii. (Nepos, *Vit. Att.*, c. 2.—Cic., *in Verr.*, II., iii., 45, 46, where Cicero explains 50,000 medimni by 300,000 modii, and 36,000 medimni by 216,000 modii.—Suidas, s. v.—Rhemn. Fann., v., 64.

"*Hylus dimidium fert urna, ut et ipsa medimni Amphora, terque capit modium.*"")

Suidas makes the medimnus = 108 litræ, confounding it apparently with the metretres. The medimnus contained 11 galls. 7-1456 pints English. It was divided into the following parts:

	each	=	Galls.	Pints.
6 ἔκτοι,			1	7-8576
12 ἡμίεκτα	"	"		7-9288
48 ἡμίνικες	"	"		1-9822
96 ἑξῆσαι	"	"		-9911
192 κοτύλαι	"	"		-4955

of which the χοῖνιξ, ἑξῆτης, and κοτύλη and their farther subdivisions were common to the dry and fluid measures, but the χοῖνιξ was of different sizes. (*Vid. METRETES, CHÆNIX, XESTES, COTYLÆ.*)

*MEDION (μήδιον), according to Lobelius, a species of Violet. This opinion, however, is rejected by Dodonæus and Bauhin. According to Adams, the prevailing opinion now is, that it was the *Campanula laciniosa*.⁴

MEDITRINALIA was one of the festivals connected with the cultivation of vineyards. It took place on the eleventh of October, on which day the people of Latium began to taste their new wine (*mustum*), and to offer libations of it to the gods. In drinking the new wine it was customary to pro-

nounce the words, "*vetus novum vinum bibo, veteri novo morbo medeor.*"¹¹ Varro derives the name of the festival from the healing power of the new wine, but Festus speaks of a goddess Meditrina.

MEGALESIA, MEGALENSIA, or MEGALENSES LUDI, a festival with games celebrated at Rome in the month of April, and in honour of the great mother of the gods (Cybele, *μεγάλη θεός*, whence the festival derived its name). The statue of the goddess was brought to Rome from Pessinus in the year 203 B.C., and the day of its arrival was solemnized with a magnificent procession, lectisternia, and games, and great numbers of people carried presents to the goddess on the Capitol.² The regular celebration of the Megalesia, however, did not begin till twelve years later (191 B.C.), when the temple which had been vowed and ordered to be built in 203 B.C., was completed and dedicated by M. Junius Brutus.³ But, from another passage of Livy,⁴ it appears the Megalesia had already been celebrated in 193 B.C. The festival lasted for six days, beginning on the 4th of April. The season of this festival, like that of the whole month in which it took place, was full of general rejoicings and feasting. It was customary for the wealthy Romans on this occasion to invite one another mutually to their repasts, and the extravagant habits and the good living during these festive days were probably carried to a very high degree, whence a senatus consultum was issued in 161 B.C., prescribing that no one should go beyond a certain extent of expenditure.⁵

The games which were held at the Megalesia were purely scenic, and not circenses. They were at first held on the Palatine in front of the temple of the goddess, but afterward also in the theatres.⁶ The first ludi scenici at Rome were, according to Valerius Antias, introduced at the Megalesia, i. e., either in 193 or 191 B.C. The day which was especially set apart for the performance of scenic plays was the third of the festival.⁷ Slaves were not permitted to be present at the games, and the magistrates appeared dressed in a purple toga and prætexta, whence the proverb *purpura Megalensis*. The games were under the superintendence of the curule ædiles,⁸ and we know that four of the extant plays of Terence were performed at the Megalesia. Cicero,⁹ probably contrasting the games of the Megalesia with the more rude and barbarous games and exhibitions of the circus, calls them *maxime casti, sollemnes, religiosi*.¹⁰

*MELAMPYRON (*μελάμπυρον*), the *Melampyrum arvense*, or Field Cow-wheat, according to Sprengel and Stackhouse.¹¹

*MELANCRANIS (*μελαγκρανίς*), a species of *Schænus* (*σχοίνος*). Sprengel makes it the *Schænus nigricans*, or Black Bog-rush.¹²

*MELAN'ION (*μελάνιον*), according to Stackhouse, that variety of the *Viola odorata* which goes by the English name of the "dark blue double violet."¹³

*MELANTERIA (*μελαντηρία*), the Inkstone. Dioscorides says of it, that "some have taken it to be the same with sory (*σόρον*), from which it is distinct, though not unlike." Sprengel thinks the *μελαντηρία* of Dioscorides different from that of Galen. The former he holds to be an arseniate of copper, the other cannot be so well ascertained. Dr. Kidd says, "The *Melanteria*, or Inkstone of Pliny, seems to be a variety of sulphate of iron, that has

been formed in a matrix containing vegetable astrigent matter, which, uniting with the metallic salt, has produced natural ink." Dr. Hill calls it a vitriol, consisting principally of iron with a little copper.¹

*MELANTHION (*μελάνθιον*), according to Sprengel, the *Nigella sativa*, or Pepper-wort. The seed of the *μελάνθιον* was called *Gith*. Pliny mentions its various uses in medicine.²

*MELANURUS (*μελανουρός*), a species of Fish, the *Sparus Melanurus*, called in Italian *occhiata*, in French *oblade*. It is the *Oblada* of Cuvier. It is a silvery fish, striped with blackish, and having a broad black spot on each side of the tail, from which latter circumstance its Greek name (which means "black tail") is derived.³

*MELEA (*μηλέα*). This term, used by itself, may, according to Adams, be supposed generally to apply to the *Pyrus malus*, or Crab Apple. The *ὀρμαλῖς* of Theophrastus, he thinks, may be presumed to be the same.⁴

*MELEAGRIS (*μελεαγρίς*), the Guinea-hen or Pintado, the *Numida Melagris* of Linnæus. It was a bird well known to the ancients, and not uncommon, we may suppose, in the time of Pausanias, who says it was an offering in the mysteries of Isis, of persons in a moderate condition of life. The Greeks expressed the screaming of this bird by *καγκάζειν*. The description given by Clitus, the disciple of Aristotle, as referred to by Athenæus, was properly applied to the Guinea-fowl by Paulmier, contrary to the explanation of Casaubon and Scaliger. Varro and Pliny confound the *Meleagris* with the *Gallina Africana*, but Columella distinguishes them from one another. The difference, however, is by no means striking, and indicates merely a variety in the species. Care must be taken not to confound the Turkey with the *Meleagris*, as the former bird was not known in Europe before the discovery of America.⁵

MELIA (*μελία*). (*Vid. HASTA*, p. 488.)

*MELIA (*μελία*), a species of Ash, most probably, according to Sibthorp and others, the *Fraxinus ornus*. The *βουμελία* of Theophrastus was the *Fraxinus excelsior*, as Stackhouse and Schneider have stated.⁶

*MELIA TERRA (*Μηλία γῆ*), Melian Earth, so called from the island of Melos, where it was obtained. "The Melian earth of the ancients," says Sir John Hill, "was a fine white marl, of a loose, crumbling texture, and easily soluble in water and other fluids. Some have imagined it to have been of other colours; but that it was really white we have the unquestionable authority of Pliny. The occasion of this error is no more than the confounding of *Μήλιος* with *Μήλινος*, which last comes from *μήλον*, "an apple," and has no connexion whatever with the former."⁷

*MELILOTUS (*μελιλωτός*), a species of plant, the Melilot, or *Melilotus officinalis*, according to Sprengel. Stackhouse calls it the *Trifolium officinale*, which is only another name for the same plant.⁸

*MELIME'LA (*μελίμηλα*). Diophanes, a writer mentioned in the *Geoponica*, makes these to have been apples ingrafted upon quinces. They are called *Mala mustea* by Varro.⁹

*MELINE (μελίμη), the *Panicum milliaceum*, or Millet.*

*MELIS, the Badger, or *Ursus melis*. Galen has been supposed to allude to it, as being an animal *μεταξύ πως ἄρκτου καὶ σῦός*.²

*MELISSA (μελίσσα or -ττα), the Bee. (Vid. *Apis*.)

*MELISSOPHYLLON (μελισσόφυλλον), a plant, so called because the bees are fond of its leaves, as Dioscorides informs us. It has stalks and leaves, according to the same authority, like black horehound, only they are bigger and narrower, not so rough, and smelling like citron. This description, Martyn thinks, agrees very well with the *Melissa* or *Baum*, a common herb in English gardens. Varro informs us that the Latin name for this plant was *apiastrium*; Columella, however, speaks of *apiastrium* and *melissophyllum* (or *meliphyllum*) as of two different herbs.³

*MELOLONTHE (μηλόλονθη), a species of Beetle, most probably the *Scarabæus melolonthæ*, or Cockchafer.*

*MELOPEPON (μηλοπέπων). The great difficulty in determining what the *melopepones* were, arises from the circumstance of the ancient authors who treated of the summer fruits frequently interchanging the terms by which they were designated. "Even Ludovici Nonnius," observes Adams, "who has bestowed so much pains in illustrating the *Res Cibaria* of the ancients, admits himself much at a loss in deciding what the *melopepones* were, but, upon the whole, inclines to think that they were a peculiar kind of melons. Schneider, in like manner, supposes the *μηλοπέπων* to be referable to the *Cucumis melo*, L. At all events, it is certain that the *μηλοπέπων* of the Greeks is the 'melo' of Palladius. The term *melopepo* is now applied to the *Squash*, a fruit used for food both in the East and in America. May not this have been the *μηλοπέπων* of the Greeks?"⁴

*MEMAICYLON (μεμαίκυλον), the fruit of the V. Wild Strawberry-tree. (Vid. *ARBUTUS*.)⁶

MEMBRANA. (Vid. *LIBER*.)

*MENANTHUS (μένανθος). The Bog Bean, an aquatic plant. "This," observes Adams, "is clearly the *τριφύλλος* of the Geoponica. From the union of these two terms the Bog-bean derives its scientific name, *Menyanthes trifoliata*. Some authorities erroneously take it for the *ισόπυρον* of Dioscorides. It may be supposed that it is the *μηνανθός* of Nicander, but Sprengel contends that the latter is the *Psoralea bituminosa*, L., on what authority, however, I cannot discover."⁷

MENELAËIA (μενελαΐα), a festival celebrated at Therapnæ, in Laconia, in honour of Menelaus and Helena, who were believed to be buried there.⁸ Menelaus was to the Lacedæmonians what Nestor was to the Messenians, a model of a wise and just king, and hence they raised him to the rank of one of the great gods,⁹ and honoured him and Helena with annual and solemn sacrifices at Therapnæ, which continued to be offered in the days of Isocrates.¹⁰ These solemnities are sometimes called *Ἑλενια*.¹¹

MENSA (τράπεζα), a Table. The simplest kind of table was one with three legs, round, called *cilli-*

ba,¹ and in Greek *τρίπους*.² It is shown in the drinking-scene painted on the wall of a wine-shop at Pompeii.³ (See woodcut.) The term *τράπεζα*, though commonly used in Greek for a table of any

kind, must have denoted one which indicated a higher degree of luxury and refinement, since it meant, according to its etymology, a four-legged table. (See woodcut, p. 188.) Horace used at Rome a dining-table of white marble, thus combining neatness with economy.⁴ For the houses of the opulent, tables were made of the most valuable and beautiful kinds of wood, especially of maple (*οφενδαμνίνη*,⁵ *acerna*), or of the citrus of Africa, which was a species of cypress or juniper (*Citrea*).⁶ For this purpose the Romans made use of the roots and tubers of the tree, which, when cut, displayed the greatest variety of spots, beautiful waves, and curling veins. The finest specimens of tables so adorned were sold for many thousand pounds.⁷ Besides the beauty of the boards (*ἐπιθήματα*), the legs of these tables were often very tasteful, being carved in imitation of lion's or tiger's feet, and made of ivory.⁸

One of the principal improvements was the invention of the *monopodium*, a round table supported by a single foot; this, with other elegant kinds of furniture, was introduced into Rome from Asia Minor by Cn. Manlius.¹⁰ Under the Roman emperors semicircular tables were introduced, called *mensæ lunatae*, from comparing them to the half-moon, and *signatae*, because they had the form of that letter, C.¹¹ This lunate table was surrounded by a sofa of the same form, called *stibadium*, which was adapted to hold seven or eight persons.¹²

As the table was not very large, it was usual to place the dishes and the various kinds of meat upon it, and then to bring it, thus furnished, to the place where the guests were reclining.¹³ On many occasions, indeed, each guest either had a small table to himself, or the company was divided into parties of two or three, with a separate table for each party, as is distinctly represented in the woodcut at page 326. Xenophon describes a great entertainment given by Seuthes, king of the Thracians, at which the guests formed a large circle, a small three-legged table being placed before each person.¹⁴ Although it is certain that dishes were in many cases brought to be laid before the guests upon the table, yet the common practice of bringing to them the board, already supplied, gave origin to such phrases as *mensam apponere* or *opponere*,¹⁵ and *mensam auferre* or *removere*.¹⁶ As the board of the table is

called by a distinct name, *ἐπίθημα*,¹ it appears that it was very frequently made separate from the tripod or other stand (*καλλίδας*) on which it was fixed.

Among the Greeks the tables were not covered with cloths at meals, but were cleansed by the use of wet sponges² or of fragrant herbs.³

Under the influence of the ideas of hospitality, which have prevailed universally in the primitive states of society, the table was considered sacred.⁴ Small statues of the gods were placed upon it.⁵ On this account Hercules was worshipped under the title *τράπεζος* and *ἐπιτράπεζος*. The Cretans ate in public; and in the upper part of their *ἀνδρείον*, or public dining-room, there was a constant table set apart for strangers, and another sacred to Jupiter, called *τράπεζα ξενία*, or *Δίος ξενίων*.⁶

The two principal courses of a *δειπνον* and *cæna*, or a Greek and Roman dinner, were called respectively *πρώτη τράπεζα*, *δεύτερα τράπεζα*, and *mensa prima*, *mensa secunda*. (*Vid. CÆNA, DEIPNON.*)

A stone tablet, supported by four other stones, was sometimes used, as it is in modern times, to cover a grave.⁷ (*Vid. FUNUS, p. 457.*)

MENSARII, MENSULARII, or NUMULARII, were a kind of public bankers at Rome who were appointed by the state; they were distinct from the argentarii, who were common bankers, and did business on their own account.⁸ The mensarii had their banks (*mensæ*), like ordinary bankers, in the Forum, and in the name of the ærarium they offered ready money to debtors who could give security to the state for it. Such an expediency was devised by the state only in times of great distress. The first time that mensarii (*quingueviri mensarii*) were appointed was in 352 B.C., at the time when the plebeians were so deeply involved in debt that they were obliged to borrow money from new creditors in order to pay the old ones, and thus ruined themselves completely.⁹ (*Compare INTEREST OF MONEY, and ARGENTARI.*) On this occasion they were also authorized to ordain that cattle or land should be received as payment at a fair valuation. Such bankers were appointed at Rome at various times, and whenever debts weighed heavily upon the people, but, with the exception of the first time, they appear, during the time of the Republic, to have always been triumviri mensarii.¹⁰ One class of mensarii, however (perhaps an inferior order), the *mensularii* or *numularii*, seem to have been permanently employed by the state, and these must be meant when we read, that not only the ærarium, but also private individuals, deposited in their hands sums of money which they had to dispose of.¹¹ As Rome must have often been visited by great numbers of strangers, these public bankers had also, for a certain percentage, to exchange foreign money and give Roman coinage instead, and also to examine all kinds of coins, whether they were of the proper metal, and genuine or not.¹² During the time of the Empire, such permanent mensarii were appointed under the control of the præfectus urbi, and formed a distinct corporation.¹³

Bankers appointed by the state also existed in other ancient towns, and Cicero¹⁴ mentions mensarii at Temnos, in Asia Minor, who were appointed by the people.

MENSIS (*μήν*), a Month. The division of the year into twelve lunar months must have been known to the Greeks from very early times, for in the

Homeric poems the lunar months appear quite familiar to them. The day of the new moon, or the first day of every month (*νοσημία*), was sacred to Apollo.¹ The month itself, however, does not seem to have been subdivided into any other periods than those of the increase and decrease of the moon (*τοῦ μὲν φθίνοντος μηνός, τοῦ δ' ἰσχυαίνοντος*). In the time of Hesiod² the lunar month was reckoned as containing 30 days, although it must have been known to have contained in reality less than 30 days. (*Vid. CALENDAR, p. 190.*) The discrepancy between the lunar and solar year rendered it necessary every other year to intercalate a thirteenth month (*μήν ἐμβόλομος*), which, however, is not mentioned either in Homer or Hesiod, and the time of its introduction is unknown.³ This necessarily produced confusion in the number of days of a year, to avoid which Solon established the rule that at Athens months of 30 and 29 days should alternate with each other,⁴ and called the thirtieth day (*τριακῆς*) of a month *ἐνθὲ καὶ νέα*, as such a day partly belonged to the month which was ending, and partly to the new month.⁵ Thus arose a regular lunar year of 354 days, and, in order to make this agree with the solar year, a month was intercalated every third year (*τρίετης*).⁶ Respecting the names of the Attic months and their division into decades, see CALENDAR⁷ and Clinton.⁸ The Hecatomædon, or first month of the Attic year, coincides very nearly with our July, and Scirophorion, or the last, with our June.⁹ While in Attica the 12 lunar months were established for religious purposes, the various kinds of business of ordinary life were here, as in other parts of Greece, regulated according to various other phenomena, such as the rising and setting of certain stars,¹¹ the arrival and departure of the birds of passage,¹² and the like.

The months of the other Greek states differed from those of the Athenians not only in their names, but also in the time of their commencement,¹³ and it was only in very few instances that the beginning of the months in another Greek state perfectly coincided with the Attic months. This is the more surprising as they were all lunar months, and should, consequently, have all commenced on the first day of a new moon; but this difference arose from the different modes of intercalation to make the lunar year agree with the solar one, so that the difference was not very great. In all parts of Greece, however, the division of a month into decades, and the mode of stating the day of a month, were the same as those customary in Attica.

Among the Spartan months we only know the names of five, viz., Gerastius, Artemisius, Phylasius, Hecatombeus, and Carneus. The last of these answered to the Attic Metageitnion,¹⁴ and the Artemisius to the Attic Elaphebolion.¹⁵ The others are uncertain. That the Spartan months in their commencement differed by two days from the Attic ones, is clear from Thucydides.¹⁶

The chronology of the Boeotians seems to have been very irregular in early times, and the time of the commencement of their months differed from that of the Attic months;¹⁷ but in 371 B.C. their months appear to have perfectly coincided with those of Attica.¹⁸ The first month of the Boeotian year was called Bucatius, and coincided with the

Attic Gamelion.¹ Besides this first month, the names of six others are known, viz., Hermæus (Attic Anthesterion), Prostaterius (Attic Elaphebolion), Hippodromius (Attic Hecatombæon²), Panemus (Attic Metageitnion³), Alalcomenius (Attic Maimacterion), and Damatrius (Attic Pyanepsion).

Among the months of the Eleans only the name of one is known with certainty, viz., the Elaphius, which is described as the month in which the vernal equinox took place. But there are two other names, Parthenius and Apollonius, which are likewise believed to be the names of Elean months.⁴

The first of the Delphian months seems to have been the Bysius, which coincided with the Attic Munychion. It fell at the time of the vernal equinox, and in it the Pythian games were celebrated. Besides this; the names of eight others are known, viz., Theoxenus, Ilæus, Domus, Synelius, Thelutius, Bucatius, Heraclius (Attic Thargelion), and Dionysius.⁵

Of the months of the Corcyræans only three are known, viz., Machaneus, Artemitius, and Eucleius, which was the twelfth.

The Cretan months are Imalius, Artamitius, Thermæus, Dromæus, &c.

The Sicilian months are Carneius (Att. Metageitnion), Panemos, &c.⁶

The Cyprian months are all known, but most of their names seem to belong to the time of the Roman Empire. They are, Ænicus, Junius (anciently Adonis), Cæsareus, Sebastus, Autocratricus, Demarchexasius, Plethypatus, Archiereus, Hesthus, and Romæus.

The Macedonians, like the Greeks, divided their year into 12 lunar months, and their names and order of succession may be gathered from Josephus and Suidas. Their year began in the autumn, and their first month fell partly in our October and partly in our November. The names and the order of their months were as follow: Dins, Apellæus, Audynæus, Peritius, Dystrus, Xanthicus, Artemisius, Dæsius, Panemus, Lons, Gorpæus, and Hyperbæus. The Macedonian months, after the time of Alexander, were adopted by the Syro-Macedonian cities, and by the Greek cities of Asia generally, and were retained until the reformation of the Roman calendar by J. Cæsar, after which time all the Greeks, both in Europe and in Asia, gradually began to adopt the new Roman calendar, though the ancient names of their months, as well as the ancient time of the commencement of their year, remained in most cases as they had been before.⁷ For an account of the Roman months, see CALENDAR, ROMAN.

MENSORES, Measurers or Surveyors. This name was applied to various classes of persons whose occupation was the measurement of things.

1. It was applied to land-surveyors, who measured and defined the extent of fields, and appear to have been the same as the agrimensores.⁸ (Compare AGRIMENSORES.)

2. To persons who measured in the Roman camps the space to be occupied by the tents. They must be distinguished from the metatores, who selected the place for a camp.⁹

3. To a class of officers during the time of the Empire who provided quarters for the soldiers in the towns through which they passed and where they made a temporary stay. They not only assigned to each soldier the house in which he was to be quartered, but also wrote the name of the occu-

pant upon the doorpost, and he who effaced or destroyed this name was punished as a falsi reus.¹

4. Mensor ædificiorum is sometimes applied to architects, or more especially to such architects as conducted the erection of public buildings, the plans of which had been drawn up by other architects.²

5. Mensores frumentarii was the name of officers who had to measure the corn which was conveyed up the Tiber for the public granaries.³ They were stationed in the port near Ostia, and were employed under the præfectus annonæ. Their name is mentioned in various ancient inscriptions.

ME'NUSIS (μήνυσις). (Vid. ECCLESIA.)

MERCEDON'IOS or MERCIDI'NOS. (Vid. CALENDAR, ROMAN, p. 194.)

MERENDA. (Vid. CENA, p. 275.)

MERIDI'ANI. (Vid. GLADIATORES, p. 476.)

*MEROPS (μέροψ), a species of Bird, the *Merops apiaster*, or Bee-eater. "It is rarely met with in England," says Adams, "but is common in the south of Europe, and hence its frequent mention in the classics."⁴

*MESP'ILE (μεσπίλη) or MESP'ILUS (μέσπιλος) the Medlar-tree, or *Mespilus tanacetifolia*, Smith. "The two species of Medlar described by Dioscorides, and subsequent writers on the *Materia Medica*, are referred by Sprengel to the *Mespilus azarolus*, Smith (Azarola, or Neapolitan Medlar), and the *M. Germanica* (common Medlar)."⁵

METÆ. (Vid. CIRCUS, p. 253.)

METAGEITNIA, a festival celebrated by the Attic demos Melite, in honour of Apollo Metageitnion. The chief solemnities consisted in offering sacrifices, and the festival was believed to commemorate the emigration (γεντίσσις πρὸς ἑτέρους) of the inhabitants of Melite to Diomis.⁶

METHO'DICI (Μεθοδικοί), an ancient medical sect, whose history begins with Themison, a pupil of Asclepiades, in the first century B.C.⁷ He differed from his master in many respects, condemned his errors,⁸ contributed much to rectify his principles, and introduced a greater precision into his system.⁹ He was the first who chose the middle way between the tenets of the Dogmatici and Empirici, the traces of which he believed he discovered in the theory of his master. Their doctrines are thus summed up by Celsus:¹⁰ "They assert that the knowledge of no cause whatever bears the least relation to the method of cure; and that it is sufficient to observe some general symptoms of distempers; and that there are three kinds of diseases, one bound, another loose (the word in the original is *fluens*, that is, a disorder attended with some discharge), and the third a mixture of these. For that sometimes the excretions of sick people are too small, sometimes too large; and sometimes one particular excretion is deficient, while another is excessive. That these kinds of distempers are sometimes acute and sometimes chronic, sometimes increasing, sometimes at a stand (where our author means the ἀκμὴ of a disease, after which it increases no more), and sometimes abating. As soon, then, as it is known to which of these classes a distemper belongs, if the body be bound, it must be opened; if it labours under a flux, it must be restrained; if the distemper be complicated, then the most urgent malady must be first opposed. And that one kind of treatment is required in acute, an-

P.—Dioscor., i., 169.—Adams, Append., s. v.).—6. (Plut., De Exil., p. 601, B.—Compare Suidas and Harpocration, s. v. Μεταγεντίας).—7. (Plin., H. N., xxix., 5).—8. (Cael. Aurel., Chron., i., 1, p. 287, c. 4, p. 323, ed. Amman).—9. (Galen, Introd., c. 1, tom. xiv., p. 683, 684, ed. Kühn).—10. (De Medic., lib. i., Præfat.)

other in inveterate distempers; another when diseases are increasing, another when at a stand, and another when inclining to health. That the observation of these things constitutes the art of medicine, which they define as a certain way of proceeding, which the Greeks call *method* (*Μέθοδος*), and affirm it to be employed in considering those things that are common to the same distempers: nor are they willing to have themselves classed either with the rationalists (*i. e.*, the Dogmatici) or with those who regard only experiments (*i. e.*, the Empirici); for they dissent from the first sect in that they will not allow medicine to consist in forming conjectures about the occult things; and also from the other in this, that they hold the observation of experiments to be a very small part of the art."—(Futvoye's translation.)

As the seeking after the causes of diseases seemed to him to rest on too uncertain a foundation, for this reason he wished to establish his system upon the analogies and indications common to many diseases (*κοινότης*), without reflecting that these analogies are often as occult, and even oftener, than all the causes of the *Dogmatici*. However, this idea of the common analogies of the morbid state had the great advantage of contributing afterward to the perfection of the science of Semeiology. If, says Sprengel,¹ Themison had chosen for his basis analogies that were easy to be recognised, or really morbid states, instead of simple maladies of the solid parts, of which he only admitted a very small number, the system of the Methodici would have been the best of all; but, deceived by the Corpuscular Philosophy of his master Asclepiades, he would not admit any other common symptoms than those given by the *Strictum* and the *Laxum*, the being confined or relaxed, and the intermediate state. Thus he was compelled to contradict himself, and commit the more errors the more he tried to escape by the *μέθοδος* the tenets both of the Empirici and Dogmatici. Themison appears to have written several works, which are now lost, but of which the titles are preserved by Cælius Aurelianus.² His followers were very numerous, but the following only deserve notice here: Soranus, the author of several works, of two only are still extant, *Περὶ Σημείων Καταγμάτων*, "De Signis Fracturæ," and *Περὶ Μήτρας καὶ Γυναικείου Αἵματος*, "De Utero et Pudendo Muliebri;" Cælius Aurelianus, the principal writer of this sect, whose work "De Morbis Acutis et Chronicis" is one of the most valuable of antiquity; Moschion, author of the work *Περὶ τῶν Γυναικείων Παθῶν*, "De Mulierum Passionibus;" Thessalus of Tralles, of whom nothing remains, but who was, in a manner, the second founder of the sect, and who (if we may trust Galen, who always mentions him with the greatest contempt) conferred no honour on the medical profession either by his talents or his character.

METOIKOI (*Μέτοικοι*) is the name by which, at Athens and in other Greek states, the resident aliens were designated, and these must be distinguished from such strangers as made only a transitory stay in a place, for Harpocration³ expressly mentions as a characteristic of a *μέτοικος* that he resided permanently in the place. No city of Greece, perhaps, had such a number of resident aliens as Athens, as none afforded to strangers greater advantages and conveniences, or a more agreeable mode of living. In the census instituted by Demetrius Phalereus (309 B.C.), the number of resident aliens at Athens was 10,000, in which number women and children were probably not included.⁴ These aliens were persons from all parts of Greece,

as well as from barbarous countries, such as Lydians, Phrygians, and Syrians, or Attic freedmen (*vid. LIBERTUS, GREEK*), and these people had chosen Athens as their adoptive country, either on account of its resources for amusement and instruction, or on account of the facilities it afforded for carrying on mercantile business. The latter class of persons seems to have been by far the most numerous. The jealousy with which the citizens of the ancient Greek republics kept their body clear of intruders, is also manifest in their regulations concerning aliens. However long they might have resided in Athens, they were always regarded as strangers, whence they are sometimes called *ξένοι*; and to remind them of their position, they had on some occasions to perform certain degrading services to the Athenian citizens. The services (*vid. HYDRIAPHORIA*) were, however, in all probability, not intended to hurt the feelings of the aliens, but were simply acts symbolical of their relation to the citizens.

Aliens were not allowed to acquire landed property in the state they had chosen for their residence, and were, consequently, obliged to live in hired houses or apartments,¹ and hence the letting of houses was a subject of much speculation and profit at Athens. As the aliens did not constitute a part of the state, and were yet in constant intercourse and commerce with its members, every alien was obliged to select a citizen for his patron (*προστάτης*), who was not only the mediator between them and the state, through whom alone they could transact any legal business, whether private or public, but was, at the same time, answerable (*ἐγγυητής*) to the state for the conduct of his client.² On the other hand, however, the state allowed the aliens to carry on all kinds of industry and commerce under the protection of the law; in fact, at Athens, nearly all business was in the hands of aliens, who on this account lived for the most part in the Piræus.³

Each family of aliens, whether they availed themselves of the privilege of carrying on any mercantile business or not, had to pay an annual tax (*μετοίκιον* or *ξενικά*) of twelve drachmæ, or, if the head of the family was a widow, of only six drachmæ.⁴ If aliens did not pay this tax, or if they assumed the right of citizens, and probably, also, in case they refused to select a patron, they not only forfeited the protection of the state, but were sold as slaves. (*VID. ΑΙΠΟΣΤΑΣΙΟΥ ΓΡΑΦΗ*.) In some cases, however, though they are of rare occurrence, aliens, without having the isopolity, might become exempt from the *μετοίκιον* (*ἀτέλεια μετοίκιου*) as well as from other obligations.⁵ Extraordinary taxes and liturgies (*εἰσφοραὶ* and *λειτουργίαι*) devolved upon aliens no less than upon citizens,⁶ though there must have been a difference between the liturgies performed by citizens and those performed by aliens. In what this difference consisted is nowhere expressly mentioned, but we have reason to believe that, with the exception of the trierarchy and gymnasiarchy, all other liturgies might devolve upon aliens, though perhaps only on certain occasions, as the choregia at the festival of the Lenæa.⁷ The extraordinary taxes (*εἰσφοραὶ*) which aliens had to pay, seem also, in some degree, to have differed from those paid by citizens; and it is clear from Demosthenes⁸ that they were taxed higher than citizens of the same census. The aliens were also obliged, like citizens, to serve in the regular armies and in

the fleet, both abroad and at home, for the defence of the city.¹ Respecting those μέτοικοι who had obtained the *ισοτέλεια*, see CYNITAS, p. 259. The heirs of a μέτοικος who died in Attica were under the jurisdiction of the polemarch.²

The preceding account of the condition of the aliens at Athens will apply, with very few modifications, to most other parts of Greece.³

METRETES (μετρητής), the principal Greek liquid measure. The Attic metretres was equal in capacity to the amphora, containing 8 galls. 7·365 pints English. (*VID. AMPHORA*.) It was divided into

1½ κεράμια, each	=	Galls	Pints
12 χῶς "		5	7·577
48 χοίνικες "			5·9471
72 ξέσται "			1·4867
144 κοτύλαι "			·9911
			·4955

(*VID. CHOUS, CHENIX, XESTES, COTYLA*.) The smaller liquid measures were of very variable sizes; their names were μύστρον (*VID. MYSTRUM*), ὀξύβαφον (*VID. OXYBAPHUM*), κύαθος (*VID. CYATHUS*), κόγχη (*VID. CONCHA*), χυνή (*VID. CHEME*), κοχλιάριον (*VID. COCHLEAR*).

In other places the metretres had a different size. Galen* says that the Syrian metretres contained 120 ξέσται. The Macedonian metretres is inferred to have been much smaller than the Attic, from the circumstance mentioned by Aristotle⁵ of an elephant's drinking 14 of them at once.

METRONOMI (μετρονόμοι) were officers at Athens belonging to that class which we might term police-officers. They were, like all officers of this kind, appointed by lot. Their number is stated differently: some say that there were fifteen (ten for the Piræus and five for the city); some say twenty-four (fifteen for the Piræus and nine for the city); and others state that there were only ten, five for the Piræus and five for the city.⁶ Böckh⁷ would alter all these passages of the grammarians so as to make them say that the whole number of metronomi was fifteen, and that ten were for the city and five for the Piræus, because the sitophylaces were distributed in the same manner. But there does not appear sufficient ground for such a bold alteration, and it seems, at any rate, probable that the number of these officers, as the grammarians state, was necessarily greater in the port-town than in the city, for there must have been more business for them in the Piræus than at Athens, which was not the case with the sitophylaces. The duties of the metronomi were to watch that the weights and measures used by tradesmen and merchants should have the size and weight prescribed by the laws, and either to punish offenders or to receive complaints against them, for the real nature of the jurisdiction of the metronomi is not known.⁸

METROPOLIS. (*VID. COLONIA*, p. 284.)

*MEUM (μῆον), a plant, the *Meum Athamanticum*, or *Ligusticum Meum*, Hooker; in English, Spignel, Meu, or Bald-money. Moses Charas says of it, "Meum or Spignel is called Athamantic from the mountain Athamas in Thessaly, where it grows plentifully. The leaves are small, and like those of anise."⁹

*MILAX (μίλαξ), a plant, the Bindweed, of which several kinds are mentioned by the ancient writers.

The more common form of the name is *Smilax*, which see.

MILLIARE, MILLIARIUM, or MILLE PASSUUM (μίλιον), the Roman mile, consisted of 1000 paces (*passus*) of 5 feet each, and was, therefore, =5000 feet. Taking the Roman foot at 11·6496 English inches (*VID. PES*), the Roman mile would be 1618 English yards, or 142 yards less than the English statute mile. By another calculation, in which the foot is taken at 11·62 inches, the mile would be a little more than 1614 yards. The number of Roman miles in a degree of a large circle of the earth is a very little more than 75. The most common term for the mile is *mille passuum*, or only the initials M. P.; sometimes the word *passuum* is omitted.¹ The Roman mile contained 8 Greek stadia.

The milestones along the Roman roads were called *miliaria*. They were also called *lapides*; thus we have *ad tertium lapidem* (or without the word *lapidem*) for three miles from Rome. Augustus erected a gilt pillar in the Forum, where the principal roads terminated, which was called *miliarium aureum*; but the miles were not reckoned from it, but from the gates of the city. Such central marks appear to have been common in the principal cities of the Roman Empire. The "London stone" in Cannon-street is supposed to have marked the centre of the Roman roads in Britain.²

*MILOS (μίλος), the *Taxus baccata*, or Yew-tree. "Nicander," says Adams, "gives a very accurate account of its effects as a poison."³

*MILTOS (μίλτος), "the Reddle of Kirwan and Aikin, and *Red Chalk* of Jameson and Phillips. It is the *Rubrica* of the Latins, and not the *Minium*, as has been supposed. Theophrastus describes two kinds, the *αὐτόματος*, or native, and the *τεχνική*, or factitious; this last is formed from yellow-ochre by burning. Reddle was used extensively in ancient times for painting ships, and hence Homer calls them *μιλτοπάρηοι*."⁴

MIMUS (μίμος) is the name by which, in Greece and at Rome, a species of the drama was designated, though the Roman mimus differed essentially from the Greek *μίμος*.

The Greek mimus seems to have originated among the Greeks of Sicily and southern Italy, and to have consisted originally of extempore representations or imitations of ridiculous occurrences of common life at certain festivals, like the Spartan *deicelistæ*. At a later period these rude representations acquired a more artistic form, which was brought to a high degree of perfection by Sophron of Syracuse (about 420 B.C.). He wrote his pieces in the popular dialect of the Dorians and a kind of rhythmical prose.⁵ The mimes of Sophron are designated as *μίμοι σπονδαῖοι*, which were probably of a more serious and ethical character, and *μίμοι γέλοιοι*, in which ridiculous buffoonery preponderated. Such mimes remained after the time of Sophron a favourite amusement of the Greeks, and Philistion of Magnesia, a contemporary of Augustus, was a celebrated actor in them.⁶

Among the Romans, the word *mimus* was applied to a species of dramatic plays as well as to the persons who acted in them. It is certain that the Romans did not derive their *mimus* from the Greeks in southern Italy, but that it was of native growth. The Greek mimes were written in prose, and the name *μίμος* was never applied to an actor, but if

used of a person, it signified one who made grimaces. The Roman mimes were imitations of foolish and mostly indecent occurrences,¹ and scarcely differed from comedy except in consisting more of gestures and mimicry than of spoken dialogue, which was not the case in the Greek mimes. The dialogue was, indeed, not excluded from the Roman mimes, but was only interspersed in various parts of the representation, while the mimic acting continued along with it, and uninterruptedly from the beginning to the end of a piece. At Rome such mimes seem originally to have been exhibited at funerals, where one or more persons (*mimi*) represented in a burlesque manner the life of the deceased. If there were several *mimi*, one of them, or their leader, was called *archimimus*.²

During the latter period of the Republic such farces were also represented in theatres; but it appears that they did not attain any high degree of perfection before the time of Cæsar, for it is not until then that writers of mimes are mentioned: Cn. Matius, Decius Laberius, and Publ. Syrus were the most distinguished among them.³ These coarse and indecent performances, of which Sulla was very fond, had greater charms for the Romans than the regular drama; hence they were not only performed on the stage, but even at repasts in the houses of private persons. On the stage they were performed as farces after tragedies, and during the Empire they gradually supplanted the place of the Atellanæ. The exact time, however, when the Atellanæ yielded to the mimes, is uncertain. It was peculiar to the actors in these mimes neither to wear masks, nor the cothurnus, nor the soccus, whence they are sometimes called *planipedes*.⁴ As the mimes contained scenes taken from common life, such as exhibited its most striking features, their authors are sometimes called *biologi* or *ethologi*,⁵ and the works themselves were distinguished for their richness in moral sentences. That distinguished and living persons were sometimes exposed to ridicule in these mimes, is clear from J. Capitolinus.⁶

MIRMILLO'NES. (*Vid. GLADIATORES*, p. 476.)

MISSIO was the technical term used by the Romans to express the dismissal of soldiers from service in the army. Such a dismissal might take place for three reasons, and there were, consequently, three kinds of *missio*: 1. *Missio honesta*, which was given to soldiers who had served the legitimate number of years; 2. *Missio causaria*, which was granted to soldiers who could no longer bear the fatigue of military service on account of ill health; and, 3. *Missio ignominiosa*, by which a man was excluded from the service in the army for crime or other bad conduct.⁸

As regards the *missio honesta*, it was granted by the law to every soldier who had attained the age of 46, or who had taken part in 20 campaigns, and to every horseman who had served in ten campaigns. The legitimate time of service was called *legitima stipendia*.⁹ Sometimes, however, soldiers obtained the *missio honesta* through the favour of

their general, before they had served the legitimate time. But this *missio* is distinguished from the real *missio honesta*, and was called *missio ex favore* or *missio gratiosa*. Persons who had obtained it might, if it was discovered, be called upon by the censors to re-enter the army.¹ The same must have been the case with persons who had obtained the *missio causaria*, and who, after their return home, had recovered from their illness, and had not yet attained the age at which they were altogether exempt from service.

The *missio ignominiosa* or *cum ignominia* was inflicted as a punishment not only upon individuals, but upon whole divisions, and even whole legions of an army,² and it might be applied to the highest officers no less than to common soldiers.³ In dismissing soldiers for bad conduct, it was generally expressed that they were sent away *cum ignominia*, but sometimes the *ignominia* was not expressly mentioned, though it was understood as a matter of course. All soldiers sent away in disgrace were stripped of their arms and everything which characterized them as soldiers, and they were neither allowed to remain in the camp nor to return to Rome; they were, in fact, labouring under perfect infamia, and compelled to live in exile. In some cases, however, the sentence might be withdrawn, especially if the general discovered that he had been led by a mistake to pronounce it.⁴

In all cases of *missio* it was necessary to release the soldiers from the military oath (*sacramentum*) which they had taken on entering the service. This act was called *exauctoratio*. During the time of the Republic and the early period of the Empire, the word *exauctorare* simply signified to release from the military oath, without implying that this was done *cum ignominia*,⁵ but during the latter period of the Empire, it is almost exclusively applied to soldiers dismissed *cum ignominia*.⁶ From the passage of Tacitus above referred to, it is clear that, at least in his time, *exauctoratio* was sometimes used as synonymous with *missio*, with this difference, that *exauctoratio* was granted to those who had only served in sixteen campaigns, and, consequently, had no claims to the advantages which were reserved for those who had served in twenty campaigns.

The military oath was taken by all the soldiers of an army at the beginning of every new campaign; and at the end of it, when the troops were disbanded and sent home, they were released from their oath;⁷ in cases where the general enjoyed a triumph, the dismissal of the army, and, consequently, the *exauctoratio* also, did not take place until this solemnity was over.⁸

MISSIO. (*Vid. GLADIATORES*, p. 476.)

ΜΙΣΘΩΣΕΩΣ ΔΙΚΗ (*μισθώσεως δίκη*), or ΜΙΣΘΩΣΕΩΣ ΟΙΚΟΥ ΔΙΚΗ (*μισθώσεως οίκου δίκη*), is the action brought against a guardian for either having neglected to make profitable use of the property of his ward, or for having made no use of it at all. Use might be made of such property either by letting it, if it consisted of lands or houses, or by putting it to interest if it consisted of money. The *δίκη μισθώσεως* must have been of a twofold character, either public or private, that is, it might be brought against the guardian, during the minority of his ward, by any person who took an interest in the welfare of the orphan, or it was brought by the orphan himself after his coming of age. Complaints

of this kind were brought before the first archon. In cases where the guardian would not or could not occupy himself with the administration of the property of his ward, he might request the archon to let the whole substance of his ward's property to the highest bidder, provided the testator had not expressly forbidden this mode of acting in his will.¹ The letting of such property took place by auction, and probably in the presence of a court of justice, for we read that the court decided in cases where objections were made against the terms of letting the property.² The person who took the property had to pay an annual per centage for the right of using it, and this per centage frequently amounted to more than 12 per cent. per annum. If one man alone was unwilling to take the whole property on such conditions, it might be divided and let to several persons separately.³ The tenant or tenants of the property of an orphan had to give security (*ἀποτιμήναι*) for it, and to mortgage (*ἀποτιμῆναι*) his own estate, and the archon sent especial persons, *ἀποτιμηταί*, to value his property, and to ascertain whether it was equivalent to that of the orphan.⁴ The technical term for letting the property of an orphan, whether it was done by the guardian himself or by the archon, was *μισθόν*, and those who took it were said *μισθοῦσθαι τὸν οἶκον* (*οἶκος* here signifies the whole substance of the property). The tenants of the estate of an orphan had the right, and perhaps the obligation, to protect it against any other person.⁵ It is not clear what resource was open to an orphan against a tenant who did not fulfil his obligations, but it is probable that, if any dispute arose, the guardian or the archon alone was answerable, and had to procure justice to the orphan.⁶

ΜΙΣΘ ΟΥ ΔΙΚΗ (*μισθοῦ δίκη*), or *ΜΙΣΘΩΣΕΩΣ ΔΙΚΗ* (*μισθώσεως δίκη*), is the name of a private action which might be brought against persons who refused to pay for services which had been performed for them, provided it had been agreed that they should be paid for; and, secondly, against persons who either had not or had imperfectly performed the services for which they were paid. It made no difference whether the service was performed by physical or intellectual powers, as teachers, sophists, actors, authors, and similar persons were paid at Athens,⁷ and it is natural to suppose that these persons, like others, made agreements, either written or by word of mouth, respecting the remuneration to be given to them. In case either party thought themselves wronged, they might bring the *μισθοῦ δίκη* against the offender. Protagoras had written a book called *δίκη ὑπὲρ μισθοῦ*, and an instance is recorded of an action of this kind in which he demanded payment of one of his pupils.⁸ It is not improbable that his work contained an account of this lawsuit.⁹

MOLA (*μύλος*), a Mill. All mills were anciently made of stone, the kind used being a volcanic trachyte or porous lava (*pyrites*,¹ *silices*,² *pumiceas*), such as that which is now obtained for the same purpose at Mayen and other parts of the Eifel in Rhenish Prussia. This species of stone is admirably adapted for the purpose, because it is both hard and cavernous, so that, as it gradually wears away, it still presents an infinity of cutting surfaces.

Every mill consisted of two essential parts, the upper millstone, which was movable (*catillus*, *ὄνος*, τὸ ἐπιμύλλον*), and the lower, which was fixed, and by much the larger of the two.⁵ Hence a mill is sometimes called *mola* in the plural. The mills mentioned by ancient authors are the following:

1. The handmill or quern, called *mola manuaria*, *versatilis*, or *trusatilis*.⁶

The islanders of the Archipelago use in the present day a mill, which consists of two flat round stones about two feet in diameter. The upper stone is turned by a handle (*κῶπη*†) inserted at one side, and has a hole in the middle into which the corn is poured. By the process of grinding, the corn makes its way from the centre, and is poured out in the shape of flour at the rim.⁸ The description of this machine exactly agrees with that of the Scottish quern, formerly an indispensable part of domestic furniture.⁹ There can be no doubt that this is the flour-mill in its most ancient form. In a very improved state it has been discovered at Pompeii. The annexed woodcut shows two which were

found standing in the ruins of a bakehouse. In the left-hand figure the lower millstone only is shown. The most essential part of it is the cone, which is surmounted by a projection containing originally a strong iron pivot. The upper millstone, seen in its place on the right hand of the woodcut, approaches the form of an hourglass, consisting of two hollow cones joined together at the apex, and provi-

1. (Plin., H. N., xxxvi., 30.)—2. (Virg., Moret., 23-27.)—3. (Ovid., Fast., vi., 318.)—4. (Deut., xxiv., 6.)—5. (Wernsdorf, Poetae Lat. Min., vi., 2, 51.)—6. (Plin., H. N., xxxvi., 29.—Gell., iii., 3.—Cato, De Re Rust., 10.)—7. (Schol. in Theocrit., iv., 58.)—8. (Tournefort, Voyage, Lett. 9.)—9. (Pennant, Tour in Scotland, 1769, p. 221, and 1772, p. 328.)

ded at this point with a socket, by which the upper stone was suspended upon the iron pivot, at the same time touching on all sides the lower stone, and with which it was intended to revolve. The upper stone was surrounded at its narrowest part with a strong band of iron; and two bars of wood were inserted into square holes, one of which appears in the figure, and were used to turn the upper stone. The uppermost of the two hollow cones served the purpose of a hopper. The corn with which it was filled gradually fell through the neck of the upper stone upon the summit of the lower, and, as it proceeded down the cone, was ground into flour by the friction of the two rough surfaces, and fell on all sides of the base of the cone into a channel formed for its reception. The mill here represented is five or six feet high.

The handmills were worked among the Greeks and Romans by slaves. Their *pistrinum* was consequently proverbial as a place of painful and degrading labour, and this toil was imposed principally on women.¹

In every large establishment the handmills were numerous in proportion to the extent of the family. Thus, in the palace of Ulysses there were twelve, each turned by a separate female, who was obliged to grind every day the fixed quantity of corn before she was permitted to cease from her labour.²

II. The cattle-mill, *mola asinaria*,³ in which human labour was supplied by the use of an ass or some other animal.⁴ The animal devoted to this labour was blindfolded.⁵ The mill did not differ in its construction from the larger kinds of handmill.

III. The water-mill (*mola aquaria*, *ὕδαλῆτης*). The first water-mill of which any record is preserved was connected with the palace of Mithradates in Pontus.⁶ That water-mills were used at Rome is manifest from the description of them by Vitruvius.⁷ A cogged wheel, attached to the axis of the water-wheel, turned another which was attached to the axis of the upper millstone: the corn to be ground fell between the stones out of a hopper (*infundibulum*) which was fixed above them.⁸ Anonius, as quoted below, mentions their existence on the Ruwer near Treves; and Venantius Fortunatus, describing a castle built in the sixth century on the banks of the Moselle, makes distinct mention of a tail-race, by which "the tortuous stream is conducted in a straight channel."⁹ In Ireland water-mills were introduced even some centuries before this date.¹⁰

IV. The floating mill.

When Rome was besieged by the Goths, A.D. 536, and when the stoppage of the aqueducts rendered it impossible to use the public corn-mills (*οἱ τῆς πόλεως μύλῳες*) in the Janiculum, so that the citizens were in danger of starvation, Belisarius supplied their place by erecting floating mills upon the Tiber. Two boats being moored at the distance of two feet from each other, a water-wheel, suspended on its axis between them, was turned by the force of the stream, and put in motion the stones for grinding the corn, by which the lives of the besieged were preserved.¹¹

V. The saw-mill.

Anonius mentions mills situated on some of the streams falling into the Moselle, and used for cutting marble into slabs.¹²

VI. The pepper-mill. A mill for grinding pepper,

made of boxwood, is mentioned by Petronius (*mota buxæ piper trivit*).¹

*MOLYBDÆNA. (Vid. PLUMBAGO.)

*MOLYBDOS. (Vid. PLUMBUM.)

MONETA, the mint or place where money was coined. The mint of Rome was a building on the Capitoline, and attached to the temple of Juno Moneta, as the ærarium was to the temple of Saturn.² This temple was vowed by Camillus, and dedicated in 344 B.C., on the spot where the house of M Manlius Capitolinus had once been standing. Some writers describe the art of coining as having been known to the Italians from the earliest times, and assign its invention to Janus;³ but this and similar accounts are nothing more than fables. The statement of Pliny,⁴ who assigns the invention of coining to Servius Tullius, has somewhat more of an historical aspect; and he derives the name pecunia from the circumstance that the coins were originally marked with the image of some animal. The earliest Roman coins were of æs (*vid. Æs*), and not struck, but cast in a mould. (See the representation of such a mould on page 449.) The moulds, however, were sometimes without any figure, and merely shaped the metal, and in this case the image, as well as the name of the gens, &c., were struck upon it by means of a hammer upon an anvil on which the form was fixed. As the strokes of the hammer were not always equal, one coin, though equal in value with another, might differ from it in thickness and shape. Greater equality was produced at the time when the Romans began to strike their money; but when this custom became general is not known. Respecting the changes which were introduced at Rome at various times in the coinage, see the articles ÆS, ARGENTUM, and AURUM.

In the early times of the Republic we do not read of any officers who were charged with the superintendence of the mint, and respecting the introduction of such officers we have but a very vague statement of Pomponius.⁵ Their name was *triumviri monetales*, and Niebuhr⁶ thinks that they were introduced at the time when the Romans first began to coin silver, i. e., 269 B.C. The *triumviri monetales* had the whole superintendence of the mint, and of the money that was coined in it. A great number of coins, both of gold and silver, is signed by one of these *triumviri* in the following manner: III. VIR AAAFF, that is, *triumvir auro, argento, ære flando ferundum*,⁷ or III. VIR. A.P.F., that is, *ad pecuniam ferundam*. Other coins, on the other hand, do not bear the signature of a *triumvir monetalis*, but the inscription CUR. X. FL. S.C., i. e., *curator denariorum flandorum ex senatus consulto*, or are signed by prætors, ædiles, and quæstors. J. Cæsar not only increased the number of the *triumviri monetales* to four, whence some coins of his time bear the signature IIII. VIR. A.P.F., but intrusted certain slaves of his own with the superintendence of the mint.⁸ The whole regulation and management of the Roman mint and its officers during the time of the Republic, is involved in very great obscurity.

The coining of money at Rome was not a privilege belonging exclusively to the state, but from the coins still extant we must infer that every Roman citizen had the right to have his own gold and silver coined in the public mint, and under the superintendence of its officers. The individual or gens who had their metal coined, stated its name as well as the value of the coin. This was a kind

1. (Sat., 74.)—2. (Liv., vi., 20.)—3. (Macrob., Sat., i., 7.—Athen., xv., p. 692.)—4. (II. N., xxxii., 3.)—5. (Dig. i., tit. 2, § 30.)—6. (Hist. of Rome, iii., p. 646.)—7. (Cic., De Leg., iii., 3.—P. Manut. ad Cic. ad Fam., vii., 13.)—8. (Suet., Jul., 76.—Compare Cic., Philipp., vii., 1.)

of guarantee to the public, and nearly all the coins of the republican period coined by a gens or an individual bear a mark stating their value. As long as the Republic herself used pure silver and gold, bad money does not seem to have been coined by any one; but when, in 90 B.C., the tribune Livius Drusus suggested the expediency of mixing the silver which was to be coined with one eighth of copper, a temptation to forgery was given to the people, and it appears henceforth to have occurred frequently. As early as the year 86 B.C., forgery of money was carried on to such an extent, that no one was sure whether the money he possessed was genuine or false, and the prætor M. Marius Gratidianus saw the necessity of interfering.¹ He is said to have discovered a means of testing money, and of distinguishing the good from the bad denarii.² In what this means consisted is not clear; but some method of examining silver coins must have been known to the Romans long before this time.³ Sulla inflicted heavy punishment upon the coiners of false money. All Roman money was generally coined at Rome, but in some particular cases the mints of other Italian towns, as in the provinces, were used; for we must remember that, during the time of the Republic, subject countries and provinces were not deprived of the right of coining their own money. This right they even retained under the Empire for a long time, though with some modifications; for while some places were allowed to coin their money as before, others were obliged to have upon their coins the head of the emperor or of some member of his family. Silver and gold, however, were only coined in places of the first rank. When all Italy received the Roman franchise, all the Italians used the Roman money, and, in consequence, lost the right to coin their own.

It has been stated above that probably every Roman citizen had a right to have his gold and silver coined, but none had the right to put his own image upon a coin, and not even Sulla ventured to act contrary to this custom. The coins apparently of the republican period with the portraits of individuals were, according to Eckhel, coined at a later time, and by the descendants of those persons whose portraits are given. Cæsar was the first to whom this privilege was granted, and his example was followed by many others, as we see from the coins of Sext. Pompeius. The emperors assumed the right to put either their own images or those of members of their families upon their coins.

From the time of Augustus, the triumviri, generally speaking, no longer put their name on any coin, and it became the exclusive privilege of the emperor to coin silver and gold. The senate, intrusted with the administration of the ærarium, retained the right of only coining copper, whence almost all copper coins of this period are marked with S. C. or EX S. C. But this lasted only till the time of Gallienus, when the right of coining all money became the exclusive privilege of the emperors. As, however, the vast extent of the Empire rendered more than one mint necessary, we find that in several provinces, such as Gaul and Spain, Roman money was coined under the superintendence of quæstors or proconsuls. Roman colonies and provinces now gradually ceased to coin their own money. In the western parts of the Empire, this must have taken place during the first century of our era, but in the East the Roman money did not become universal till after the time of Gallienus. From the time of the Emperor Aurelian, a great number of cities of the Empire possessed mints in which Roman money was coined, and during the latter period of the Empire, the su-

perintendents of mints are called procuratores, or præpositi monetæ.

The persons who were employed as workmen in a mint were called *monetarii*. Their number at Rome appears to have been very great during the latter period of the Empire, for in the reign of Aurelian they nearly produced a most dangerous rebellion.⁴ They seem generally to have been freedmen.⁵

In Greece, every free and independent city had the right to coin its own money. Sparta and Byzantium are said to have only coined iron money,⁶ but no ancient iron coin has ever been found. Respecting the time when money was first coined in Greece, see ARGENTUM, p. 90. The Greek term for money was νόμισμα, from νόμος, because the determination of its value was fixed by law or contract.⁷

The mint at Athens was called ἀργυροκοπεῖον. (Vid. ARGYROCOPION.) We do not hear of any officers connected with the management or the superintendence of the Athenian mint. How far the right of coining money was a privilege of the central government of Attica, is unknown. But the extant coins show that at least some demes of Attica had the right of coining, and it is probable that the government of Athens only watched over the weight and the purity of the metal, and that the people, in their assembly, had the right of regulating everything concerning the coining of money.⁸ The Attic gold and silver coins were always of very pure metal, and we have only one instance in which the state, at a time of great distress, used bad metal. This was in the archonship of Antigènes and Callias, B.C. 407 and 406.⁹ Individuals who coined bad money were punished with death.¹⁰ (Vid. ΝΟΜΙΣΜΑΤΟΣ ΔΙΑΦΘΟΡΑΣ ΔΙΚΗ.) The place where money was coined is always indicated on Greek coins; either the name of the place is stated, or some symbolical representation of the place, as the owl on Athenian and a peacock on Samian coins. These symbols are generally of a religious nature, or connected with the worship of the gods or heroes.

For farther information on this subject, see Eckhel, *Doctrina Numorum Veterum*, and especially the *Prolegomena generalia* in vol. i.

MONETARII. (Vid. MONETA.)

MONILE (δρμος), a Necklace. Necklaces were worn by both sexes among the most polished of those nations which the Greeks called barbarous, especially the Indians, the Egyptians, and the Persians. (Vid. ARMILLA.) Greek and Roman females adopted them more particularly as a bridal ornament.¹¹

The simplest kind of necklace was the *monile baccatum*, or bead necklace,¹² which consisted of berries, small spheres of glass, amethyst, &c., strung together. This is very commonly shown in ancient paintings. (See woodcuts, p. 96, 263.) The right-hand figure in the woodcut at page 263, and the head of Minerva at page 466, exhibit a frequent modification of the bead necklace, a row of drops hanging below the beads. These drops, when worn, arrange themselves upon the neck like rays proceeding from a centre. To this class of necklaces belongs one in the Egyptian collection of the British Museum (see the next woodcut), in which small golden lizards alternate with the drops. The figure in the woodcut immediately underneath this exhibits the central portion of a very ancient and exquisitely wrought necklace, which was found at S.

Agatha, near Naples, in the sepulchre of a Greek lady. It has 71 pendants. Above them is a band consisting of several rows of the close chainwork which we now call Venetian. (Vid. CATENA.)

We also give here the central portions, exhibiting the patterns of three splendid gold necklaces, purchased from the Prince of Canino for the British Museum. These were found in Etruscan tombs. The ornaments consist of circles, lozenges, rosettes, ivy-leaves, and hippocampi. A heart depends from the centre of one of the necklaces.

The necklace was sometimes made to resemble a serpent coiled about the neck of the wearer, as was the case with that given as a nuptial present by Venus to Harmonia, which was ornamented in so elaborate a manner that Nonnus devotes 50 lines of his *Dionysiaca*¹ to its description. This same necklace afterward appears in the mythology as the bribe by which Eriphyle was tempted to betray her husband.²

The beauty and splendour, as well as the value of necklaces, were enhanced by the insertion of pearls and precious stones, which were strung together by means of linen thread; silk, or wires and links of gold. For this purpose emeralds, or other stones of a greenish hue (*smaragdi*), were often employed (*virides gemmæ*³). Amber necklaces are mentioned in the *Odyssey*.⁴ Some account of the various kinds of links is given in the article CATENA. The hooks or clasps for fastening the necklace behind the neck were also various, and sometimes neatly and ingeniously contrived. Besides a band encircling the neck, there was sometimes a second, or even a third row of ornaments, which hung lower down, passing over the breast.⁵

Very valuable necklaces were sometimes placed, as dedicated offerings, upon the statues of Minerva, Venus, and other goddesses,⁶ and this was in accordance with the description of their attire given by the poets.⁷ Horses and other favourite animals were also adorned with splendid necklaces (*aurea*,⁸ *gemma monilia*⁹). (Vid. TORQUES.)

MONOPO'DIUM. (Vid. MENSA, p. 612.)

MONOXYLON. (Vid. LINTER.)

MONUMENTUM. (Vid. FUNUS, p. 461.)

MORA. (Vid. ARMY, GREEK, p. 98.)

*MOR'EA (μορέα or μοράα), the *Ficus Morus*, L., or Black Mulberry-tree. It is the σκῆμνος of Theophrastus, a name, however, which was sometimes applied to the *Ficus Sycamorus*, or Sycamore. The μόνον βαρώδες of Athenæus and the other diætical writers was the fruit of the *Ficus Morus*.¹

*MORMYRUS (μόρμυρος), the *Sparus Mormyrus*, L., or Morme, a species of Spare. This fish, according to Belon, is very like the *μελαυνούρος*. (Vid. MELANURUS.)²

*ΜΟΡΟΧΘΟΣ ΑΙΘΟΣ, a species of mineral. "According to Sprengel, it is called *Speckstein* and *Seifenstein* in Germany. It consists," he says, "of talc, alumine, and silica, with a small proportion of iron and manganese. Dr. Jameson supposes it a variety of fuller's earth. Dr. Hill says it is an indurated clay, and that it is now called French Chalk."³

MORTARIUM, also called PILA and PILUM⁴ (ῥίμος, ῥύνη, ῥύδις, apparently from the root of *icere*, to strike), a Mortar.

Before the invention of mills (*vid. MOLA*), corn was pounded and rubbed in mortars (*pistum*), and hence the place for making bread, or the bakehouse, was called *pistrinum*.⁵ Also, long after the introduction of mills, this was an indispensable article of domestic furniture.⁶ Hesiod,⁷ enumerating the wooden utensils necessary to a farmer, directs him to cut a mortar three feet, and a pestle (ῥήρον, ῥοπάνον, *pistillum*) three cubits long. Both of these were evidently to be made from straight portions of the trunks or branches of trees, and the thicker and shorter of them were to be hollowed. They might then be used in the manner represented in a painting on the tomb of Remeses III. at Thebes (see woodcut, left-hand figure, taken from Wilkinson, ii., p. 383); for there is no reason to doubt that the Egyptians and the Greeks fashioned and used their mortars in the same manner. (See also Wilkinson, iii., p. 181, showing three stone mortars with metal pestles.) In these paintings we may observe the thickening of the pestle at both ends, and that two men pound in one mortar, raising their pestles alternately, as is still the practice in Egypt. Pliny¹ mentions the various kinds of stone selected for making mortars, according to the purposes which they were intended to serve. Those used in pharmacy were sometimes made, as he says, "of Egyptian alabaster." The annexed woodcut shows the

forms of two preserved in the Egyptian collection

1. (Dioscor., i., 180.—Celsus, iii., 18.—Adams, *Append.*, s. v.)—2. (Aristot., H. A., vi., 17.—Plin., H. N., xxxii., 11.—Adams, *Append.*, s. v.)—3. (Dioscor., v., 151.—Adams, *Append.*, s. v.)—4. (Plin., H. N., xviii., 3.—Id. ib., xxxiii., 26.)—5. (Schol. in Hes., Op. at D., 421.)—6. (Servius in Virg., *Æn.*, i., 170.)—7. (Plaut., *Aul.*, i., ii., 17.—Cato, *De Ro Rust.*, 74-76.—Colum *De Ro Rust.*, xii., 55.)—8. (l. c.)—9. (H. N., xxxvi., 43.)

of the British Museum, which exactly answer to this description, being made of that material. They do not exceed three inches in height: the dotted lines mark the cavity within each. The woodcut also shows a mortar and a pestle, made of baked white clay, which were discovered A.D. 1831, among numerous specimens of Roman pottery, in making the northern approaches to London bridge.¹

Besides the uses already mentioned, the mortar was employed in pounding charcoal, rubbing it with glue in order to make black paint (*atramentum*); in making plaster for the walls of apartments;² in mixing spices, and fragrant herbs, and flowers for the use of the kitchen;³ and in metallurgy, as in triturating cinnabar to obtain mercury from it by sublimation.⁴

The philosopher Anaxarchus was pounded to death with iron pestles in a mortar.⁶

MOS. (*Vid. Jus*, p. 560.)

*MOSCHUS (μόςχος), the Musk Stag, or *Moschus moschiferus*, L. "The first mention of this animal occurs in the works of the Arabian medical authors, whose descriptions of it are copied, or referred to by Simeon Seth. Seth says that musk was got from India and China. He compares the animal which furnished it with the gazelle: ζών τινος μονοκέρατος μεγίστου, ὁμοίου δορκάδι."⁷

MOTHAKES (Μόθακες), MOTHON'ES (Μόθωνες). (*Vid. CIVITAS, GREEK*, p. 260.)

MOUNYCHIA (Μουνύχια), a festival celebrated in honour of Artemis Munychia. Plutarch⁸ says that it was instituted to commemorate the victory over the Persians at Salamis, and that it was held every year on the sixteenth of Munychion.⁹ The sacrifices which were offered to the goddess on this day consisted of cakes called *ἀμφιφώντες*, either because at this season the full moon was seen in the west at the moment the sun rose in the east, or, as is more probable, and also confirmed by most authorities, because these cakes were adorned all round with burning candles.¹⁰ Eustathius¹¹ says that these cakes were made of cheese.

MOUSEIA (Μούσεια), a festival with contests, celebrated at Thespiae in Boeotia, in honour of the Muses.¹² It was held every fifth year, and with great splendour.¹³ From Æschines¹⁴ it appears that there was also a festival called Museia, which was celebrated in schools.

MUCI'NA CAUTIO. (*Vid. CAUTIO*.)

MUNERATOR. (*Vid. GLADIATORES*, p. 475.)

MU'NICEPS, MUNICI'PIUM. (*Vid. COLONIA*, p. 283, *FÆDERATÆ CIVITATES*.)

MUNUS. (*Vid. HONORES*.)

MUNUS. (*Vid. GLADIATORES*, p. 475.)

MUNYCHIA. (*Vid. MOUNYCHIA*.)

MURA'LIS CORONA. (*Vid. CORONA*, p. 311.)

*MURÆNA, the Muræna (or Lamprey), a species of Eel, the *Muræna Helena*, L. The Linnæan name has arisen from the remark of Athenæus, that it was the "Helen" (choicest dish) at banquets. This fish is about three feet long, and sometimes more. It weighs as much as twenty to thirty pounds; is very much extended in the Mediterranean, and was held in high estimation by the ancients. The *πλώραι ἐγγεῖς* were a much esteemed kind, procured from Sicily, called in Latin *flute*, whence the French name *la Flutte*. The *Muræna* were carefully reared by the Romans in their fishponds; they were even

taught to be obedient to the voice; and the orator Hortensius is said to have wept over the loss of one, of which death had deprived him. Antonia, the wife of Drusus, adorned a favourite muræna with pendants.¹

MURRHINA VASA or MU'RREA VASA were first introduced into Rome by Pompey, who dedicated cups of this kind to Jupiter Capitolinus.² The material of which these vases were made is much disputed; but their value was very great.³ Pliny⁴ says that seventy talents were given for one holding three sextarii, and speaks of a murrhine trulla which cost 300 talents. Nero gave even 300 talents for a capis or drinking-cup.

Pliny⁵ says that these murrhine vessels came from the East, principally from places within the Parthian empire, and chiefly from Caramania. He describes them as made of a substance formed by a moisture thickened in the earth by heat, and says that they were chiefly valued on account of their variety of colours. Modern writers differ much respecting the material of which they were composed. Some think that they were variegated glass, and others that they were made of onyx, since that stone presents a variety of colours; but the latter conjecture is overthrown by a passage of Lampridius,⁶ who speaks of onyx and murrhine vases. Most recent writers, however, are inclined to think that they were true Chinese porcelain, and quote in support of their opinion the words of Propertius:⁷

"Murreaque in Parthis pocula cocta fecis."

This opinion would be rendered still more probable if we could place dependance on the statement of Sir W. Gell,⁸ "that the porcelain of the East was called Mirra di Smyrna to as late a date as 1555."

*MUS (μῦς), the Mouse. "Gesner holds," remarks Adams, "that this term is most generally applied to the domestic mouse, meaning, I suppose, the *Mus musculus*, L. The term *musculus* is obtained from Pliny, who applies it to the smaller domestic mouse. The ancients, however, were acquainted with other species of this genus; thus the *ἀρουραῖος μῦς* of Aristotle and Hesychius are to be referred, no doubt, to the *Mus agrestis*, L.; the *ὄραξ* of Nicander was probably the Black Rat, or *Mus rattus*, L.; and the *γηγγήλις*, or *ἀγριος μῦς*, would appear to have been the Field Mouse, or *Mus sylvaticus*. The *Sorex* of Pliny is set down by Gesner as being the Dormouse, or *Glis muscardinus*. The *Mus araneus* of the Latin authors, namely, the *μῦς τήφλος* or *μυγάλη* of the Greeks, was the *Sorex araneus*, or common Shrew; frequent mention of it occurs in the ancient works on Toxicology. The *μῦς δίπους* of Herodotus and Aristotle is the Jerboa, or *Dipus sagitta*. The *πῶξ* of Theophrastus may be supposed to be the *Mus jaculus*."¹⁰

MUSCULUS was, according to the description of Vegetius,¹¹ one of the smaller military machines, by which soldiers, in besieging a town, were protected while engaged in filling up the ditches round the besieged place, so that the movable towers (*turres ambulatoriæ*) of the besiegers might be able to approach the walls without obstacle. A more minute description of a musculus is given by Cæsar.¹² The one which he describes was nine feet long, and was constructed in the following manner: Two beams of equal length were placed upon the ground at the distance of four feet from each other, and upon them

were fixed little pillars five feet high. Their top ends were joined by transverse beams, which formed a gentle slope on either side of the roof, of which they formed the framework. The roof was then entirely covered with pieces of wood two feet broad, which were fastened with metal plates and nails. Around the edge of this roof, square pieces of wood four cubits broad were fixed, for the purpose of keeping together the bricks and mortar with which the musculus was then covered. But that these materials, which were intended to protect the musculus against fire, might not suffer from water, the bricks and mortar were covered with skins; and that these skins, again, might not suffer from the fire or stones which the besieged might throw upon the musculus, the whole was covered with rags of cloth. The whole of this machine was constructed under the cover of a vinea, and close by the Roman tower. At a moment when the besieged were least expecting any attack, the musculus was moved on against the wall of the town. The men engaged under it immediately began to undermine the wall, and thus to make a breach in it; and while this work was going on, the besiegers kept up a lively fight with the besieged, in order to prevent them from directing their attacks against the musculus.¹ The musculus described by Cæsar was evidently designed for different purposes than the one mentioned by Vegetius, and the former appears to be only a smaller, but a more indestructible kind of vinea than that commonly used.

MUSEIA. (Vid. ΜΟΥΣΕΙΑ.)

MUSE'UM (Μουσεῖον) was the name given to an institution, founded by Ptolemy Philadelphus, about B.C. 280, for the promotion of learning and the support of learned men.² We learn from Strabo³ that the museum formed part of the palace, and that it contained cloisters or porticoes (περίπατος), a public theatre or lecture-room (ἐξέδρα), and a large hall (οἶκος μέγας), where the learned men dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and after Egypt became a province of the Roman Empire, by the Cæsar.⁴ Botanical and zoological gardens appear to have been attached to the museum.⁵ The Emperor Claudius added another museum to this institution.⁶

MUSIC (GREEK). In compiling the following article, little more has been attempted than to give an outline of facts which rest upon positive evidence, and, at the same time, to present them in such a form as to serve for an introduction to the original sources. Hence it necessarily consists, in a great measure, of technical details, which, however, can present no difficulty to persons acquainted with the first elements of the modern theory; and nothing has been said in the way of deduction except in one or two cases, where the interest of the subject and the apparent probability of the conclusions seemed to permit it.

The term Ἀρμονική was used by the Greek writers to denote what is now called the Science of Music; μουσική having, as is well known, a much wider signification. Ἀρμονική ἔστιν ἐπιστήμη θεωρητικὴ καὶ πρακτικὴ τῆς τοῦ ἡρμωσμένου ὅσους. Ἠρμωσμένον δὲ ἔστιν τὸ ἐκ φθόγγων καὶ διαστημάτων, ποτὶν τάξιν ἔχοντων, συγκείμενον.⁷

The following sevenfold division of the subject, which is adopted by the author just quoted, as well

as by others, will be partly adhered to in the present article: I. Of Sounds (περὶ φθόγγων). II. Of Intervals (περὶ διαστημάτων). III. Of Genera (περὶ γενῶν). IV. Of Systems (περὶ συστημάτων). V. Of Modes (περὶ τόνων). VI. Of Transition (περὶ μεταβολῆς). VII. Of Composition (περὶ μελοποιίας). It must be observed that the term τόνος is used in different senses. First it signifies *degree of tension*, and so *pitch*, whence its application to denote *mode*, the modes being scales which differed in pitch: and then it is taken for *result of tension*; whence its meaning as the name of an interval, *tone*, because a tone is the interval through which the voice is most naturally raised at one effort.¹

A sound is said to be *musical* when it has a determinate *pitch* (τάσις). When two sounds differ in pitch, one is said to be more *acute* (ὀξύς), the other more *grave* (βαρύς); or, in common language, one is called higher, and the other lower. The term ἐμμελής applied to a sound either signifies *simply*, that it is capable of being used in a melody, or *relatively*, that it is capable of being used in the *same melody* with some other sound or system of sounds; the latter is its most common meaning.

An interval is the difference, or, rather, distance between two sounds of different pitch. When we compare the intervals between two pairs of sounds, we judge them, in certain cases, to be similar or equal. If the more acute sound of one of them be then raised, that interval is said to become greater than the other. It is this property of intervals (their being comparable in respect of magnitude) which enables us to classify them, and enumerate their several kinds.

Intervals are either *consonant* (σύνφωνα) or *dissonant* (διάφωνα), according as the two sounds may or may not be heard at the same time without offending the ear.² Strictly speaking, it is impossible to define the limit between the two classes, and this seems to be acknowledged by the later writers, who distinguish various degrees of consonance and dissonance. Originally, the only intervals reckoned consonant were the octave or eighth (διὰ πασῶν), the fifth (διὰ πέντε or δι' ὀκτειῶν), the fourth (διὰ τεσσάρων or συλλαβῆς), and any interval produced by adding an octave to one of these. But all intervals less than the fourth, or intermediate between any of those two just enumerated (as the sixth, tenth, &c.), were considered as dissonant. The principal intervals, less than the fourth, employed in Greek music, were the double tone (δίτονον), nearly equal to the modern major third; the tone and half (τριημιτόνιον), nearly the same as the minor third; the tone (τόνος), equal to the modern major tone; the half tone (ἡμιτόνιον), and the quarter tone (διεσις).³ Other writers speak of ὁμοφωνία, or unison; ἀντιφωνία, or the consonance of the octave; and παραφωνία, or the consonance of the fourth and fifth.⁴ The latter author considers παραφωνία to be intermediate between consonance and dissonance, and mentions the tritone or sharp fourth as an example of it.

If two strings, perfectly similar except in length, and stretched by equal tensions, be made to vibrate, the number of vibrations performed in a given time by each is inversely proportional to its length; and the interval between the sounds produced is found to depend only on the ratio of the lengths, i. e., of the numbers of vibrations. Thus,

if the ratio be $\frac{1}{2}$,	the interval is an octave;
if " $\frac{2}{3}$,	" " a fifth;
if " $\frac{3}{4}$,	" " a fourth;
if " $\frac{4}{5}$,	" " a major tone.

1. (Compare Cæs., De Bell. Civ., iii., 80.—Do Bell. Alex., 1.)
2. (Athenæus, v., p. 203.)—3. (xviii., p. 794.)—4. (Strabo, l. c.)—5. (Philatr., Apollon., vi., 24.—Athen., xiv., p. 654.)—6. (Suet., Claud., 42, with Casanbon's note.)—7. (Euclid, Int. Harm., p. 1.)

1. (Vid. Aristid., p. 22.—Eucl., 19.)—2. (Eucl., p. 8.)—3. (Eucl., p. 8.)—4. (Vid. Aristot., Probl., xix., 39, and Gaudens, ut, p. 11.)

The discovery of these ratios is attributed, probably with truth, to Pythagoras. But the accounts of the experiments by which he established them¹ are plainly false, since they contradict the known fact that, when similar and equal strings are stretched by different tensions, the numbers of vibrations are as the square roots of the tensions.²

The *τόνος* or tone was defined to be the difference between the fourth and fifth; so that the corresponding ratio would be determined either by experiment, or by simply dividing $\frac{3}{2}$ by $\frac{4}{3}$.

It is remarkable that each of the four ratios enumerated above is *superparticular*; i. e., the two terms of each differ from one another by unity. Euclid seems to consider no intervals consonant except such as correspond to superparticular (*ἐπιμόριος*) or multiple (*πολλαπλασίων*) ratios; the latter being such as $\frac{2}{1}$, $\frac{3}{1}$, $\frac{4}{1}$, &c. On this theory the octave and fourth ($\frac{3}{2}$) would be dissonant, but the octave and fifth ($\frac{3}{1}$) consonant.³ And it is also worthy of notice, that all the intervals employed in the modern theory are either such as correspond to superparticular ratios, or are produced from such by compounding them with the octave. Thus the ratio corresponding to the

major third	is $\frac{4}{3}$;
minor third	" $\frac{6}{5}$;
minor tone	" $\frac{9}{8}$;
major semitone	" $\frac{16}{15}$.

It seems, therefore, extraordinary, that analogy should not have led at once to the discovery at least of the major and minor third, as soon as the connexion between intervals and ratios had been observed. However, no such discovery was then made, or, if made, it was neglected; and this affords at once an explanation of the fact that intervals less than the fourth were reckoned dissonant; for the *δίτονον*, or double major tone, is greater than the true consonant major third (which consists of a major and minor tone) by an interval expressed by the ratio $\frac{8}{5}$, a difference quite sufficient to destroy the consonance of the interval. In fact, when a keyed instrument is tuned according to the equal temperament, the major thirds are too great by an interval little more than half of this ($\frac{1}{2} \frac{8}{5}$ nearly), and yet are only just tolerable. This subject is important, because it bears immediately upon the question whether harmony was used in the Greek music.

An aggregate of two or more intervals, or, rather, a series of sounds separated from one another by intervals, constituted a system. Systems were named from the number of sounds which they comprehended. Thus an octachord was a system of eight sounds, a pentachord of five, and so on: and usually, though not necessarily, the number of sounds corresponded to the interval between the extreme sounds.

The fundamental system in ancient music was the *tetrachord*, or system of four sounds, of which the extremes were at an interval of a fourth. In modern music it is the octachord, and comprehends an octave between the extremes. The important and peculiar property of the latter system, namely, the *completeness* of its scale, was fully understood, as the name of the interval *διὰ πασών* sufficiently indicates;⁴ but it was not taken in theory for the foundation of the scale, or, at any rate, was considered as made up of two tetrachords.

The *genus* of a system depended upon the distribution of the two intermediate sounds of the tetrachord. The Greek musicians used three genera:

I. The diatonic, in which the intervals between

the four sounds were (ascending) semitone, tone, tone:

II. The chromatic; semitone, semitone, tone and a half:

III. The enharmonic; diesis, diesis, double tone

(The second note is meant to represent a sound half way between E and F, for which the modern system supplies no notation.)

Of these genera the diatonic was allowed to be the most ancient and natural, and the enharmonic the most modern and difficult; the latter, however, seems soon to have become the favourite, with theorists at least, for Aristoxenus complains that all writers before his time had devoted their treatises almost entirely to it, to the neglect of the two others.¹

The only difference between the ancient and modern diatonic is, that in the former all the tones are major tones, whereas in the latter, according to the theory generally admitted, major and minor tones occur alternately.² The interval called a semitone in the above descriptions is, therefore, strictly neither equal to the modern major semitone, nor to half a major tone, but the ear would hardly appreciate the difference in *melody*.

Besides these genera, certain *colours* (*χρόαι*) or specific modifications of them are enumerated.³

The enharmonic had only one *χρόα*, namely, the genus itself, as described above: it is commonly called simply *ἁρμονία*.

The chromatic had three: 1st, *χρῶμα τονιαῖον*, or simply *χρῶμα*, the same as the genus; 2d, *χρῶμα ἡμιόλιον*, in which intervals of three eighths of a tone were substituted for the two semitones; 3d, *χρῶμα μαλακόν*, in which intervals of one third of a tone were similarly employed.

The diatonic had two *χρόαι*: 1st, *διάτονον σύντονον*, or simply *διάτονον*, the same as the genus; 2d, *διάτονον μαλακόν*, in which an interval of three fourths of a tone was substituted for the second semitone (ascending).

The following table will exhibit at one view the intervals between the sounds of the tetrachord, taken in the ascending order, according to each of these *χρόαι*, the tone being represented by unity, and two tones and a half being supposed to make up a fourth, a supposition which is not exactly true, but is commonly adopted by the ancient writers as sufficiently accurate for their purpose.⁴

- | | |
|-----------------------|--|
| I. Diatonic . . . | 1. <i>διάτονον (σύντονον)</i> . . . $\frac{1}{2}$, 1, 1. |
| | 2. <i>διάτονον μαλακόν</i> . . . $\frac{1}{2}$, $\frac{3}{4}$, $\frac{3}{4}$. |
| II. Chromatic . . . | 1. <i>χρῶμα (τονιαῖον)</i> . . . $\frac{1}{2}$, $\frac{1}{2}$, $\frac{3}{2}$. |
| | 2. <i>χρῶμα ἡμιόλιον</i> . . . $\frac{3}{8}$, $\frac{3}{8}$, $\frac{7}{4}$. |
| | 3. <i>χρῶμα μαλακόν</i> . . . $\frac{1}{3}$, $\frac{1}{3}$, $\frac{11}{6}$. |
| III. Enharmonic . . . | <i>ἁρμονία</i> . . . $\frac{1}{4}$, $\frac{1}{4}$, 2. |

There seems to be little evidence that any of these *χρόαι* were practically used, except the three principal ones, *διάτονον*, *χρῶμα*, *ἁρμονία*. But it would be wrong to conclude hastily that the others would be impossible in practice, or necessarily unpleasant. In the *soft diatonic*, for instance, the in-

interval, which is roughly described as five fourths of a tone, would be greater than a major tone, but less than a minor third; now there are two intervals of this kind, corresponding to the *superparticular* ratios $\frac{9}{8}$ and $\frac{7}{6}$, which ought, therefore, by analogy, to be consonant, or, at any rate, capable of being employed as well as the tone and semitone; and, although they are not used in modern music, or, at least, not admitted in theory,¹ nothing but experiment can determine how far the ear might become accustomed to them. These intervals exist in the natural scales of the horn, trumpet, &c., and are, in fact, used instead of the minor third and tone in the harmony of the dominant seventh, both by stringed instruments and voices, when unaccompanied by *tempered* instruments. If this view be correct, the intervals of the tetrachord in the *διάτονον μαλακόν* would probably correspond to the ratios $\frac{13}{12}$, $\frac{12}{11}$, $\frac{11}{10}$, and similar considerations might be applied to the other *χρόα*.

The four sounds of the tetrachord were distinguished by the following names: *ὑπάτη* (sc. *χορδή*) was the *lowest*; *νῆτη* or *νεάτη* the highest; *παρυπάτη* the lowest but one, and *παρανῆτη* the highest but one. *Παρανῆτη* was also frequently called *λιχανός*, probably because, in some ancient instrument, the corresponding string was struck by the forefinger; and *παρυπάτη* was afterward called *τρίτη* in certain cases. These names were used in all the genera; but the name of the genus was commonly added to *λιχανός* (thus, *λιχανός διάτονος*, *χρωματικῆ*, or *ἐναρμόνιος*), perhaps because the position of this sound with respect to *ὑπάτη* and *νῆτη* is what chiefly determines the character of the genus. When the two lowest intervals of the tetrachord, taken together, were less than the remaining one, those two were said to form a *condensed interval* (*πυκνόν*). Thus the interval between *ὑπάτη* and *λιχανός* is *πυκνόν* in the enharmonic and chromatic genera. The three sounds of the *πυκνόν* were sometimes called *βαρυνπυκνός*, *μεσοπυκνός*, and *ὀξυπυκνός*, and sounds which did not belong to a *πυκνόν* were called *ἀπυκνός*.

It is not to be supposed that the tetrachord could long continue to furnish the entire scale used in

practice, though it was always considered as the element of the more comprehensive systems which gradually came into use. The theory of the genera, as has been seen, required only the tetrachord for its full development, though it certainly could not have been invented till after the enlargement of the scale.

Terpander is said to have invented the seven-stringed lyre,² which seems not to have been obsolete in Pindar's time;³ its scale consisted of an octave, with one sound omitted.⁴ The addition of this omitted sound (attributed to Lycaon or Pythagoras) would give an octachordal lyre with a complete octave for its scale. And an instrument called *magadis*, which must have had a still greater compass, was very early known, and is said to have had twenty strings as used by Anacreon.⁴

When two tetrachords were joined, so that the highest sound of one served also for the lowest of the other, they were said to be *conjunct* (*συνημμένα*). But if the highest sound of one were a tone lower than the lowest of the other, they were called *disjunct* (*διεzeugμένα*), thus:

BCDEFGA conjunct.

EFGA BCDE disjunct.

In the latter case, the tone (between A and B) which separates them was called *τόνος διατεκτικός*.⁵

A hendecachordal system, consisting of three tetrachords, of which the middle one was conjunct with the lower, but disjunct from the upper, thus,

BCDEFGABCDE,

is supposed to have been used about the time of Pericles.⁶ In such a system the lowest tetrachord was called (*τετράχορδον*) *ὑπατῶν*, the middle *μέσων*, and the highest *διεzeugμένων*. Afterward a single sound (called *προσλαμβανόμενος*) was added at an interval of a tone below the lowest of *ὑπατῶν*, and a conjunct tetrachord (called *ὑπερβολαίων*) was added above. And thus arose a system of two complete octaves,

which was called the *greater perfect system*. Another system, called the *smaller perfect system*, was com-

posed of three conjunct tetrachords, called *ὑπατῶν*, *μέσων*, and *συνημμένων*, with *προσλαμβανόμενος*, thus:

and these two together constituted the *immutable system* (*σύστημα ἀμετάβολον*) described by all the writers later than Aristoxenus, and probably known to him.²

The sounds in these systems were named in the way before described, the names of the tetrachords only being added, and *μέση* and *παραμέση* being substituted for *νῆτη μέσων* and *ὑπάτη διεzeugμένων* respectively. Thus, taking the sounds in the ascending order,

- | | | |
|---|------------------|---------------|
| A | προσλαμβανόμενος | |
| B | ὑπάτη ὑπατῶν | |
| C | παρυπάτη ὑπατῶν | } τετρίχορδον |
| D | λιχανός ὑπατῶν | |
| E | ὑπάτη μέσων | } ὑπατῶν. |
| F | παρυπάτη μέσων | |
| G | λιχανός μέσων | } τ. μέσων. |
| A | μέση | |

So far the sounds are common to the greater and smaller systems. Then follow, in the greater,

- | | | |
|---|-----------------------|-------------------|
| B | παραμέση | } τ. διεzeugμένων |
| C | τρίτη διεzeugμένων | |
| D | παρανῆτη διεzeugμένων | |
| E | νῆτη διεzeugμένων | |
| F | τρίτη ὑπερβολαίων | } τ. ὑπερβολαίων. |
| G | παρανῆτη ὑπερβολαίων | |
| A | νῆτη ὑπερβολαίων | |

The interval between *μέση* and *παραμέση* is a tone. But in the smaller system, *μέση* serves also for the lowest sound of the tetrachord *συνημμένων*, which terminates the scale, thus:

- | | |
|----|----------------------|
| A | μέση. |
| bB | τρίτη συνημμένων. |
| C | παρανῆτη συνημμένων. |
| D | νῆτη συνημμένων. |

1. (Vid. Smith's Harmonies, sect. iv., art. 10.)—2. (Eucl., p. 17.)

In adapting the modern notation to these scales, we have represented them in the diatonic genus; but the same arrangement of the tetrachords was adopted in the others. Those sounds of the immutable system which were the same in all the genera, namely, *προσλαμβανόμενος*, *ὑπάτη ὑπατών*, *ὑπάτη μέσων*, *μέση*, *παράμεση*, *νήτη συνημιμένων*, *νήτη διεγυγμένων*, and *νήτη υπερβολαίων*, were called fixed (*ἑστώτες*), being, in fact, except the first, the extreme sounds of the several tetrachords. The rest, being the intermediate sounds, on the position of which the genus depended, were called movable (*κινούμενοι*).

Μέση was certainly considered a sort of key-note to the whole system,¹ and *προσλαμβανόμενος* was added to complete the octave below *μέση*.² This addition is supposed to have been made later than the time of Plato, but earlier than Aristoxenus.³

The greater of the two systems thus described appears to have superseded the other in practice; in fact, it is evidently the most natural of the two. But it must not be supposed that it was necessarily used in its complete form as the scale of any instrument; it was rather a theoretical canon by which the scales really employed were constructed. With

Indeed, Plutarch relates, on the authority of Aristoxenus, that Olympus was led to the invention of this genus by observing that a peculiar and beautiful character was given to melody when certain notes of the scale, and particularly *λιχανός*, were left out.⁴ It is therefore most probable that this was the original form of the enharmonic scale, and that it was more ancient than the highly artificial chromatic. In this form it would be both natural and easy. But afterward, when additional sounds were interposed between B and C, E and F, it would of course become, as it is always described, the most difficult of all the genera, without, however, ceasing to be natural; for these additional sounds could certainly be neither used by a composer nor executed by a singer as *essential* to the melody, but must rather have been introduced as passing or ornamental notes, so that the general effect of the genus would remain much the same as before. The assertion of Aristoxenus (see p. 28, 53), that no voice could execute more than two quarter tones in succession, evidently supports this view. (Compare what is said by Aristides⁵ of the rare use of intervals of *three* and *five* quarter tones.) Thus the enharmonic would derive its distinctive character more from the largeness of the highest interval of the tetrachord than from the smallness of the two others. Aristoxenus⁶ expressly mentions the important influence which the magnitude of the interval between *λιχανός* and *νήτη* had upon the character of the genus, and blames the musicians of his own time for their propensity to diminish this interval for the sake of *sweetness* (*τοῦτον δ' αἶτιον τὸ βούλεσθαι γλυκαίνειν αἶτι*). That a peculiar character really is given to a melody by the occurrence of a larger interval than usual between certain sounds of the scale, is a well-known fact, exemplified in many national airs, and easily proved by the popular experiment of playing on the black keys only of a piano forte. (See Burney⁷ on the *Old Enharmonic*.)

The genus of a system was determined, as has

regard to its *fitness* for use, it may be observed, that in the diatonic genus the effect of such a system would not perceptibly differ, so long as the *melody* only was required, from that of the corresponding notes (given above) as played on a modern instrument with or without temperament. The chromatic scale is quite unlike anything now employed; and though it was not considered the most difficult, was certainly the least natural (*Τεχνικώτατον δὲ τὸ χρώμα*).¹ The modern minor scale, A, B, C, D, E, F, G, A, can hardly be considered an exception to the assertion, that the chromatic scale is quite unlike anything now employed, for its essential character, as now used, depends so little upon the chromatic interval between F and G, that this peculiarity is usually got rid of in melody by raising the F or lowering the G, according to circumstances.² But it is impossible to form a decided judgment of the merits of the chromatic scale without a much greater knowledge of the rules of composition than seems now attainable. The effect of the enharmonic must have been nearly the same as that of the diatonic, supposing *λιχανός* to be left out in each tetrachord, thus:

been explained, by the *magnitude* of certain of its intervals. The *species* (*εἶδος*) depended upon the order of their succession. Hence, supposing no system to be used which was not similar to some part of the *σύστημα ἀμετάβολον*, every system would have as many species as it had intervals, and no more.³

The tetrachord, for example, had three species in each genus, thus (diatonic),

1st. $\frac{1}{2}$, 1, 1. 2d. $\frac{1}{2}$, $\frac{1}{2}$, 1. 3d. 1, 1, $\frac{1}{2}$.
(where 1 stands for a tone).

The species of a system was often described by indicating two sounds of the *σύστημα ἀμετάβολον* between which a similar one might be found. Of the seven species of the octachord, the first was exemplified by the octave comprehended between *ὑπάτη ὑπατών* and *παράμεση*; the second by that between *παρυπάτη ὑπατών* and *τρίτη διεγυγμένων*; and so on. The order of the intervals in these seven species would be as follows in the diatonic genus (ascending):

1st. $\frac{1}{2}$, 1, 1, $\frac{1}{2}$, 1, 1, 1.
2d. 1, 1, $\frac{1}{2}$, 1, 1, 1, $\frac{1}{2}$.
3d. 1, $\frac{1}{2}$, 1, 1, 1, $\frac{1}{2}$, 1.
4th. $\frac{1}{2}$, 1, 1, 1, $\frac{1}{2}$, 1, 1.
5th. 1, 1, 1, $\frac{1}{2}$, 1, 1, $\frac{1}{2}$.
6th. 1, 1, $\frac{1}{2}$, 1, 1, $\frac{1}{2}$, 1.
7th. 1, $\frac{1}{2}$, 1, 1, $\frac{1}{2}$, 1, 1.

This distinction of species is important, because it formed *originally* the chief difference between the *modes* (*τόνοι*). Unfortunately, there are no means of determining what was the real difference between *melodies* written in these several scales; and the difficulty of forming any probable hypothesis on this subject is increased by what is said of *μέση* in the passage quoted above from the Aristotelic *Problemata*. Πάντα γὰρ τὰ χρηστά μέλη πολλάκις τῇ μέσῃ χρῆται, καὶ πάντες οἱ ἀγαθοὶ ποιηταὶ πυκνὰ πρὸς τὴν μέσῃ ἀπαντῶσι, κἂν ἀπέλθωσι, ταχὺ ἐπανέρχονται, πρὸς δὲ ἄλλην οὕτως οὐδεμίαν. For, since the position of *μέση* was determined by the intervals adjacent to it, any series of sounds *beginning* or *ending* with *μέση* would give a system always of the

1. (Vid. Arist., Probl., xix., 20.)—2. (Aristides, p. 10.)—3. (Böckh.)—4. (Vid. Plutarch's Dialogue on Music, Mém. de l'Acad. des Inscriptions, vol. x., 126.)—5. (p. 28.)—6. (p. 23.)—7. (vol. i, p. 27.)

1. (Aristides, p. 19.)—2. (Vid. Dehn, Theoretisch-praktische Harmonielehre, p. 67, 68.)—3. (Euclid, p. 14.)

same species. Possibly the author of the *Problematika* does not use the term *μέση* in the same sense as Euclid.

However, it is certain that the seven species of the octachord above described were anciently (*ὑπὸ τῶν ἀρχαίων*¹) denoted by the names Mixolydian, Lydian, Phrygian, Dorian, Hypolydian, Hypophrygian, and Hypodorian; and it seems likely that they always differed in pitch as well as species, the Mixolydian being the highest and the Hypodorian the lowest. Hence it is conjectured that there were originally only three modes, corresponding to the three species of tetrachord, and that these were the Dorian, Phrygian, and Lydian; because the octachord in each of these three modes is made up of two similar disjunct tetrachords, which are of the first species in the Dorian, the second in the Phrygian, and the third in the Lydian.

Aristides describes also six *enharmonic* modes of very ancient origin (*αἱς οἱ πᾶν παλαιότατοι πρὸς τὰς ἁρμονίας κέχρηται*²), consisting of different species of octachords, and quotes the well-known passage in Plato³ as referring to them. The order of the intervals is given as follows (see the notes of Meibomius upon the passage):

Lydian	. 4,	2,	1,	$\frac{1}{2}$,	$\frac{1}{4}$,	2,	$\frac{1}{4}$.
Dorian	. 1,	$\frac{1}{2}$,	$\frac{1}{4}$,	2,	1,	$\frac{1}{4}$,	$\frac{1}{4}$, 2.
Phrygian	. 1,	$\frac{1}{2}$,	$\frac{1}{4}$,	2,	1,	$\frac{1}{4}$,	$\frac{1}{4}$, 1.
Iastian	. $\frac{1}{2}$,	$\frac{1}{4}$,	2,	$1\frac{1}{2}$,	1.		
Mixolydian	. $\frac{1}{2}$,	$\frac{1}{4}$,	1,	1,	$\frac{1}{4}$,	$\frac{1}{4}$,	3.
Syntonolydian	$\frac{1}{2}$,	$\frac{1}{4}$,	2,	$1\frac{1}{2}$,	2.		

It will be observed that these scales do not all comprehend exactly an octave; and none of them, except the Lydian, is coincident with any part of the *σύστημα ἀμετάβολον*. That systems were not always restricted to the *immutable* form, is proved by what Euclid says of *compound* systems, with more than one *μέση*. None of these scales is decidedly unnatural, except, perhaps, the Mixolydian. Of course it is impossible to recognise their characters as described by Plato, in the absence of examples of their application in actual melody. Their principal interest, therefore, consists in the evidence which they afford of the antiquity of *enharmonic* systems, i. e., of systems formed by omitting certain sounds of the diatonic scale. For, unless we take this view of them, and consider the quarter tones as unessential additions, it seems quite impossible to understand how they could be used at all.

The difference of species, considered as the characteristic distinction of modes, is evidently spoken of as a thing antiquated and obsolete, not only by Aristides (who was certainly later than Cicero⁴), but also by Euclid. As to Aristoxenus, the fragments which remain of his writings contain no allusion to such a distinction at all. In his time, it appears that the number of modes was thirteen; and later writers reckon fifteen.⁵ The descriptions of these fifteen modern modes are very scanty, but they indicate pretty plainly that they were nothing more than transpositions of the *greater perfect system*; their names were Hypodorian, Hypoastian, Hypophrygian, Hypoæolian, Hypolydian, Dorian, Iastian, Phrygian, Æolian, Lydian, Mixolydian, Hyperastian, Hyperphrygian, Hyperæolian, Hyperlydian. The Hypodorian was the lowest in pitch, and the *προσθαυβανόμενοι* of the others were successively higher by a semitone; and only that part of each scale was used which was within the compass of the voice. It seems likely that the ancient modes mentioned by Euclid, and described above, consisting of octachords taken, as regards their *species*, from different parts of the *σύστημα ἀμετάβολον*, would, as regards *pitch*, be each so placed as to lie

between *ὑπὲρ τῶν μέσων* and *ὑπὲρ διεξυγμένων* of the modern mode of the same name. For they certainly did always differ in pitch, as the name *τόνος* shows; and there is no reason to believe that their relative position was ever changed: the system of notation, moreover, confirms this supposition. But for details on this subject we must refer to the dissertation of Böckh,¹ where it is treated at length. The only important results, however, are, first, that the modes did anciently differ in *species*; secondly, that in process of time this difference either disappeared entirely, or ceased to be their distinguishing mark; and, thirdly, that their general *pitch* was always different. The ideas conveyed by these general assertions of the real character and effect of the Greek music are excessively vague and unsatisfactory, but an examination into particulars does not tend to make them at all more definite or clear.

There can be little doubt that different rhythms and degrees of slowness or quickness, as well as different metres and styles of poetry, would soon be appropriated to the modes, so as to accord with their original musical character; and these differences would in time naturally supersede the old distinction of species, and come to be looked on as their characteristic marks: so that, at length, all the species might even be used in each mode, for the sake of additional variety. With regard to the poetry, indeed, it is certain that particular measures were considered appropriate to different modes,² and it has even been attempted to divide Pindar's Odes into Dorian, Æolian, and Lydian.³ The rhythm of the music must have depended chiefly, if not entirely, upon that of the words, or else have been of a very simple and uniform character, since there is no mention of a notation for it as distinct from the metre of the poetry. Probably, therefore, nothing like the modern system of *musical* rhythm existed; and, if so, this must have formed one of the most essential points of difference between the ancient and modern music. How the rhythm of mere *instrumental* music was regulated, or what variety it admitted, does not appear. There is no reason, however, to believe that music without words was practised to any extent, though it was certainly known; for Plato speaks with disapprobation of those who used *μέλος καὶ ῥυθμὸν ἄνευ ῥημάτων, ψιλλὴ κιθαρῖσι τε καὶ ἀλίσσει προσχρώμενοι*,⁴ and others mention it.⁵

On the last two of the heads enumerated in dividing the whole subject, very little real information can be obtained. In fact, they could not be intelligibly discussed without *examples*, a method of illustration which, unfortunately, is never employed by the ancient writers. *Μεταβολή* was the transition from one *genus* to another, from one system to another (as from disjunct to conjunct, or *vice versa*), from one mode to another, or from one style of melody to another,⁶ and the change was made in the same way as in modern *modulation* (to which *μεταβολή* partly corresponds), viz., by passing through an intermediate stage, or using an element common to the two extremes between which the transition was to take place.⁷

Μελοποιία, or composition, was the application or use of all that has been described under the preceding heads. This subject, which ought to have been the most interesting of all, is treated of in such a very unsatisfactory way, that one is almost forced to suspect that only an *exoteric* doctrine is contained in the works which have come down to us. On composition *properly* so called, there is nothing but an enumeration of different kinds of *sequence* of notes, viz.: 1. *ἄγωγή*, in which the sounds

1. (Eucl., p. 15.)—2. (p. 21.)—3. (Rep., iii., 10.)—4. (Vid. p. 70.)—5. (Eucl., p. 19.—Aristid., p. 23, 21.)

1. (iii., 8.)—2. (Plat., Leg., ii., p. 670.)—3. (Böckh, iii., 15.)—4. (Leg., ii., p. 669.)—5. (Böckh ii., 11.)—6. (Eucl., 20.)—7. (Vid. Euclid, 21.)

followed one another in a regular ascending or descending order; 2. *πλοκή*, in which intervals were taken alternately ascending and descending; 3. *περτίει*, or the repetition of the same sound several times successively; 4. *τονή*, in which the same sound was sustained continuously for a considerable time.¹ Besides this division, there are several classifications of melodies, made on different principles. Thus they are divided according to *genus*, into diatonic, &c.; according to *mode*, into Dorian, Phrygian, &c.; according to *system*, into grave, acute, and intermediate (*ὑπατοιδής, νητοιδής, μεσοειδής*). This last division seems merely to refer to the general pitch of the melody; yet each of the three classes is said to have a distinct *turn* (*τρόπος*), the grave being *tragic*, the acute *ionic* (*νομικός*), and the intermediate *dithyrambic*. Again, melody is distinguished by its character (*ἦθος*), of which three principal kinds are mentioned, *διασταλτικόν, συσταλτικόν, and ἡσυχαστικόν*, and these terms are respectively applied to mean aptitude for expressing a magnanimous and heroic, or low and effeminate, or calm and refined character of mind. Other subordinate classes are named, as the erotic, epithalman, comic, and encomiastic.² No account is given of the *formal* peculiarities of the melodies distinguished by these different characters, so that what is said of them merely excites our curiosity, without tending in the least to satisfy it.

The most ancient system of notation appears to have consisted merely in the appropriation of the letters of the alphabet to denote the different sounds of the scale; and the only alteration made in it was the introduction of new signs, formed by accenting letters, or inverting, distorting, and mutilating them in various ways, as the compass of the scale was enlarged. A great, and seemingly unnecessary, complexity was caused by the use of two different signs for each sound; one for the voice, and the other for the instrument. These two signs were written, one above the other, immediately over the syllable to which they belonged. They are given by several of the Greek writers, but most fully by Alypius. The instrumental signs appear to have been chosen arbitrarily; at least, no law is now discoverable in them: but the vocal (which were probably more ancient) follow an evident order. The sounds of the middle part of the scale are denoted by the letters of the Ionian alphabet (attributed to Simonides) taken in their natural order; and it is remarkable that these signs would be just sufficient for the sounds comprised in the six modes supposed to be the most ancient, if the compass of each were an octave, and they were pitched at intervals of a semitone above one another. Accented or otherwise altered letters are given to the higher and lower sounds. To learn the system perfectly must have required considerable labour, though its difficulty has been much exaggerated by some modern writers.³ A few specimens of Greek melody expressed in the ancient notation have come down to us. An account of them may be found in Burney,⁴ where they are given in modern notes with a conjectural rhythm. The rest of them may also be seen in Böckh⁵ with a different rhythm. It is composed to the words of the first Pythian, and is supposed by Böckh to be certainly genuine, and to belong to a time earlier than the fifteen modes. Its merits have been very variously estimated; probably the best that can be said of it is, that no certain notion can now be obtained of its real effect as anciently performed.

It has long been a matter of dispute whether the ancients practised *harmony*, or music in parts. We

believe there are no sufficient grounds for supposing that they did. The following are the facts usually appealed to on each side of the question. In the first place, the writers who professedly treat of music make no mention whatever of such a practice; this omission constitutes such a very strong *prima facie* evidence against it, that it must have settled the question at once but for supposed positive evidence from other sources on the other side. It is true that *μελοποιία*, which might have been expected to hold a prominent place in a theoretical work, is dismissed very summarily; but still, when the subjects which *ought* to be explained are enumerated, *μελοποιία* is mentioned with as much respect as any other, while *harmony* is entirely omitted. In fact, there seems to be no Greek word to express it; for *ἁρμονία* signifies a well-ordered *succession* of sounds,¹ and *συμφωνία* only implies the concord between a single pair of sounds, without reference to succession. That the Greek musicians were acquainted with *συμφωνία* is proved by many passages, though we are not aware that they ever mention the concord of *more* than two sounds. But the subject of concord, so long as succession is not introduced, belongs rather to acoustics than to music. There is, however, a passage,² where succession of concords is mentioned: *Διὰ τί ἡ διὰ πασῶν συμφωνία ἄδεται μόνῃ; μαγαδίζονται γὰρ ταύτην, ἄλλην δὲ οὐδέμιναν. Μαγαδίξεν* signified the singing or playing in two parts at an interval of an octave; and the word is derived from *μαγάδις*, the name of a stringed instrument which had sufficient compass to allow a succession of octaves to be played on it. (This practice of *magadizing* could not fail, of course, to arise as soon as men and women attempted to sing the same melody at once.) The obvious meaning of the passage, then, is, that since no interval except the octave could be *magadized* (the effect of any other is well known to be intolerable), *therefore* no interval was employed at all; implying that no other kind of counterpoint than *magadizing* was thought of. But the words are certainly capable of a somewhat milder interpretation.

In the next place, the constitution of the scale was, as has been seen, very unfit for harmony, the beauty of which depends so essentially upon the use of *thirds*. The true major third was either not discovered or not admitted to be consonant till a very late period, Ptolemy being the earliest extant author who speaks of the *minor tone*;³ a fact which is so extraordinary and so contrary to all that could have been anticipated, as to destroy all confidence in any *a priori* reasonings on the subject, and to exclude all but actual evidence on either side. The positive evidence in *favour* of the existence of counterpoint consists chiefly in certain indications of two modes having been sometimes used at once. Thus the expression in Herace,⁴

“*Sonante mistum tibiis carmen lyra
Hac Dorian, illis barbarum,*”

is interpreted to mean that the lyre was played in the Dorian mode, and the *tibia* in the *Lydian*; so that, if the ancient Dorian and Lydian octave were employed, the former being of the fourth species, while the latter was of the second, and pitched two tones higher, the series of intervals heard would consist of fourths and major thirds, or, rather, double tones.

Again, there are passages such as,

Αἰολεὺς ἔδανε Δωρίαν κέλευθον ἑμῶν,⁵

which are supposed to indicate that poetry written

1 (Euclid, 22.)—2. (Euclid, 21. — Aristid., 29.)—3 (Vid. Böckh, iii., 7.)—4. vol. i., p. 83.)—5 (iii., 12.)

1 (Vid. Burney, i., 131.)—2. (Arist., Probl., xix., 18.)—3. (Vid. Burney, i., 448.)—4. (Epod., ix., 5.)—5. (Quoted from Pindar by the scholiast on Pyth., ii., 127.)

in one mode, and sung accordingly, was accompanied by instruments in another. For a view of the most that can be made of such arguments, see Böckh, iii., 10. Our knowledge of the real use of the modes is so very imperfect, that not much reliance can be placed on them; and, at any rate, they would only prove the existence of a kind of *magadizing*, modified by taking scales of different (instead of the same) species for the two parts, so as to avoid the succession of intervals absolutely the same. This would certainly be the very lowest kind of counterpoint; but if anything more had been practised, it would be absolutely impossible to account for the utter silence of the theoretical writers, which is all but fatal, even to such a limited hypothesis. It is only necessary to add that the influence of *instruments* upon the development of the art ought to be kept in view in considering this question. The Greeks had only two kinds of instrumental music, *αὐλὴν* and *κithάριον*. The *αὐλὴν* was always a pipe pierced with holes, so as to have an artificial scale. The simple tube or trumpet does not appear to have been used as a musical instrument, so that the scale of natural harmonics was probably unknown; and this may partly account for the major third escaping observation. And anything like the *modern* system of harmony could probably no more have been invented without the assistance of keyed instruments, than the Elements of Euclid could have been composed in the total absence of drawing materials. For a fuller account of ancient musical instruments, see Böckh, iii., 11.

The chief authorities on the subject of this article are the "Antiquæ Musicæ Auctores Septem," viz., Aristoxenus, Euclid, Nicomachus, Alypius, Gaudentius, Bacchius, Aristides Quintilianus, and Martianus Capella, edited by Meibomius, in one volume (Amsterdam, 1652), to the pages of which the preceding quotations refer; the Harmonics of Ptolemy (with an Appendix by Wallis, *Op. Mathematic.*, tom. iii.); the Dialogue of Plutarch, and a section of the Aristotelic Problemata; Burney, *History of Music*; Böckh, *De Metris Pindari*; Drieberg, *Musikalische Wissenschaften der Griechen*, and *Aufschlüsse über die Musik der Griechen*; Bode, *Gesch. der Lyrisch. Dichtkunst der Hellenen* (Lips., 1838.)

MUSIC (ROMAN). It may well be believed, that in music as in the other arts, the genius of Greece had left little for Romans to do but admire and imitate. Yet we must not forget that another element had been introduced into the arts of Rome, as well as into her language and government; one which was derived from Etruria, and partook of an Oriental character. Every species of musical instrument found on Greek works of art is found also on Etruscan. No doubt the early Roman music was rude and coarse; still, from the most ancient times, mention is made of hymns and flutes in their triumphal processions: so Servius, in his *comitia*, made two whole centuries of *cornicines* and *tibicines*; and the Twelve Tables allowed at funerals ten players on the flute, and enjoined that "the praises of great men should be sung in mournful songs (*nemice*) accompanied by the flute."

The year B.C. 365 marks an era in Roman music by its adaptation to theatrical amusements. It is in this year we find mention of a *lectisternium*, at which actors were first brought from Etruria, who, without verses, danced in dumb show to the sound of the flute. Some time later Livy¹ mentions a curious tale of the desertion of certain Roman flute-players, who were only brought back by an amusing stratagem. We learn from Valerius Maximus² that the Roman flute-players were incorporated into

a college, and Ovid,³ speaking of their importance, says,

"Temporibus veterum tibicinis usus anorum
Magnus, et in magno semper honore fuit:
Cantabat fanis, cantabat tibia ludis,
Cantabat mœstis tibia funeribus."

Nero, as Suetonius² tells us, played on the flute, and came in a sort of triumphal procession through Italy, bearing the spoils he had won in 1800 musical contests. The same writer informs us, that the emperor, to preserve his voice, used to lie on his back with a thin plate of lead on his stomach; that he took frequent emetics and cathartics, and at last transacted all business in writing.

There does not appear to be any trace of a Roman musical system entirely distinct from the Greek. A passage in Cicero would lead us to suppose that the laws of contrast, of light and shade, of loud and soft, of swelling and diminishing, were understood by the Romans,² and another passage from Apuleius decidedly proves that the Romans had instrumental music distinct from their vocal; on both of which points there is no clear evidence to decide the question with reference to the Greeks. Still the Roman musical writers, as St. Augustin, Macrobius, Martianus Capella, Cassiodorus, and Boethius (all of whom flourished between the fourth and sixth centuries of the Christian era), did nothing to improve the science of music, and were little more than copyists of their Greek predecessors. The great improvement which the Romans introduced (rather a practical than a theoretical one) was a simplification of the musical nomenclature, effected by rejecting the arbitrary signs in use among the Greeks, and substituting for them the first fifteen letters of the Roman alphabet.⁴ This simplification they were enabled to make by a reduction of the modes: indeed, it seems very probable that this complicated system had in practice entirely fallen into disuse, as we know that the diatonic genus had usurped the place of the two other genera. (*Vid. MUSIC, GREEK.*)

Of all Latin authors, Boethius gives the most profound account of the subject. His work is a carrying out of the old Pythagorean system, and is a mere abstract speculation on the nature of music, which, viewed as one of the *quadrivium*, or four mathematical sciences, has its foundation in number and proportion. A full analysis of the work may be seen in Hawkins.⁵ It contains, 1st, an investigation into the ratios of consonances; 2d, a treatise on several kinds of proportion; 3d, a declaration of the opinions of different sects with respect to the division of the monochord and the general laws of harmony.

Before this time, St. Ambrose had introduced the practice of antiphonal singing in the church at Milan. Of the nature of the Ambrosian chant we only know that it consisted in certain progressions, corresponding with different species of the diapason. It is described as a kind of recitation, more like reading than singing.

It was by St. Gregory the Great that the octave was substituted for the tetrachord as the fundamental division of the scale. The first octave he denoted by capital letters, A, B, C, &c.; the second by small letters, a, b, c, &c.; and when it became necessary to extend the system, marked the third by small letters doubled, aa, bb, &c. There is no proof that the Romans, any more than the Greeks, had any notation with reference to time. Where vocal music was united with instrumental, the time was marked by the metre of the song: the want of a notation of time would make us doubt whether

1. (ix., 30.)—2. (ii., 5.)

1. (Fast., vi., 657.)—2. (Nero, 24.)—3. (De Orat., iii., 44.)—4. (Hawkins, vol. i., p. 279.)—5. (i., p. 338.)

any but a very simple style of merely instrumental music prevailed among them.¹

For a general account of ancient music, the reader is referred to the previous article.

MUSIVUM OPUS. (*Vid.* HOUSE, ROMAN, p. 520.)

*MUSMON (μοῦσμων), an animal noticed by Strabo, and said to be engendered between a she-goat and a ram. Others held it to be what is now called the *Mouflon* of Sardinia and of Corsica, the original of our sheep, or, according to Aldrovandi, the Spanish Sheep.²

MUSTAX (μύσταξ), Mustaches. The different parts of the beard (*vid.* BARBA) had different names, which also varied with its age and appearance. The young beard, first appearing on the upper lip, was called ὑπὴνη, or ὑπὴνη πρώτη,³ and the youth just arrived at puberty, who was graced with it, was πρῶτον ὑπὴνητης.⁴ By its growth and development it produced the mustaches, which the Greeks generally cherished as a manly ornament.⁵ To this practice, however, there seems to have been one exception. The Spartan ΕΡΗΟΡΙ, when they were inducted, made a proclamation requiring the people "to shave their mustaches and obey the laws." For what reason they gave the former command does not appear.⁶

*MUSTELA (γαλῆ), the Weasel. Pliny speaks of two kinds, the tame or domestic, answering to the γαλῆ, and the wild, or ἰκτίς. "There is considerable difficulty, however," remarks Adams, "in determining exactly what the *Ictis* of the Greeks and Romans was. Schneider, in his commentary on Nicander, pronounces it to be the Ferret; but in his edition of Aristotle's Natural History, he decides, upon the authority of Cetti, an Italian, that the *Ictis* is a peculiar species of the Ferret, which the Sardinians call *Baccamele*, namely, the *Mustela furo*."⁷

MUTATIONES. (*Vid.* MANSIO.)

MUTUUM. The *mutui datio* is mentioned by Gaius as an instance of an obligatio "*quæ re contrahitur*." It exists when things "*quæ pondere numero mensuræ constant*," as coined money, wine, oil, corn, æs, silver, gold, are given by one man to another so as to become his, but on the condition that other things of a like kind shall be returned. If the condition is that the same thing shall be returned, it is not *mutuum*. (*Vid.* COMMODATUM.) Inasmuch as the thing was in this case so given as to become the property of the receiver, the Roman jurists were led to the absurdity of saying that *mutuum* was so called for this reason (*quod ex meo tuum fit*). This contract was the foundation of a certio conditio to the lender, provided he was the owner of the things, and had the power of alienation: otherwise he had no action till the things were consumed. If the borrower lost the things by any accident, as fire, shipwreck, &c., he was still bound: the reason of which clearly was, that by the *mutui datio* the things became his own. The lender could have no interest from the borrower, unless interest had been agreed on, or unless there was delay in returning the thing. The borrowing by way of *mutuum* and at interest are opposed by Plautus.⁸ The *senatus consultum Macedonianum* did not allow a right of action to a lender against a *filiusfamilias*

to whom he had given money "*mutua*," even after the death of the father.¹

*MYAGRUM (μυάγρον), a plant, which Hardouin and Stephens refer to a species of *Camelina*, and which Sprengel, accordingly, holds to be the *Camelina sativa*, Crantz. The English name for the *Myagrum* of Linnaeus is, according to Adams, "Gold of Paradise," and Hooker, he says, calls this plant the *Camelina sativa*.²

*MYAX (μυᾶξ), a term applied more especially to the *Mytilus edulis*, or common Mussel, but which appears to have a more extensive application.³

*MYLLÆ (μύλλαι). "The *Pyrite* and *Molares*," says Sir John Hill, "are masses of mineral, saline, and sulphureous matter, either in detached pieces of different figures and textures, or in whole veins." They also, as Adams remarks, often contain gold, silver, copper, and iron in small quantities.⁴

*MYOPS (μύωψ). (*Vid.* CESTRUS.)

*MYOSOTIS (μυοσώτις), a plant, of which Dioscorides describes two species. The first of these Sprengel supposes to have been the *Parietaria cretica*. The other he decides to be the well-known plant called "Forget-me-not," or *Myosotis palustris*.⁵

*MYRICA (μυρίκη), the Tamarisk. "Stack-house," observes Adams, "sets down the *μυρίκη* of Theophrastus as being the *Myrica cordifolia*. Sprengel, Schneider, and Dierbach agree in holding it to be the *Tamarix Gallica*, or French tamarisk-tree. Linnaeus makes a distinction between the *Myrica* and *Tamarix*, although Pliny had acknowledged them as synonymous. Damm contends that the notices of the *μυρίκη* in Homer indicate that it must have been '*arboris speciem non nimis humilem*.' I can find nothing, however, in these passages of Homer which would lead me to doubt of its applicability to the French tamarisk, a shrub which grows to about 20 feet in height."⁶

*MYRMEX (μύρμηξ), a term applicable both to the *Formica fusca*, or common Ant, and to the *Formica rufa*, or Pismire. Dodwell gives an interesting account of the Herculean Ant, with which the gardens at Athens abound, and which are employed as a means of exterminating the small red ant that infest the orange and lemon trees.⁷

*MYRUS (μύρος), the *Myrrina Myrus*, or *M. aphis*, L., a species of Murey or Eel. Rondelet says it wants the spots and scales of the *Muræna*: this accords with Aristotle's description of it.⁸

MYSTIA (Μυσία), a festival celebrated by the inhabitants of Pellene, in Achaia, in honour of Demeter Mysia. The worship of this goddess was introduced at Pellene from a place called Mysia, in the neighbourhood of Argos.⁹ The festival of the Mysia near Pellene lasted for seven days, and the religious solemnities took place in a temple surrounded by a beautiful grove. The first two days men and women took part in the celebration together; on the third day the men left the sanctuary, and the women, remaining in it, performed during the night certain mysterious rites, during which not even male dogs were allowed to remain within the sacred precincts. On the fourth day the men returned to the temple, and men and women now received each other with shouts of laughter, and assailed each other with various raileries.¹⁰ Other particulars are not known.

MYSTAE (μύσται). (*Vid.* ELEUSINIA.)

MYSTERIA. As each mystery or mystic festival is described in a separate article, a few general observations will only be required under this head. The names by which they were designated in Greece are *μυστήρια*, *τελεραί*, and *ὄργια*. The name *ὄργια* (from *ὄργα*) originally signified only sacrifices accompanied by certain ceremonies, but it was afterward applied especially to the ceremonies observed in the worship of Dionysus, and, at a still later period, to mysteries in general.¹ *Τελετή* signifies, in general, a religious festival,² but more particularly a lustration or ceremony performed in order to avert some calamity either public or private.³ *Μυστήριον* signifies, properly speaking, the secret part of the worship, but it was also used in the same sense as *τελετή*, and for mystic worship in general.

Mysteries, in general, may be defined as sacrifices and ceremonies which took place at night, or in secret, within some sanctuary, which the uninitiated were not allowed to enter. What was essential to them were objects of worship, sacred utensils, and traditions with their interpretation, which were withheld from all persons not initiated. We must, however, distinguish between mysteries properly so called, that is, such in which no one was allowed to partake unless he had undergone a formal initiation, and the mystic ceremonies of certain festivals, the performance of which, though confined to particular classes of persons or to a particular sex, yet did not require a regular initiation. Our attention in this article will be confined to the mysteries properly so called.

It appears to have been the desire of all nations of antiquity to withhold certain parts of their religious worship from the eyes of the multitude, in order to render them the more venerable.⁴ But that the ancient mysteries were nothing but the impositions of priests, who played upon the superstitious and ignorant, is an opinion which, although entertained by Limburg-Brouwer, the latest writer on the subject,⁵ certainly cannot satisfy those who are accustomed to seek a more solid and vital principle in all religious institutions that have ever had any lasting influence upon mankind. The persons united and initiated to celebrate the mysteries in Greece were neither all priests, nor did they belong to the ignorant and superstitious classes of society, but they were, on the contrary, frequently the most distinguished statesmen and philosophers. It has been remarked under ELEUSINIA (p. 396), that it is far more probable that the mysteries in the various parts of Greece were remains of the ancient Pelasgian religion. The associations of persons for the purpose of celebrating them must therefore have been formed at the time when the overwhelming influence of the Hellenic religion began to gain the upper hand in Greece, and when persons who still entertained a reverence for the worship of former times united together, with the intention of preserving and upholding among themselves as much as possible of the religion of their forefathers. It is natural enough that they formed themselves, for this purpose, into societies, analogous to the brotherhoods in the Church of Rome,⁶ and endeavoured to preserve against the profanation of the multitude that which was most dear to them. Hence the secrecy of all the Greek mysteries, and hence the fact that the Greek mysteries were almost invariably connected with the worship of the old Pelasgian divinities. The time when mysteries were established as such must have been after the great changes and

disturbances produced by the Dorian migration, although tradition referred their institution to Orpheus, the Curetes, the Idæan Dactyles, Dionysus, &c., who belong to a much earlier period. These traditions, however, may in so far be regarded as true, as the mysteries were only a continuation and propagation of the ancient religion. It must, however, be admitted, that in subsequent times new elements were added to the mysteries which were originally foreign to them. The development of philosophy, and, more especially, the intercourse with the East and with Egypt, appear to have exercised a considerable influence upon their character.

The most celebrated mysteries in Greece were those of Samothrace and Eleusis. (*Vid.* CABBIRIA, ELEUSINIA.) But several other places and divinities had their peculiar mysteries, *e. g.*, the island of Crete those of Zeus;¹ Argolis those of Hera;² Athens those of Athena and Dionysus³ (*vid.* DIONYSIA); Arcadia those of Artemis;⁴ Ægina those of Hecate.⁵ But not only the worship of the great gods, but also that of some ancient heroes was connected with mysteries.⁶

The benefits which the initiated hoped to obtain were security against the vicissitudes of fortune, and protection from dangers both in this life and in the life to come. The principal part of the initiation, and that which was thought to be most efficacious in producing the desired effects, were the lustrations and purifications, whence the mysteries themselves are sometimes called *καθάρσια* or *καθαρμοί*.

Offences against and violations of the mysteries were at Athens under the jurisdiction of the archon king, and the court, in such cases, only consisted of persons who were themselves initiated (*μεμνημένοι*), and were selected from the *heliastæ* for the purpose.⁷ Even in cases which were brought before an ordinary court, the judges were only initiated persons, if the case had any connexion with the mysteries.⁸ That no one but the initiated might hear the transactions in such a case, the court was surrounded by public slaves, to keep all profane persons at a distance.⁹

The Roman religion had no such mysteries as that of the Greeks, but only mystic rites and ceremonies connected with the celebration of certain festivals. The Bacchanalia were of foreign origin, and of short duration. (*Vid.* DIONYSIA.)

A very full account of the Greek mysteries is given by Limburg-Brouwer, *Hist. de la Civilisat. Mor. et Relig. des Grecs*, tom. iv., p. 180–415, and chapter xxvi. of the same work contains a useful survey of the various opinions upon the subject which have been entertained by modern scholars and philosophers.

***MYSTICETUS** (*μυστικητος*). "This term occurs in the common editions of Aristotle's Natural History, and hence Linnæus calls the common whale *Balæna Mysticetus*. Schneider, however, reads *μῦς τὸ κῆτος*. It is the *Musculus* of Pliny.¹⁰

MYSTRUM (*μύστρον*), a Greek liquid measure, of which there were two sizes, called the large and small mystrum. The small, which was the more common of the two, was $\frac{1}{4}$ th of the cotyla, and $\frac{1}{4}$ th of the cyathus, and therefore contained .0208 of an English pint.¹¹ Galen adds that the smaller mystrum contained 2½ drachms; that the larger was $\frac{1}{4}$ th of the cotyla, and contained 3½ drachms; but that the most exact mystrum (*τὸ δικάϊστον μύστρον*)

1. (Lobeck, *Aglaophamus*, i., p. 305.)—2. (Aristot., *Rhet.*, ii., 24.—*Pind.*, *Nem.*, x., 63.)—3. (Plato, *De Rep.*, ii., p. 264, E.)—4. (Strabo, p. 717.)—5. (*Histoire de la Civilisation Morale et Relig. des Grecs*, tom. iv., p. 199.)—6. (Porphy., *De Abstin.*, iv., 5.)

1. (Strabo, p. 718.—Athen., ix., 18.)—2. (Paus., ii., 38, § 2.)—3. (Plut., *Alcib.*, 34.)—4. (Paus., viii., 23, § 3.)—5. (Paus., ii., 30, § 2.)—6. (Paus., iv., 34, § 6.—*Id.* ib., ii., 1.—*Id.* ib., ii., 30, § 5.—*Herod.*, v., 83.)—7. (Pollux, *Onom.*, viii., 141.)—8. (Andocid., *De Myst.*, p. 14.)—9. (Pollux, *Onom.*, viii., 123.)—10. (Adams, *Append.*, s. v.—*Plin.*, H. N., xi., 37.)—11. (Galen, *Frag.*, c. 15.)

held 8 scruples, that is, 2½ drachms. According to this, the small mystrum would be ⅓ths of the larger. But in the 13th chapter of the same fragment he makes the large mystrum = ⅓d of the cotyla, and the small mystrum ⅓th of the large. In c. 4 he makes the large mystrum = 3 oxybapha, and the small = 1½d. Cleopatra makes the large = ⅓th of the cotyla, the small = ⅓d.¹

*MYZON or MYXON (μύζων, μύξων), a variety of the Mullet. Artdi calls it *Chylon Myzo anthorum*.²

N

NÆTIA. (Vid. FUNUS, p. 459.)

*NAPY (νάπυ), a term applied by Theophrastus, Galen, and others to the *Sinapis nigra*, or common Mustard. Dr. Milligan, however, in his edition of Celsus, sets it down for the *Sinapis alba*, or White Mustard.³

*NARCISSUS (νάρκισσος), a plant. The name is especially referable to the *Narcissus poeticus*, or Daffodil, but it was most probably applied on some occasions to other species.⁴

*NARDUS (νάρδος). "By Nard," says Dr. Harris, "was meant a highly aromatic herb, growing in the Indies, and called *Nardostachys* by Dioscorides and Galen." It is fully described by Moses Charas. "That the ancient Nards were Valerians, is now," remarks Adams, "universally admitted. Sprengel shows that the Indian Nard of the ancients was the species of Valerian called *Patrinia Jatamansi*, Don. The νάρδος Κελτικὴ is referable to the *Valeriana Celtica* and *Saluicna*, All. The νάρδος ὀρεία is the species now called *Valeriana tulerosa*. Tournefort named it *V. maxima Pyrcnatica*.⁵

*NARCE (νέρκη). (Vid. TORPEDO.)

*NARTHEX. (Vid. FERULA.)

NATALITI LUDI. (Vid. LUDI NATALITI.)

NATALIBUS RESTITUTIO. (Vid. INGENUI.)

NATATIO, NATATORIUM. (Vid. BATHS, p. 148).

NAVALIA were docks at Rome where ships were built, laid up, and refitted. They were attached to the emporium outside of the Porta Trigemina, and were connected with the Tiber.⁶ The emporium and navalia were first included within the walls of the city by Aurelian.⁷

The docks (νεώσοικοι or νεώρια) in the Piræus at Athens cost 1000 talents; and having been destroyed in the anarchy by the contractors for three talents, were again restored and finally completed by Lycurgus.⁸ They were under the superintendence of regular officers called ἐπιμεληταὶ τῶν νεωρίων. (Vid. EPIMELETAI, 5.)

NAVALIS CORONA. (Vid. CORONA, p. 310.)

NAVARCHUS (ναύαρχος) is the name by which the Greeks designated both the captain of a single ship and the admiral of a fleet. The office itself was called ναυαρχία. The admiral of the Athenian fleet was always one of the ten generals (στρατηγοί) elected every year, and he had either the whole or the chief command of the fleet.⁹ The chief officers who served under him were the trierarchs and the pentecontarchs, each of whom commanded one vessel; the inferior officers in the vessels were the κυβερνήται, or helmsmen, the κελενσταί, or commanders of the rowers, and the πρωρίται, who must have

been employed at the prow of the vessels.¹ (Compare STRATEGOS.)

Other Greek states who kept a navy had likewise their navarchs. A Spartan navarchus is mentioned by Xenophon,² and under him served an officer called ἐπιστολεύς.³ The navarchia of Sparta, however, was an innovation of later times, when the Spartans had acquired a fleet and possessions in foreign countries. The office was distinct from that of the kings, and Aristotle⁴ calls it σχεδὸν ἑτέρα βασιλεία.⁵

The navarchus in Rhodes seems to have been their chief military officer. We find him authorized to conclude treaties with foreign nations,⁶ and sent on embassies in the name of the Republic.⁷

NAUCRA'RIA (ναυκραρία) is the name of a division of the inhabitants of Attica. The four Attic phylæ were each divided into three phratries, and each of these twelve phratries into four naucraries, of which there were thus forty-eight. This division is ascribed to Solon;⁸ but Herodotus,⁹ in relating the insurrection of Cylon, mentions magistrates at Athens called πρυτάνεις τῶν ναυκράρων, so that the naucraries must have existed long before Solon. There is, however, some difficulty connected with this passage of Herodotus, inasmuch as Thucydides,¹⁰ in relating the same event, mentions the nine archons instead of the prytanes of the naucraries. Wachsmuth¹¹ endeavours, very ingeniously, to reconcile Herodotus and Thucydides, by supposing that the prytanes of the naucraries were the same as the trittarchs, the assessors of the first archon, and were thus identified by Thucydides with the archons themselves. What the naucraries were previous to the legislation of Solon is not stated anywhere, but it is not improbable that they were political divisions similar to the demes in the constitution of Cleisthenes, and were made, perhaps, at the time of the institution of the nine archons, for the purpose of regulating the liturgies, taxes, or financial and military affairs in general.¹² Tittmann,¹³ moreover, supposes, with some probability, that they were, like the demes of Attica, local divisions. Hence the grammarians inform us that ναύκραρος, or the chief officer of every naucrary, was the same as the demarch. At any rate, however, the naucraries before the time of Solon can have had no connexion with the navy, and the word ναύκραρος cannot be derived from ναῦς, a ship, but from ναῖω, and ναύκραρος is only another form for ναυκλήριος in the sense of a householder, as ναῦλον was used for the rent of a house.¹⁴

Solon, in his legislation, thus only retained the old institution of the naucraries. His innovation probably was, that he charged each of them with the equipment of one trireme and with the mounting of two horsemen.¹⁵ All military affairs, as far as regards the defraying of expenses, probably continued, as before, to be regulated according to naucraries. Cleisthenes, in his change of the Solonian constitution, retained the division into naucraries for military and financial purposes,¹⁶ but he increased their number to fifty, making five of each of his ten tribes, so that now the number of their ships was increased from forty-eight to that of fifty, and that of horsemen from ninety-six to one hundred. The statement of Herodotus,¹⁷ that the Athenians, in their war against Ægina, had only fifty ships of their own,

is thus perfectly in accordance with the fifty naucraries of Cleisthenes. The functions of the former *ναύκαραι*, as the heads of their respective naucraries, were now transferred to the demarchs. (*Vid.* DEMARCHI.)¹ The obligation of each naucrary to equip a ship of war for the service of the Republic may be regarded as the first form of trierarchy.² As the system of trierarchy became developed and established, this obligation of the naucraries appears to have gradually ceased and to have fallen into disuse. (Compare TRIERARCHIA.)

NAUCRAROS. (*Vid.* NAUCRARIA.)

NAVES. (*Vid.* SHIPS.)

NAUMACHIA was the name given to the representation of a seafight among the Romans, and also to the place where such engagements took place. These fights were sometimes exhibited in the circus or amphitheatre, sufficient water being introduced to float ships, but more generally in buildings especially devoted to this purpose. The first representation of a seafight on an extensive scale was exhibited by Julius Cæsar, who caused a lake to be dug for the purpose in a part of the Campus Martius, called by Suetonius the "Lesser Code-ta."³ This lake was afterward filled up in the time of Augustus, on account of the malaria arising from the stagnant water in it.⁴ Augustus also dug a lake (*stagnum*) near the Tiber for the same purpose, and planted around it a grove of trees (*nemus*).⁵ This naumachia was the first permanent one; it continued to be used after others had been made, and was subsequently called the "vetus naumachia."⁶ Claudius exhibited a magnificent seafight on the lake Fucinus.⁷ Nero appears to have preferred the amphitheatre for these exhibitions.⁸ Domitian made a new naumachia, and erected a building of stone around it, in which the spectators might sit to see the engagement.⁹ Representations of naumachia were sometimes given on the coins of the emperors.¹⁰

The combatants in these seafigths, called *Naumachiarii*,¹¹ were usually captives,¹² or criminals condemned to death,¹³ who fought, as in gladiatorial combats, until one party was killed, unless preserved by the clemency of the emperor. The ships engaged in the seafigths were divided into two parties, called respectively by the names of different maritime nations, as Tyrians and Egyptians,¹⁴ Rhodians and Sicilians,¹⁵ Persians and Athenians,¹⁶ Corycæans and Corinthians, Athenians and Syracusans, &c.¹⁷ These seafigths were exhibited with the same magnificence and lavish expenditure of human life as characterized the gladiatorial combats and other public games of the Romans. In Nero's naumachia there were sea-monsters swimming about in the artificial lake,¹⁸ and Claudius had a silver triton placed in the middle of the lake Fucinus, who was made, by machinery, to give the signal for attack with a trumpet.¹⁹ Troops of Nereids were also represented swimming about.²⁰ In the seafigth exhibited by Titus there were 3000 men engaged,²¹ and in that exhibited by Domitian the ships were almost equal in number to two real fleets (*pene justæ classes*).²² In the battle on the

lake Fucinus there were 19,000 combatants,¹ and fifty ships on each side.²

NAUTA. (*Vid.* EXERCITORIA ACTIO.)

NAUTICON (*ναυτικόν*). (*Vid.* INTEREST OF MONEY, p. 545.)

*NAUTILUS (*ναυτίλος*). This shell-fish is graphically described by Aristotle, Oppian, and Philé. It is the *Argonauta Argo*, L., or the Paper Nautilus.

NAUTODICÆA (*ναυτοδικαί*) are called *ἀρχαί* or *magistratus* by most of the ancient grammarians,³ while a few others call them *δικασταί*.⁴ The concurrent authority of most of them, together with a passage of Lysias,⁵ the only Attic orator who mentions the *nautodicæ*, renders it more than probable that they were a magistracy. This can be the less doubtful, as the words *δικάζειν* and *δικασταί* are sometimes used of magistrates in their capacity of *εἰσαγωγεῖς*.⁶ (*Vid.* ΕΙΣΑΓΩΓΕΙΣ.) All testimonies of the ancients, however, agree that the *nautodicæ* had the jurisdiction in matters belonging to navigation and commerce, and in matters concerning such persons as had entered their names as members of a *phratia* without both their parents being citizens of Athens, or, in other words, in the *δικαί ἐμπόρων* and *δικαί ξενίας*. The time when *nautodicæ* were first instituted is not mentioned, but the fact that they had the jurisdiction in cases where a person had assumed the rights of a *phrator*, without his father and mother being citizens, shows that their institution must belong to a time when it was sufficient for a man to be a citizen if only his father was a citizen, whatever his mother might be, that is, previous to the time of Pericles⁷ (compare CIVITAS, p. 259), and perhaps as early as the time of Cleisthenes. The *nautodicæ* were appointed every year by lot in the month of Gamelion, and probably attended to the *δικαί ἐμπόρων* only during the winter, when navigation ceased, whereas the *δικαί ξενίας* might be brought before them all the year round.

It is a well-known fact, that the two actions (*δικαί ἐμπόρων* and *δικαί ξενίας*) which we have here assigned to the *nautodicæ* belonged, at least at one time, to the *thesmothetæ*.⁸ Several modern writers, such as Böckh, Baumstark, and others, have, therefore, been led to suppose, that all the grammarians who call the *nautodicæ* *ἀρχαί* are mistaken, and that the *nautodicæ* were not *εἰσαγωγεῖς* in the cases above mentioned, but *δικασταί*. But this mode of settling the question does not appear to us to be as satisfactory as that adopted by Meier and Schömann.⁹ In all the speeches of Demosthenes, no trace occurs of the *nautodicæ*; and in the oration against *Lacritus*,¹⁰ where all the authorities are mentioned before whom such a case as that of *Lacritus* might be brought, the orator could scarcely have failed to mention the *nautodicæ*, if they had still existed at the time. It is, therefore, natural to suppose that the *δικαί ἐμπόρων*, at the time of Philip of Macedonia, when they became *δικαί ἑμμενοί* (*vid.* ΕΜΜΗΝΟΙ ΔΙΚΑΙ), were taken from the *nautodicæ* and transferred to the *thesmothetæ*. And as the Republic could not now think it any longer necessary to continue the office of *nautodicæ* merely on account of the *δικαί ξενίας*, these latter were likewise transferred to the *thesmothetæ*, and the office of the *nautodicæ* was abolished. The whole period during which *nautodicæ* existed at Athens would thus comprehend the time from the legislation of Cleisthenes, or soon after, to Philip of Macedonia. One difficulty, however, yet remains, for *nautodicæ* are mentioned by *Lucian*¹¹ in a dialogue

which the author represents as having taken place after the death of Alexander. Those who are unwilling to believe that Lucian here, as in other places, has been guilty of an anachronism, must suppose that the nautodicae were, after their abolition, restored for a time, of which, however, there is no other evidence.¹

NEBRIS, a Fawn's Skin (from νεβρός, a fawn: *vid. Aëgis*), worn originally by hunters and others as an appropriate part of their dress, and afterward attributed to Bacchus,² and, consequently, assumed by his votaries in the processions and ceremonies which they observed in honour of him.³ (*Vid. Dionysia*, p. 363, 365.) The annexed woodcut, taken from Sir Wm. Hamilton's *Vases*,⁴ shows a priestess of Bacchus in the attitude of offering a nebris to him or to one of his ministers. The works of ancient

art often show it as worn not only by male and female bacchanals, but also by Pans and Satyrs. It was commonly put on in the same manner as the aëgis or goatskin, by tying the two fore legs over the right shoulder so as to allow the body of the skin to cover the left side of the wearer.⁵ In the Dionysiac processions, the fawn's skin worn by the god, besides its natural spots, which were greatly admired, was enriched with gems.⁶

*NEBRITES (*νεβρίτης*), a precious stone, mentioned in the Orphic poem. De Laet supposes it either an agate or a jasper.⁷

NEFASTI DIES. (*Vid. Dies*, p. 362.)

NEGATIVA, NEGATORIA ACTIO. (*Vid. CONFESSORIA ACTIO*.)

NEGOTIORUM GESTORUM ACTIO. This was an action which a man might have against another who had managed his affairs for him in his absence, without being commissioned to do so (*sine mandato*). The action was not founded either on contract or delict, but was allowed for convenience' sake (*utilitatis causa*). The person whose business was transacted by another, and the person who transacted the business, might severally have an action against one another in respect of that which "*ex bona fide alterum alteri præstare oportet*." The

action of the self-constituted agent was sometimes called *contraria*, by analogy to similar actions in other cases. He was bound to make good any loss that was incurred during his administration by *dolus* or *culpa*, and in some instances even loss that had been incurred by *casus*. On the other hand, he had his action for all expenses properly incurred, and in some cases even if the result was unfortunate to the absent person; as if he paid for medical attendance on a sick slave, and the slave died, notwithstanding all his care: but various difficulties might easily be suggested as to such cases as these,¹ and the rule must be qualified by the condition of the thing undertaken being a thing profitable (to the owner) to be undertaken, though the result might be unprofitable.²

NEKRODEIPNON. (*Vid. FUNUS*, p. 458.)

NEKROTHAPTAI. (*Vid. FUNUS*, p. 459.)

NEKUSIA. (*Vid. FUNUS*, p. 458.)

NEMEAN GAMES (*νέμεα*, *νεμεία*, or *νεμαία*), one of the four great national festivals of the Greeks. It was held at Nemea, a place near Cleonæ in Argolis. The various legends respecting its origin are related in the argumenta of the scholiasts to the Nemea of Pindar, with which may be compared Pausanias³ and Apollodorus.⁴ All these legends, however, agree in stating that the Nemea were originally instituted by the Seven against Thebes in commemoration of the death of Opheltes, afterward called Archemorus. When the Seven arrived at Nemea, and were very thirsty, they met Hypsipyle, who was carrying Opheltes, the child of the priest of Zeus and of Eurydice. While she showed to the heroes the way to the nearest well, she left the child behind, lying in a meadow, which, during her absence, was killed by a dragon. When the Seven, on their return, saw the accident, they slew the dragon, and instituted funeral games (*ἄγων ἐπιτάφιος*), to be held every third year (*τριετηρικός*). Other legends attribute the institution of the Nemean games to Heracles, after he had slain the Nemean lion; but the more genuine tradition was that he had either revived the ancient games, or, at least, introduced the alteration by which they were from this time celebrated in honour of Zeus. That Zeus was the god in honour of whom the games were afterward celebrated, is stated by Pindar.⁵ The games were at first of a warlike character, and only warriors and their sons were allowed to take part in them; subsequently, however, they were thrown open to all the Greeks (*δημοτικὴν πλῆθος συνέδραμε*). The games took place in a grove between Cleonæ and Phlius.⁶ The various games, according to the enumeration of Apollodorus,⁷ were horse-racing, running in armour in the stadium,⁸ wrestling, chariot-racing and discus, boxing, throwing the spear and shooting with the bow, to which we may add musical contests.⁹ The scholiasts on Pindar describe the *agôn* very imperfectly as *ἵππικός* and *γυμνικός*. The prize given to the victors was at first a chaplet of olive-branches, but afterward a chaplet of green parsley. When this alteration was introduced is not certain, though it may be inferred from an expression of Pindar,¹⁰ who calls the parsley (*σέλινον*) the *βοράνα λεόντος*, that the new prize was believed to have been introduced by Heracles. The presidency at these games, and the management of them, belonged at different times to Cleonæ, Corinth, and Argos, and from the first of these places they are sometimes called *ἄγων Κλεωναίος*. The judges who awarded the prizes were dressed in black robes,

and an instance of their justice, when the Argives presided, is recorded by Pausanias.¹

Respecting the time at which the Nemean games were held, the scholiast on Pindar² merely states that they were held on the 12th of the month of Panemus, though in another passage he makes a statement which upsets this assertion. Pausanias³ speaks of winter Nemea, and manifestly distinguishes them from others which were held in summer. It seems that for a time the celebration of the Nemea was neglected, and that they were revived in Ol. 53, 2, from which time Eusebius dates the first Nemead. Henceforth it is certain that they were for a long time celebrated twice in every Olympiad, viz., at the commencement of every second Olympic year in the winter, and soon after the commencement of every fourth Olympic year in the summer. This has been shown by Böckh in an essay *über die Zeitverhältnisse der Demosth. Rede gegen Midias*, in the transactions of the Berlin Acad., 1818, 1819.—*Histor. Philol. Klasse*, p. 92, &c.—Compare Ideler, *Handb. der Chronol.*, ii., p. 606, &c. About the time of the battle of Marathon, it became customary in Argolis to reckon according to Nemeads.

In 208 B.C., Philip of Macedonia was honoured by the Argives with the presidency at the Nemean games,⁴ and Quinctius Flaminus proclaimed at the Nemea the freedom of the Argives.⁵ The Emperor Hadrian restored the horse-racing of boys at the Nemea, which had fallen into disuse. But after this time they do not seem to have been much longer celebrated, as they are no longer mentioned by any of the writers of the subsequent period.⁶

NE'NIA. (*Vid.* FUNUS, p. 459.)

NEO'COROI. (*Vid.* EDITUI.)

NEODAMO'DEIS. (*Vid.* CIVITAS, GREEK, p. 260; *Idolotes*, p. 492.)

NEO'RIA, NEOISOIKOI. (*Vid.* NAVALIA.)

*NEPENTHES (*νήπενθες*). Among the many conjectures which have been started concerning the *Nepenthes*, that one appears very plausible which supposes it to have been *Opium*, or the juice of the *Papaver somniferum*.⁷

NEPTUNA'LIA, a festival of Neptune, celebrated at Rome, of which very little is known.⁸ The day on which it was held was probably the 23d of July. In the ancient calendar this day is marked as *Nept. ludi et feriae*, or *Nept. ludi*, from which we see that the festival was celebrated with games. Respecting the ceremonies of this festival, nothing is known except that the people used to build huts of branches and foliage (*umbrae*), in which they probably feasted, drank, and amused themselves.¹⁰

*NER'ION (*νήριον*) the *Nerium oleander*, or Rose-bay. The modern Greek name is *πικροδάφνη*. Sibthorp says it is very common throughout Greece, and that it marks the torrent-bed and fringes the banks of the Ilissus. The flowers are used as an ornament, and cover the bazar at Athens. The leaves boiled, or the dried leaves powdered, are employed as remedies for the itch; boiled in oil, they serve as a liniment for rheumatic pains. In Cyprus it retains the ancient name of *ροδοδάφνη*, and the Cypriotes adorn their churches with the flowers on feast-days.¹¹

*NERITES (*νήριτης*). According to Rondelet and Gesner, the *νήριτης* of Aristotle is a species of

Concha, whereas that of Ælian is a species of *Cochlea*; the *C. Nerite*, as Adams thinks, of Linnæus. It is called the Sea-snail.¹

NEXI. (*Vid.* NEXUM.)

NEXUM is defined by Manilius to be "*omne quod per libram et as geritur, in quo sint Mancipi*." Mucius Scævola has a different definition: "*quæ per as et libram fiant ut obligentur, præterquam quæ Mancipio dantur*." Varro,² who has preserved both these definitions, prefers the latter, as being consistent with the etymology of the word: "*quod obligatur per libram, neque suum sit, inde Nexum dicitur*." As an illustration, he adds: "*Liber qui suas operas in servitutem pro pecunia quam debeat dat, dum solveret, nexus vocatur, ut ab ære obærat*." The difference in these definitions arises solely from the different aspect under which the nexum is viewed. Every nexum was in the form of a sale, and, consequently, viewed as to its formal part, nexum comprehended Mancipium. The testamenti factio was also included under nexum. Viewed as to its object and legal effect, nexum was either the transfer of the ownership of a thing, or the transfer of a thing to a creditor as a security: accordingly, in one sense, nexum included Mancipium, as explained in Mancipium; in another sense, Mancipium and nexum are opposed in the same way in which sale and mortgage or pledge are opposed. The formal part of both transactions consisted in a transfer per as et libram. This explanation is consistent with the definitions of the jurists and the uses of these two words.

The person who became nexum by the effect of a nexum or nexum (for this form of the word also is used) was said nexum inire.³ The phrases nexi datio, nexi liberatio, respectively express the contracting and the release from the obligation.

The Roman law as to the payment of borrowed money (*pecunia certa credita*)⁴ was very strict. A curious passage of Gellius⁵ gives us the ancient mode of legal procedure in the case of debt, as fixed by the Twelve Tables. If the debtor admitted the debt, or had been condemned in the amount of the debt by a judex, he had thirty days allowed him for payment. At the expiration of this time he was liable to the manus injectio (*vid.* MANUS INJECTIO), and ultimately to be assigned over to the creditor (*addictus*) by the sentence of the prætor. The creditor was required to keep him for sixty days in chains, during which time he publicly exposed the debtor on three nundinæ, and proclaimed the amount of his debt. If no person released the prisoner by paying the debt, the creditor might sell him as a slave or put him to death. If there were several creditors, the letter of the law allowed them to cut the debtor in pieces, and to take their share of his body in proportion to their debt. Gellius says that there was no instance of a creditor ever having adopted this extreme mode of satisfying his debt. But the creditor might treat the debtor, who was addictus, as a slave, and compel him to work out his debt; and the treatment was often very severe.

It is remarkable, that in this passage Gellius does not speak of nexi, but only of addicti; which is sometimes alleged as evidence of the identity of nexum and addictus, but it proves no such identity. If a nexum is what he is here supposed to be, the law of the Twelve Tables could not apply; for when a man had once become nexum with respect to one creditor, he could not become nexum to another; and if he became nexum to several at once, in this case the creditors must abide by their contract in taking a joint security. This law of the Twelve Tables only applied to the case of a debtor

1. (Adams, *Append.*, s. v.)—2. (*De Ling. Lat.*, vi., 5.)—3. (Liv., vii., 19.)—4. (*Vid.* *Lex Gall. Cisalp.*, 21, 22.)—5. (xii., 1.)

being assigned over by a judicial sentence to several creditors, and it provided for the settlement of their conflicting claims. The distinction between a *nexum* and a *res iudicata* is obvious enough, though some writers have missed it.

The precise condition of a *nexum* has, however, been a subject of much discussion among scholars, and it is not easy to reconcile all the passages in which the term occurs so as to deduce from them a consistent view of the matter. Sometimes, indeed, *nexum* appears to be used in the same sense as *addictus*, which cannot cause any difficulty if we consider that the effect of being *nexum* and *addictus* was the same, as will presently be made probable.

As a *nexum* was effected *per æs et libram*, it was in the form of a sale, and, of course, there was an object of sale; and this object of sale might be a thing or a person. A free man could not properly be the object of a sale, but it requires only a slight acquaintance with Roman law to perceive that this difficulty could be got over by a fiction. As in the case of manumission *per vindictam* there was a fiction that the slave was free, so there might here be a fiction that the freeman was a slave. And if this is not admitted as a probable solution, it cannot be denied that there is as much difficulty in understanding the *coemptio* of a female, who was *sui iuris*, which, as a legal fact, is quite certain, as the formal sale of a freeman with his consent. The notion of a freeman giving himself into the power of another, so far from being foreign to the notions of Roman law, as some writers have asserted, is perfectly consistent with them, as we see in the instance of *adrogation*. The *nexum*, then, being in the form of a sale, the *nexum* was in a servile condition as a necessary consequence of the *nexum*, and the opinion that there must be an *addictio* to give effect to the *nexum* is inconsistent with the notion of the *nexum*. According to this view, a *nexum*, as soon as the contract of *nexum* was made, was in the condition of an *addictus*, and both were treated as slaves. But it has been urged that "one cannot discover any reason for this self-pledging (*nexum*), since every insolvent, even when there was no *nexum*, must become his creditor's slave (*addictus*), and how can we understand that the abolition of the *nexum* was such an advantage gained by the plebeians,¹ if the *addictio* still remained, which might be obtained when there was no *nexum*; and it cannot be denied that it did remain!" The advantage consists precisely in the difference between a contract which cannot be enforced against a person without the forms of legal proceeding, and a contract which at once gives a man a power over his debtor without any application to a court of justice. The effect of the abolition of the *nexum*, in this its special sense, while the *addictio* still existed, may be illustrated by the supposed case of a landlord's remedy for the recovery of his rent by distress being abolished, while his other remedies under the contract for letting and hiring remained.

It is remarked by Götting,² that "the comparison of the *adrogatio* and the *adoptio* gives the clearest proof of the correctness of Savigny's view, who rejects the notion of a freeman pledging himself. In the case of the *adrogatio* of a Roman, who was *sui iuris*, there was no *mancipatio* which such person could effect of himself; but in the case of *adoptio*, a *mancipatio* occurs, and it is effected by the living father and the son together. In the case of *coemptio*, it certainly appears as if the woman of herself effected a self-*mancipatio*; she, however, is not herself *auctor*, but her guardian is *auctor*."

1. (Liv., viii., 28.)—2. (Gesch. der Röm. Staatsverfassung.)

There may be some weight in this observation, the point of which appears to be this: there was *mancipatio* in the case of *adoptio*, where the adopted person was in the power of another, but no *mancipatio* in the case of *adrogation*, where the adopted person was not in the power of another. The tacit conclusion, then, seems to be, that if in one case there was no *mancipatio*, and yet a person was brought into the power of another with his own consent, there could be no *mancipatio* when a person consented to put himself into a servile relation to another; for it is here assumed that a *nexum* was voluntary. But this is not a legitimate conclusion. It is easy to see that *mancipatio* in the case of *adoptio*, where the son was in the power of the father, was a sufficient form, considering that the person adopted was only a *filiusfamilias*; and that *adrogation*, which was of a person who was *sui iuris*, was a very different matter, and required other forms to be observed, because the person *adrogated* was not a *filiusfamilias*. (*Vid. ADOPTION.*) A *nexum* effected no change of familia, like an *adoptio* or *adrogation*; and, while its object was different from that of both of these ceremonies, it is quite consistent for its form to have been the same as the form of the one, and different from the form of the other.

The mode in which Götting³ explains this matter of the *nexum* is as follows: "A free citizen can come into a *mancipii causa* when he cannot pay a loan (*as confessum*) out of his own means. What in such case he has to give security for, that to which he has bound himself, is called *nexum* (namely, *æs*); hence the phrases *nexi datio*, *nexi liberatio*. The person who does such an act is called *nexum* (from *nexus nexūs*) *iniens*, *nexum faciens*; but after he has received the loan in the above solemn manner, he is *nexu obligatus*, *nexu victus*: as soon as he has failed to fulfil his obligation, and, in consequence of such failure, has been *addicted* (*addictus*), and given in *mancipium* by the magistrate, he is called *nexus* (adjective), *qui se nexum dedit*:" a more confused account of the thing, or one more remote from legal precision, cannot be imagined.

The *lex Poetilia* (B.C. 326) alleviated the condition of the *nexi*. So far as we can understand its provisions, it set all the *nexi* free, or made them *soluti*,⁴ and it enacted that, for the future, there should be no *nexum* (*cautumque in posterum ne reciterentur*), and that no debtor should, for the future, be put in chains. *Addictio*, however, still continued in force after the *lex Poetilia*, as we see in several instances.⁵ It appears from the *lex Gallia Cisalpinæ*,⁶ that in the case of other actions there was only a *possessio bonorum*, but in the case of *pecunia certa credita* there was personal execution. The enactment of the *lex Julia*, which introduced the *bonorum cessio*, and gradual changes in society, must have diminished the frequency of the *addictio*. (*Vid. BONORUM CESSIO.*)

Neither the *addictus* nor the *nexus* was a slave, and his *ingenuitas* was only in suspense. As to the *nexum*, it must have been necessary that the effect of the legal act by which the *ingenuus* was made a *nexus* should be done away with by another legal act; and this seems to be the *nexi liberatio* which was done *per æs et libram*. It also appears, from a passage in Livy,⁷ that a certain person, who was *iudicatus pecuniæ*, and is not described as *nexus*, was released from his obligation *per æs et libram*. In the time of Gaius, an imaginary form of payment *per æs et libram* was retained in cases where the

1. (p. 123.)—2. (Liv., viii., 28, "nexi soluti.")—3. (Liv. xxiii., 14.—Sall., Cat., 33.—Cicero, Pro Flacco, 20.)—4. (c. 21, 22.)—5. (vi., 14.)

obligation was contracted either per æs et libram, or was due ex iudicati causa.¹ There seems, indeed, no reason why this ceremony should have been used in the case of an addictus who wished to be restored to his former state, for the addictio was by implication only to have an effect till the debt was paid. It might be contended that such was the effect of the nexum also; but we must distinguish between the effect of a sentence of the prætor and a solemn act like that of the nexum, which was in form a transfer of ownership. The addictus was protected against injuria from his master,² and it is said that he retained his name and tribe; but it is somewhat difficult to understand how he retained his tribe, since he had sustained infamia. Upon the discharge of his obligations, the addictus, it seems, returned to his former status.

It was Niebuhr's opinion that the nexum, when it became a form of giving security, had not its complete effect until the debtor was unable to pay, and was brought into the condition of a debtor-slave by the addictio. An answer to this is contained in a passage already quoted. If it required an addictio to make a person nexus, what was the use of a nexum when a man might become addictus, even when there was no nexum? The only intelligible solution of all these difficulties is, that a nexum had an immediate effect.

It seems to be a legal consequence of a nexum and an addictio, that the children, if they were in the power of the parent, must follow his condition, as in the case of adrogation.

In the case mentioned in Livy,³ where the son is said to have been nexus for his father's debt (*cum se nexum dedisset*), it may be that the father bound his son only, which he could certainly do just in the same way as he could mancipate him. If the son was not in his father's power, he could still bind himself on behalf of his father. The expression in Livy does not enable us to determine which of the two possible cases was the real case, but it seems probable that the son was in the power of the father.

The meaning of the provision in the Twelve Tables, as cited by Gellius, as to cutting the debtor in pieces, has been a subject of much discussion. Taylor, in his essay (*Comment. ad L. Decemviralem de Inope Debitorum in partem dissecando*), attempts to prove that Gellius misunderstood the old law, and that the words of the Twelve Tables, "*partis secanto: si plus minusve secuerint se fraude esto*," mean that the several creditors are entitled to have the "*partis*," that is, the "*operæ*" of the addictus, divided or distributed among them; and he goes on to explain the rest of the law in these terms: "*Communis sit servus eorum, qui quidem adfuerint; et sine fraude esto, si ceteri loties prociatati suas quoque partis in debitor non vindicaverint*." But the arguments of Taylor are by no means satisfactory. The conjecture that the "*partis*" are the shares of the creditors arising from the sale of the debtor, is also unsupported by any proof. This monstrous enactment, if we take it literally, shocks all our notions of humanity, but it has been well observed that it is by no means inconsistent with the spirit of the old Roman law; and the fact of an actual division of a debtor's body not being on record, is no proof against, and hardly furnishes a presumption against the existence of such a law. The Romans had no prisons for debtors. The creditor was the debtor's jailer, and we know that in the oldest time he was often a cruel keeper. When there were several creditors who claimed the body of a debtor, he might be kept by any one for the benefit of himself and the rest till the sixty days were over; but after

that time, if the creditors could not agree among themselves, there was no possible mode of settling their conflicting claims than that which the law of the Decemviri gave them, and which they might adopt if they chose. Such a law could never be carried into effect in any country, as the legislators must have well known, and thus, while its terms fully satisfied the claims of the creditors, in practice it may have turned out really favourable to the debtor. (*Vid.* the remarks of Gellius on this part of the law.) But the solution of the difficulty is quite a different matter from the fact of its existence, which is in no way to be questioned because we cannot explain it.

The various authorities on the subject of the nexum and addictio are referred to by Rein, *Das Röm. Privatrecht*, p. 313, &c. The writer of this article has not had the advantage of seeing the essay of Savigny, *Ueber das altrömische Schuldrecht*, Berlin, 1834, and is only generally acquainted with it from other works. The whole subject is still encumbered with difficulty, as will appear from a reference to the various writers on this subject. The note of Walter⁴ appears to contain the true statement as to the difference between the effect of a nexum and a *res iudicata*; but he rejects the notion of a man selling or pledging himself.

NIMBUS VITREUS. (*Vid.* NIX.)

*NITRUM (*νίτρον*). "It is scarcely necessary to remark," says Adams, "that the Latin *Nitrum* and the Greek *νίτρον* was a very different substance from the modern nitrate of potass; but it is not so easy to determine its real nature. Geoffroy, indeed, looked upon it as having been of the same nature as the salt of tartar or potash; but it is much more probable that it was a native composition of soda. It appears from Martial and Serapion that it was nearly allied to common salt, which we know to be a compound of soda. From the circumstance incidentally mentioned in the Bible, that an effervescence was produced by pouring vinegar upon it, we may also determine, with some confidence, that it was a carbonate. It seems probable, then, that it was a carbonate of soda. This is also the opinion of Coray, no mean authority on such a matter. Dr Kidd, however, maintains that, though the terms *natron* and *nitrum* are commonly applicable to the native carbonate of soda, they were sometimes applied likewise to saltpetre and sal ammoniac. He thinks that Pliny, in the following sentence, applies it to the latter: '*Calce aspersum reddit odorem vehementem*.' The *νίτρον* is called *χαλυσταίων* by Plato, from Chalcistra, a lake in Macedonia."⁵

NIX (*χιών*), Snow, was used by the Greeks and Romans in various ways as an accompaniment to their meals in warm weather. The great antiquity of the practice is shown by Athenæus.⁶ They drank water cooled by the admixture of snow.⁷ Also, when the wine was mixed in the vase (*vid.* CRATER), snow was poured into it instead of water, so as to cool and to dilute it at the same time.⁸ Fragments of ice were put into the cups of wine with the same view.⁹ Another method of applying the snow was by passing wine through a strainer or colander filled with snow; by this process the wine was also rendered clear.¹⁰ The "*nimbus vitreus*," mentioned by Martial,¹¹ seems to have been a glass colander, which was filled with snow so as to look like a cloud, and from which the wine, after passing through the snow, descended in a shower. Moreover, we learn

that the water which was poured upon the hands of the guests before a splendid dinner was sometimes cooled with snow.¹

In consequence of this abundant use of snow and ice, they became articles of traffic.² They were brought to Rome in carts and wagons, kept in ice-house, and surrounded with chaff and shaggy blankets to prevent them from melting,³ agreeably to the practice still adopted in many parts of Europe and Asia. (*Vid.* PSYLETÆ.)

NODUS, in a special sense, was applied to the following parts of dress: I. The knot used in tying on the scarf (*vid.* CHLAMYs) or other article constituting the AMICTUS. This was often effected by the aid of a brooch (*vid.* FIBULA), a ring, or some jewel,⁴ but frequently in the method shown in the woodcut of Diana at page 245. II. The knot of hair (*κόρυμβος*, *κροφύλλος*), either at the top or at the back of the head, adopted by both sexes in fastening their long hair, which was turned upward or backward for the purpose (*crine rursus adducto revocare nodo*).⁵ Examples may be seen in the woodcuts at p. 291, 292, 314, 443. III. The knot of leather worn by boys of the poorer classes at Rome instead of the golden BULLA.

NOMEN (GREEK) (*ὄνομα*). The Greeks, as is well known, bore only one name,⁶ and it was one of the especial rights of a father to choose the names for his children, and to alter them if he pleased.⁷ It was customary to give to the eldest son the name of the grandfather on his father's side. The history of Greece contains many instances of this custom, and Sosithus⁸ says, "I gave to my eldest son, as is just (*ὥσπερ καὶ δίκαιόν ἐστι*), the name of my father."⁹ What custom was generally followed with regard to the other children may be inferred from the same passage, for Sosithus goes on to say, that he called his second son after the name of his wife's father, the third after a relative of his wife, and the fourth son after his own grandfather on his mother's side. Mothers seem also sometimes to have assumed the right of giving the names to their children,¹⁰ and it may be that, as in the case described by Aristophanes,¹¹ sometimes a quarrel arose between the parents, if they could not agree upon the name to be given to a child. A boy also sometimes received the name of his father, as in the cases of Demosthenes and Demades, or one similar to that of his father. Nausiniens thus called his son Nausiphilus, and Callistrates called his son Callistratus.¹² A similar method was sometimes adopted in the names of several brothers; thus two brothers, in the speech of Lysias against Diagion, are called Diodetus and Diogion. In some cases, lastly, the name of a son was a patronymicon, formed from the name of the father, as Phocion, the son of Phoces.

The day on which children received their names was the tenth after their birth.¹³ According to some accounts, a child received its name as early as the seventh, or even fifth day after its birth. (*Vid.* AMPHIDROMIA.) The tenth day, called *δεκάτην*, however, was a festive day, and friends and relatives were invited to take part in a sacrifice and a repast, whence the expressions *δεκάτην θύειν* and *δεκάτην ἑορταίη*. If in a court of justice proofs could be adduced that a father had held the *δεκάτην*, it was sufficient evidence that he had recognised the child as his own.¹⁴

The fact that every Greek had only one name rendered it necessary to have an innumerable variety of names, and never has a nation shown more taste, ingenuity, and invention in devising them than the ancient Greeks. But, however great the number of names might be, ambiguity and confusion could not be avoided, and in reading the works of the Greeks we are not always certain whether the same name in different passages or writers belongs to one or to several persons. The Greeks themselves were aware of this, and, where accuracy was of importance, they used various means to prevent mistakes. Sometimes they added the name of the father in the genitive case, as: Ἀλκιβιάδης ὁ Κλεινίου, Ἰλίστιονάναξ ὁ Πανσανίου: sometimes they added the name of the place or country in which a person was born, in the form of an adjective, as Θουκυδίδης ὁ Ἀθηναῖος, Ἡρόδοτος Ἀλικαρνασσεύς, Χαρμανίδης Παιανιεὺς, Δικαίολχος ὁ Μεσσήνιος, &c.; sometimes they added an epithet to the name, expressing either the occupation or profession which a person followed, or indicating the school to which he belonged. Instances are of such frequent occurrence that it is superfluous to quote any. The custom of adding the father's name was called *πατρὸν ὀνομάζεσθαι*.¹

In common life the Greeks had yet another means of avoiding ambiguity, and this was the frequent use of nicknames, expressive of mental or bodily peculiarities and defects. Thus Demosthenes was from his childhood called *Βάταλος*.² Aristophanes³ mentions several names of birds which were used as nicknames; other nicknames are preserved in Athenæus.⁴

NOMEN (ROMAN). In the earliest history of Rome there occur persons who are designated by only one name, such as Remulus, Remus, and others, while there are many, also, who bear two names. The Romans of a later age were themselves uncertain as to the legitimate number of names borne by the earliest Romans; and while Varro,⁵ Appian,⁶ and others stated that the earliest Romans used only to have one name, their opponents adduced a great many instances in which persons had two. This question will perhaps be placed in a more proper light, and become more satisfactorily settled, if we consider separately the three distinct elements of which the Roman nation was composed in its origin, and it will then be found that both Varro and his opponents are right or wrong according as their assertions are applied to one or to all of the three tribes.

The Sabines, from the earliest times down to the end of their existence, had two names,⁷ one indicating the individual as such (*prænomen*), *e. g.*, Albus, Volesus, Pompius,⁸ Talus,⁹ Cains, Titus, Quintus, Appius, &c., and the second the gens to which the individual belonged, which terminated, like the Roman nomina gentilicia, in *ius* or *eius*, *e. g.*, Tatius, Pompilius, Claudius, &c. It is, moreover, a feature peculiar to the Sabines, that a person sometimes, instead of a *prænomen* and a nomen gentilicium, had two nomina gentilicia, one indicating the gens of his father, and the other that of his mother. The latter sometimes preceded and sometimes followed the former. This custom is clear from Livy,¹⁰ who mentions a Campanian (Sabine) woman, Paculla Minia, who was married to a man who bore the name of Cerrinius from his gens, and one of the sons of these parents was called Minius Cerrinius. Another instance is the name of the Sabine angur Attius Na

vius, where, according to Dionysius,¹ Attius is the *ἄνομα συγγενικόν*. Dionysius, however, must be mistaken in making Navius an *ἄνομα προσηγορικόν*, if he meant this to be the same as the Roman prænomen, which the name Navius never was. In all probability, therefore, both Attius and Navius are nomina gentilitia. A third instance seems to be Minatius Magius,² the son of Decius Magius. This practice must have been very common among the Sabines, for in most cases in which the two names of a person have come down to us, both have the termination *ius*, as Marius Egnatius, Herius Asinius,³ Statius Gellius,⁴ Ofilius Calavius. A more complete list of such Sabine names is given by Götting,⁵ who supposes that a son bore the two nomina gentilitia of his father and mother only as long as he was unmarried, and that at his marriage he only retained the nomen gentilitium of his father, and, instead of that of his mother, took that of his wife. Of this, however, there is not sufficient evidence. Thus much is certain, that the Sabines at all times had two names, one a real prænomen, or a nomen gentilitium serving as a prænomen, and the second a real nomen gentilitium, derived from the gens of the father. The Sabine women bore, as we have seen in the case of Paculla Minia, likewise two names, *e. g.*, Vestia Oppia, Faucula Cluvia,⁶ but whether, in case they both terminate in *ia*, they are nomina gentilitia, and whether the one, as Götting thinks, is derived from the gens of the woman's father, and the other from that of her husband, cannot be decided. Many Sabines appear also to have had a cognomen besides their prænomen and nomen gentilitium; but, wherever this occurs, the prænomen is generally omitted, *e. g.*, Herennius Bassus,⁷ Calavius Perolla,⁸ Vettius Cato,⁹ Insteius Cato, Popadius Silo, Papius Mutilus.¹⁰ Such a cognomen must, as among the Romans, have distinguished the several families contained in one gens.

The Latins in the earliest times had generally only one name, as is seen in the instances adduced by Varro,¹¹ Romulus, Remus, Faustulus, to which we may add the names of the kings of the aborigines (Latins), Latinus, Ascanius, Capetus, Capys, Procas, Numitor, Amulius, and others. When, therefore, Varro and Appian say that the earliest Romans had only one name, they were probably thinking of the Latins. There occur, indeed, even at an early period, Latins with two names, such as Geminus Metius, Metius Suffetius, Vitruvius Vacus, Turnus Herdonius, &c.; but these names seem to be either two nomina gentilitia, or one a nomen gentilitium and the other a cognomen, and the Latins do not appear to have had genuine prænomena, such as occur among the Sabines, and afterward among the Romans.

The Etruscans in the Roman historians generally bear only one name, as Porsenna, Spurrinna, which apparently confirms the opinion of Varro; but on many urns in the tombs of Etruria, such names terminating in *na* are frequently preceded by a prænomen. Müller,¹² and Götting,¹³ who follows him, are of opinion that no Etruscan ever bore a nomen gentilitium, and that the names terminating in *na* are mere cognomina or agnomina. Niebuhr,¹⁴ on the other hand, thinks, and with more probability, that the Etruscan *na* corresponds to the Sabine and Roman *ius*, and that, accordingly, such names as Porsenna, Spurrinna, Cæcina, Perperna, Vibenna, Ergenna, Mastarna, &c., are real nomina gentilitia.

From this comparison of the three original tribes, it is clear that, when the Romans became united into one nation, they chiefly followed the custom of the Sabines, and perhaps that of the Latins.¹ Originally every Roman citizen belonged to a gens, and derived his name (*nomen* or *nomen gentilitium*) from his gens. The nomen gentilitium generally terminated in *ius*, or with a preceding *e*, in *eius*, which in later times was often changed into *æus*, as Annius, Anneius and Annæus; Appuleius and Appulæus. Nomina gentilitia terminating in *ilius* or *elius*, sometimes change their termination into the diminutive *illus* and *ellus*, as Opillus, Hostillus, Quintillus, and Ofellus, instead of Opdus, Hostilius, Quintilius, and Ofelius.² Besides this nomen gentilitium, every Roman had a name, called prænomen, which preceded the nomen gentilitium, and which was peculiar to him as an individual, *e. g.*, Caius, Lucius, Marcus, Cneius, Sextus, &c. In early times this name was given to boys when they attained the age of puberty, that is, at the age of fourteen, or, according to others, at the age of seventeen,³ when they received the toga virilis.⁴ At a later time it was customary to give to boys a prænomen on the ninth day after their birth, and to girls on the eighth day. This solemnity was preceded by a lustration of the child, whence the day was called *dies lustricus*, *dies nominum*, or *nominalia*.⁵ The prænomen given to a boy was in most cases that of the father, but sometimes that of the grandfather or great-grandfather. Hence we frequently meet with instances like M. Tullius, M. F., that is, Marcus Tullius, Marci filius, or C. Octavius, C. F., C. N., C. P., that is, Caius Octavius, Caii filius, Caii nepos, Caii pronepos. Sometimes, however, the prænomen was given without any reference to father or grandfather, &c. There existed, according to Varro, about thirty prænomena, while nomina gentilitia were innumerable. These two names, a prænomen and a nomen gentilitium, or simply nomen, were indispensable to a Roman, and they were, at the same time, sufficient to designate him; hence the numerous instances of Romans being designated only by these two names, even in cases where a third or fourth name was possessed by the person. Plebeians, however, in many cases, only possessed two names, as C. Marius, Q. Sertorius, Cn. Pompeius, &c. The prænomen characterized a Roman citizen as an individual, and gave him, as it were, his caput (*vid. Caput*) at the time when he received it. As women had not the full caput of men, they only bore the feminine form of the nomen gentilitium, as Cornelia, Sempronia, Tullia, Terentia, Porcia, &c. In later times, however, we find that women also sometimes had a prænomen, which they received when they married, and which was the feminine form of the prænomen of their husbands, such as Caia, Lucia, Publia.⁶ Caia Cæcilia, the wife of L. Tarquinius, if the name be historical, is an exception to this rule.⁷ When Macrobius⁸ states that girls received their name (he evidently means the prænomen) on the eighth day after their birth, he alludes, as in the case of boys receiving theirs on the ninth day, to an innovation of later times, and among the female prænomena given at such an early age, we may reckon Prima, Secunda, Tertia, Quarta, Postuma, &c.⁹ Vestal virgins, at the appointment to their priesthood (*capitio*), when they left the patria potestas, received, like married women, a prænomen, *e. g.*, Caia Tarratia or Caia Suffetia.¹⁰

(Plin., H. N., xxxv., 11.)

Every Roman citizen, besides belonging to a gens, was also a member of a familia contained in a gens, and, as a member of such a familia, he had or might have a third name or cognomen. Such cognomina were derived by the Romans from a variety of mental or bodily peculiarities, or from some remarkable event in the life of the person who was considered as the founder of the familia. Such cognomina are Asper, Imperiosus, Magnus, Maximus, Publicola, Brutus, Capito, Cato, Naso, Laheo, Cæcilius. Cicero, Scipio, Sulla, Torquatus, &c. These names were in most cases hereditary, and descended to the latest members of a familia; in some cases they ceased with the death of the person to whom they were given for special reasons. Many Romans had a second cognomen (*cognomen secundum* or *agnomen*), which was given to them as an honorary distinction, and in commemoration of some memorable deed or event of their life, *e. g.*, Africanus, Asiaticus, Hispanus, Cretensis, Macedonicus, Numantianus, &c. Such agnomina were sometimes given by one general to another, sometimes by the army and confirmed by the chief general, sometimes by the people in the comitia, and sometimes they were assumed by the person himself, as in the case of L. Cornelius Scipio Asiaticus. Sometimes, also, a person adopted a second cognomen which was derived from the name of his mother, as M. Porcius Cato Salonianus or Saloniinus, who was the son of M. Cato Censorius and of Salonia.¹

The regular order in which these names followed one another was this: 1. prænomen; 2. nomen gentilicium; 3. cognomen primum; 4. cognomen secundum or agnomen. Sometimes the name of the tribe to which a person belonged was added to his name, in the ablative case, as Q. Verres Romilia,² C. Claudius Palatina,³ Ser. Sulpicius Lemonia.⁴ No one was allowed to assume a nomen gentilicium or a cognomen which did not belong to him, and he who did so was guilty of falsum.⁵

It must have been in comparatively few cases that persons had a fourth name or agnomen; but the three others were, at least at a late period, when the plebeian aristocracy had become established, thought indispensable to any one who claimed to belong to an ancient family.⁶ In the intercourse of common life, however, and especially among friends and relatives, it was customary to address one another only by the prænomen or cognomen, as may be seen in the letters of Cicero. It was but very seldom that persons were addressed by their nomen gentilicium. The most common mode of stating the name of a person, in cases where legal accuracy was not the object, was that of mentioning the prænomen and cognomen, with the omission of the nomen gentilicium, which was easily understood. Thus Caius Julius Cæsar would, during the better ages of the Republic and in familiar address, be called Caius, otherwise Caius Cæsar, or even Caius Julius, but never Julius Cæsar, which was only done during the latter period of the Republic and under the Empire, as in Albius Tibullus, Cornelius Nepos, Menenius Agrippa, &c. A very common mode of stating the name of a person during these latter times was that of merely mentioning the cognomen, provided the person bearing it was sufficiently known or notorious, as we speak of Milton and Johnson, without adding any other distinction, although there are many persons bearing the same name. The most common of these cases among the Romans are Verres, Carbo, Cato, Cæpio, Cicero, Cæsar, Sulla, &c. In the time of Augustus and Tiberius, it became very common to invert the an-

cient order of nomen and cognomen, and to say, *e. g.*, Drusus Claudius, or Silvanus Plautius, instead of Claudius Drusus and Plautius Silvanus.¹

Roman women had likewise sometimes a cognomen, although instances of it are very rare. It was sometimes, like that of men, derived from personal peculiarities, such as Rufa and Pusilla;² sometimes from the nomen gentilicium of their husbands, as Junia Claudilla, Ennia Nævina,³ Livia Ocellina,⁴ and sometimes from the cognomen of their husbands, as Cæcilia Metella.

During the latter part of the Republic and the early period of the Empire, when the Roman franchise was given to whole countries and provinces, the persons who thus acquired the civitas frequently adopted the prænomen and nomen of the person through whose interest they had obtained the distinction, or of the emperor himself. After the time of Caracalla (A.D. 212), when all the free inhabitants of the Empire had obtained the Roman franchise, and when the gentilician relations which had already gradually fallen into oblivion were totally forgotten, any person might adopt what name he pleased, either ancient or newly invented, and even change his name if he did not like it;⁵ and henceforth the ancient Roman names disappear from the history of the Empire with incredible rapidity.

If a person, by adoption, passed from one gens into another, he assumed the prænomen, nomen, and cognomen of his adoptive father, and added to these the name of his former gens, with the termination *anus*. Thus C. Octavius, after being adopted by his uncle C. Julius Cæsar, was called C. Julius Cæsar Octavianus, and the son of L. Æmilius Paullus, when adopted by P. Cornelius Scipio, was called P. Cornelius Scipio Æmilianus. (*Vid. ADOPTION, ROMAN.*) There were, however, two gentes, viz., the gens Antonia and the gens Flaminia, which, in case of any of their gentiles being adopted into another gens, took the termination *inus* instead of *anus*, as Antoninus and Flamininus, instead of Antonianus and Flaminianus. Sometimes, also, the cognomen of the former family was retained, and added, without any alteration, to the name of the adoptive father, as in the case of Q. Servilius Cæpio Brutus.⁶ This was only done in case the cognomen was of great celebrity; and it sometimes underwent a change in the termination. Thus Claudius Marcellus, when adopted by Cornelius Lentulus, was called Cornelius Lentulus Marcellinus.⁷ If one man adopted two brothers, the adoptive father might choose any prænomen at his discretion, in order to distinguish his adoptive sons from each other. Thus, when Augustus adopted the two sons of Agrippa, he gave to the one the prænomen Caius, and to the other the prænomen Lucius.⁸ During the early period of the Empire, it appears to have sometimes occurred that a person, when adopted into another gens, added his own nomen gentilicium, without any alteration, to that of his adoptive father, as in the cases of C. Plinius Cæcilius Secundus and L. Ælius Aurelius Commodus.⁹ Besides this, many other irregularities occurred in cases of adoption during the period of the Empire, but it is not necessary for our purpose to enumerate them here.

Slaves had only one name, and usually retained that which they had borne before they came into slavery. If a slave was restored to freedom, he received the prænomen and nomen gentilicium of his former master, and to these was added the name

1. (Gellius, xiii., 19.—Plut., Cat. Maj., 24.)—2. (Cic. in Verr., i., 3.)—3. (Cic. in Verr., ii., 43.)—4. (Cic., P. Milp., ix., 7.)—5. (Dig. 48, tit. 11, s. 13.)—6. (Juv., i., 127.)

1. (Vell. Patern., ii., 97, 112.)—2. (Horat., Sat., ii., 3, 216.)—3. (Suet., Calig., 12.)—4. (Suet., Galb., 3.)—5. (Cod. 9, tit. 25.)—6. (Eckhel, Doctr. Num., vol. v., p. 59.)—7. (Eckhel, Doctr. Num., vol. v., p. 59 and p. 187.)—8. (Vell. Patern., ii., 96.)—9. (Dion Cass., Excerpt., lib. lxxii., c. 15.)

which he had had as a slave. He became thus, in some measure, the gentilis of his former master, in as far as he had the same nomen gentilicium, but he had none of the other claims which a freeborn gentilis had.¹ Instances of such freedmen are Titus Ampius Menander, a freedman of T. Ampius Balbus;² L. Cornelius Chrysogonus, a freedman of L. Cornelius Sulla;³ M. Tullius Laurea and M. Tullius Tiro, freedmen of M. Tullius Cicero. It appears, however, that the emancipator sometimes avoided giving to his freedman his nomen gentilicium, for Dion Cassius⁴ mentions a freedman of J. Cæsar whose nomen gentilicium is Licinius. If the state emancipated a servus publicus, and gave him the franchise at the same time, any prænomen and nomen were given to him, or he took these names from the magistrate who performed the act of emancipation in the name of the state, and then received a cognomen derived from the name of the city, as Romanus or Romanensis.⁵

ΝΟΜΙΣΜΑΤΟΣ ΔΙΑΦΘΟΡΑΣ ΓΡΑΦΗ (νομίσματος διαφθοράς γραφή) is the name of the public action which might, at Athens, be brought against any one who coined money either too light in weight or not consisting of the pure metal prescribed by the law. The lawful punishment inflicted upon a person in case he was convicted was death.⁶ What action might be brought against those who coined money without the sanction of the Republic, and how such persons were punished, is not known.⁷

ΝΟΜΟΦΥΛΑΚΕΣ (Νομοφύλακες). This name denotes certain magistrates or official persons of high authority, who exercised a control over other magistrates, and, indeed, over the whole body of the people, it being their duty to see that the laws were duly administered and obeyed. Mention is made of such officers at Sparta and elsewhere, and some of the Greek philosophers who wrote on legislation appear to have thought that such a body of men was essential to the well-being of a social community.⁸ No such body existed at Athens, for they must have had a power too great for the existence of a democracy. The senate of 500, or the areopagitic council, performed in some measure the office of law-guardians;⁹ but the only persons designated by this name appear to have been inferior functionaries (a sort of police), whose business it was to prevent irregularities and disturbances in the public assemblies. Even their existence has been doubted by modern writers: some think they have been confounded with the *θεσμοβέται*. Another hypothesis is, that the office was never introduced until the time of Demetrius Phalereus, who, when he was invested with the authority of lawgiver by Cassander, gave to the Eleven the additional duty of watching the conduct of all the other magistrates, with a view to introduce a more aristocratical government. In favour of this opinion, it has been observed, that the office of *νομοφύλακες* is only mentioned by grammarians, and they refer to Dinarchus, who was the friend and contemporary of Demetrius.¹⁰

ΝΟΜΟΣ (νόμος). This word comprehends the notion not only of established or statute law, but likewise of all customs and opinions to which long prescription or natural feeling gives the force of law; as Euripides¹¹ expresses it, τὸ ἐν χρόνῳ μακρῷ νόμον αἰεὶ φύσει τε πεφυκός. In the heroic ages,

before the period of authentic history begins, we find in the Homeric and other poems traces of a general belief among the Greeks that government ought to be controlled by law. As even the supreme God was supposed to be subject to a higher power, Fate or *Ἀναγκή*, so the *Διοτρεφὴς βασιλεὺς* was bound to govern according to the rules of justice, *δίκη, νόμος, ἐνομή*.¹ Government, though monarchical and hereditary, was nevertheless limited, *ἐπὶ βροτῶν γέρας*.² The monarchs were *ἡγήτορες ἢ δὲ μέδοντες*, bound to consult for the good of their people, and to listen to the advice of their counsellors, or the chief men of the state (*γέροντες, ἄνακτες, &c.*), and also to administer justice, *δίκας, θέμιστας, εὐδικίας*.³

These notions of law and justice were necessarily vague. The regal power, though limited in practice, appears to have been absolute in theory, and, as such, was easily liable to be abused. We find complaints of the abuse of power in Hesiod;⁴ and Wachsmuth⁵ remarks that the Odyssey contains indications of a struggle of the nobility against the sovereign. That many beneficial concessions were made by the kings to their people before the age of authentic history, is not improbable. The changes introduced by Theseus may be considered in this light. But the first great step towards the establishment of constitutional law appears to have been taken by the Athenians, when they abridged the power of the Medontidæ, and rendered government responsible, *τὴν βασιλείαν μετέστησαν εἰς ἀρχὴν ἐπὶ πένθονον*.⁶

The transition from customary or traditional law to fixed civil ordinances must have taken place gradually. When people came to unite in cities (*συνωκίζοντο*), and form compact societies, they began to feel the necessity of having permanent laws to define and secure their civil rights. The notion soon sprang up that society was formed for the good of all classes. The expression *τὸ κοινόν*, formerly applied to national leagues and confederacies,⁷ came to denote a united body of citizens, and equal laws were claimed for all. From this body, indeed, were excluded all such persons as came under the definition of *περίοικοι*, provincials,⁸ or serfs, like the Helots, and all slaves of every kind. It was only the townsmen (*πολίτης*) and the freeman who could enjoy the privileges of a citizen. The emigrant (*ἀπίμνητος μετανάστης*), though, if he became a resident (*μέτοικος*), he was, upon certain conditions, admitted to the protection of the law, was never placed on the same footing as the native.

Before any written codes appeared, law was promulgated by the poets or wise men, who sang the great deeds of their ancestors, and delivered their moral and political lessons in verse. Such was the *ρήτρα* (declared law) of Sparta and Tarantum. The laws of Charondas were sung as *σκόλια* at Athens.⁹ The influence exercised by these men arose in a great measure from the belief that they were divinely inspired, a power which was ascribed to most of the ancient law-makers. Thus the laws of Minos were said to be a revelation from Jupiter;¹⁰ Lycurgus was the confidant of the Delphic god; Zaleucus of Pallas.¹¹ Some have supposed that the use of *νόμος*, in the sense of *law*, was derived from the circumstance of laws having first been in verse, as the same word denotes *measure* or *tune*. But this is not surprising, when we consider that prin

ciples of harmony are necessary not only to music and poetry, but to the adjustment of the various relations of civil society; and both meanings may well be derived from *νέμειν* (*distribuere suum cuique*).

As civilization advanced, laws were reduced to writing, in the shape either of regular codes or distinct ordinances, and afterward publicly exhibited, engraved on tablets, or hewn on columns.¹ The first written laws we hear of are those of Zaleucus.² The first at Athens were those of Draco, called *θεσμοί*, and by that name distinguished from the *νόμοι* of Solon.³ From the origin of this word, one would suppose that it signified ordained or statute law, *τεθείς νόμος*; but it is frequently used like *θεμῖς*, in the sense of natural right or social usage.⁴ The six inferior archons were called *θεροβέται*, because a great variety of causes fell under their cognizance, and, in the absence of a written code, those who declare and interpret the laws may be properly said to make them.⁵

The laws of Lycurgus were not written. He enjoined that they should never be inscribed on any other tablet than the hearts of his countrymen.⁶ Those of Solon were inscribed on wooden tablets, arranged in pyramidal blocks turning on an axis, called *ἀξονες* and *κύρβεις*.⁷ They were first hung in the Acropolis, but afterward brought down to the Prytaneum.⁸ Archives were established for the custody of Athenian laws in the temple of the mother of the gods (*ἐν τῷ μητρώῳ*), with a public servant (*δημόσιος*) to take care of them.⁹ Others were hung up in various public places, so that any citizen might have access to them, to read or take extracts. For instance, laws which concerned the jurisdiction of the archon were hung up in his office; those which concerned the senate (*βουλευτικοὶ νόμοι*) in their council-room, and so on.¹⁰ After the expulsion of the thirty tyrants, in the archonship of Euclides, a decree was passed by the assembly to restore the ancient laws, and appoint a committee to revise them, and propose any alterations or additions that might seem necessary. The new and old laws were all to be written out in the enlarged Ionian alphabet, which had not come into use in Solon's time; and the whole code, thus revised, was transcribed on the walls of the portico (*εἰς τὴν στοᾶν ἀνεγράφαν*). At the same time it was enacted that no magistrate should be allowed to use an unwritten law (*ἀγράφῳ δὲ νόμῳ τὰς ἀρχὰς μὴ χρῆσθαι μηδὲ περὶ ἐνός*).¹¹

According to these statutes of Solon, and those which were subsequently enacted at various times, the magistrates and the judges at Athens were bound to administer the law, executive and judicial. The heliastic body, acting in their capacity of judges or jurors (as to their legislative, see *ΝΟΜΟΘΕΤΕΣ*), were sworn *περὶ μὲν ὧν νόμοι εἰσὶ, κατὰ τοὺς νόμους ψηφισέσθαι, περὶ δὲ ὧν μὴ εἰσὶ, γνώμῃ τῇ δικαιοσύνῃ*.¹² In all causes, whether civil or criminal, the parties procured copies or extracts of such laws as were material to the questions to be tried, and brought them before the *ἡγεμὼν δικαστηρίου* at the *ἀνάκρισις*, by whom they were assigned to the *ἐξήνος*, and produced at the trial, to be read to the *δικασταί* by the *γραμματεῖς*. If any man produced before the judges a fictitious law (*οὐκ ὄντα νόμον*), he was punishable with death.¹³

As the *δικασταί* (chosen as explained under *ΔΙΚΑΣΤΕΣ*) performed the functions of both judge and jury, it is evident that the important question, how the laws of Athens worked, depends on the discretion which in practice they exercised in the interpretation of the written law. This is only to be discovered by a careful perusal of the Attic orators, and is too wide a question to be discussed here. Much light is thrown on the subject by Aristotle, who, in treating of judicial matters, always has in view the practice of the Athenian courts. He reckons the *νόμοι* among the *ἀτεχνοὶ πλάττει*, and advises the orator, when the law of the country is against him (*ἐὰν ἐναντίος ᾖ ὁ γεγραμμένος τῷ πράγματι*), to appeal to the universal law of justice or equity (*τῷ κοινῷ νόμῳ καὶ τοῖς ἐπιεικέσιν, ὡς δικαιοτέροις*). For (says he) if the written law is contrary to justice, it is not a law, *οὐ γὰρ ποιεῖ τὸ ἔργον τοῦ νόμου*. From this it may be seen, that the notions entertained by the Athenians of the discretion to be exercised by a judge were somewhat different from our own. There existed at Athens no class of persons corresponding to our counsel or attorneys, whose business or profession it was to expound the laws. The office of the *ἐξηγηταί* related only to religious observances. (*Ἰδ. ΕΞΗΓΕΤΑΙ*.) According to the principle of the constitution, every citizen was bound to watch over the preservation of the laws, and to inform against and prosecute any persons who transgressed them. The people, either on the bench or in the assembly, were the ultimate judges.²

As to the difference between *νόμος* and *ψήφισμα*, and as to the manner in which laws were enacted or repealed, see *ΝΟΜΟΘΕΤΕΣ*.

NOMOTHETES (*νομοθέτης*), legislator, is a word which may be applied to any person who causes laws to be enacted. Thus Pericles and Themistocles are called *νομοβέται*, movers or proposers of laws.³ It is, however, more commonly given to those eminent men whose laws have been celebrated for their intrinsic merit, or for the important influence which they exercised over the destinies of their country. Such were Minos of Crete, Draco at Athens, Zaleucus at Locri, and Charondas, whose laws were distinguished for their *ἀκρίβεια*, and were received at Rhegium, Catania, and other Chalcidian states.⁴ Many other men have been honoured with this title, either for having improved the laws of their countrymen, or as having, by their writings, their counsel, and their good example, led to the introduction of a sound moral discipline among them. These were the sages or wise men, called by Diogenes Laertius *συνετοὶ τινες καὶ νομοθετικοί*. Pittacus of Lesbos, Phidon of Argos, Thales of Miletus, Bias of Priene, Chilon, who improved the laws of Lycurgus, and Pythagoras, may be reckoned in this class.⁵ But the name of *νομοθέτης* is given *κατ' ἐξοχὴν* to Solon and Lycurgus; for they not only introduced codes of laws, but were founders of *constitutions* (*πολιτεῖαι*), which, though from time to time modified and altered, and sometimes even suspended, remained more or less in force so long as Athens and Sparta existed as republics.⁷ So high was the esteem in which Solon was held by the Athenians, as the founder of their social polity, that, although many important reforms were effected at various periods, he still continued to be regarded as *the lawgiver* (*ὁ νομοθέτης*), and the whole body of laws passed under his name. Wachsmuth⁸ remarks, that on this account, whenever a law of Solon is cited, we may suspect that

it contains interpolation. On the other hand, we should bear in mind that in all the changes which took place in the Athenian constitution, the reformers aimed at preserving the main principles of Solon's policy. Clisthenes, who established the *δημοι*, remodelled the *φυλαί*, and made other changes, is characterized by Aristotle¹ as having for his object *ἀβῆσαι τὴν δημοκρατίαν*.

There is this remarkable difference between the legislation of Solon and that of other Greek lawgivers, that he did not (as they did) endeavour to secure fixity and finality for his institutions. Zaleucus and Charondas are said to have made it a capital crime to propose new laws. Lycurgus forbade young men to censure the laws; and when he went on his last journey, from which he never returned (the story says), he bound his countrymen by an oath to observe all his laws till his return. Solon exacted a similar oath of the Athenians for only ten years.²

But Solon also devised regulations by which the laws might undergo periodical revision, and be amended as occasion required. At the first *κυρία ἐκκλησία* in every year, any person was at liberty to point out defects in the existing code or propose alterations. If his motion was deemed worthy of attention, the third assembly might refer the matter to a legislative committee, called *νομοθέται*. This committee was selected by lot from the heliastic body; it being the intention of Solon to limit the power of the popular assembly by means of a superior board emanating from itself, composed of citizens of mature age, bound by a stricter oath, and accustomed to weigh legal principles by the exercise of their judicial functions. The number of the committee so appointed varied according to the exigency of the occasion. The people appointed five advocates (*σύνδικοι*) to attend before the board and maintain the policy of the existing institution. If the proposed measure met the approval of the committee, it passed into law forthwith. Besides this, the thesmothetæ were officially authorized to review the whole code, and refer all statutes which they considered unworthy of being retained to the *νομοθέται*.³

Hence appears the difference between *ψήφισμα* and *νόμος*. The mere resolution of the people in assembly was a *ψήφισμα*, and only remained in force a year, like a decree of the senate. Nothing was a *law* that did not pass the ordeal of the *νομοθέται*. The democracy of Solon was therefore one of that kind, in which (as Aristotle says), *κύριος ἦν ὁ νόμος ἀλλ' οὐ τὸ πλῆθος*.⁴ *Privilegia* required to be passed by six thousand of the people in assembly, giving their votes secretly. The naturalization of a foreigner is an example of a *privilegium*, for which two votes of different assemblies were necessary.⁵

Propositions to be submitted to the people were first approved by the senate of 500, and then called *προβουλευματα*. The mover of a law was said *θεῖναι* or *γράφειν νόμον*, the people who passed it *θεῖσθαι*. To enact a man for proposing illegal measures was called *γράφεσθαι τινα παρανόμων*. As to the proceedings in such a case, see ΠΑΡΑΝΟΜΩΝ ΓΡΑΦΗ.

NONE. (*Vid.* CALENDAR, ROMAN.)

NORMA (γνώμων), a square used by carpenters, masons, and other artificers, to make their work rectangular.⁶ It was made by taking three flat

wooden rulers (*vid.* REGULA) of equal thickness, one of them being two feet ten inches long, the others each two feet long, and joining them together by their extremities so as to assume the form of a right-angled triangle.¹ This method, though only a close approximation, must have been quite sufficient for all common purposes. For the sake of convenience, the longest side, *i. e.*, the hypotenuse of the triangle, was discarded, and the instrument then assumed the form in which it is exhibited among other tools in the woodcut at p. 252. A

square of a still more simple fashion, made by merely cutting a rectangular piece out of a board, is shown on another sepulchral monument, found at Rome and published by Gruter,² and copied in the woodcut which is here introduced.

From the use of this instrument, a right angle was also called a *normal* angle.³ Anything misshapen was called *abnormis*.⁴

NOTA CENSORIA was the remark which the censors in their lists wrote by the side of the name of a Roman citizen who deserved censure for misdemeanour or immoral conduct. For one important branch of the power of the Roman censors was the *disciplina* or *cura morum*, whence they are called by Cicero⁵ *perfecti moribus et magistri veteris disciplina et severitatis*. This part of the censorial power appears at first to have extended no farther than to censure and to punish the bad conduct of a citizen in so far as it had an injurious influence on his census,⁶ but gradually it acquired the character of a complete superintendence of the whole private and public life of a citizen. This part of their office invested them with a peculiar kind of jurisdiction, which in many respects resembles that which in modern times is exercised by public opinion; for there are innumerable actions which, though acknowledged by every one to be bad and immoral, yet do not come within the reach of the positive laws of a country. Even in cases of real crimes, the positive laws frequently punish only the particular offence, while in public opinion the offender, even after he has undergone punishment, is still incapacitated for certain honours and distinctions, which are granted only to persons of unblemished character. Hence the Roman censors might brand a man with their *nota censoria* in case he had been convicted of a crime in an ordinary court of justice, and had already suffered punishment for it.⁷ The *nota censoria*, also called *animadversio* or *notatio censoria*, together with the punishment and the

cause of this infiction, were marked by the side of the name of the guilty citizen (*causam notæ subscribere*).¹ The consequence of such a nota was only *ignominia*, and not *infamia*² (*vid. INFAMIA, ROMAN*, p. 535), and the censorial edict was not a *judicium* or *res judicata*,³ for its effects were not lasting, but might be remedied by the improved conduct of the guilty person, or removed by the following censors, by a judicial decision, or by a *lex*. A nota censoria was, moreover, not valid unless both censors agreed. The *ignominia* was thus only a transitory *capitis diminutio*, which does not even appear to have deprived a magistrate of his office,⁴ and certainly did not disqualify persons labouring under it for obtaining a magistracy, for being appointed as judges by the prætor, or for serving in the Roman armies. *Mam. Æmilius* was thus, notwithstanding the *animadversio censoria*, made dictator.⁵

A person might be branded with a censorial nota in a variety of cases, which it would be impossible to specify, as in a great many instances it depended upon the discretion of the censors and the view they took of a case; and sometimes even one set of censors would overlook an offence which was severely chastised by their successors.⁶ But the offences which are recorded to have been punished by the censors are of a threefold nature.

I. Such as occurred in the private life of individuals, *e. g.*, 1. Living in celibacy at a time when a person ought to be married to provide the state with citizens.⁷ The obligation of marrying was frequently impressed upon the citizens by the censors, and the refusal to fulfil it was punished with a fine (*as uxorium*).⁸ 2. The dissolution of matrimony or betrothment in an improper way, or for insufficient reasons.⁹ 3. Improper conduct towards one's wife or children, as well as harshness or too great indulgence towards children, and disobedience of the latter towards their parents.¹⁰ 4. Inordinate and luxurious mode of living, or spending more money than was proper. A great many instances of this kind are recorded.¹¹ At a later time the *leges sumptuariæ* were made to check the growing love of luxuries. 5. Neglect and carelessness in cultivating one's fields.¹² 6. Cruelty towards slaves or clients.¹³ 7. The carrying on of a disreputable trade or occupation,¹⁴ such as acting in the theatres.¹⁵ 8. Legacy-hunting, defrauding orphans, &c.

II. Offences committed in public life, either in the capacity of a public officer or against magistrates. 1. If a magistrate acted in a manner not befitting his dignity as an officer, if he was accessible to bribes or forged auspices.¹⁶ 2. Improper conduct towards a magistrate, or the attempt to limit his power, or to abrogate a law which the censors thought necessary.¹⁷ 3. Perjury.¹⁸ 4. Neglect, disobedience, and cowardice of soldiers in the army.¹⁹ 5. The keeping of the *equus publicus* in bad condition. (*Vid. EQUITES*.)

III. A variety of actions or pursuits, which were thought to be injurious to public morality, might be forbidden by the censors by an edict,²⁰ and those who acted contrary to such edicts were branded

with the nota and degraded. For an enumeration of the offences that might be punished by the censors with *ignominia*, see Niebuhr, *Hist. of Rome*, ii., p. 399, &c.

The punishments inflicted by the censors generally differed according to the station which a man occupied, though sometimes a person of the highest rank might suffer all the punishments at once, by being degraded to the lowest class of citizens. But they are generally divided into four classes:

1. *Motio* or *ejectio e senatu*, or the exclusion of a man from the number of senators. This punishment might either be a simple exclusion from the list of senators, or the person might at the same time be excluded from the tribes and degraded to the rank of an *æriarian*.¹ The latter course seems to have been seldom adopted; the ordinary mode of inflicting the punishment was simply this: the censors, in their new lists, omitted the names of such senators as they wished to exclude, and in reading these new lists in public, passed over the names of those who were no longer to be senators. Hence the expression *præteriti senatores* is equivalent to *e senatu ejecti*.² In some cases, however, the censors did not acquiesce in this simple mode of proceeding, but addressed the senator whom they had noted, and publicly reprimanded him for his conduct.³ As, however, in ordinary cases, an ex-senator was not disqualified by his *ignominia* for holding any of the magistracies which opened the way to the senate, he might at the next census again become a senator.⁴

2. The *ademptio equi*, or the taking away the *equus publicus* from an eque. This punishment might likewise be simple, or combined with the exclusion from the tribes and the degradation to the rank of an *æriarian*.⁵ (*Vid. EQUITES*, p. 416.)

3. The *motio e tribu*, or the exclusion of a person from his tribe. This punishment and the degradation to the rank of an *æriarian* were originally the same; but when, in the course of time, a distinction was made between the *tribus rusticæ* and the *tribus urbanæ*, the *motio e tribu* transferred a person from the rustic tribes to the less respectable city tribes; and if the farther degradation to the rank of an *æriarian* was combined with the *motio e tribu*, it was always expressly stated.⁶

4. The fourth punishment was called *referre in ærarios*,⁷ or *facere aliquem ærarium*,⁸ and might be inflicted on any person whom the censors thought to deserve it. (*Vid. ÆRARI*.) This degradation, properly speaking, included all the other punishments, for an eque could not be made an *æriarius* unless he was previously deprived of his horse, nor could a member of a rustic tribe be made an *æriarius* unless he was previously excluded from it.⁹

A person who had been branded with a nota censoria might, if he thought himself wronged, endeavour to prove his innocence to the censors (*causam agere apud censores*¹⁰); and if he did not succeed, he might try to gain the protection of one of the censors, that he might intercede on his behalf. If neither of the censors would intercede, he might appeal to the tribunes, or to the people itself. But cases in which this last refuge was resorted to must have occurred very seldom, and where they happened they were mostly unsuccessful attempts; whence Dionysius,¹¹ with some justice, says that the censorship was an *ἀρχὴ ἀνυπεύθυνος*.¹²

NOTARII. (Vid. LIBRARI.)

NOTITIA DIGNITATUM, or, more fully, *Notitia Dignitatum et Administrationum omnium tam Civilium quam Militarum in partibus Orientis et Occidentis*, is the title of a work containing a list of the civil and military offices and dignities of the Roman Empire. It does not contain the names of any of the officers, but merely the titles belonging to them. The work is of very great importance to those who wish to become acquainted with the internal organization and administration of the Roman Empire during its latter period. At what time the book was written, or by what author, is unknown, though it is generally supposed that it was composed between the year A.D. 425 and 452. The last edition of it is that by E. Böcking, in 2 vols. 8vo, Bonn, 1839 and 1840.

NOVALE (Vid. ARATRUM, p. 80.)

NOVATIO. (Vid. OBLIGATIONES, p. 674.)

NOVELLÆ or NOVELLÆ CONSTITUTIONES form a part of the corpus juris. Most of them were published in Greek, and their Greek title is *Ἀποκεφάλισμα τῶν συνταγῶν τοῦ βασιλέως Ἰουστινιανοῦ Νεαῖαι Διατάξεις*. Some of them were published in Latin, and some in both languages. The first of these novellæ of Justinian belongs to the year A.D. 535 (Nov. 1), and the latest to the year A.D. 565 (Nov. 137); but most of them were published between the years 535 and 539. These constitutiones were published after the completion of the second edition of the Code, for the purpose of supplying what was deficient in that work. Indeed, it appears that, on the completion of his second edition of the Code, the emperor designed to form any new constitutions which he might publish into a body by themselves, so as to render a third revision of the Code unnecessary, and that he contemplated giving to this body of law the name of Novellæ Constitutiones.¹ It does not, however, appear that any official compilation of these new constitutions appeared in the lifetime of Justinian. The Greek text of the Novellæ, as we now have them, consists of 168 novellæ, of which 159 belong to Justinian, and the rest to Justin the Second and to Tiberius: they are generally divided into chapters.

There is a Latin epitome of these novellæ by Julian, a teacher of law at Constantinople, which contains 125 novellæ. The epitome was probably made in the time of Justinian, and the author was probably antecessor at Constantinople.

There is also another collection of 134 novellæ in a Latin version made from the Greek text. This collection is generally called Liber Authenticorum: the compiler and the time of the compilation are unknown. This collection has been made independently of the Greek compilation. It is divided into nine collationes, and the collationes are divided into tituli.

The most complete work on the history of the Novellæ is by Biener, *Geschichte der Novellen*. See also *Beytrag zur Litterar-Geschichte des Novellen-Auszugs von Julian*, Von Haubold, *Zeitschrift, &c.*, iv.

NOVEMBER. (Vid. CALENDAR, ROMAN.)

NOVENDIALE (sc. *sacrum*) was the name given to two different festivals. I. It was the name of a festival lasting nine days, which was celebrated as often as stones rained from heaven. It was originally instituted by Tullus Hostilius, when there was a shower of stones upon the Mons Alhanus, and was frequently celebrated in later times.² II. This name was also given to the sacrifice performed nine days after a funeral. (Vid. FUNUS, p. 462.)

NOVI HOMINES. (After the senate and the

higher offices of the state were opened to the plebeians, a new order of nobles arose, and the term *Nobiles* was applied to those persons whose ancestors had been magistratus curules. (Vid. MAGISTRATUS.) Those persons, on the contrary, whose ancestors had not been so distinguished, were called *Ignobiles*; and when those who belonged to the latter class obtained any of the higher magistracies, they were called *Novi Homines*, or upstarts.¹ The nobles attempted to keep all the higher offices of the state in their own body, and violently opposed all candidates who did not belong to their order.² Some of the most distinguished men in the state were, however, novi homines, as T. Coruncanius, who lived before the first Punic war, Sp. Carvilius, M. Cato, Mummius, the conqueror of Achaia, C. Marius, and Cicero.³

NOVI O'PERIS NUNTIA'TIO. (Vid. OPERIS NOVI NUNTIA'TIO.)

*NOUMENIUS (νοῦμενός), "the name of a bird mentioned by Hesychius. Gesner supposes it to be the Curlew, or *Arquata* of Latin authors. Linnaeus forms the scientific name of the Curlew by the junction of the Greek and Latin names, i. e., *Numenius Arquata*."⁴

NOXA. (Vid. NOXALIS ACTIO.)

NOXALIS ACTIO. If a filiusfamilias or a slave committed theft or injuria, the person injured had a noxalis actio, or a legal remedy for the noxa or wrong done to him, against the father (*paterfamilias*) or the owner of the slave, as the case might be, but he had no action against the son or the slave. The word noxa (from noc-eo) properly signified in jury done; in its legal sense it comprehended every delictum.⁵ The father or the master might either pay damages to the injured person, or surrender the offender to him. The surrender of the offender was expressed by the phrase "noxæ dare or dedere;" and the acceptance of the offender in satisfaction of the injury was expressed by the phrase "noxæ accipere;" in these expressions "noxæ" does not mean "punishment," as is sometimes supposed, but the meaning of the expression is, that the person was surrendered in respect of or as a compensation for his noxa. In the Institutes,⁶ noxa is defined to be the person or thing that does the mischief, and noxia the mischief that is done.

Noxales actiones were given both by leges and by the edict. In the case of furtum they were given by the Twelve Tables, and in the case of damni injuria by the lex Aquilia. In the case of injuriæ and of vi bonorum raptorum, they were given by the edict. This action was said "caput sequi," which is thus explained by instances: if a son or slave committed noxa, the action was against the father or owner, so long as the offender was in his power; if the offender became sui juris, the injured party had a directa actio against him; and if he came into the power of another person, that other person was liable to the action. If a paterfamilias committed a noxa, and was adopted (adrogated), the actio, which was originally against him (*directa*), became an action against the adopting person. A paterfamilias or master could have no action against a son or slave in respect of a noxa done to him, the ground of which was that no obligatio could be contracted between such parties; and as the foundation of all obligatio was wanting in such case, it followed that there could be no action against such son or slave if he became sui juris, nor against another person into whose power he might come if another person's slave or son committed noxa.

1. (Cic., c. Rull., ii., 1, 2.—Id., Pro Cluent., 40.—Appian, De Bell. Civ., ii., 2.—Plut., Cat. Maj., 1.)—2. (Liv., xxii., 34, 35.—Id., xxxix., 41.—Sallust, Bell. Jug., 73.)—3. (Vell. Pat., ii., 128.—Walter, Gesch. des Röm. Rechts, p. 125.)—4. (Adams, Append., s. v.)—5. (Dig. 50, tit. 16, s. 236.)—6. (iv., tit. 2.)

1. (Const., Cordi., s. 4.)—2. (Liv., i., 31.—Id., xxi., 62.—Id., xxv., 7.—Id., xxvi., 23.—Id., xxvii., 37.—Id., xxix., 34.)

and then came into the power of the injured person, it was a question between the two schools whether the right of action was extinguished, or only suspended so as to revive in case the offending party was released from the power of the injured person. The opinion of the Proculiani, which was in favour of the suspension only, appears more consistent with the principles on which this right of action was founded.

The mode of the "noxæ deditio" was by mancipatio. The Proculiani contended that three mancipationes were required by the law of the Twelve Tables (*vid. EMANCIPATIO*); but the Sabiniani contended that the law only applied to the case of voluntary mancipations, and that one mancipatio was sufficient.

If the father or owner made no defence to a noxalis actio, the offender was given up by a decree of the prætor to the injured person, and thus became his prætorian property (*in bonis*). If several slaves committed theft, the edict required the master to pay only the amount of damage which would be payable in case a single freeman had committed the theft.

Justinian abolished the noxæ datio in the case of children, observing that it appeared from the ancient jurists that there might be an action against a filiusfamilias in respect of his delicts.¹

NUDIPEDA'LIA. (*vid. CALCEUS*, p. 189.)

NUDUS (γυμνός). These words, besides denoting absolute nakedness, which was to be ἀναπτέχονος καὶ ἀχίτου,² were applied to any one who, being without an Amicrus, wore only his tunic or indutus.³ In this state of nudity the ancients performed the operations of ploughing, sowing, and reaping.⁴ Thus Cincinnatus was found naked at the plough when he was called to be dictator, and went for his toga that he might appear before the senate.⁵ The accompanying woodcut is taken

from an antique gem in the Florentine collection, and shows a man ploughing in his tunic only. The light and thin clothing of HETÆRÆ was denoted by the use of the same epithets.⁶ (*vid. COLA VESTIS*.)

This term, applied to the warrior, expressed the absence of some part of his armour.⁷ Hence the light-armed were called γυμνήτες. (*vid. ARMA*, p. 94.)

NUMMULARII or NUMULARII. (*vid. MENSA RII*.)

NUMMUS or NUMUS. (*vid. SESTERTIUS*.)

NUNCUPARE. (*vid. TESTAMENTUM*.)

NUNDINÆ is invariably and justly derived by all the ancient writers from *novem* and *dies*, so that it literally signifies the ninth day.⁸ In ancient calendaria, all the days of the year, beginning with the first of January, are divided into what we may call

weeks, each containing eight days, which are marked by the letters A, B, C, D, E, F, G, H. Now it is admitted on all hands that this division is made to mark the nundinæ, for every eighth day, according to our mode of speaking, was a nundinæ. There were thus always seven ordinary days between two nundinæ. The Romans, in their peculiar mode of reckoning, added these two nundinæ to the seven ordinary days, and, consequently, said that the nundinæ recurred every ninth day, and called them *nundinæ*, as it were *novendinæ*. A similar mode of stating the number of days in a week is still customary in Germany, where, in common life, the expression *eight days* is used for a week, and the French and Italians, in the same manner, call a fortnight *quince jours* and *quindici giorni*.

The number of nundinæ in the ancient year of ten months was 38; and care was always taken that they should not fall on the calends of January nor upon the nones of any month,¹ and, in order to effect this, the 355th day of the lunar year (*dies intercalaris*) was inserted in such a manner as to avoid the coincidence of the nundinæ with the primæ calendæ or the nones. Macrobius says that it was generally believed, that if the nundinæ fell upon the primæ calendæ, the whole year would be signalized by misfortunes; the nones were avoided because the birthday of King Servius Tullius was celebrated on the nones of every month, as it was known that he was born on the nones of some month, though the month itself was not known. Now, as on the nundines, the country-folk (plebeians) assembled in the city, the patricians feared lest the plebeians assembled at Rome on the nones might become excited, and endanger the peace of the Republic. These reasons are, indeed, very unsatisfactory, as Götting² has shown, and it is more probable that the calends of January were ill suited to be nundinæ, because this day was generally spent by every father in the bosom of his own family, and that the nones were avoided because, as Ovid³ says, *Nonarum tutela deo caret*. But at the time when the Julian calendar was introduced, these scruples, whatever they may have been, were neglected, and in several ancient calendaria the nundinæ fall on the first of January as well as on the nones. (*vid. Græv. Thesaur.*, viii., p. 7, and the calendarium given in the article *CALENDAR*.) Both before and after the time of Cæsar, it was sometimes thought necessary, for religious reasons, to transfer the nundinæ from the day on which they should have fallen to another one.⁴ The nundinæ themselves were, according to Plutarch,⁵ sacred to Saturn, and, according to Granius Licinianus,⁶ the Flaminica offered at all nundinæ a sacrifice of a ram to Jupiter.

It is uncertain to whom the institution of the nundinæ is to be ascribed, for some say that it was Romulus,⁷ and others that it was Servius Tullius⁸ who instituted them, while the nature of the things for which they were originally set apart seems to show that their institution was as old as the Roman year of ten months, or, at least, that they were instituted at the time when the Roman population extended beyond the precincts of the city itself. For the nundinæ were originally market-days for the country-folk, on which they came to Rome to sell the produce of their labour, and on which the king settled the legal disputes among them. When, therefore, we read that the nundinæ were feriæ or dies nefasti, and that no comitia were allowed to be

1. (Gaius, iv. 75-79.—Inst., iv., tit. 8.—Dig. 9, tit. 4.)—2. (Compare Moschus, iv. 95.)—3. (Aristoph., Eccles., 409.—John, xxi., 7.)—4. held, we have to understand this of the populus, and not of the plebes; and while for the populus the *nundinæ* were *feriæ*, they were real days of business (*dies fasti* or *comitiales*) for the plebeians, who on these occasions pleaded their causes with members of their own order, and held their public meetings (the ancient *comitia* of the plebeians) and debates on such matters as concerned their own order, or to discuss which they were invited by the senate.¹ How long this distinction existed that the *nundinæ* were *nefasti* for the patricians and *fasti* for the plebeians, is not quite clear. In the law of the Twelve Tables they appear to have been regarded as *fasti* for both orders,² though, according to Granius Licinianus,³ this change was introduced at a later time by the *lex Hortensia*, 286 B.C. This innovation, whenever it was introduced, facilitated the attendance of the plebeians at the *comitia centuriata*. In the ancient *calendaria*, therefore, the *nundinæ* and *dies fasti* coincide. The subjects to be laid before the *comitia*, whether they were proposals for new laws or the appointment of officers, were announced to the people three *nundinæ* beforehand (*trinundino die proponere*).

The *nundinæ* being thus at all times days of business for the plebeians (at first exclusively for them, and afterward for the patricians also), the proceedings of the tribunes of the people were confined to these days, and it was necessary that they should be terminated in one day;⁴ that is, if a proposition did not come to a decision in one day, it was lost, and if it was to be brought again before the people, the tribunes were obliged to announce it three *nundinæ* beforehand, as if it were quite a new subject.

Instead of *nundinæ*, the form *nundinum* is sometimes used, but only when it is preceded by a numeral, as in *trinundinum* or *trinum nundinum*. (See the passages above referred to.) It is also used in the expression *internundinum* or *inter nundinum*, that is, the time which elapses between two *nundinæ*.⁵ The word *nundinæ* is sometimes used to designate a market-place, or a time for marketing in general.⁷

NUNDINUM. (Vid. NUNDINÆ.)

NUNTIATIO. (Vid. OPERIS NOVI NUNTIATIO.)

NUPTIÆ. (Vid. MARRIAGE, ROMAN.)

*NYCTERIS (νυκτερίς), the common Bat, or *Vespertilio murinus*. "It is not improbable," remarks Adams, "that the ὄρνις of the ancient poets was the *Vespertilio spectrum*, or Vampyr."⁸

*NYCTICORAX (νυκτικώρας), a bird described by Aristotle and other ancient authors. "The *Nycticorax* of modern naturalists is a species of Heron, but the νυκτικώρας of Aristotle would rather appear to have been a species of Owl. It might be supposed the *Stryx nyctea*, or Great White Owl, if it were ascertained that it is found in the south of Europe."⁹

*NYMPHÆA (νυμφαία), a plant. "The description of it," says Adams, "which is given by Theophrastus, is not sufficiently precise to enable us to determine whether he meant to apply it to the *Nymphaea alba* or the *lutea*, i. e., the White or the Yellow Water Lily. The two species described by Dioscorides are referable to the two species of *Nymphaea* which we have mentioned. The *Nymphaea lutea* is now held to be a distinct genus, and

is called *Nuphar lutea* by Smith, Hooker, and other late botanists. The term *Nuphar* is said to be an Egyptian word, signifying 'the medicine of the Nile.' It occurs among the synonyms of Dioscorides. By the Arabian authors it is called *Nenufar*, which is a corruption of *Nuphar*. Sibthorp found the *Nuphar lutea* growing in the lakes of Thessaly, as described by Dioscorides."¹¹

NYMPHAGOGUS (νυμφαγωγός). (Vid. MARRIAGE, GREEK, p. 620.)

O.

OATH (GREEK). An oath (ὄρκος) is an appeal to some superior being, calling on him to bear witness that the swearer speaks the truth, or intends to perform the promise which he makes. Hence the expressions ἰστω Ζεὺς, θεὸν μαρτύρομαι, and others of the same import, so frequently used in the taking of oaths.² It is obvious that such an appeal implies a belief, not only in the existence of the being so called upon, but also in his power and inclination to punish the false swearer; and the force of an oath is founded on this belief. Hence an oath is called θεῶν ὄρκος.³ Ζεὺς ὄρκιος⁴ is the god who has regard to oaths, and punishes their violation. Ζῆν' ἔχων ἐπ' ὤμοτον⁵ means (according to Suidas) ὄρκον ἐγγυητήν.

We find early mention in the Greek writers of oaths being taken on solemn and important occasions, as treaties, alliances, vows, compacts, and agreements, both between nations and individuals. Thus, when the Greeks and Trojans agree to decide the fate of the war by a single combat between Menelaus and Paris, they ratify their agreement by an oath.⁶ The alliance between Cræsus and the Lacedæmonians is confirmed by an oath.⁷ So is the treaty between the Medes and Lydians, whose rites in swearing (as Herodotus tells us⁸) were the same as those of the Greeks, with this addition, that they made an incision in their arms and tasted each other's blood. We may farther notice the treaty of peace between the Athenians and Peloponnesians, upon which every state was to swear ἐπιχώριον ὄρκον τὸν μέγιστον,⁹ the vow of the Ionian women,¹⁰ that of the Phœceans,¹¹ and the promise of Circe to Ulysses.¹² The reliance placed in an oath is specially shown in the dialogue between Ægeus and Medea in Euripides,¹³ and the speech of Minerva in Euripides.¹⁴ For other examples we refer the reader to Sophocles, *Œd. Tyr.*, 647; *Œd. Col.*, 1637; *Trachin.*, 1183.—Herod., vi., 74.—Hom., *Il.*, ix., 132.

That the Greeks (as a nation) were deeply imbued with religious feeling, and paid high regard to the sanctity of oaths, may be gathered from the whole tenor of their early history, and especially from the writings of the poets Homer, Æschylus, and Pindar.¹⁵ They prided themselves on being superior in this respect to the barbarians.¹⁶ The treacherous equivocation practised by the Persians at the siege of Barca¹⁷ would have been repugnant to the feelings of a people whose greatest hero declared that he hated like hell one

Ὅς ᾗ ἕτερον μὲν κεύθῃ ἐνὶ φρεσὶν, ἄλλο δὲ βάζῃ.¹⁸

The poets frequently allude to the punishment of perjury after death, which they assign to the infer

(Herod., iv., 201.)—18. (Il., ix., 313.)

mal gods or Furies;¹ and we find many proofs of a persuasion that perjurers would not prosper in this world.² One of the most striking is the story told by Leutychedes to the Athenians of Glaucus the Spartan, who consulted the Pythian oracle whether he should restore a deposit, or deny on oath that he had ever received it; and who, for merely deliberating upon such a question, was cut off with his whole family.³

Anciently the person who took an oath stood up, and lifted his hands to heaven, as he would in prayer; for an oath was a species of prayer, and required the same sort of ceremony.⁴ Oaths were frequently accompanied with sacrifice or libation.⁵ Both sacrifice and libation are used in the compact of the Greeks and Trojans in *Il.*, iii., 276. The victims on such occasions were not eaten, but, if sacrificed by the people of the country, were buried in the ground; if by strangers, were thrown into the sea or a river.⁶

The parties used also to lay their hands upon the victims, or on the altar, or some other sacred thing, as if by so doing they brought before them the deity by whom the oath was sworn, and made him witness of the ceremony. Hence the expressions *πρὸς τὸν θεὸν ἐξορκίζεω, ὁμνῶναι καθ' ἱερῶν.*⁷ In Homer,⁸ Juno, making a solemn promise to Sleep, takes the Earth in one hand and Heaven in the other, and swears by Styx and the subterranean gods. To touch the head, hand, or other part of the body of the person to whom the promise was made, was a common custom. The hand especially was regarded as a pledge of fidelity, and the allusions to the junction of hands in making contracts and agreements abound in the ancient writers.⁹ Other superstitious rites were often superadded, to give greater solemnity to the ceremony,¹⁰ which appear to be ridiculed by Aristophanes.¹¹

The different nations of Greece swore by their own peculiar gods and heroes; as the Thebans by Hercules, Iolaus, &c., the Lacedæmonians by Castor and Pollux, the Corinthians by Neptune;¹² the Athenians swore principally by Jupiter, Minerva, Apollo (their *πατρώος θεός*), Ceres, and Bacchus.

The office or character of the party, or the place, or the occasion often suggested the oath to be taken. Thus Iphigenia, the priestess, swears by Diana in Euripides, *Iph. in Taurus*. Menelaus bids Antilochus swear by Neptune (the equestrian god), the subject being on horses.¹³ So Philpides, in Aristophanes,¹⁴ is made ridiculously to swear *ὑπὸν Ποσειδῶν ῥὸν ἱππιον*. Achilles swears by his sceptre,¹⁵ Telemachus by the sorrows of his father.¹⁶ Hence the propriety of the famous oath in Demosthenes by the warriors who fought at Marathon, &c. Here we may observe, that as swearing became a common practice with men upon trivial occasions and in ordinary conversation, they used to take oaths by any god, person, or thing, as their peculiar habits, or predilections, or the fancy of the moment dictated. Pythagoras, on this account, swore by the number Four.¹⁷ Socrates used to swear *ὑπὸν κύνα*, in

which he was absurdly imitated by others.¹ Aristophanes, so keenly alive to all the foibles of his countrymen, takes notice of this custom, and turns it into ridicule. Hence he makes the sausage-dealer swear *ὑπὸν Ἑρμῆν τὸν ἀγοραῖον*,² Socrates *μὰ τὴν Ἀναπορίην*, &c.³

Women also had their favourite oaths. As the men preferred swearing by Hercules, Apollo, &c., so the other sex used to swear by Venus, Ceres, and Proserpine, Juno, Hecate, Diana; and Athenian women by Aglauros, Pandrosus, &c.⁴

The security which an oath was supposed to confer, induced the Greeks, as it has people of modern times, to impose it as an obligation upon persons invested with authority, or intrusted with the discharge of responsible duties.⁵ The Athenians, with whom the science of legislation was carried to the greatest perfection, were, of all the Greek states, the most punctilious in this respect. The youth, entering upon his 20th year, was not permitted to assume the privileges of a citizen, or to be registered in the *ληξιαρχικὸν γραμματεῖον*, without taking a solemn oath in the Temple of Aglauros to obey the laws and defend his country. (The form of his oath is preserved in Pollux.⁶) The archon, the judge, and the arbitrator were required to bind themselves by an oath to perform their respective duties.⁷ (*Vid.* DICASTES.) As to the oath taken by the Senate of Five Hundred, see Demosthenes.⁸ As to the oath of the witness, and the voluntary oath of parties to an action, see MARTYRIA. The importance, at least apparently, attached to oaths in courts of justice, is proved by various passages in the orators.⁹ Demosthenes constantly reminds his judges that they are on their oaths, and Lycurgus¹⁰ declares that *τὸ συνέχον τὴν δημοκρατίαν ὄρκος ἐστίν*.

The experience of all nations has proved the dangerous tendency of making oaths too common. The history of Athens and of Greece in general furnishes no exception to the observation. While in the popular belief and in common parlance oaths continued to be highly esteemed, they had ceased to be of much real weight or value. It is impossible to read the plays of Aristophanes, the orators, and other writers of that period, without seeing that perjury had become a practice of ordinary occurrence. The poet who wrote that verse which incurred the censure of the comedian, *ἡ γλῶσσ' ὁμόμοχ', ἡ δὲ φῆρ' ἀνόμοτος*,¹¹ was not the only person who would thus refine. The bold profligacy described by Aristophanes¹² was too often realized in action. To trace the degeneracy of the Greek character belongs not to this place. We conclude by reminding our readers that in a later age the Greeks became a by-word among the Romans for lying and bad faith.¹³

A few expressions deserve notice. *Nῆ* is used by Attic writers in affirmative oaths, *μὰ* in negative. The old form of affirmation, still preserved by the other Greeks, and used by Xenophon, was *ναὶ μὰ*.¹⁴ *Nῆ* is nothing more than another form of *ναὶ*, used with an accusative case, *μὰ* being omitted, as it often is in negative oaths.¹⁵ *Nῆ*, however, is never used by the tragedians, who always employ a paraphrase in affirmative oaths, such as *θεὸν μαρτυρεσθαι*.¹⁶ *Ἐπομνήναι* is used affirmatively.

ly, ἀπομνύναι negatively, according to Eustathius.¹ Διδύμνσθαι is to swear strongly, to protest.² Ὀρκιον, though often used synonymously with ὅρκος, signifies, more strictly, a compact ratified by oath; ὅρκια τέμνειν is to make a compact with oaths and sacrifice; and through the frequent practice of sacrificing on such occasions, it came that ὅρκιον was sometimes used for the victim itself.³ In the phrase ὁμνύναι καθ' ἑαυτὸν, the original meaning of κατά was, that the party laid his hand upon the victims; but the same phrase is used metaphorically in other cases, where there could be no such ceremony. Thus κατά χιλίων εὐχὴν ποιήσασθαι χιμάρων⁴ is to make a vow to offer a thousand kids; as though the party vowing laid his hands upon the kids at the time, as a kind of stake. The same observation applies to ὁμνύναι καθ' ἐξωλείας.

OATH (ROMAN) (*jusjurandum*, *juramentum*). The subject of Roman oaths may be treated of under four different heads, viz.: 1. Oaths taken by magistrates and other persons who entered the service of the Republic. 2. Oaths taken in transactions with foreign nations in the name of the Republic. 3. Oaths taken before the prætor or in the courts of justice. 4. Oaths, or various modes of swearing in common life.

1. *Oaths taken by magistrates and other persons who entered the service of the Republic*—After the establishment of the Republic, the consuls, and subsequently all the other magistrates, were obliged, within five days after their appointment, to promise, on oath, that they would protect and observe the laws of the Republic (*in leges jurare*).⁵ Vestal virgins and the flamen dialis were not allowed to swear on any occasion,⁶ but whether they also entered upon their sacred offices without taking an oath analogous to that of magistrates is unknown. When a flamen dialis was elected to a magistracy, he might either petition for an especial dispensation (*ut legibus solveretur*), or he might depute some one to take the oath for him. But this could not be done unless the permission was granted by the people. The first Roman consuls seem only to have sworn that they would not restore the kingly government, nor allow any one else to do so,⁷ and this may have been the case till, all fears of such a restoration having vanished, the oath was changed into a *jusjurandum in leges*. The consular oath was occasionally taken under the Empire.⁸

During the later period of the Republic we also find that magistrates, when the time of their office had expired, addressed the people, and swore that during their office they had undertaken nothing against the Republic, but had done their utmost to promote its welfare.⁹ In some cases a tribune of the people might compel the whole senate to promise, on oath, that they would observe a plebiscitum, and allow it to be carried into effect, as was the case with the *lex Agraria* of Saturninus. The censor Q. Metellus, who refused to swear, was sent into exile.¹⁰ During the time of the Empire, all magistrates, on entering their office, were obliged to pledge themselves by an oath that they would observe the *acta Cæsarum* (*jurare in acta Cæsarium*), and the senators had to do the same regularly every year on the first of January.¹²

All Roman soldiers, after they were enlisted for a campaign, had to take the military oath (*sacramentum*), which was administered in the following manner: Each tribus militum assembled his legion, and picked out one of the men, to whom he put the oath, that he would obey the commands of his generals, and execute them punctually. The other men then came forward, one after another, and repeated the same oath, saying that they would do like the first (*idem in me*).¹ Livy² says that, until the year 216 B.C., the military oath was a real sacramentum (*vid. SACRAMENTUM*), i. e., the soldiers took it voluntarily, and promised (with imprecations) that they would not desert from the army, and not leave their ranks except to fight against the enemy or to save a Roman citizen. But in the year 216 B.C. the soldiers were compelled by the tribunes to take the oath, which the tribunes put to them, that they would meet at the command of the consuls, and not leave the standards without their orders, so that in this case the military oath became a *jusjurandum*. But Livy here forgets that, long before that time, he has represented³ the soldiers taking the same *jusjurandum*. A perfect formula of a military oath is preserved in Gellius.⁴ It may be here remarked that any oath might be taken in two ways: the person who took it either framed it himself, or it was put to him in a set form, and in this case he was said *in verba jurare*, or *jurare verbis conceptis*. Polybius⁵ speaks of a second oath which was put to all who served in the army, whether freemen or slaves, as soon as the castrametatio had taken place, and by which all promised that they would steal nothing from the camp, and that they would take to the tribunes whatever they might happen to find. The military oath was, according to Dionysius,⁶ the most sacred of all, and the law allowed a general to put to death, without a formal trial, any soldier who ventured to act contrary to his oath. It was taken upon the signa, which were themselves considered sacred. In the time of the Empire a clause was added to the military oath, in which the soldiers declared that they would consider the safety of the emperor more important than anything else, and that they loved neither themselves nor their children more than their sovereign.⁷ On the military oath in general, compare Brissotius, *De Formul.*, iv., c. 1-5.

II. *Oaths taken in transactions with foreign nations in the name of the Republic*.—The most ancient form of an oath of this kind is recorded by Livy,⁸ in a treaty between the Romans and Albans. The pater patratus pronounced the oath in the name of his country, and struck the victim with a flint-stone, calling on Jupiter to destroy the Roman nation in like manner, as he (the pater patratus) destroyed the animal, if the people should violate the oath. The chiefs or priests of the other nation then swore in a similar manner by their own gods. The ceremony was sometimes different, inasmuch as the fetialis cast away the stone from his hands, saying, "*Si sciens fallo, tum me Diespiter salva urbe arceque bonis ejiciat, uti ego hunc lapidem*." Owing to the prominent part which the stone (*lapis silex*) played in this act, Jupiter himself was called *Jupiter Lapis*,¹⁰ and hence it was, in after times, not uncommon among the Romans, in ordinary conversation, to swear by Jupiter Lapis.¹¹ In swearing to a treaty with a foreign nation, a victim (a pig or a lamb) was in the early times always sacrificed by

the *fetialis* (whence the expressions *fœdus ætere, ðρκια τέρεων*), and the priest, while pronouncing the oath, probably touched the victim or the altar.¹ (Compare *FETIALES*.) This mode of swearing to a treaty through the sacred person of a *fetialis* was observed for a long time; and after the second Punic war, the *fetiales* even travelled to Africa to perform the ancient ceremonies.² The *ius fetiale*, however, fell into disuse as the Romans extended their conquests; and as, in most cases of treaties with foreign nations, the Romans were not the party that chose to promise anything on oath, we hear of no more oaths on their part; but the foreign nation or conquered party was sometimes obliged to promise with a solemn oath (*sacramentum*) to observe the conditions prescribed by the Romans, and documents recording such promises were kept in the Capitol.³ But in cases where the Romans had reason to mistrust, they demanded hostages, as being a better security than an oath, and this was the practice which in later times they adopted most generally. At first the Romans were very scrupulous in observing their oaths in contracts or treaties with foreigners, and even with enemies; but attempts were soon made by individuals sophistically to interpret an oath and explain away its binding character;⁴ and from the third Punic war to the end of the Republic, perjury was common among the Romans in their dealings with foreigners as well as among themselves.

III. *Oaths taken before the prætor or in courts of justice.*—In general, it may be observed, that if anything had been promised by a person on oath, the promise had, in a court of justice, no more binding power than it would have had without the oath, and the oath was in such case merely a stronger promise as far as the conscience of the person who took it was concerned.⁵ But if a slave, for the sake of obtaining his liberty, had promised on oath to perform certain services to his master, the oath was considered binding.⁶ The emperors also, in some cases, considered the promise of a free citizen, when it was confirmed by an oath, as binding.⁷

Sometimes, when a case was brought before the prætor, the plaintiff might put the defendant to his oath (*deferre iuramentum*) either in regard to the whole case in question, or to a part of it. If the oath was taken, the whole question, or that part of it to which the oath applied, was settled at once, and the *litis contestatio*, or a formal *iudicium*, was superfluous. But if the defendant refused to take the oath, he might, in return, put the plaintiff to his oath (*referre iuramentum*), to make him declare *se non calumniæ causa agere*. (Vid. *CALUMNIA*.) But if the defendant neither swore himself, nor put the plaintiff to his oath of calumny, he admitted the necessity of a *iudicium*. If the oath merely referred to a part of it, so that the defendant only acknowledged part of what the plaintiff alleged, a *iudicium* was still necessary, but its formula was of course modified.⁸ Respecting the oath of calumnia, to which the defendant might in all cases put the plaintiff, and to which the latter also might be put by the prætor, see *CALUMNIA*. The formula of an oath before the prætor depended upon the person who put it.⁹

A *iudex* or *iudices* appointed by the prætor were obliged to promise on oath to discharge their duties according to the laws.¹⁰ Rein¹¹ denies that, after a *iudex* was given by the prætor, either of the litigant parties had the right to put the other to an oath; but from the Digest¹ it is clear that it might be done by the party *cui onus probatæ incumbat*, provided he himself had before taken the *iuramentum calumniæ*. When documents in the trial of a cause were laid before the *iudex*, of which he doubted the genuineness or correctness, he might make the party who brought them forward establish their correctness or genuineness by an oath.²

The witnesses who gave their evidence in civil proceedings before a *iudex*, sometimes confirmed their testimony by an oath, which they either took voluntarily, or which was put to them by the *iudex*. In *iudicia publica*, the witnesses had always to give their evidence on oath.³ We have no means of ascertaining whether, in all instances of civil causes, witnesses might be compelled to take an oath, but it seems probable that in a civil cause a witness generally did not give his evidence on oath, unless he himself chose to do so, or the *iudex*, for special reasons, thought it advisable that he should.

False swearing (*pejorare, perjurium*) was not regarded by the Romans as it is by us. Swearing was merely a matter of conscience, and, consequently, the person who was guilty of false swearing was responsible to the Deity alone. Perjury does not appear to have been punished more severely than false witness in general given without an oath. When, therefore, Valerius Maximus⁴ speaks of *infamia perjurii*, he uses *infamia* in a popular, and not a strictly legal sense. The manner in which the Romans regarded perjury is implied in an expression of Cicero,⁵ who says, "*Perjurii poena divina, exitium; humana, dedecus*." Hence every oath was accompanied by an execration,⁶ and perjury, therefore, was an act which belonged more to the jurisdiction of the censors than to an ordinary court of justice.⁷ Witnesses convicted of having given false testimony, with or without oath, were punished.⁸ (Compare *FALSUM*.)

IV. *Oaths or various modes of swearing in common life.*—The practice of swearing, or calling upon some god or gods as witnesses to the truth of assertions made in common life or in ordinary conversations, was as common among the Romans as among the Greeks. The various forms used in swearing may be divided into three classes:

1. Simple invocations of one or more gods, as *Hercle* or *Mehercle*, that is, *ita me Hercules iuvet, amet, or servet*;¹ *Pol, Perpol, or Ædopol*, that is, *per Pollucem; per Jovem Lapidem*, or simply *per Jovem; per superos; per deos immortales; mediis fidiis*, that is, *ita me Dius (Διός) filius iuvet*;² *ita me deus amet, or dii ament*. Sometimes, also, two or a great number of gods were invoked by their names.¹¹ The *genii* of men were regarded as divine beings, and persons used to swear by their own *genius* or by that of a friend, and during the Empire by that of an emperor.¹² Women as well as men swore by most of the gods, but some of them were peculiar to one of the sexes. Thus women never swore by *Hercules*, and men never by *Castor*. Varro, moreover, said that in ancient times women only swore by *Castor* and *Pollux*, while in the extant writers we find men frequently swearing by *Pollux*.¹³ *Juno* and *Venus* were mostly invoked by women, but also by lovers and effeminate men in general.¹⁴

1. (Virg. *Æn.* xii. 301, &c.—Liv. xxi. 45.)—2. (Liv. xxx. 43.)—3. (Liv. xxii. 24.)—4. (Gellius, vii. 18.—Liv. iii. 20.—id. xii. 61.—Cic. De Off. iii. 27, &c.)—5. (Dig. 2, tit. 14, s. 7, § 16.)—6. (Dig. 38, tit. 1, s. 7.—Compare Ad, tit. 12, s. 44.)—7. (Cod. 2, tit. 37, s. 1.)—8. (Dig. 12, tit. 2, s. 34, § 6, &c.—Quintil. v. 6.)—9. (Dig. 12, tit. 2, s. 3, § 4, and s. 5.)—10. (Cic. De Invent. i. 39.)—11. (Röm. Privatr. p. 477, &c.)

1. (22, tit. 3, s. 25, § 3.)—2. (Dig. 12, tit. 2, s. 31.—Cod. 4, tit. 1, s. 2.)—3. (Cic. Pro Rosc. Com., 15.—Id., Pro Sulla, 7.—Id., Pro Font., 8.—Id., Pro Balb., 5.—Quintil. v. 7.—Val. Max. viii. 5, § 5.)—4. (viii. 5, § 5.)—5. (De Leg. ii. 9.)—6. (Plut. Quest. Græc. p. 275, Franc.)—7. (Cic. De Off. i. 13.—Liv. xiv. 18.—Gellius, vii. 18.)—8. (Dig. 22, tit. 5, s. 16.)—9. (Fest., s. v. Mecastor.)—10. (Fest., s. v.—Varro, De Ling. Lat. iv. p. 20, Bip.)—11. (Plaut., Bacchid., iv. 8, 51.—Terent., Andr. iii. 2, 25.)—12. (Horat., Epist., i. 7, 94.—Suet., Calig. 27.)—13. (Gellius, iii. 6.)—14. (Plaut., Amphit., ii. 2, 210.—Tibull., iv. 13, 15.—Juv., ii. 98.—Ovid, Amor., ii. 7, 27.—Id. ib. ii. 8, 18.)

2 Invocations of the gods, together with an execution, in case the swearer was stating a falsehood. Execrations of this kind are, *Dii me perdant*;¹ *dii me interficiant*;² *dispercam*;² *ne vivam*;⁴ *ne saluus sim*,⁵ &c.

5. Persons also used to swear by the individuals or things most dear to them. Thus we have instances of a person swearing by his own or another man's head,⁶ by his eyes,⁷ by his own welfare or that of his children,⁸ by the welfare of an emperor,⁹ &c.

Respecting the various forms of oaths and swearing, see Brissonius, *De Formul.*, viii., c. 1-18.

OBÆ. (*Vid.* TRIBUS, GREEK.)

OBELISCUS (*ὀβελίσκος*) is a diminutive of *Obelus* (*ὀβελός*), which properly signifies a sharpened thing, a skewer or spit, and is the name given to certain works of Egyptian art. (Herodotus¹⁰ uses *ὀβελός* in the sense of an obelisk.) A detailed description of such works would be inconsistent with the plan of this work, but some notice of them is required by the fact that several of them were transported to Rome under the emperors. Ammianus Marcellinus¹¹ says that "an obelisk is a very rough stone, in the shape of a kind of landmark or boundary-stone, rising with a small inclination on all sides to a great height; and in order that it may imitate a solar ray by a gradual diminution of its bulk, it terminates in a prolongation of four faces united in a sharp point. It is very carefully smoothed." Most ancient writers consider obelisks as emblematic of the sun's rays.¹²

An obelisk is, properly, a single block of stone, cut into a quadrilateral form, the sides of which diminish gradually, but almost imperceptibly, from the base to the top of the shaft, but do not terminate in an apex upon the top, which is crowned by a small pyramid, consisting of four sides terminating in a point. The Egyptian obelisks were mostly made of the red granite of Syene, from which place they were carried to the different parts of Egypt. They were generally placed in pairs at the entrance to a temple, and occasionally in the interior, and were usually covered with hieroglyphical inscriptions.

Obelisks were first transported to Rome under Augustus, who caused one to be erected to the circus, and another in the Campus Martius.¹³ The former was restored in 1589, and is called at present the Flaminian obelisk. Its whole height is about 116 feet, and without the base about 78 feet. The obelisk in the Campus Martius was set up by Augustus as a sundial. It stands at present on the Monte Citorio, where it was placed in 1792. Its whole height is about 110 feet, and without the base about 71 feet. Another obelisk was brought to Rome by Caligula, and placed on the Vatican in the Circus of Caligula.¹⁴ It stands at present in front of St. Peter's, where it was placed in 1586, and its whole height is about 132 feet, and without the base and modern ornaments at the top about 83 feet. But the largest obelisk at Rome is that which was originally transported from Heliopolis to Alexandria by Constantine, and conveyed to Rome by his son Constantius, who placed it in the Circus Maximus.¹⁵ Its present position is before the north portion of the Lateran Church, where it was placed in 1588. Its whole height is about 149 feet, and without the base about 105 feet.

1. (Plaut., *Mil. Glor.*, iii., 2, 20.—*Id.*, *Cistell.*, ii., 1, 21.)—2. (Plaut., *Mostell.*, i., 3, 35.)—3. (Horat., *Sat.*, i., 9, 47.)—4. (Cic. ad Fam., vii., 23.—Mart., x., 12, 3.)—5. (Cic. ad Att., xvi., 13.)—6. (Dig. 12, tit. 2, s. 3, § 4.—Ovid, *Trist.*, v., 4, 45.—*Id.*, *Heroid.*, iii., 107.—Juv., vi., 16.)—7. (Plaut., *Menecm.*, v., 9, 1.—Ovid, *Amor.*, ii., 16, 44.)—8. (Dig. 12, tit. 2, s. 5.—Plin., *Epist.*, ii., 20.)—9. (Cod. 2, tit. 4, s. 41.)—10. (ii., 111.)—11. (xvi., 4.)—12. (Compare Plin., *H. N.*, xxxvi., 14.)—13. (Plin., *H. N.*, xxxvi., 14.)—14. (Plin., *H. N.*, xxxvi., 15; xvi., 76, § 2.)—15. (Amm. Marc., xvii., 4.)

There are eight other obelisks at Rome besides those mentioned above, but none of them are of historical importance. There are also obelisks in various other places, as at Constantinople, Arles, Florence, Catania in Sicily, &c., some of which are works of Egyptian art, and others only imitations.

There are two small obelisks in the British Museum, which were brought by the French from Cairo.¹

OBÆLOS. (*Vid.* VERU.)

OBLIGATIONES. Obligatio is defined² to be "a bond of law by which we are under a necessity of paying (*solvendæ*) anything according to the laws of our state." This definition has only reference to one part of an obligation, namely, the right of action, which is inseparable from the notion of a Roman obligation. According to Paulus,³ the substance of an obligation consists in another person binding himself to give to us something, or to do something, or to secure or make good something (*ad dandum aliquid, vel faciendum, vel præstandum*). This "binding" must, however, be understood of a "legal binding," that is, the party who fails to perform what he has engaged to do, must be liable to legal compulsion; in other words, the duty which he owes may be enforced by suit or action. Any agreement which is binding according to positive morality, but which, for any reason, cannot be legally enforced, is not properly an obligatio, but still the Romans gave such agreement the name of obligatio, and added the term *naturalis*, by which it is opposed to *civilis* and *prætoria* or *honoraria*. The obligations *civiles* were those which were created by enactments (*legibus*), or generally were established by the *ius civile*; *prætorie* or *honorarie* were those which owed their origin to the jurisdiction of the prætor. Viewed with reference to the events on which the law operated to give obligations a binding force, obligations arose either from contract or quasi contract, and delict (*maleficium, delictum*), or quasi delict.⁴ According to Gaius, every obligatio arises either from contract or delict.

Contract (*contractus*) was made in four ways—re, verbis, litteris, and consensu.

As an example of a contract re, Gaius mentions *mutuum*. (*Vid.* MUTUUM.) Also, if a man received what was not due from a person who paid by mistake, the payer had his remedy for the recovery just as if it were a case of *mutuum*. But "this kind of obligation," observes Gaius, "does not appear to arise from contract, because he who gives with the intention of payment rather intends to dissolve or put an end to (*disstrahere*) a transaction (*negotium*) than to commence or to constitute (*contrahere*) a transaction." In such a case the English law has a fiction of a promise to pay on the part of the person who has received the money.

To the contracts made re, there also belong *COMMODATUM*, *DEPOSITUM*, and *PIGNUS*.

The obligatio verbis was contracted by oral question and answer between the parties. The form of words was: *Dari Spondes? Spondeo; Dabis? Dabo; Promittis? Promitto; Fidepromittis? Fidepromitto; Fidejubes? Fidejubeo; Facies? Faciam*. The words *dari spondes? spondeo*, were so peculiarly Roman, that their legal effect could not be preserved if their meaning was transferred into another language; nor could a valid obligatio with a peregrinus be made by the use of the word *spondeo*.⁵

The evidence of such an obligatio must have been the presence of witnesses.⁶

It is to this form of contract by question and an

1. (Zoega, *De Usu et Origine Obeliscorum*.—Egyptian Antiquities, vol. i., c. 14, 15, London, 12mo, 1832.)—2. (Inst., iii., tit. 13.)—3. (Dig. 44, tit. 7, s. 3.)—4. (Inst., iii., tit. 13.)—5. (Gaius, ii., 93, 179.)—6. (Cic., *Pro Rosc. Com.*, ii., 5.)

swer (*ex interrogazione et responsione*) that the terms "stipulari" and "stipulatio" refer. The word "stipulari" properly refers to him who asks the question, "*Si quis ita dari stipuletur; Post mortem meam dari spondes; vel ita, Cum morieris, spondes?*" The person who asked the question was stipulator; he who answered the question was promissor, and he was said spondere.¹ Sometimes the whole form of words which comprises the question and the answer is comprehended in the term stipulatio,² and the participle "stipulata" is sometimes used in a passive sense.³

A stipulatio which contained an impossible condition was invalid (*inutilis*). As the stipulatio was effected by words, it was a necessary consequence that the parties should have power to speak and hear, and on this ground was founded the rule of law that a mutus and a surdus could not be parties to a stipulatio. As to the ability of pupilli and infantes with respect to obligations, see IMPUBES and INFANS. The stipulator might have another party to the contract on his behalf, who was called adstipulator. The adstipulator had the same right of action as the stipulator, and, therefore, a payment in respect of the stipulatio could be made to him as well as to the stipulator; and the stipulator had an actio mandati against the adstipulator for the recovery of anything that he had received.

There were some peculiarities in the adstipulatio. The right of action did not pass to the heres of the adstipulator, and the adstipulation of a slave for his master had no effect, though in all cases he could acquire for his master by stipulation. The same rule of law appeared to apply to him who was in mancipio, for he was servi loco. If a son who was in the power of his father became his adstipulator, he did not acquire anything for his father, though he acquired for him by stipulatio. Still his adstipulatio gave the son a right of action, provided he was released from the father's power without a capitis diminutio, as, for instance, by the father's death, or by being inaugurated flamen dialis. The same rule of law applied to a filiafamilias and to a wife in manu.

Those who were bound for the promissor were called sponsores, fidepromissores, fidejussores. (*Vid. INTERCESSIO.*)

The case of an obligatio literis is illustrated by Gaius⁴ by the instance of nomina transcripticia, as when a creditor who has a debt due from a person in respect of a sale, or a letting, or a partnership, enters it in his book (*codices, or tabulæ expensæ et accepti*) as a debt (*expensum illi fert*):⁵ *expensum tulisse non dicit, cum tabulas non recitat*. This was called "*Nomen transcripticium a re in personam*." It was called *transcriptio a persona in personam* when a creditor entered in his books a debt as due from a third party, which was really due from another party, but which that other party had transferred (*delegavit*) to the creditor.

Cicero clearly alludes to this literarum obligatio in his Oratio pro Roscio Comodo. He says,⁶ speaking of the plaintiff's demand, "his claim is for a certain sum of money (*pecunia certa*), and this must be either 'data' (a case of obligatio re), or 'expensa lata' (the literarum obligatio), or stipulata (an obligatio verbis)."

Some difficulty arises about the mode of converting an obligation of a different kind into an obligatio literis. The subject is discussed by Unterholzner⁷ in an ingenious essay, which, however, was written

before the publication of the MS. of Gaius; and it has since been discussed by other writers. Unterholzner conjectured that a third party, with the consent of the debtor and creditor, made the entry in his own books; but there is no evidence in support of this assumption. Theophilus¹ represents the literarum obligatio as a novatio or change of an obligation of one kind into an obligation of another kind, and this, he says, was effected both by words and writing (*ῥήμασι καὶ γράμμασι*). It was effected, according to him, by the creditor writing to the debtor (*γράφειν ῥήματα πρὸς αὐτόν*) to ask his consent to the old obligation being made into a new one of a different kind, and by the debtor consenting. As stated by him, the obligatio literis might be an obligatio contracted by a letter of the creditor to the debtor, and the debtor's reply. In principle, there would be no objection to its being contracted by the debtor's consent expressed by a subscription in the creditor's books. The literarum obligatio of Theophilus, however, rather seems to correspond to the other kinds of literarum obligatio referred to by Gaius,² where he says, "this obligation can be contracted by chirographa and syngrapha, that is, if a man writes that he owes a sum of money or will pay it; provided, however, there be no stipulatio on the same account." It is not impossible that Gaius means that the creditor might convert an obligation of another kind into that of pecunia expensa by the bare entry of it in his book; for it is no objection to this, as Unterholzner has it, "that a unilateral writing on the part of the creditor should have the effect of putting another person under an obligatio," for an obligatio was already contracted, which the creditor would have to prove; but if he could prove it, the law gave him all the advantage of a creditor for pecunia certa, if he had complied with certain forms. Gaius³ certainly may be understood as asserting that this obligatio was contracted simply "*expensum ferendo*:" but it seems to be the general opinion that this literarum obligatio required the consent of the debtor either orally in the presence of witnesses or by letter;⁴ and this is not inconsistent with Gaius; for, though he says that the debtor is bound by the "*expensum ferendo*," that does not exclude his consent, but merely shows what is necessary in order to make the consent legally binding.

The obligationes consensu were emptio and venditio, locatio, conductio, societas, mandatum. All obligationes by contract, of course, required consent and the evidence of consent; but "these obligationes," says Gaius,⁵ "are said to be contracted consensu, because no peculiar form of words or writing was required, but the consent of the parties to the transaction was sufficient." Accordingly, such transactions could take place between persons at a distance from one another, but a verborum obligatio required the presence of the parties. The actions founded on these obligationes consensu were bonæ fidei.

A legal obligatio implies a right of action against the person who owes the duty (*qui obligatur*). This right of action (*ex contractu*) might be acquired by any person who was sui juris. It might also be acquired for him by those who were in his potestas, manus, and mancipium; and by free men and slaves whom a man possessed bona fide, with certain exceptions. This right of action might also be acquired by a man through the acts of a free man who was his agent, so far that he could require the cession of the obligatio so acquired.

An obligatio was terminated (*tollitur*) in various

1. (Gaius, iii., 100, 105.—Dig. 45, tit. 1, s. 113: "De Verborum Obligationibus.")—2. (Dig. 45, tit. 1, s. 5, § 1.)—3. (Cic., Pro Rosc. Com., 5.)—4. (iii., 128.)—5. (Compare Cic., Pro Rosc. Com., 4, 5.)—6. (c. 5.)—7. ("Ueber die Rede des Cicero für den Schauspieler Q. Roscius," Zeitschrift, i., 248.)

1. (ad tit. 1: "De Lit. Oblig.")—2. (iii., 134.)—3. (iii., 137;—4. (Cic., Pro Rosc. Com., 5.—Val. Max., viii., 2, 2.)—5. (iii., 135.)

ways. The most common way was by payment (*solutio*) of what was due. A man, with the consent of the creditor, might pay another's debt, but the two schools differed as to the legal consequence of such payment. The Proculiani, as usual, adhering strictly to fundamental principles, maintained that the debtor was still under his obligatio, but if the money was demanded of him by the creditor, he had a good plea of *dolus malus* (*exceptio doli mali*).

An obligatio might be terminated by acceptilatio. An obligation contracted per *res et libram* might be determined in the same way, and also one arising "ex iudicati causa." (*Vid. NEXUM.*) An obligatio might also be determined by novatio, which is the change of an existing duty (*debitum*) into another obligation, and the determination of the former obligation.¹ This is explained by the following instance:² If I stipulate that Titius shall give me what is due from you, a new obligatio arises by the intervention of a new person, and the former obligation is determined by being replaced by the latter; and sometimes a former obligatio may be determined by a subsequent stipulatio, though the subsequent stipulatio may be invalid. If the stipulation was from the same person, it required the addition of something to effect a novatio, as the addition of a condition, or the circumstance of adding to or subtracting from the time contained in the terms of the covenant. As to the case of a condition, it was the law in the time of Gaius that there was no novatio until the condition was fulfilled, and till that time the former obligatio continued. The opinion of the great jurist Servius Sulpicius as to the condition immediately effecting a novatio, was not law in the time of Gaius (*alio jure utimur*).

An obligatio was also determined by the *litis contestatio*, if the proceedings had taken place in a *legitimum iudicium*. It is stated generally, under the articles *litis contestatio* and *legitimum iudicium*, what is the import of these terms respectively. The original obligation (*principalis obligatio*) was determined by the *litis contestatio*, and the defendant (*reus*) was then bound (*tenetur*) by the *litis contestatio*. If he was condemned, the *litis contestatio* ceased to have any effect, and he was bound by the judgment (*ex causa iudicati*). It was a consequence of these doctrines, that, after a *litis contestatio* in a *legitimum iudicium*, a man could not bring his action on the original contract; for if his declaration or demand was *dari mihi oportere*, it was bad (*inutilis*), for after the *litis contestatio* the *dari oportere* had ceased. In the case of a *iudicium quod imperio continetur*, the obligatio existed and the action could be brought, but the demand might be answered by a plea (*exceptio*) of a *res iudicata* or in *iudicium deducta*. In the *iudicia imperio continentia* the *exceptio rei iudicatæ* corresponds to the condemnation in the *legitima iudicia*, and the *exceptio rei in iudicium deductæ* to the *litis contestatio*. On this subject the reader may consult Keller, *Ueber Litis Contestation*, p. 11, &c.

Obligations arising from contract passed by universal succession to the heres. There were no means of transferring obligations from the creditor to another person except by a novatio, which was effected by the assignee stipulating with the debtor with the consent of the creditor, the effect of which was to release the debtor from his former obligatio, and to bind him by a new one. If this novatio was not effected, the assignee could only sue as the cognitor or procurator of the assignor, and not in his own name.³

From the consideration of obligations arising

from contracts, Gaius¹ passes to the consideration of obligations "*quæ ex delicto oriuntur*;" and these delicts, which are the foundation of these obligations, are FURTUM, BONA RAPTA or RAPINA, DAMNUM, and INJURIA. All these obligations he considers to be comprised in one genus, whereas the obligations ex contractu are distributed into four genera.

The arrangement by the Roman jurists of obligations ex delicto with obligations ex contractu was founded on the circumstance that both classes of obligations were the foundation of rights in personam, or rights against a determinate individual or determinate individuals; but there is an important difference in the origin of the two rights. The rights ex contractu are rights founded on lawful acts, and rights ex delicto are rights founded on infringements of other rights.

The obligations quasi ex contractu are not enumerated by Gaius, but they are discussed in the Institutes of Justinian.² These obligations do not properly arise either from contract or delict; but, inasmuch as they are founded on acts which are not delicts, they must be considered as belonging to contract rather than to delict, if we will refer them to one of these classes. But, in fact, these quasi contracts belong to neither class. Instances of these quasi contracts, enumerated in the Institutes, are "*absentis negotiorum gestio*" (*vid. Negotiorum Gestorum Actio*), the "*tutela iudicium*," a "*communis res sine societate*," as when a thing has been bequeathed and given to several persons, and some other instances.

These quasi contracts are arranged in the Institutes of Justinian after obligations ex contractu, and the obligations quasi ex delicto are placed immediately after the obligations ex delicto. Instances of these obligations quasi ex delicto enumerated in the Institutes³ are, "*si iudex litem suam fecerit*," and the case of "*dejectum effusumve*," and others.

We may now examine more closely the meaning of the term obligatio, and other terms used in relation to the law of contracts. Its etymology (*lig-o*, to bind) points merely to the obligatory part of a contract, or to the duty owing by one of the parties to the contract (*debitor*) to the other party (*creditor*), or to the duties mutually owing from the one to the other. The word which, as opposed to obligatio or "binding," expresses the determination of such binding, is "*solutio*;" and, generally, some form of the word "*solvere*" is the appropriate term to express the legal termination of the obligatio. But, inasmuch as duties owing by one party to the contract, or duties mutually owing by the parties to the contract, imply a right in the other party to the contract, or imply mutual rights in the parties to the contract, the word obligatio is often used to express both the rights and the corresponding duties which arise out of the contract. Consistently with this, we find the right of the creditor spoken of as his obligatio, and the duty of the debtor as his obligatio. There is no special name in the Roman law for a right against a determinate person or determinate persons. The name for ownership or property is dominium, to which is opposed the name obligationes as descriptive of rights against determinate persons.

It is correctly remarked (Austin, *An outline of a course of Lectures on General Jurisprudence*), "that in the writings of the Roman lawyers the term obligatio is never applied to a duty which answers to a right in rem." But as the duty answering to a right in rem is only the duty of forbearance, that is, of not doing anything, there is no great inconveni-

1. (Dig. 46, tit. 2: "De Novationibus et Delegationibus"—2 (Gaius, iii., 176).—3. (Gaius, i., 38, &c.)

1. (iii., 182).—2. (iii., tit. 27.).—3. (iv., tit. 5.)

ence in the want of a name: as soon as an act is done which is an infringement of the right, or, in other words, a delictum (in one sense in which the Romans use this word), an obligation arises by force of such act (*obligatio ex delicto*), and gives the injured person a right of action against the wrong-doer.

A contractus, as it will appear from what has been said, required the consent of all the parties to it. Those obligationes which were said to be founded on "consent" (*consensus*) were said to be so founded only because consent was sufficient,¹ and no peculiar form of words or expression was required; whereas, in the obligationes contracted "re," "verbis," and "litteris," certain acts, words, or writing were required. In those contracts where particular forms were not required in order to convert them into obligationes, any words or acts were sufficient which were evidence of consent. What words and acts are evidence of consent, cannot, of course, be determined generally in any system of jurisprudence. But certain acts or events exclude the notion of consent, even if the formal parts of a contract have been most scrupulously observed; constraint by force or threats (*vis, metus*), and fraud (*dolus*), and, in many cases, error (*error, ignorantia*), either render the agreement absolutely null, or give the party who has been constrained, deceived, or in error, various modes of defence against the claims of the other party.

An obligatio supposes two persons; the person to whom the duty is due, or the creditor, and the person from whom it is due, or the debtor. But there may be more than two parties to an obligatio, either as creditores or debitores, or both, all of whom may be comprehended under the general name of rei.² With reference to a person who is under the same obligatio, a person may be called coreus. But when there are several parties to an obligatio, there are properly several obligationes, and this is the case whether the creditor is one and the debitores are several, or the creditores are several and the debtor is one, or both the creditores and debitores are several. In the obligatio pro rata, the claims of the several creditores, or the duties of the several debitores, are determinate parts of a whole, which is made up by the parts being united in one formal obligatio. There are cases when several creditores may claim the whole (*solidum*), or several debitores may owe the whole (*solidum*): where a creditor claims the whole against several debitores, there are, in fact, several obligationes binding on the several debitores. If he can only claim the whole once, he may claim it from any of the debitores; but when he has been satisfied by one debtor, his whole claim is extinguished.

An obligatio may be unilateral, that is, may only give a right of action to one of the parties to it, as in the case of mutuum, stipulatio, and others; or it may be bilateral, that is, it may give a right to each party against the other, as emptio, venditio, locatio, conductio.

It remains to explain some other terms which are of frequent occurrence.

The most general name for any agreement is conventio, pactio, pactum conventum, and its essence is consent: "*conventionis verbum generale est, ad omnia pertiens, de quibus negotii contrahendi transigendique causa consentiunt, qui inter se agunt.*"³ Conventions, then, were juris gentium, and, as a genus, were divisible into species. Those conventions which were the foundation of a right of action were called contractus, of which the Roman law acknowledged the four kinds already mention-

ed. As these contractus are distinguished by particular names, they have been named by modern writers contractus nominati, as opposed to other contracts presently to be mentioned, which they have named innominati. Contractus nominati, as has been shown, were contracts made or accompanied by certain forms: if these forms were wanting in the conventio, it could not belong to the class of contractus nominati; but if the matter of the conventio was a civile negotium or a civilis causa, it formed an obligatio, and was the foundation of an action "*præscriptis verbis*" or "*in factum*;" or, as it is clearly expressed by Julian,⁴ this is the actio "*ad quam necesse est confugere, quoties contractus existunt, quorum appellationes nulla jure civili prodita sunt.*" All the events upon which these actions could arise may be reduced to the four following heads: "*aut do tibi ut des, aut do ut facias, aut facio ut des, aut facio ut facias.*" An example of the first class will show the difference between these innominate and nominate contracts: if I give a man money for a thing, this is buying and selling, and is a nominate contract; but if I give a man a thing for another thing, this is exchange, and it is an innominate contract, but still it is the foundation of a civilis obligatio. These innominate contracts take the name of contracts from their resemblance to proper contracts in the Roman sense; but, as they are not referrible to any one of such contracts, it is necessary to form them into a separate class. These contracts, as it will appear from the description just given of them, have their foundation in an act (a giving or doing) by one of the parties, and so far resemble contracts re. Accordingly, the contract is not complete so long as a thing remains to be given or done by the debtor; and the creditor may have his action (*conductio*) for the recovery of a thing which he has given, and for which the debtor has not made the return (a giving or an act) agreed upon. The creditor has also his action generally (*præscriptis verbis*) for the completion of the contract, or for compensation to the amount of the injury sustained by its non-performance.

All other conventiones were simply pacta, the characteristic of which is that they were not originally the foundation of actions, but only of pleas or answers (*exceptiones*); that is, if an agreement (*conventio, pactio*) could not be referred to the one or other class of contracts, it did not give a right of action. Now all conventiones were the foundation either of actiones or of exceptiones. Conventiones were contractus when they were made with certain forms; when they were not made with these forms, but still on good consideration (*causa*), they were the foundation of a civilis obligatio. When there was no causa, there was no obligatio created by such conventio, and it is added,⁵ "therefore a nuda pactio does not produce an obligatio, but an exceptio:" whence it follows that a nuda pactio is a pactio sine causa, or a pactio for the benefit of one party only. Sometimes nuda conventio is used as equivalent to nuda pactio.⁶ It is a mistake to say that pactum by itself means a one-sided contract. Pactum is a term as general as conventio (*pactum a pactione—est autem pactio duorum plurimum in idem placitum consensus*⁷), and is a part of all contracts, as conventio is. There might be a pactum or pactio relating to marriage, the establishment of a servitus in provincial lands,⁸ and other matters. But pactum, as included in the law of obligationes, obtained a limited signification; and it was used to signify agreements not included among the contractus, but still binding agreements, as being found-

1. (Gaius, iii., 135.)—2. (Cic. De Or., ii., 43.)—3. (Dig. ii., tit. 14.)

1. (Dig. 19, tit. 5: "De præscriptis verbis." &c.)—2. (Dig. 2, tit. 14, s. 7, § 4.)—3. (Dig. 15, tit. 5, s. 15.)—4. (Dig. 2, tit. 4, s. 1.)—5. (Gaius, ii., 31.)

ed on a causa. Some of these obligatory pacts were the foundation of an actio civilis, and some of them were protected by the prætor: ait prætor: "*Pacta conventa quæ neque dolo malo neque adversus leges plebiscita senatus consulta edicta decreta principum neque quo fraus cui eorum fiat facta erunt servabo.*" The parties to a pactum were said "*pacisci.*" Anything might be the subject of a "*pactum*" which did not involve an illegality. If an illegal pactum was made, it was still illegal, though it had been confirmed by a stipulatio or any other form. The matter relating to pacts is not arranged in the Digest under the head of Obligationes et Actiones,² but in the same book with the titles De Jurisdictione, &c.

Savigny contends that the notion of agreement, or of contract in its general sense (*vertrag*), is too narrowly conceived by jurists in general. He defines agreement to be the "union of several persons in one concordant declaration of will whereby their legal relations are determined." Consequently, the notion of contract or agreement must be extended to other things than to contracts which produce obligationes: for instance, tradition is characterized by all the marks of an agreement; and the fact that the declaration of their will by the parties to the tradition is insufficient to effect complete tradition without the external act by which possession is acquired, does not in the least affect the essence of the agreement. In like manner, easements (*servitutes*) take their rise from agreement. The imperfect conception of an agreement has arisen from not separating in some cases the obligatory agreement from those acts for which such obligatory agreement is generally a preparation, and of which it is an accompaniment. This becomes more apparent if we consider the case of a gift, which is a real agreement, but without any obligation: it is merely a giving and receiving by mutual consent. This general notion of agreement is contained in the words of Ulpian already quoted, in which he defines pactio to be "*duorum pluriumve,*" &c. It does not seem, however, that the Romans applied the terms pactio, pactum, and conventio to any agreements except those which were the foundation of obligationes.³

Pollicitatio is a proffer or offer on the part of a person who is willing to agree (*pollicitatio offerentis solius promissum*⁴). A pollicitatio, of course, created no obligation. The word is frequently used with reference to promises made by a person to a state, city, or other body politic, such as the promise to erect a building, to exhibit public shows, &c. Such pollicitations were binding when there was a causa, as a promise made with reference to a dignity (*honor*) conferred or to be conferred. A pollicitatio sine causa was also obligatory if the person began to do what he had promised, as if he laid the foundation of a building or cleared the ground (*Huic theatro ex privatorum pollicitationibus multa debentur*⁵).

A person who vowed anything was also bound (*voto obligatus*).

(Gaius, iii., 88, &c.—*Inst.*, iii., tit. 13, &c.—Dig. 47, tit. 7, *De Obligationibus et Actionibus*.—Mühlenbruch, *Doctrina Pandectarum*, lib. iii., *De Obligationibus*.—Marzoll, *Lehrbuch*, &c. The matter of obligationes is arranged by Gans, *System des Römischen Civilrechts*, p. 60, *Vom Obligationenrecht*.)

OBOLUS. (*Vid.* DRACHMA.)

OBSDIONALIS CORONA. (*Vid.* CORONA, p. 309.)

OBSONIUM. (*Vid.* OPSONIUM.)

1. (Dig. 2, tit. 14, s. 7.)—2. (Dig. 44, tit. 7.)—3. (Savigny, *System des Heut. Röm. Rechts*, iii.)—4. (Dig. 50, tit. 12, s. 3.)—5. (*Vid.* Plin., *Epist.*, x., 48—*Id.* ib., v., 12.)

OCCUPATIO. The word is used by Cicero¹ to express the acquisition of ownership by occupation, or the taking possession of that which has no owner. Among the modes of acquiring ownership "*naturali ratione,*" that is, by such means as are in all nations acknowledged to be lawful means of acquiring ownership, Gaius² enumerates the taking possession of those things quæ nullius sunt, as animals of the chase, birds and fishes, and such things are said "*occupantis fieri.*"³

*OCHNE (ὄχνη), the Pear-tree, or *Pyrus communis*. Theocritus has ὄχνας. (*Vid.* PYRUS.)*

*OCHRA (ὄχρα), our Yellow Ochre, *i. e.*, the ochrey brown iron ore of Jameson. It was much used by the ancient painters, and likewise as a medicine.⁵

*OCHRUS (ὄχρος), the *Pisum Ochrys*, a species of Pease that grows plentifully among corn in Italy and Sicily.⁶

*OCIMOËIDES (ὀκμοειδές), a plant, which Matthioli and Bauhin hold to be a species of *Lychnis*, an opinion, however, which is rejected by Dodonæus. Sprengel agrees with Lobelius and Dalechamp in referring it to the *Saponaria Ocimoides*.⁷

*OCIMUM or O'CYMUM (ὀκμον, ὀκμυον), a plant, which Adams makes the same with the *Ocimum Basilicum*, or Sweet Basil.⁸

O'CREA (ὀκρεαίς), a Greave, a Leggin. A pair of greaves (κνημίδες) was one of the six articles of armour which formed the complete equipment of a Greek or Etruscan warrior (*vid.* ARMA, p. 94), and likewise of a Roman soldier as fixed by Servius Tullius.⁹ They were made of bronze,¹⁰ of brass,¹¹ of tin,¹² or of silver and gold,¹³ with a lining probably of leather, felt, or cloth. Another method of fitting them to the leg so as not to hurt it was by the interposition of that kind of sponge which was also used for the lining of helmets (*vid.* GALEA, p. 466), and which Aristotle describes as being remarkable for thinness, density, and firmness. The greaves, lined with these materials, as they were fitted with great exactness to the leg, probably re-

1. (*Off.*, i., 7.)—2. (*ii.*, 66, &c.)—3. (Dig. 41, tit. 1: "*De acquirendo rerum dominio.*")—4. (*Hom.*, *Odyss.*, vii., 120—*Theocritus*, *Idyll.*, i., 134—*Adams*, *Append.*, s. v.)—5. (*Theophrast.*, *H. P.*, i., 19.—*Id.* ib., vii., 1.—*Dioscor.*, ii., 170.—*Adams*, *Append.*, s. v.)—9. (*Liv.*, i., 43.)—10. (*Alcman.*, *Frag.*, i., ed. *Matthiæ*.)—11. (*Hes.*, *Scut.*, 122.)—12. (*Hom.*, ii., xviii., 612.—*Id.* ib., xxi., 592.)—13. (*Virg.*, *Æn.*, vii., 634.—*Id.* ib., viii., 624.—*Id.* ib., xi., 488.)

quired, in many cases, no other fastening than their own elasticity. Often, nevertheless, they were farther secured by two straps, as may be seen in the woodcut at p. 94. Their form and appearance will be best understood from the preceding woodcut. The upper figure is that of a fallen warrior, represented among the sculptures, now at Munich, belonging to the temple in Ægina. In consequence of the bending of the knees, the greaves are seen to project a little above them. This statue also shows very distinctly the ankle-rings (ἐπισφύρια), which were used to fasten the greaves immediately above the feet. The lower portion of the same woodcut represents the interior view of a bronze shield and a pair of bronze greaves, which were found by Signor Campanari in the tomb of an Etruscan warrior, and which are now preserved in the British Museum. These greaves are made right and left.

That the Greeks took great delight in handsome and convenient greaves may be inferred from the epithet *ἐυκημιδες*, as used by Homer, and from his minuteness in describing some of their parts, especially the ankle-rings, which were sometimes of silver.¹ The modern Greeks and Albanians wear greaves, in form resembling those of their ancestors, but made of softer materials, such as velvet, ornamented with gold, and fastened with hooks and eyes.

Among the Romans, greaves made of bronze, and richly embossed, were worn by the gladiators. Some such have been found at Pompeii.² It appears that in the time of the emperors greaves were not entirely laid aside as part of the armour of the soldiers.³ At an earlier period the heavy-armed wore a single greave on the right leg.⁴ Leggings of ox-hide or strong leather, probably of the form already described, and designated by the same names both in Greek and Latin, were worn by agricultural labourers⁵ and by huntsmen.⁶

OCTOBER. (*Vid.* CALENDAR, ROMAN.)

OCTOPHORON. (*Vid.* LECTICA, p. 571.)

CECUS. (*Vid.* HOUSE, ROMAN, p. 517.)

*OË or OIE (ὄη, οἴη), the *Pyrus sorbus*, or Service-tree. Its fruit is called *oia* by Dioscorides.⁷

*CENANTHE (οἰάνθη), a plant, about which many conjectures have been formed. Sprengel prefers that of Lobelius, who held it to be the *Pedicularis tuberosa*, L. "From my acquaintance, however," observes Adams, "with the *Cenanthe pimpinelloides*, or Parsley Waterdropwort, I cannot help thinking that it agrees pretty well with the description of Dioscorides. The *Cenanthe crocata*, a species very similar in appearance, but very different in quality, is entirely out of the question, although Dr. Milligan holds it to be the *Cenanthe* of Celsus. The term *οἰάνθη* is likewise applied to the flowers of the wild vine."⁸

*II A small bird mentioned by Aristotle. It is supposed to have been the *Saxicola Cenanthe*, Bechstein. Its English name is *Wheatear*; its Scotch, *Chacker*.⁹

*CENAS (οἰνᾶς), the common Pigeon, or *Columba Cenas*.¹⁰

CENOPHORUM (οἰνόφορον), a Basket, or other contrivance for carrying bottles of wine; a wine-basket. This was sometimes used by those who took their own wine with them in travelling, in order to avoid the necessity of purchasing it on the

road.¹ A slave, called the wine-bearer (*cenophorus*), carried it probably on his back.

*CENOTHE'RA (οἰνοθήρα), according to Sprengel, the *Epilobium angustifolium*, or narrow-leaved Willow-herb. "The commentators, however," remarks Adams, "are in general very undecided regarding it."²

*CESTRUS (οἶστρος). "Bochart and Aldrovandus," remarks Adams, "have proved most satisfactorily, that by the Greek poets, &c., the terms *οἶστρος* and *μύρσι* were used indiscriminately; but that Aristotle and other writers on matters of science apply the former to a species of gadfly (meaning, I presume, the *Cestrus bovis*, or Breeze), and the latter to a species of horsefly (the *Tabanus bovinus*). This, it appears to me, is the most satisfactory account of the matter. But yet I think it right to mention that Schneider, treating of the *μύρσι* of Ælian, professes himself unable to determine whether it was a species of *Cestrus*, *Tabanus*, or *Hippobosca*; and in another place he offers it as a conjecture, that the *οἶστρος* of Aristotle was a species of *Culex*. It seems agreed that the *Asilus* of Virgil was the Breeze." (*Vid.* ASILUS).³

OFFENDIX. (*Vid.* APEX.)

OGULNIA LEX. (*Vid.* LEX, p. 584.)

OIKIAΣ ΔΙΚΗ (*oikias dikē*), an action to recover a house, in which (as in any other action where property was the subject of litigation) the dicasts decided (*δεδικάσεν*) to which of the parties the house belonged, and adjudged it to him (*ἐπεδίκασεν*). Nothing farther being requisite, the suit was an *ἀρίμητος ἀγωγή*. Certain speeches of Lysias, Isæus, and Hypérides, which are now lost, were upon this subject. The *oikias dikē* was only to recover the house itself; the by-gone rents, or mesne profits, were recoverable in an action called *ἐνοικίου δίκη*. (*Vid.* ΕΝΟΙΚΙΟΥ ΔΙΚΗ).⁴

OFFICIUM ADMISSIONUM. (*Vid.* ADMISSIONALIS.)

OINOCHOOI (οἰνοχοῖοι). (*Vid.* SYMPOSIUM.)

IONISTICE (οἰωνιστική). (*Vid.* DIVINATIO, p. 369.)

*OLIVA, the Olive-tree. (*Vid.* ELAIA and COTINOS.)

OLLA, *ant.* AULA,⁵ *dim.* OLLULA (λέβης; χύτρος, χύτρα, *dim.* χυτρίς), a vessel of any material, round and plain, and having a wide mouth; a pot, a jar.

Besides being made of earthenware⁷ (*δοσπρακίνη, testacea*) and bronze (*χαλκή, ænea*,⁸ *ænum*;⁹ *λέβης χαλκείος*), the ancients also made these vessels of different kinds of stone, which were turned upon the lathe. At Pleurs, a village near Chiavenna, to the north of the Lake of Como, the manufacture of vessels from the potstone found in a neighbouring mountain is still carried on, and has probably existed there from the time of Pliny, who makes express mention of it.¹¹ Some of these vessels are nearly two feet in diameter, and, being adapted to bear the fire, are used for cooking (*Οκύλις observare ollam pulvis, ne aduratur*),¹²

The following woodcut is taken from a vase in the British Museum, which was found at Canino in Etruria. The painting upon it represents the story of Medea boiling an old ram with a view to persuade the daughters of Pelias to put him to death.¹³

1. (Hom., II., iii., 331.—Id. ib., xi., 18.)—2. (Gell. Pompeiana, 1817, plate 18.—Donaldson, Pompeii, vol. ii.)—3. (Lamprid., Al. Sever., 40.)—4. (Veget., De Re Mil., i., 20.)—5. (Hom., Od., xiv., 288.—Plin., H. N., xix., 7.—Pallad., De Re Rust., i., 43.)—6. (Hor., ii., 3, 234.)—7. (Theophrast., H. P., ii., 10.—Adams, Append., s. v.)—8. (Theophrast., H. P., vi., 6.—Dioscor., iii., 133.—Id., v., 2.—Adams, Append., s. v.)—9. (Aristot., H. A., ix., 36.—Adams, Append., s. v.)—10. (Aristot., H. A., v., 11.)

✓ The pot has a round bottom, and is supported by a tripod, under which is a large fire. The ram, restored to youth, is just in the act of leaping out of the pot. Instead of being supported by a separate tripod, the vessel was sometimes made with the feet all in one piece, and it was then called in Greek *τρίπους* (*vid.* *Τίριος*), *χυτρόπους*,¹ and *πυρίστατης*.

Besides being placed upon the fire in order to boil water or cook victuals, the ancients used pots to carry fire, just as is now done by the modern inhabitants of Greece, Italy, and Sicily.² They also used small pots containing fire and pitch, to annoy the enemy in sieges by throwing them from slings and military engines.

A late traveller in Asia Minor informs us that the Turks wash their hands in the following manner: A boy or servant pours water upon the hands, the water falling into a vessel which is placed underneath to receive it.³ So in the *Odyssey*,⁴ a servant brings water in a golden ewer (*πρόχων*), and pours it upon the hands of the guest over a jar (*λεβήτις*) of silver. Numerous passages of ancient authors show that this practice has always prevailed in the same countries.

The Argives and Æginetans drank out of small, coarse pots of their own manufacture, rather than purchase cups of superior quality from Athens.⁵ (*Vid.* *FICTILE*, p. 440.)

Ollæ were also used to hold solids and keep them in store, while amphoræ rendered the same service in regard to liquids. (*Vid.* *AMPHORA*.) Thus grapes were kept in jars as at present.⁶ Although pots were commonly made solely with a view to utility, and were therefore destitute of ornament and without handles, yet they were sometimes made with two handles (*διωτοι*) like amphoræ; and, when they were well turned upon the wheel, well baked, smooth and neat, and so large as to hold six congii (=4½ gallons nearly), they were, as we learn from Plato,⁷ considered very beautiful.

Pots were used, as with us, in gardening.⁸

Another very remarkable use of these vessels of earthenware among the Greeks was to put infants into them to be exposed,⁹ or to be carried any-

where.¹ Hence the exposure of children was called *ἐγχυτρίζειν*,² and the miserable women who practised it *ἐγχυτρίστριαι*.³

In monumental inscriptions the term *olla* is frequently applied to the pots which were used to receive the ashes of the slaves or inferior members of a family, and which were either exposed to view in the niches of the *Columbarium*, or immured in such a manner as to show the lid only. Some good specimens of cinerary ollæ are preserved in the British Museum, in a small apartment so constructed as to exhibit accurately the manner of arranging them. (*Vid.* above, p. 287, 288, 461, and numerous plates in Bartoli's *Antichi Sepolcri*.)

The lid of the olla was called *ἐπίθημα* and *operculum*. It generally corresponded in the material and the style of ornament with the olla itself.⁴

**OLOLYDON* (*ὀλολύγον*), "the name of an animal," says Adams, "mentioned by Theocritus. The scholiast calls it a swallow; some have referred it to the lark; and others have supposed it a frog! From the probable derivation of the word (*i. e.*, from *ὀλολύγη*), I am disposed to agree with the scholiast."⁵

**OLOSTION* (*ὀλόστιον*), a plant mentioned by Dioscorides. "Little, however, can be made," says Adams, "from his brief description of it. It is decidedly *not* the *Stellaria Holostium*, or Greater Stichwort, as Ruellius supposed; nor the *Plantago albicans*, as Dodonæus suggested. Whether or not the *Holostium umbellatum*, as Tabermontanus and Sprengel contend, possesses the requisite character, I dare not venture to decide, as I have no acquaintance with that plant."⁶

OLYMPIAD (*Ὀλυμπιάς*), the most celebrated chronological æra among the Greeks, was the period of four years, which elapsed between each celebration of the Olympic games. The olympiads began to be reckoned from the victory of Coræbus in the footrace, which happened in the year B.C. 776.⁷ Timæus of Sicily, however, who flourished B.C. 264, was the first writer who regularly arranged events according to the conquerors in each olympiad, with which æra he compared the years of the Attic archons, the Spartan ephors, and that of the Argive priestesses.⁸ His practice of recording events by olympiads was followed by Polybius, Diodorus Siculus, Dionysius of Halicarnassus, and sometimes by Pausanias, Elian, Diogenes Laertius, Arrian, &c. It is twice adopted by Thucydides⁹ and Xenophon.¹⁰ The names of the conquerors in the footrace were only used to designate the olympiad, not the conquerors in the other contests. Thucydides,¹¹ however, designates two olympiads by the name of the conquerors in the pancratium; but this appears only to have been done on account of the celebrity of these victors, both of whom conquered twice in the pancratium. Other writers, however, adhere so strictly to the practice of designating the olympiad only by the conqueror in the footrace, that even when the same person had obtained the prize in other contests as well as in the footrace, they only mention the latter. Thus Diodorus¹² and Pausanias¹³ only record the conquest of Xenophon of Corinth in the footrace, although he had also conquered at the same festival in the pentathlon.

The writers who make use of the æra of the olympiads usually give the number of the olympiad (the first corresponding to B.C. 776), and then the name of the conqueror in the footrace. Some wri-

OLYMPIAD.

OLYMPIAD

ters also speak of events as happening in the first, second, third, or fourth year, as the case may be, of a certain olympiad; but others do not give the separate years of each olympiad. The rules for converting olympiads into the year B.C., and *vice versa*, are given under CALENDAR (GREEK), p. 191; but, as this is troublesome, we subjoin for the use of the student a list of the olympiads, with the years of the Christian æra corresponding to them, from the beginning of the olympiads to A.D. 301. To save space, the separate years of each olympiad, with the corresponding years B.C., are only given from the 47th to the 126th Olympiad, as this is the most important period of Grecian history; in the other olympiads the first year only is given. In consulting the following table, it must be borne in mind that the Olympic games were celebrated about midsummer (*vid. OLYMPIC GAMES*), and that the Attic year commenced at about the same time. If, therefore, an event happened in the second half of the Attic year, the year B.C. must be reduced by one. Thus Socrates was put to death in the 1st year of the 95th Olympiad, which corresponds in the following table to B.C. 400; but, as his death happened in Thargelion, the 11th month of the Attic year, the year B.C. must be reduced by one, which gives us B.C. 399, the true date of his death.

Many of the ancient writers did not consider history to begin till the Olympiad of Corebus, and regarded as fabulous the events said to have occurred in preceding times.¹

The old olympiad æra appears only to have been used by writers, and especially by historians. It does not seem ever to have been adopted by any state in public documents. It is never found on any coins, and scarcely ever on inscriptions. There are only two inscriptions published by Böckh in which it appears to be used.² A new olympiad æra, however, came into use under the Roman emperors, which is found in inscriptions and was used in public documents. This æra begins in Ol. 227, 3 (A.D. 131), in which year Hadrian dedicated the Olympieion at Athens; and, accordingly, we find Ol. 227, 3, spoken of as the first olympiad, Ol. 228, 3 (A.D. 135), as the second olympiad, &c.³

OLYMPIC GAMES ('Ολυμπια), the greatest of the national festivals of the Greeks. It was celebrated at Olympia in Elis, the name given to a small plain to the west of Pisa, which was bounded on

the north and northeast by the mountains Cronius and Olympus, on the south by the river Alpheus, and on the west by the Cladeus, which flows into the Alpheus. Olympia does not appear to have been a town, but rather a collection of temples and public buildings, the description of which does not come within the plan of this work.

The origin of the Olympic games is buried in obscurity. The legends of the Elean priests attributed the institution of the festival to the Idæan Heracles, and referred it to the time of Cronos. According to their account, Rhea committed her newborn Zeus to the Idæan Dactyli, also called Curetes, of whom five brothers, Heracles, Pæonæus, Epimedes, Iasius, and Idas, came from Ida in Crete to Olympia, where a temple had been erected to Cronos by the men of the Golden Age; and Heracles, the eldest, conquered his brothers in a footrace, and was crowned with the wild olive-tree. Heracles hereupon established a contest, which was to be celebrated every five years, because he and his brothers were five in number.¹ Fifty years after Deucalion's flood they said that Clymenus, the son of Cardis, a descendant of the Idæan Heracles, came from Crete and celebrated the festival; but that Endymion, the son of Æthlius, deprived Clymenus of the sovereignty, and offered the kingdom as a prize to his sons in the footrace; that, a generation after Endymion, the festival was celebrated by Pelops to the honour of the Olympian Zeus; that when the sons of Pelops were scattered through Peloponnesus, Amythaon, the son of Cretheus and a relative of Endymion, celebrated it; that to him succeeded Pelias and Neleus in conjunction, then Augeas, and at last Heracles, the son of Amphitryon, after the taking of Elis. Afterward Oxyllus is mentioned as presiding over the games, and then they are said to have been discontinued till their revival by Iphitus.² Most ancient writers, however, attribute the institution of the games to Heracles, the son of Amphitryon,³ while others represent Atreus as their founder.⁴

Strabo⁵ rejects all these legends, and says that the festival was first instituted after the return of the Heraclidæ to the Peloponnesus by the Ætolians, who united themselves with the Eleans. It is impossible to say what credit is to be given to the ancient traditions respecting the institution of the festival; but they appear to show that religious festivals had been celebrated at Olympia from the earliest times, and it is difficult to conceive that the Peloponnesians and the other Greeks would have attached such importance to this festival, unless Olympia had long been regarded as a hallowed site. The first historical fact connected with the Olympian games is their revival by Iphitus, king of Elis, who is said to have accomplished it with the assistance of Lycurgus, the Spartan lawgiver, and Cleosthenes of Pisa; and the names of Iphitus and Lycurgus were inscribed on a disc in commemoration of the event, which disc Pausanias saw in the Temple of Hera at Olympia.⁶ It would appear from this tradition, as Thirlwall⁷ has remarked, that Sparta concurred with the two states most interested in the establishment of the festival, and mainly contributed to procure the consent of the other Peloponnesians. The celebration of the festival may have been discontinued in consequence of the troubles consequent upon the Doric invasion, and we are told that Iphitus was commanded by the Delphic oracle to revive it as a remedy for intestine commotions and for pestilence, with which Greece

was then afflicted. Iphitus thereupon induced the Eleans to sacrifice to Heracles, whom they had formerly regarded as an enemy, and from this time the games were regularly celebrated.¹ Different dates are assigned to Iphitus by ancient writers, some placing his revival of the olympiad at B.C. 884, and others, as Callimachus, at B.C. 828.² The interval of four years between each celebration of the festival was called an olympiad; but the olympiads were not employed as a chronological era till the victory of Coræbus in the footrace, B.C. 776. (*Vid.* OLYMPIAD.)

The most important point in the renewal of the festival by Iphitus was the establishment of the *εκεχειρία*, or sacred armistice, the formula for proclaiming which was inscribed in a circle on the disc mentioned above. The proclamation was made by peace-heralds (*σπονδοφόροι*), first in Elis and afterward in the other parts of Greece; it put a stop to all warfare for the month in which the games were celebrated, and which was called *τερομηνία*. The territory of Elis itself was considered especially sacred during its continuance, and no armed force could enter it without incurring the guilt of sacrilege. When the Spartans, on one occasion, sent forces against the fortress Phyræum and Lepreum during the existence of the Olympic truce (*ἐν ταῖς Ὀλυμπιακαῖς σπονδαῖς*), they were fined by the Eleans, according to the Olympic law, 2000 minæ, being two for each Hoplite.³ The Eleans, however, pretended not only that their lands were inviolable during the existence of the truce, but that, by the original agreement with the other states of Peloponnesus, their lands were made sacred forever, and were never to be attacked by any hostile force;⁴ and they farther stated that the first violation of their territory was made by Pheidon of Argos. But the Eleans themselves did not abstain from arms, and it is not probable that such a privilege would have existed without imposing on them the corresponding duty of refraining from attacking the territory of their neighbours. The later Greeks do not appear to have admitted this claim of the Eleans, as we find many cases in which their country was made the scene of war.⁶

The Olympic festival was probably confined at first to the Peloponnesians; but, as its celebrity extended, the other Greeks took part in it, till at length it became a festival for the whole nation. No one was allowed to contend in the games but persons of pure Hellenic blood: barbarians might be spectators, but slaves were entirely excluded. All persons who had been branded by their own states with *atimia*, or had been guilty of any offence against the divine laws, were not permitted to contend.⁶ When the Hellenic race had been extended by colonies to Asia, Africa, and other parts of Europe, persons contended in the games from very distant places; and in later times a greater number of conquerors came from the colonies than from the mother-country. After the conquest of Greece by the Romans, the latter were allowed to take part in the games. The emperors Tiberius and Nero were both conquerors, and Pausanias⁷ speaks of a Roman senator who gained the victory. During the freedom of Greece, even Greeks were sometimes excluded, when they had been guilty of a crime which appeared to the Eleans to deserve this punishment. The horses of Hieron of Syracuse were excluded from the chariot-race through the influence of Themistocles, because he had not taken part with the other Greeks against the Persians.⁸ All the Lacedæmonians were excluded in the 90th Olympiad,

because they had not paid the fine for violating the Eleian territory, as mentioned above;¹ and similar cases of exclusion are mentioned by the ancient writers.

No women were allowed to be present, or even to cross the Alps during the celebration of the games, under penalty of being hurled down from the Tyepean rock. Only one instance is recorded of a woman having ventured to be present, and she, although detected, was pardoned in consideration of her father, brothers, and son having been victors in the games.² An exception was made to this law in favour of the priestess of Demeter Chamyne, who sat on an altar of white marble opposite to the Hellandæia.³ It would appear from another passage of Pausanias that *virgins* were allowed to be present, though married women were not (*παρθένους δὲ οὐκ ἐλθόντων θεασάσθαι*); but this statement is opposed to all others on the subject, and the reading of the passage seems to be doubtful.⁶ Women were, however, allowed to send chariots to the races; and the first woman whose horses won the prize was Cynisca, the daughter of Archidamus and sister of Agesilaus.⁶ The number of spectators at the festival was very great; and these were drawn together, not merely by the desire of seeing the games, but partly through the opportunity it afforded them of carrying on commercial transactions with persons from distant places,⁷ as is the case with the Mohammedan festivals at Mecca and Medina. Many of the persons present were also deputies (*θεωροί*) sent to represent the various states of Greece; and we find that these embassies vied with one another in the number of their offerings, and the splendour of their general appearance, in order to support the honour of their native cities. The most illustrious citizens of a state were frequently sent as *θεωροί*.⁸

The Olympic festival was a Pentaeteris (*πενταετηρίς*), that is, according to the ancient mode of reckoning, a space of four years elapsed between each festival, in the same way as there was only a space of two years between a *τριετηρίς*. According to the scholiast on Pindar,⁹ the Olympic festival was celebrated at an interval sometimes of 49, sometimes of 50 months; in the former case in the month of Apollonius, in the latter in that of Parthenius. This statement has given rise to much difference of opinion from the time of J. Scaliger; but the explanation of Böckh in his commentary on Pindar is the most satisfactory, that the festival was celebrated on the first full moon after the summer solstice, which sometimes fell in the month of Apollonius, and sometimes in Parthenius, both of which he considers to be the names of Eleian or Olympian months: consequently, the festival was usually celebrated in the Attic month of Hecatombæon. It lasted, after all the contests had been introduced, five days, from the 11th to the 15th days of the month inclusive.¹⁰ The fourth day of the festival was the 14th of the month, which was the day of the full moon, and which divided the month into two equal parts (*διχομήνης μήνα*).¹¹

The festival was under the immediate superintendence of the Olympian Zeus, whose temple at Olympia, adorned with the statue of the god made by Phidias, was one of the most splendid works of art in Greece.¹² There were also temples and altars

to most of the other gods. The festival itself may be divided into two parts, the games or contests (*ἀγών Ὀλυμπιακός, ἀέθλων ἡμίλλαι, κρίσις ἀέθλων, τεθμός ἀέθλων, νικαφορίαι*), and the festive rites (*εὐρηγί*) connected with the sacrifices, with the processions, and with the public banquets in honour of the conquerors. Thus Pausanias distinguishes between the two parts of the festival when he speaks of *τὸν ἀγῶνα ἐν Ὀλυμπίᾳ πανήγυριν τε Ὀλυμπιακὴν*.¹ The conquerors in the games, and private individuals, as well as the theori or deputies from the various states, offered sacrifices to the different gods; but the chief sacrifices were offered by the Eleans in the name of the Elean state. The order in which the Eleans offered their sacrifices to the different gods is given in a passage of Pausanias.² There has been considerable dispute among modern writers, whether the sacrifices were offered by the Eleans and the theori at the commencement or at the termination of the contests: our limits do not allow us to enter into the controversy, but it appears most probable that certain sacrifices were offered by the Eleans as introductory to the games, but that the majority were not offered till the conclusion, when the flesh of the victims was required for the public banquets given to the victors.

The contests consisted of various trials of strength and skill, which were increased in number from time to time. There were in all twenty-four contests, eighteen in which men took part, and six in which boys engaged, though they were never all exhibited at one festival, since some were abolished almost immediately after their institution, and others after they had been in use only a short time. We subjoin a list of these from Pausanias,³ with the date of the introduction of each, commencing from the Olympiad of Coræbus: 1. The footrace (*δρόμος*), which was the only contest during the first 13 olympiads. 2. The *διανολος*, or footrace, in which the stadium was traversed twice, first introduced in Ol. 14. 3. The *δολιχος*, a still longer footrace than the *διανολος*, introduced in Ol. 15. For a more particular account of the *διανολος* and *δολιχος*, *vid. Stadium*. Some words appear to have dropped out of the passage of Pausanias to which we have just referred. In every other case he mentions the name of the first conqueror in each new contest, but never the name of the conqueror in the same contest in the following olympiad. In this passage, however, after giving the name of the first conqueror in the *διανολος*, he adds, *τῇ δὲ ἑξῆς Ἀκανθοσ*. There can be little doubt that this must be the name of the conqueror in the *dolichos*, which is also expressly stated by Africanus.⁴ 4. Wrestling (*πάλη*); and, 5. The Pentathlon (*πένταθλον*), which consisted of five exercises (*vid. Pentathlum*), both introduced in Ol. 18. 6. Boxing (*πυγμαχία*), introduced in Ol. 23. (*vid. Pugilatus*.) 7. The chariot-race, with four full-grown horses (*ἵππων τελείων δρόμος ἄρμα*), introduced in Ol. 25. 8. The Pancratium (*παγκράτιον*), (*vid. Pancratium*); and, 9. The horserace (*ἵππος κέλως*), both introduced in Ol. 33. 10 and 11. The footrace and wrestling for boys, both introduced in Ol. 37. 12. The Pentathlon for boys, introduced in Ol. 38, but immediately afterward abolished. 13. Boxing for boys, introduced in Ol. 41. 14. The footrace, in which men ran with the equipments of heavy-armed soldiers (*τῶν ὀπλιτῶν δρόμος*), introduced in Ol. 65, on account of its training men for actual service in war. 15. The chariot-race with mules (*ἀπέρηνη*), introduced in Ol. 70; and, 16. The horserace with mares (*κάληνη*), described by Pausanias,⁵ introduced in Ol. 71, both of which

were abolished in Ol. 84. 17. The chariot-race with two full-grown horses (*ἵππων τελείων συνωρίς*), introduced in Ol. 93. 18 and 19. The contest of heralds (*κήρυκες*) and trumpeters (*σαλπικταί*), introduced in Ol. 96.⁶ 20. The chariot-race with four foals (*πῶλων ἄρμασσιν*), introduced in Ol. 99. 21. The chariot-race with two foals (*πῶλων συνωρίς*), introduced in Ol. 128. 22. The horserace with foals (*πῶλος κέλως*), introduced in Ol. 131. 23. The Pancratium for boys, introduced in Ol. 145. 24. There was also a horserace (*ἵππος κέλως*) in which boys rode,⁷ but we do not know the time of its introduction. Of these contests, the greater number were in existence in the heroic age; but the following were introduced for the first time by the Eleans: all the contests in which boys took part, the footrace of Hoplites, the races in which foals were employed, the chariot-race in which mules were used, and the horserace with mares (*κάληνη*). The contests of heralds and trumpeters were also probably introduced after the heroic age.

Pausanias⁸ says that, up to the 77th Olympiad, all the contests took place in one day; but, as it was found impossible in that Olympiad to finish them all in so short a time, a new arrangement was made. The number of days in the whole festival which were henceforth devoted to the games, and the order in which they were celebrated, have been a subject of much dispute among modern writers, and in many particulars can be only matter of conjecture. The following arrangement is proposed by Krause:⁹ On the first day the initiatory sacrifices were offered, and all the competitors classed and arranged by the judges. On the same day the contest between the trumpeters took place; and to this succeeded, on the same day and the next, the contests of the boys, somewhat in the following order: the footrace, wrestling, boxing, the pentathlon, the pancratium, and, lastly, the horserace. On the third day, which appears to have been the principal one, the contests of the men took place, somewhat in the following order: the simple footrace, the *dioulos*, the *dolichos*, wrestling, boxing, the pancratium, and the race of Hoplites. On the fourth day, the pentathlon, either before or after the chariot and horseraces, which were celebrated on this day. On the same day, or on the fifth, the contests of the heralds may have taken place. The fifth day appears to have been devoted to processions and sacrifices, and to the banquets given by the Eleans to the conquerors in the games.

The judges in the Olympic games, called *Hellano-dicæ* (*Ἑλλανοδίκαι*), were appointed by the Eleans, who had the regulation of the whole festival. It appears to have been originally under the superintendence of Pisa, in the neighbourhood of which Olympia was situated; and, accordingly, we find in the ancient legends the names of Enomaus, Pelops, and Augeas as presidents of the games. But after the conquest of Peloponnesus by the Dorians, on the return of the Heraclidæ, the Ætolians, who had been of great assistance to the Heraclidæ, settled in Elis, and from this time the Ætolian Eleans obtained the regulation of the festival, and appointed the presiding officers.¹⁰ Pisa, however, did not quietly relinquish its claim to the superintendence of the festival, and it is not improbable that at first it had an equal share with the Eleans in its administration. The Eleans themselves only reckoned three festivals in which they had not had the presidency, namely, the 8th, in which Pheidon and the Piseans obtained it; the 34th, which was celebrated under

1. (v., 4, § 4.)—2. (v., 14, § 5.)—3. (v., 8, § 2, 3; 9, § 1, 2.—Compare Plut., Symp., v., 2.)—4. (apud Euseb., Chron., i., 'Ελλ. δλ., p. 39.)—5. (v., 9, § 1, 2.)

1. (African. ap. Euseb., Chron., i., 'Ελλ. δλ., p. 41.—Paus., v., 22, § 1.—Compare Cic. ad Fam., v., 12.)—2. (Paus., vi., 2, § 4; 12, § 1; 13, § 6.)—3. (v., 9, § 3.)—4. (Olymp., p. 106.)—5. (Strabo, viii., p. 337, 335.)

the superintendence of Pantaleon, king of Pisa; and the 104th, celebrated under the superintendence of the Piseans and Arcadians. These olympiads the Eleans called *ἀνολυμπιάδες*, as celebrated contrary to law.¹

The hellanodicæ were chosen by lot from the whole body of the Eleans. Pausanias² has given an account of their numbers at different periods; but the commencement of the passage is, unfortunately, corrupt. At first, he says, there were only two judges chosen from all the Eleans, but that in the 25th Ol. (75th Ol. ?) nine hellanodicæ were appointed, three of whom had the superintendence of the horseraces, three of the pentathlon, and three of the other contests. Two olympiads after, a tenth judge was added. In the 103d Ol. the number was increased to 12, as at that time there were 12 Elean phylæ, and a judge was chosen from each tribe; but, as the Eleans afterward lost part of their lands in war with the Arcadians, the number of phylæ was reduced to eight in the 104th Ol., and, accordingly, there were then only eight hellanodicæ. But in the 108th Ol. the number of hellanodicæ was increased to 10, and remained the same to the time of Pausanias.³

The hellanodicæ were instructed for ten months before the festival by certain of the Elean magistrates, called *νομοφύλακες*, in a building devoted to the purpose near the market-place, which was called *Ἑλλανοδοκίων*.⁴ Their office probably only lasted for one festival. They had to see that all the laws relating to the games were observed by the competitors and others, to determine the prizes, and to give them to the conquerors. An appeal lay from their decision to the Elean senate.⁵ Their office was considered most honourable. They wore a purple robe (*πορφύρεα*), and had in the stadium special seats appropriated to them.⁶ Under the direction of the hellanodicæ was a certain number of *ἀλῦται*, with an *ἀντράρχης* at their head, who formed a kind of police, and carried into execution the commands of the hellanodicæ.⁷ There were also various other minor officers under the control of the hellanodicæ.

All free Greeks were allowed to contend in the games who had complied with the rules prescribed to candidates. The equestrian contests were necessarily confined to the wealthy; but the poorest citizens could contend in the athletic contests, of which Pausanias⁸ mentions an example. This, however, was far from degrading the games in public opinion; and some of the noblest as well as meanest citizens of the state took part in these contests. The owners of the chariots and horses were not obliged to contend in person; and the wealthy vied with one another in the number and magnificence of the chariots and horses which they sent to the games. Alcibiades sent seven chariots to one festival, a greater number than had ever been entered by a private person;⁹ and the Greek kings in Sicily, Macedon, and other parts of the Hellenic world contended with one another for the prize in the equestrian contests.

All persons who were about to contend had to prove to the hellanodicæ that they were freemen of pure Hellenic blood, had not been branded with atimia, nor guilty of any sacrilegious act. They farther had to prove that they had undergone the preparatory training (*προγυμνάσματα*) for ten months previous, and the truth of this they were obliged to swear to in the *βουλευτήριον* at Olympia before the statue of Zeus *Ὀρκίος*. The fathers, brothers, and

gymnastic teachers of the competitors, as well as the competitors themselves, had also to swear that they would be guilty of no crime (*κακοῦργημα*) in reference to the contests.¹ All competitors were obliged, thirty days previous to the festival, to undergo certain exercises in the gymnasium at Elis, under the superintendence of the hellanodicæ.² The different contests, and the order in which they would follow one another, were written by the hellanodicæ upon a tablet (*λευκωμα*) exposed to public view.³

The competitors took their places by lot, and were, of course, differently arranged, according to the different contests in which they were to be engaged. The herald then proclaimed the name and country of each competitor.⁴ When they were all ready to begin the contest, the judges exhorted them to acquit themselves nobly, and then gave the signal to commence. Any one detected in bribing a competitor to give the victory to his antagonist was heavily fined; the practice appears to have been not uncommon, from the many instances recorded by Pausanias.⁵

The only prize given to the conqueror was a garland of wild olive (*κότινος*), which, according to the Elean legends, was the prize originally instituted by the Idæan Heracles.⁶ But, according to Phlegon's account,⁷ the olive crown was not given as a prize upon the revival of the games by Iphitus, and was first bestowed in the seventh olympiad with the approbation of the oracle at Delphi. This garland was cut from a sacred olive-tree, called *ἐλαία καλῆς τῆς ἑστέρας*, which grew in the sacred grove of Altis in Olympia, near the altars of Aphrodite and the Hours.⁸ Heracles is said to have brought it from the country of the Hyperboreans, and to have planted it himself in the Altis.⁹ A boy, both of whose parents were still alive (*ἀμφιθαλὴς παῖς*), cut it with a golden sickle (*χρυσῷ ὀρεπάνῳ*). The victor was originally crowned upon a tripod covered over with bronze (*τρίπους ἐπίχαλκος*), but afterward, and in the time of Pausanias, upon a table made of ivory and gold.¹⁰ Palm branches, the common tokens of victory on other occasions, were placed in their hands. The name of the victor, and that of his father and of his country, were then proclaimed by a herald before the representatives of assembled Greece. The festival ended with processions and sacrifices, and with a public banquet given by the Eleans to the conquerors in the prytæneum.¹¹

The most powerful states considered an Olympic victory, gained by one of their citizens, to confer honour upon the state to which he belonged; and a conqueror usually had immunities and privileges conferred upon him by the gratitude of his fellow-citizens. The Eleans allowed his statue to be placed in the Altis, or sacred grove of Zeus, which was adorned with numerous such statues, erected by the conquerors or their families, or at the expense of the states of which they were citizens. On his return home, the victor entered the city in a triumphal procession, in which his praises were celebrated frequently in the loftiest strains of poetry. (Compare *ATHLETÆ*, p. 120.)

Sometimes the victory was obtained without a contest, in which case it was said to be *ἀκουρί*. This happened either when the antagonist who was assigned neglected to come, or came too late, or when an athlete had obtained such celebrity by former conquests, or possessed such strength and skill, that no one dared to oppose him.¹² When one state conferred a crown upon another state, a

proclamation to this effect was frequently made at the great national festivals of the Greeks.¹

As persons from all parts of the Hellenic world were assembled together at the Olympic games, it was the best opportunity which the artist and the writer possessed of making their works known. It in fact, to some extent, answered the same purpose as the press does in modern times. Before the invention of printing, the reading of an author's works to as large an assembly as could be obtained, was one of the easiest and surer modes of publishing them; and this was a favourite practice of the Greeks and Romans. Accordingly, we find many instances of literary works thus published at the Olympic festival. Herodotus is said to have read his history at this festival; but, though there are some reasons for doubting the correctness of this statement, there are numerous other writers who thus published their works, as the sophist Hippias, Prodicus of Ceos, Anaximenes, the orator Lysias, Dion Chrysostom, &c.² It must be borne in mind that these recitations were not contests, and that they formed, properly, no part of the festival. In the same way painters and other artists exhibited their works at Olympia.³

The Olympic games continued to be celebrated with much splendour under the Roman emperors, by many of whom great privileges were awarded to the conquerors. (*Vid.* ΑΤΗΛΕΤΑ, p. 120.) In the sixteenth year of the reign of Theodosius, A.D. 394 (O. 293), the Olympic festival was forever abolished; but we have no account of the names of the victors from O. 249.

Our limits do not allow us to enter into the question of the influence of the Olympic games upon the national character, but the reader will find some excellent remarks on this subject in Thirlwall's *Hist. of Greece*, vol. i., p. 390, &c.

There were many ancient works on the subject of the Olympic games and the conquerors therein. One of the chief sources from which the writers obtained their materials must have been the registers of conquerors in the games, which were diligently preserved by the Eleians (Ἡλείων ἐς τοὺς Ὀλυμπιονίκας γράμματα; τὰ Ἡλείων γράμματα ἀρχαῖα⁴). One of the most ancient works on this subject was by the Eleian Hippias, a contemporary of Plato, and was entitled ἀναγραφὴ Ὀλυμπιονίκων.⁵ Aristotle also appears to have written a work on the same subject.⁷ There was a work by Timæus of Sicily, entitled Ὀλυμπιονίκαι ἢ χρονικά πραξίδια, and another by Eratosthenes (born B.C. 275), also called Ὀλυμπιονίκαι.⁸ The Athenian Stesicleides is mentioned as the author of an ἀναγραφὴ τῶν ἀρχόντων καὶ Ὀλυμπιονίκων,⁹ and Pliny¹⁰ speaks of Agriopas as a writer of *Olympionica*.

There were also many ancient works on the Greek festivals in general, in which the Olympic games were of course treated of. Thus the work of Dicaearchus, Περὶ Ἀγώνων,¹¹ contained a division entitled δὲ Ὀλυμπικός.¹²

One of the most important works on the Olympic games was by Phlegon of Tralles, who lived in the reign of Hadrian; it was entitled Περὶ τῶν Ὀλυμπίων, or Ὀλυμπίων καὶ Χρονικῶν Συναγωγὴ, was comprised in 16 books, and extended from the first Olympiad to O. 229. We still possess two considerable fragments of it. The important work of Julius Africanus, Ἑλληνικῶν Ὀλυμπιάδων ἀπὸ τῆς πρώτης, &c., is preserved to us by Eusebius; it comes down to O. 249. Dexippus of Athens, in

his *χρονικὴ ιστορία*, carried down the Olympic conquerors to O. 262.

In modern works much useful information on the Olympic games is given in Corsini's *Dissert. Agonistica*, and in Böckh's and Dissen's editions of Pindar. See also Meier's article on the Olympic games, and Rathgeber's articles on Olympia, Olympieion, and Olympischer Jupiter in Ersch and Gruber's *Encyclopädie*.—Dissen, *Ueber die Anordnung der Olympischen Spiele*, in his *Kleine Schriften*, p. 185; and Krause, *Olympia oder Darstellung der grossen Olympischen Spiele*, Wien, 1838.

In course of time, festivals were established in several Greek states in imitation of the one at Olympia, to which the same name was given. Some of these are only known to us by inscriptions and coins; but others, as the Olympic festival at Antioch, obtained great celebrity. After these Olympic festivals had been established in several places, the great Olympic festival is sometimes designated in inscriptions by the addition of "in Pisa," ἐν Πέλλεσσιν.¹ We subjoin from Krause an alphabetical list of these smaller Olympic festivals. They were celebrated at

Ægæ in Macedonia. This festival was in existence in the time of Alexander the Great.²

Alexandrea.³ In later times the number of Alexandrian conquerors in the great Olympic games was greater than from any other state.

Anazarbus in Cilicia. This festival was not introduced till a late period.⁴

Antioch in Syria. This festival was celebrated at Daphne, a small place 40 stadia from Antioch, where there was a large sacred grove watered by many fountains. The festival was originally called Daphnea, and was sacred to Apollo and Artemis,⁵ but was called Olympia after the inhabitants of Antioch had purchased from the Eleians, in A.D. 44, the privilege of celebrating Olympic games. It was not, however, regularly celebrated as an Olympic festival till the time of the Emperor Commodus. It commenced on the first day of the month Hyperbæretæus (October), with which the year of Antioch began. It was under the presidency of an alytarches. The celebration of it was abolished by Justin, A.D. 521. The writings of Libanius, and of Chrysostom, the Christian father, who lived many years at Antioch, give many particulars respecting this festival.

Athens. There were two festivals of the name of Olympia celebrated at Athens, one of which was in existence in the time of Pindar,⁶ who celebrates the ancestors of the Athenian Timodemus as conquerors in it, and perhaps much earlier.⁷ It was celebrated to the honour of Zeus, in the spring, between the great Dionysia and the Bendidia.⁸ The other Olympic festival at Athens was instituted by Hadrian, A.D. 131, from which time a new Olympic æra commenced.⁹ (*Vid.* OLYMPIAD.)

Attalia in Pamphylia. This festival is only known to us by coins.¹⁰

Cyzicus on the Propontis.¹¹

Cyrene in Africa.¹²

Dium in Macedonia. These games were instituted by Archelaus, and lasted nine days, corresponding to the number of the nine Muses. They were celebrated with great splendour by Philip II. and Alexander the Great.¹³

Ephesus. This festival appears by inscriptions, in which it is sometimes called 'Αδριανὴ Ὀλύμπια ἐν Ἐφέσῳ, to have been instituted by Hadrian.¹

Elis. Besides the great Olympic games, there appear to have been smaller ones celebrated yearly.²

Magnesia in Lydia.³

Neapolis.⁴

Nicæa in Bithynia.⁵

Nicopolis in Epirus. Augustus, after the conquest of Antony off Actium, founded Nicopolis, and instituted games to be celebrated every five years (ἑὺν πεντητηρικὸς) in commemoration of his victory. These games are sometimes called Olympic, but more frequently bear the name of Actia. They were sacred to Apollo, and were under the care of the Lacedæmonians.⁶ (Vid. AKTIA.)

Olympus in Thessaly, on the mountain of that name.⁷

Pergamos in Mysia.⁸

Side in Pamphylia.⁹

Smyrna. Pausanias¹⁰ mentions an agon of the Smyrnæans, which Corsini¹¹ supposes to be an Olympic festival. The Marmor Oxoniense expressly mentions Olympia at Smyrna, and they also occur in inscriptions.¹²

Tarsus in Cilicia. This festival is only known to us by coins.¹³

Tegea in Arcadia.¹⁴

Thessalonica in Macedonia.¹⁵

Thyatira in Lydia.¹⁶

Tralles in Lydia.¹⁷

Tyrrus in Phœnicia.¹⁸

***OLYRA** (ὄλῦρα). Didymus describes this as ἰδιὸς σπέρματος παραπλησίον κριθῇ. "In fact," says Adams, "it can scarcely admit of a doubt that it was a variety of Spelt, namely, *Triticum Spelta*, L."¹⁹

***OMPHAX** (ὀμφαξ), a species of precious stone, most probably, according to Sir John Hill, the *Beryllus oleaginus* of Pliny. Theophrastus informs us that it was one of the gems used for engraving seals.²⁰

***ONITIS** (ὄνιτις), a plant, which the scholiast on Nicander and Hesychius agree in identifying with the ὀρίγανον, or Sweet Marjoram, the *Origanum onites*, L.²¹

***ONOBRYCHIS** (ὀνόβρυχις), the *Onobrychis sativa*, called, in English, Cock's Head or Saintfoin.²²

***ONOS** (ὄνος), the Ass, or *Equus Asinus*, L. "The wild Ass," says Adams, "is the *Para* of Scripture, and the *dvaygos* of the Greeks." "The domestic ass," says Smith, "supposed to be derived from the wild hymn of the Desert and the horse of Asia, enters at a remote period into the circle of human economic establishments. The first-mentioned, as might be expected, resided in the same regions where the dawn of civilization first commenced, and, gifted with inferior powers of resistance, is presumed to have been subjugated several ages before the second, because we find it repeatedly in the Pentateuch before the horse is noticed; such as in the sacrifice of Abraham; in his visits to Egypt, where he received presents from Abimelech; and in the spoils of Shechem, where

asses are numbered with other cattle, but horses are not mentioned. Yet that noble animal, by nature provided with greater physical capabilities, with more intelligence, and more instinctive capacities for adapting his existence to the circumstances of domestication in every region, is, in his servitude, grown larger, more adorned, more acute, and more educational than in a state of nature; while the ass, in similar circumstances, has degenerated from his pristine character, becoming, even in the greater part of Persia, smaller in stature, less fleet, less intelligent, and, by his own impulses, less the associate of man. When the horse, from thorough domesticity, is again cast upon his own resources, he resumes his original independence, provides for his own safety and that of the herd under his care, without altogether losing his acquired advantages; the ass, on the contrary, although never a spontaneous associate in his domestication, is nowhere known to have again become wild, or to have sought his freedom with a spirit of persevering vigilance; and in cases where, by accident, he has found himself in freedom, he has made no energetic efforts to retain it, nor recovered qualities that restore him to the filiation of the hyman or the kulan. When emancipated, he becomes, without effort, the prey of the lion, the tiger, the hyena, or the wolf, and in America he has been known to succumb under the beak of a condor. It is evident that the difference in the relative condition of the two species is, with regard to the ass, not entirely referable to human neglect and want of kindness, but, in part at least, must be ascribed to inferior sensibility and weaker intellectual power, both being alike evinced by the hardness of his hide, by his satisfaction with coarser food, and his passive stubbornness."²³

***II.** A species of fish, the same with the γάδις of Athenæus, and probably the *Bacchus* of Pliny. The name would appear to have been applied to more than one species of the *Gadus*, but more especially to the *Gadus merluccius*, or Hake. Adams considers it doubtful whether the Greeks were acquainted with the *Gadus eglefinus*, or Haddock.²⁴

***ONOSMA** (ὄνοσμα, called also ὄνομα and ὄνομῆς), a plant, a species of *Anchusa*, or one of its congeners. Hardouin says of it, "*Nihil aliud onosma esse censuerim præter Anchusam degenerem.*" Stephens also holds it to be a species of Alkanet. Sprengel maintains that it is either the *Anchusa undulata*, or *Lithospermum caruleo-purpureum*.²⁵

***ONYX**, 1. "In mineralogy the term *onyx* was applied, 1. To a semiprecious stone of a fine flinty texture, namely, the *Onyx agate* of Cleaveland: 2. To a variety of gypseous alabaster, from which small vases were formed."²⁶ (Vid. ALABASTER.)

***II.** A term used by Dioscorides, Galen, and the other writers on the *Materia Medica*, to signify the *operculum*, or cover of the *Strombus lentiginosus*.²⁷

OPALIA, a Roman festival in honour of Opis, which was celebrated on the 14th day before the Calends of January (Dec. 19th), being the third day of the Saturnalia, which was also originally celebrated on the same day, when only one day was devoted to the latter festival. It was believed that Opis was the wife of Saturnus, and for this reason the festivals were celebrated at the same time.²⁸ The worshippers of Opis paid their vows sitting, and touched the earth on purpose, of which she was the goddess.²⁹

*OP'ALUS (ὄπαλος, ὀπάλλιος), the Opal "The opalus of Pliny," observes Dr. Moore, "is too well characterized, and its peculiar lustre or opalescence too accurately described by him, to leave any doubt that it was what we call precious Opal. Pliny is not the only one among the ancients, as Jameson supposed, who makes mention of this gem. The Orphic poem commends the beauty of the ὀπάλλιος, and evidently alludes to its other name παιδῆρος, in saying that it has the delicate complexion of a lovely youth (ἡμετροῦ τέρενα χρῶα παιδός). This gem also, Pliny says, the Indians so well imitated in glass, that the counterfeit could hardly be detected. The Opal was perhaps too highly valued to be frequently engraved. There are very few engraved specimens of this mineral preserved in collections. But that it sometimes was used as a ringstone, we learn from the story Pliny tells of a senator named Nonius, who, possessing an opal valued at 20,000 sesterces, which Antony coveted, was proscribed in consequence, and fled, saving of his whole fortune this ring alone."¹

OP'ERIS NOVI NUNTIATIO was a summary remedy provided by the edict against a person who was making an opus novum. An opus novum consisted in either adding something in the way of building (*edificando*), or taking away something so as to alter the appearance of a thing (*facies operis*). The object of the nuntiatio was either the maintenance of a right (*jus*), or to prevent damage (*damnum*), or to protect the public interest (*publicum jus*). The owner of the property which was threatened with damage by the opus novum, or he who had an easement (*servitus*) in such property, had the *jus nunciandi*.² Nuntiatio consisted in protesting against and forbidding the progress of the opus novum on the spot where the work was proceeding, and in the presence of the owner or of some person who was there present on his account. The nuntiatio did not require any application to, or interference on the part of the prætor. It was a rule of law that the nuntiatio must take place before the work was completed: after it was completed, the operis novi nuntiatio had no effect, and redress could only be obtained by the interdict *quod vi aut clam*.

If the opus novum consisted in building on the complainant's ground, or inserting or causing anything to project into his premises, it was better to apply at once to the prætor, or to prevent it per manum, that is, as it is explained "jactu lapilli," which was a symbol of the use of force for self-protection.

The edict declared that after a nuntiatio nothing should be done until the nuntiatio was declared illegal (*nuntiatio, missa or remissa fiat*) or a security (*satisfactio de opere restituendo*) was given. If the person to whom the notice was given persevered, even if he had a right to do what he was doing, yet, as he was acting against the prætor's edict, he might be compelled to undo what he had done. By the nuntiatio, the parties were brought within the jurisdiction of the prætor. In cases where there was danger from the interruption of the work, or the person who was making the opus novum denied the right of the nuntians, he was allowed to go on upon giving a cautio or security for demolition or restoration, in case the law was against him. When the cautio was given or the nuntians waived it, the party was entitled to an interdictum prohibitorium for his protection in prosecuting the work.

The effect of the nuntiatio ceased when the cautio was given; when the nuntians died, when he alienated the property in respect of which he claimed the *jus nunciandi*, or when the prætor per-

mitted the work to go on (*operis novi nuntiatio, neminem remeiserit*;³ *ante remissam nuntiationem*.⁴

*ΟΦΙΣ ΘΑΛΑΑΤΤΙΟΣ (ὄφις θαλάττιος), a species of fish. "Ælian holds it to be the same as the Μύρος. It is therefore, most probably, the *Murana ophis*, L. Rondelet says of it that it is very like the Conger Eel. Belon and Gesner both mention that it is seldom met with."⁵

*ΟΦΙΤΕΣ (ὄφιτες), according to some, a variety of *Serpentine*. "Others, however, describe it, more accurately, as a mixture of reddish brown common serpentine, leek and pistachio green precious serpentine, white granular foliated limestone, and small portions of diallage. Of the ophites there are three varieties specified by Dioscorides; one black and heavy, a second ash-coloured and spotted, the third containing white lines. The first was perhaps green porphyry, the Ophites of Waller; the second seatite; and the third the kind just described."⁶

ΟΠ'ΙΜΑ ΣΠΟΛΙΑ. (*Vid. SROLIA*.)

OPINATO'RES were officers under the Roman emperors, who were sent into the provinces to obtain provisions for the army. The provisions had to be supplied to them within a year. The etymology of the name is uncertain.⁷

ΟΡΙΣΤΟΓΡΑΦΗ. (*Vid. LIBER*.)

*ΟΡΟΒΑΛ'SAMUM (ὀροβάλισσμον), the resinous juice of the *Amyris Gileadensis*.

*ΟΙΤΟΣ ΜΗΔΙΚΟΣ (ὀτός Μηδικός), the same as our asafetida, namely, the Gum-resin of the *Ferula Asa-fœtida*. It is the *Laser* and *Laserpitium* of the Latins. The ὀτός Συριανός was merely a variety of it.

Ο'ΡΡΙΑ ΛΕΧ. (*Vid. SUMTUARIE LEGES*.)

*ΟΡΣΙΑΝΟΣ (ὀρσιανός). "From Pliny's account of this stone," observes Adams, "there is every reason to conclude that it was the same as the *Obsidian* of modern mineralogists. It is nearly allied to pumice, and consists mostly of silex and alumine. According to Sir J. Hill, it was named ὀρσιανός, ἀπὸ τῆς ὀρσιδος, because, when polished, it was used as a looking-glass." He adds, "the true origin of the name being forgotten from the false spelling of the word, after ages thought it had received it from one *Obsidius*, whom they imagined the first finder of it."⁸

ΟΡΣΟΝΙUM or OBSONIUM (ὀρσον, *dim. ὀρσιον*; ὀρσῆμα,⁹ denoted everything which was eaten with bread. Among the ancients, loaves, at least preparations of corn in some form or other, constituted the principal substance of every meal. But together with this, which was the staff of their life, they partook of numerous articles of diet called *opsomia* or *pulmentaria*,¹⁰ designed also to give nutriment, but still more to add a relish to their food. Some of these articles were taken from the vegetable kingdom, but were much more pungent and savoury than bread, such as olives, either fresh or pickled, radishes, and sesamum.¹¹ Of animal food, by much the most common kind was fish, whence the terms under explanation were, in the course of time, used in a confined and special sense to denote fish only, but fish variously prepared, and more especially salt fish, which was most extensively employed to give a relish to the vegetable diet either at breakfast¹² or at the principal meal.¹³ For the same reason, *ὀρσοφάγος* meant a gourmand or epicure, and *ὀρσοφαγία* gluttony.¹⁴

(Athen., x., 24—37.)

1. (Moore's Anc. Mineral., p. 152.)—2. (Dig. 43, tit. 25.)

Of the different parts of fishes, the roe was the most esteemed for this purpose. It is still prepared from the fish in the very same waters adjoining Myus in Ionia, which were given to Themistocles by the King of Persia.¹ A jar was found at Pompeii containing caviare made from the roe of the tunny.²

Some of the principal *ραρχεῖαι*, or establishments for curing fish, were on the southern coast of Spain;³ but the Greeks obtained their chief supply from the Hellespont,⁴ and more especially Byzantium first rose into importance after its establishment by the Milesians in consequence of the active prosecution of this branch of industry. Of all seas, the Euxine was accounted by the ancients the most abundant in fish, and the catching of them was aided by their migratory habits, as in the autumn they passed through the Bosphorus towards the south, and in spring returned to the Euxine in order to deposit their spawn in its tributary rivers. At these two seasons they were caught in the greatest quantity, and, having been cured, were shipped in Milesian bottoms, and sent to all parts of Greece and the Levant. The principal ports on the Euxine engaged in this traffic were Sinope and Panticapæum.⁵

Among the fish used for curing were different kinds of sturgeon (*ἀντακίος*⁶), tunny (*σκομβρός*⁷, *σκόμber*, *πηλεμύς*, a name still in use, with some modification, among the descendants of the ancient Phœceans at Marseilles⁸), and mullet. A minute discussion of their qualities, illustrated by quotations, may be seen in Athenæus.⁹

Plato mentions the practice of salting eggs, which was no doubt intended to convert them into a kind of opsonium.¹⁰ The treatise of Apicius, *De Opsoniis*, is still extant in ten books.

The Athenians were in the habit of going to market (*εἰς τοῦνον*) themselves in order to purchase their opsonia (*ὀψωνεῖν*,¹¹ *opsonare*). (Vid. MACELUM, TINTINNABULUM.) But the opulent Romans had a slave, called *opsonator* (*ὀψώνης*), whose office it was to purchase for his master. It was his duty, by learning what flavours were most acceptable to him, by observing what most delighted his eyes, stimulated his appetite, and even overcame his nausea, to satisfy, as much as possible, all the cravings of a luxurious palate.¹² We may also infer, from an epigram of Martial,¹³ that there were *opsonatores*, or purveyors, who furnished dinners and other entertainments at so much per head, according to the means and wishes of their employers. Spon¹⁴ has published two inscriptions from monuments raised to the memory of Romans who held the office of purveyors to the imperial family. At Athens both the sale and the use of all kinds of opsonia were superintended by two or three special officers, appointed by the senate, and called *ὀψωνομοί*.¹⁵

OPTIO. (Vid. CENTURIO.)

OPTIMATES is synonymous with optimi, and, accordingly, signifies the best men in the state, whether of noble or plebeian origin. But at Rome, where the reverence for the *mores et instituta majorum* formed such a prominent feature of the national character, the name optimates was applied to a political party, which we may call the conservative or aristocratic party, in contradistinction to the popular party, with its desire for change and

improvement. As long as the patricians and plebeians were the only two parties in the Republic, there was no occasion for the appellation of optimates, though Livy,¹ applying expressions very common in his own days, makes M. Horatius Barbatus distinguish between populares and optimates instead of between patricians and plebeians. But at the time when a new nobility, consisting of wealthy plebeians as well as patricians, had been formed, and occupied the place formerly held by the patricians, the term optimates began to be applied frequently to persons belonging to this new order of nobles, and mostly comprehended the *ordo senatorius* and the *ordo equestris*. When, at a still later period, the interests of the senators and equites became separated, the name optimates was used in a narrower sense, and only comprised the party consisting of the senate and its champions, in opposition to the popular party, which was now sometimes designated by the name of plebs.² There is a locus classicus on optimates in Cicero,³ but in defining the classes of persons to which he applies the term optimates, he rather follows the etymological than the conventional meaning which the word had assumed in his days. His object in so doing was to remove from the party of the optimates, to which he himself belonged, the odium attached to it by the popular party.⁴

ORACULUM (*μαντεῖον*, *χρηστήριον*) was used by the ancients to designate both the revelations made by the deity to man, as well as the place in which such revelations were made. The deity was in none of these places believed to appear in person to man, and to communicate to him his will or knowledge of the future, but all oracular revelations were made through some kind of medium, which, as we shall see hereafter, was different in the different places where oracles existed. It may, on first sight, seem strange, that there were, comparatively speaking, so few oracles of Zeus, the father and ruler of gods and men. But although, according to the belief of the ancients, Zeus himself was the first source of all oracular revelations, yet he was too far above men to enter with them into any close relation; other gods, therefore, especially Apollo, and even heroes, acted as mediators between Zeus and men, and were, as it were, the organs through which he communicated his will.⁵ The fact that the ancients consulted the will of the gods on all important occasions of public and private life, arose partly from the general desire of men to know the issue of what they are going to undertake, and partly from the great reverence for the gods, so peculiar to the ancients, by which they were led not to undertake anything of importance without their sanction; for it should be borne in mind that an oracle was not merely a revelation to satisfy the curiosity of man, but, at the same time, a sanction or authorization by the deity of what man was intending to do or not to do. We subjoin a list of the Greek oracles, classed according to the deities to whom they belonged.

I. ORACLES OF APOLLO.

1. *The Oracle of Delphi* was the most celebrated of all the oracles of Apollo. Its ancient name was Pytho, which is either of the same root as *πυθίσθαι*, to consult, or, according to the Homeric hymn on Apollo,⁶ derived from *πυθίσθαι*, to putrefy, with reference to the nature of the locality. Respecting the topography of the Temple of Apollo, see Pausanias⁷ and Müller.⁸ In the innermost sanctuary (the *ἄδυτον* or *μέγαρον*) there was the statue of Apollo,

1. (iii., 39.)—2. (Tacit., *Annal.*, iv., 32.)—3. (Pro Sext., 45.)—4. (Compare Cic. ad Att., i., 17, 18, 19.)—5. (Soph., *Ed. Col.* 629.—*Æsch.*, *Eumen.*, 19, 611, &c.)—6. (165, &c.)—7. (x., 14 & 7.)—8. (In Dissen's *Findar*, ii., p. 628.)

(Hegewisch, *Coloniæ der Griechen*, p. 80.)—6. (Herod., iv., 33.—Schneider, *Ecl. Phys.*, i., p. 65; ii., p. 48.)—7. (Hermippus, i., c.)—8. (Passow, *Handwörterbuch*, s. v.)—9. (iii., 64–93.)—10. (Symp., p. 404, ed. Bekker.)—11. (Theophrast., *Char.*, 28.)—12. (Sen., *Epist.*, 47.—Compare Hor., *Sat.*, i., ii., 9; iii., vii., 106.—Plaut., *Menach.*, II., i., 1.—Id., *Mil.*, III., ii., 73.)—13. (xiv., 217.)—14. (Misc. *Erud. Ant.*, p. 214.)—15. (Athen., vi., 12.)

which was, at least in later times, of gold; and before it there burned upon an altar an eternal fire, which was fed only with fir-wood.¹ The inner roof of the temple was covered all over with laurel garlands,² and upon the altar laurel was burned as incense. In the centre of this temple there was a small opening (*χάσμα*) in the ground, from which, from time to time, an intoxicating smoke arose, which was believed to come from the well of Castolus, which vanished into the ground close by the sanctuary.³ Over this chasm there stood a high tripod, on which the pythia, led into the temple by the prophetes (*προφῆτης*), took her seat whenever the oracle was to be consulted. The smoke rising from under the tripod affected her brain in such a manner that she fell into a state of delirious intoxication, and the sounds which she uttered in this state were believed to contain the revelations of Apollo. These sounds were carefully written down by the prophetes, and afterward communicated to the persons who had come to consult the oracle.⁴

The pythia (the *προφῆτις*) was always a native of Delphi,⁵ and when she had once entered the service of the god she never left it, and was never allowed to marry. In early times she was always a young girl, but after one had been seduced by Echeocrates the Thessalian, the Delphians made a law that in future no one should be elected as prophetess who had not attained the age of fifty years, but, in remembrance of former days, the old woman was always dressed as a maiden.⁶ The pythia was generally taken from some family of poor country-people. At first there was only one pythia at a time; but when Greece was in its most flourishing state, and when the number of those who came to consult the oracle was very great, there were always two pythias, who took their seat on the tripod alternately, and a third was kept in readiness in case some accident should happen to either of the two others.⁷ The effect of the smoke on the whole mental and physical constitution is said to have sometimes been so great, that in her delirium she leaped from the tripod, was thrown into convulsions, and after a few days died.⁸

At first oracles were only given once every year, on the seventh of the month of Bysius (probably the same as *Πύθιος*, or the month for consulting), which was believed to be the birthday of Apollo;⁹ but as this one day, in the course of time, was not found sufficient, certain days in every month were set apart for the purpose.¹⁰ The order in which the persons who came to consult were admitted was determined by lot;¹¹ but the Delphian magistrates had the power of granting the right of *προμαντεία*, i. e., the right of consulting first, and without their order being determined by lot, to such individuals or states as had acquired claims on the gratitude of the Delphians, or whose political ascendancy seemed to give them higher claims than others. Such was the case with Cressus and the Lydians,¹² with the Lacedæmonians,¹³ and Philip of Macedonia.¹⁴ It appears that those who consulted the oracle had to pay a certain fee, for Herodotus states that the Lydians were honoured with *ἀρεταία* by the Delphians. The pythia always spent three days before she ascended the tripod in preparing herself for the solemn act, and during this time she fasted, and bathed in the Castalian well, and dressed in a simple manner; she also burned in the temple laurel

leaves and flour of barley upon the altar of the god.¹ Those who consulted the oracle had to sacrifice a goat, or an ox, or a sheep, and it was necessary that these victims should be healthy in body and soul, and to ascertain this they had to undergo a peculiar scrutiny. An ox received barley, and a sheep chick-pease, to see whether they ate them with appetite; water was poured over the goats, and if this put them into a thorough tremble, the victim was good.² The victim which was thus found eligible was called *δαωτήριον*.³ Wachsmuth⁴ states that all who came to consult the oracle wore laurel garlands surrounded with ribands of wool, but the passages from which this opinion is derived only speak of such persons as came to the temple as supplicants.⁵

The Delphians, or, more properly speaking, the noble families of Delphi, had the superintendence of the oracle. Among the Delphian aristocracy, however, there were five families which traced their origin to Deucalion, and from each of these one of the five priests, called *δαοί*, was taken.⁶ Three of the names of these families only are known, viz., the Cleomantids, the Thracids,⁷ and the Laphriads.⁸

The *δαοί*, together with the highpriest or prophetes, held their offices for life, and had the control of all the affairs of the sanctuary and of the sacrifices.⁹ That these noble families had an immense influence upon the oracle is manifest from numerous instances, and it is not improbable that they were its very soul, and that it was they who dictated the pretended revelations of the god.¹⁰

Most of the oracular answers which are extant are in hexameters, and in the Ionic dialect. Sometimes, however, Doric forms also were used.¹¹ The hexameter was, according to some accounts, invented by Phemonoe, the first pythia. This metrical form was chosen, partly because the words of the god were thus rendered more venerable, and partly because it was easier to remember verse than prose.¹² Some of the oracular verses had metrical defects, which the faithful among the Greeks accounted for in an ingenious manner.¹³ In the times of Theopompus, however, the custom of giving the oracles in verse seems to have gradually ceased; they were henceforth generally, in prose, and in the Doric dialect spoken at Delphi. For, when the Greek states had lost their political liberty, there was little or no occasion to consult the oracle on matters of a national or political nature, and the affairs of ordinary life, such as the sale of slaves, the cultivation of a field, marriages, voyages, loans of money, and the like, on which the oracle was then mostly consulted, were little calculated to be spoken of in lofty poetical strains.¹⁴ When the oracle of Delphi lost its importance in the eyes of the ancients, the number of persons who consulted it materially decreased, and in the days of Plutarch one pythia was, as of old, sufficient to do all the work, and oracles were only given on one day in every month.

The divine agency in Pytho is said to have first been discovered by shepherds who tended their flocks in the neighbourhood of the chasm, and whose sheep, when approaching the place, were seized with convulsions.¹⁴ Persons who came near the

place showed the same symptoms, and received the power of prophecy. This, at last, induced the people to build a temple over the sacred spot. According to the Homeric hymn on Apollo, this god was himself the founder of the Delphic oracle, but the local legends of Delphi stated that originally it was in the possession of other deities, such as Gæa, Themis, Phœbe, Poseidon, Night, Cronos, and that it was given to Apollo as a present.¹ Other traditions, again, and these, perhaps, the most ancient and genuine, represented Apollo as having gained possession of the oracle by a struggle, which is generally described as a fight with Python, a dragon, who guarded the oracle of Gæa or Themis.

The oracle of Delphi, during its best period, was believed to give its answers and advice to every one who came with a pure heart, and had no evil designs: if he had committed a crime, the answer was refused until he had atoned for it;² and he who consulted the god for bad purposes was sure to accelerate his own ruin.³ No religious institution in all antiquity obtained such a paramount influence, not only in Greece, but in all countries around the Mediterranean, in all matters of importance, whether relating to religion or to politics, to private or to public life, as the oracle of Delphi. When consulted on a subject of a religious nature, the answer was invariably of a kind calculated not only to protect and preserve religious institutions, but to command new ones to be established,⁴ so that it was the preserver and promoter of religion throughout the ancient world. Colonies were seldom or never founded without having obtained the advice and the directions of the Delphic god.⁵ Hence the oracle was consulted in all disputes between a colony and its metropolis, as well as in cases where several states claimed to be the metropolis of a colony.⁶ The Delphic oracle had at all times a leaning in favour of the Greeks of the Doric race, but the time when it began to lose its influence must be dated from the period when Athens and Sparta entered upon their struggle for the supremacy in Greece; at this time the partiality for Sparta became so manifest, that the Athenians and their party began to lose all reverence and esteem for it,⁷ and the oracle became a mere instrument in the hands of a political party. In the times of Cicero and Plutarch, many believed that the oracle had lost the powers which it had possessed in former days, but it still continued to be consulted down to the times of the Emperor Julian, until at last it was entirely done away with by Theodosius.

Notwithstanding the general obscurity and ambiguity of most of the oracles given at Delphi, there are many, also, which convey so clear and distinct a meaning, that they could not possibly be misunderstood, so that a wise agency at the bottom of the oracles cannot be denied. The manner in which this agency has been explained at different times, varies greatly according to the spirit of the age. During the best period of their history, the Greeks, generally speaking, had undoubtedly a sincere faith in the oracle, its counsels and directions. When the sphere in which it had most benefited Greece became narrowed and confined to matters of a private nature, the oracle could no longer command the veneration with which it had been looked upon before. The pious and believing heathens, however, thought that the god no longer bestowed his care upon the oracle, and that he was beginning to withdraw from it: while freethinkers and unbeliev-

ers looked upon the oracle as a skilful contrivance of priestcraft which had then outgrown itself. This latter opinion has also been adopted by many modern writers. The early Christian writers, seeing that some extraordinary power must in several cases have been at work, represented it as an institution of the evil spirit. In modern times opinions are very much divided. Hüllmann, for example, has endeavoured to show that the oracle of Delphi was entirely managed and conducted by the aristocratic families of Delphi, which thus are described as forming a sort of hierarchical senate for all Greece. If so, the Delphic senate surely was the wisest of all in the history of the ancient world. Klausen, on the other hand, seems to be inclined to allow some truly divine influence, and, at all events, thinks that, even in so far as it was merely managed by men, it acted in most cases according to lofty and pure moral principles.

The modern literature on the Delphic oracle is very rich; the most important works are: C. F. Wilster, *De Religione et Oraculo Apollinis Delphici*, Hafniæ, 1827.—H. Piotrowski, *De Gravitare Oraculi Delphici*, Lipsiæ, 1829.—R. H. Klausen, in *Ersch und Gruber's Encyclopædie*, s. v. *Orakel*.—K. D. Hüllmann, *Würdigung des Delphischen Orakels*, Bonn, 1837.—W. Götte, *Das Delphische Orakel, in seinem politischen, religiösen und sittlichen Einfluss auf die alte Welt*, Leipzig, 1839.

2. *Oracle at Abæ, in Phocis*. An oracle was believed to have existed here from very early times,¹ and was held in high esteem by the Phocians.² Some years before the Persian invasion, the Phocians gained a victory over the Thessalians, in which they obtained, among other spoils, four thousand shields, half of which they dedicated in the Temple of Apollo at Abæ, and half in that of Delphi.³ The oracle was, like many others, consulted by Cræsus, but he does not seem to have found it agreeing with his wishes.⁴ In the Persian invasion of Xerxes the Temple of Abæ was burned down, and, like several temples destroyed in this invasion, it was never rebuilt. The oracle itself, however, remained, and before the battle of Leuctra it promised victory to the Thebans; but in the Phocian or sacred war, when some Phocian fugitives had taken refuge in the ruins, they were entirely destroyed by the Thebans.⁵ But even after this calamity the oracle seems to have been consulted, for the Romans, from reverence for the oracle, allowed the inhabitants of Abæ to govern themselves. Hadrian built a small temple by the side of the old one, some walls of which were still standing as ruins in the time of Pausanias.⁶

3. *Oracle on the Hill of Ptoon*, in the territory of Thebes. The oracle was here given through the medium of a man called *πρόμαντις*, and the first promantis was said to have been Teneros, a son of Apollo.⁷ The oracles were usually given in the Æolian dialect; but when Mys, the Carian, consulted the god, the answer was given in the Carian language,⁸ so that, instead of the three Thebans who generally wrote down the oracles, the Carian was obliged to do it himself.⁹ When Alexander the Great destroyed Thebes, the oracle also perished.¹⁰ In the time of Plutarch the whole district was completely desolate.¹¹

4. *Oracle of Apollo at Ismenion*, in Bœotia, south of Thebes. The Temple of Apollo Ismenios was the national sanctuary of the Thebans. The oracle was here not given by inspiration, as in other places,

but from the inspection of the victims.¹ On one occasion it gave its prophecy from a huge cobweb in the Temple of Demeter.²

5. *Oracle of Apollo at Hysia*, on the frontiers of Attica. This place contained an oracle of Apollo with a sacred well, from which those drank who wished to become inspired. In the time of Pausanias the oracle had become extinct.³

6. *Oracle of Apollo at Tegyra*, was an ancient and much-frequented oracle, which was conducted by prophets. The Pythia herself, on one occasion, declared this to be the birthplace of Apollo. In the time of Plutarch the whole district was a wilderness.⁴

7. *Oracle of Apollo in the village of Eutresis*, in the neighbourhood of Leuctra.⁵ This oracle became extinct during the Macedonian period.⁶

8. *Oracle of Apollo at Orobæ*, in Eubœa. Apollo here bore the surname of the Selinuntian.⁷

9. *Oracle of Apollo in the Lyceum at Argos*. The oracle was here given by a prophetess.⁸

10. *Oracle of Apollo Deiradiotes*, on the acropolis of Larissa. The oracle was given by a prophetess, who was obliged to abstain from matrimonial connexions once in every month. She was believed to become inspired by tasting of the blood of a lamb which was sacrificed during the night. This oracle continued to be consulted in the days of Pausanias.⁹

11. *Oracle of Apollo at Didyma*, usually called the oracle of the Branchidæ, in the territory of Miletus. This was the oracle most generally consulted by the Ionians and Æolians.¹⁰ The temple, however, was said to have been founded previously to the arrival of the Ionians on the coast of Asia,¹¹ and the altar was said to have been built by Heracles, and the temple by Branchos, a son of Apollo, who had come from Delphi as a purifying priest.¹² Hence this oracle, like that of Delphi, combined purifying or atoning rites with the practice of prophesying.¹³ The real antiquity of the oracle, however, cannot be traced farther back than the latter half of the 7th century before our era.¹⁴ The priests, called Branchidæ, who had the whole administration of the oracle, were said to be the descendants of Branchos. The high-priest bore the name of Stephanephorus. Among them was one family which possessed the hereditary gift of prophecy, and was called the family of the Evangelidæ.¹⁵ The oracle was under the especial management of a prophet, whose office did not last for life. The oracles were probably inspired in a manner similar to that at Delphi.¹⁶ Crœsus made to this oracle as munificent presents as to that of Delphi.¹⁷ The principles which it followed in its counsels and directions were also the same as those followed by the Delphians. The Persians burned and plundered the temple, as had been predicted by the pythia of Delphi,¹⁸ but it was soon restored, and adorned with a fine brazen statue of Apollo,¹⁹ which Xerxes, on his retreat, carried with him to Ecbatana. A part of the Branchidæ had surrendered to Xerxes the treasures of the temple, and were, at their own request, transplanted to Bactriana,²⁰ where their descendants are said to have been severely punished by Alexander for their treachery.²¹ Seleucus sent the statue of Apollo back to Didyma, because the oracle had saluted him as

king.¹ The oracle continued to be consulted after the faithlessness of its ministers. Some ruins of the temple at Didyma are still extant.²

12. *Oracle of Apollo at Claros*, in the territory of Colophon. It was said to have been founded by Cretans under Rhacius, previous to the settlement of the Ionians in Asia Minor. The early legends put this oracle in connexion with Delphi, from whence Manto, the daughter of Teiresias, came to Claros, married Rhacius, and gave birth to Mopsos, from whom the prophets of Claros were probably believed to be descended.³ This oracle was of great celebrity, and continued to be consulted even at the time of the Roman emperors.⁴ The oracles were given through an inspired prophet, who was taken from certain Milesian families. He was generally a man without any refined education, had only the names and the number of the persons who consulted the oracle stated to him, and then descended into a cavern, drank of the water from a secret well, and afterward pronounced the oracle in verse.⁵

13. *Oracle of Apollo at Grynea*, in the territory of the Myrinæans.⁶

14. *Oracle of Apollo Gonnapeus*, in Lesbos.⁷

15. *Oracle of Apollo at Abdera*.⁸

16. *Oracle of Apollo in Delos*, which was only consulted in summer.⁹

17. *Oracle of Apollo at Patara*, in Lycia, was only consulted in winter. The prophetess (πρόμαντις) spent a night in the temple to wait for the communications which the god might make to her.¹⁰

18. *Oracle of Apollo at Telmessus*. The priests of this institution did not give their answers by inspiration, but occupied themselves chiefly with the interpretation of dreams, whence Herodotus¹¹ calls them ἐξηγηταί. But they also interpreted other marvellous occurrences. Near Telmessus there was another oracle of Apollo, where those who consulted it had to look into a well, which showed them in an image the answer to their questions.¹²

19. *Oracle of Apollo at Mallos*, in Cilicia.¹³

20. *Oracle of the Sarpedomian Apollo*, in Cilicia.¹⁴

21. *Oracle of Apollo at Hybla*, in Caria.¹⁵

22. *Oracle of Apollo at Hierakonome*, on the Mæander, a celebrated oracle, which spoke in good verses.¹⁶

II. ORACLES OF ZEUS.

1. *Oracle of Zeus at Olympia*. In this, as in the other oracles of Zeus, the god did not reveal himself by inspiration, as Apollo did in almost all of his oracles, but he merely sent signs which men had to interpret. Those who came to consult the oracle of Olympia offered a victim, and the priest gave his answers from the nature of the several parts of the victim, or from accidental circumstances accompanying the sacrifice.¹⁷ The prophets or interpreters here belonged to the family of the Iamids. In early times the oracle was much resorted to, and Sophocles¹⁸ mentions it along with the most celebrated oracles; but in later times it was almost entirely neglected, probably because oracles from the inspection

of victims might be obtained anywhere. The spot where the oracles were given at Olympia was before the altar of Zeus.¹ It was especially those who intended to take part in the Olympic games that consulted the oracle about their success,² but other subjects were also brought before it.

2. *Oracle of Zeus at Dodona.* Here the oracle was given from sounds produced by the wind. The sanctuary was situated on an eminence.³ Although in a barbarous country, the oracle was in close connexion with Greece, and in the earliest times apparently much more so than afterward.⁴ Zeus himself, as well as the Dodonæans, were reckoned among the Pelasgians, which is a proof of the ante-Hellenic existence of the worship of Zeus in these parts, and perhaps of the oracle also.⁵ The oracle was given from lofty oaks covered with foliage,⁶ whence Æschylus⁷ mentions the speaking oaks of Dodona as great wonders. Beech-trees, however, are also mentioned in connexion with the Dodonæan oracle, which, as Hesiod⁸ said, dwelled in the stem of a beech-tree. Hence we may infer that the oracle was not thought to dwell in any particular or single tree, but in a grove of oaks and beeches. The will of the god was made manifest by the rustling of the wind through the leaves of the trees, which are therefore represented as eloquent tongues. In order to render the sounds produced by the winds more distinct, brazen vessels were suspended on the branches of the trees, which, being moved by the wind, came in contact with one another, and thus sounded till they were stopped.⁹ Another mode of producing the sounds was this: There were two columns at Dodona, one of which bore a metal basin, and the other a boy with a scourge in his hand; the ends of the scourge consisted of little bones, and, as they were moved by the wind, they knocked against the metal basin on the other column.¹⁰ According to other accounts, oracles were also obtained at Dodona through pigeons, which, sitting upon oak-trees, pronounced the will of Zeus.¹¹ The sounds were in early times interpreted by men,¹² but afterward, when the worship of Dione became connected with that of Zeus, by two or three old women, who were called *πελειάδες* or *πλάται*, because pigeons were said to have brought the command to found the oracle.¹³ In the time of Herodotus,¹⁴ the names of the three prophetesses were Promeneia, Timarete, and Nicandra. They were taken from certain Dodonæan families, who traced their pedigree back to the mythical ages. There were, however, at all times priests called *τόρμποι*¹⁵ connected with the oracle, who on certain occasions interpreted the sounds; but how the functions were divided between them and the Pelææ is not clear. In the historical times, the oracle of Dodona had less influence than it appears to have had at an earlier period, but it was at all times inaccessible to bribes, and refused to lend its assistance to the Doric interest.¹⁶ It was chiefly consulted by the neighbouring tribes, the Ætolians, Acarnanians, and Epirotæ,¹⁷ and by those who would not go to Delphi on account of its partiality for the Dorians. There appears to have been a very ancient connexion between Dodona and the Boeotian Ismenion.¹⁸

The usual form in which the oracles were given at Dodona was in hexameters; but some of the oracles yet remaining are in prose. In 219 B.C., the temple was destroyed by the Ætolians, and the sacred oaks were cut down,¹ but the oracle continued to exist and to be consulted, and does not seem to have become totally extinct until the third century of our æra. In the time of Strabo, the Dodonæan prophetesses are expressly mentioned, though the oracle was already decaying, like all the others.²

(Compare Cordes, *De Oraculo Dodonæo*, Grönningen, 1826.—J. Arnet, *Ueber das Taubenorakel von Dodona*, Wien, 1840.—L. von Lassaulx, *Das Pelasgische Orakel des Zeus zu Dodona, ein Beitrag zur Religionsphilosophie*, Würzburg, 1840.)

3. *Oracle of Zeus Ammon*, in an oasis in Libya, not far from the boundaries of Egypt. According to the traditions current at Dodona and Thebes in Egypt, it was founded by the latter city,³ and the form in which the god was represented at Thebes and in the Ammonium was the same; he had in both places the head of a ram.⁴ The Greeks became acquainted with this oracle through the Cyreneans, and Sparta was the first city of Greece which formed connexions with it.⁵ Its example was followed by the Thebans, Olympians, Dodonæans, Eleans, and others, and the Athenians sent frequent theories to the Ammonium even before Ol. 91,⁶ and called one of their sacred vessels Ammonius.⁷ Temples of Zeus Ammon were now erected in several parts of Greece. His oracle in Libya was conducted by men who also gave the answers.⁸ Their number appears to have been very great, for, on some occasions, when they carried the statue about in a procession, their number is said to have been eighty.⁹ In the time of Strabo,¹⁰ the oracle was very much neglected and in a state of decay. The Greek writers who are accustomed to call the greatest god of a barbarous nation Zeus, mention several oracles of this divinity in foreign countries.

III. ORACLES OF OTHER GODS.

The other gods who possessed oracles were consulted only concerning those particular departments of the world and human life over which they presided. Demeter thus gave oracles at Patræ in Achaia, but only concerning sick persons, whether their sufferings would end in death or recovery. Before the sanctuary of the goddess there was a well, surrounded by a wall. Into this well a mirror was let down by means of a rope, so as to swim upon the surface. Prayers were then performed and incense offered, whereupon the image of the sick person was seen in the mirror either as a corpse or in a state of recovery.¹² At Pharæ, in Achaia, there was an oracle of *Hermes*. His altar stood in the middle of the market-place. Incense was offered here, oil-lamps were lighted before it, a copper coin was placed upon the altar, and after this the question was put to the god by a whisper in his ear. The person who consulted him shut his own ears, and immediately left the market-place. The first remark that he heard made by any one after leaving the market-place was believed to imply the answer of Hermes.¹³

There was an *Oracle of Pluto and Cora* at Charax or Acharaca, not far from Nysa, in Caria. The two deities had here a temple and a grove, and near the latter there was a subterraneous cave of a miraculous nature, called the cave of Charon; for persons suffering from illness, and placing confidence in the

power of the gods, travelled to this place, and stayed for some time with experienced priests, who lived in a place near the cave. These priests then slept a night in the cavern, and afterward prescribed to their patients the remedies revealed to them in their dreams. Often, however, they took their patients with them into the cave, where they had to stay for several days in quiet, and without taking any food, and were sometimes allowed to fall into the prophetic sleep, but were prepared for it, and received the advice of the priests; for to all other persons the place was inaccessible and fatal. There was an annual panegyris in this place, probably of sick persons who sought relief from their sufferings. On the middle of the festive day, the young men of the gymnasium, naked and anointed, used to drive a bull into the cave, which, as soon as it had entered, fell down dead.¹

At Epidaurus Limera, oracles were given at the festival of *Ino*. (*Vid. Inoæ*.) The same goddess had an oracle at Cætylon, in which she made revelations in dreams to persons who slept a night in her sanctuary.² *Hera Acraea* had an oracle between Lechaon and Pagæ.³

IV. ORACLES OF HEROES.

1. *Oracle of Amphiaraus*, between Potniæ and Thebes, where the hero was said to have been swallowed up by the earth. His sanctuary was surrounded by a wall, and adorned with columns, upon which birds never settled, and birds or cattle never took any food in the neighbourhood.⁴ The oracles were given to persons in their dreams, for they had to sleep in the temple⁵ after they had prepared themselves for this incubatio by fasting one day, and by abstaining from wine for three days.⁶ The Thebans were not allowed to consult this oracle, having chosen to take the hero as their ally rather than as their prophet.⁷ Another oracle of Amphiaraus was at Oropus, between Bœotia and Attica, which was most frequently consulted by the sick about the means of their recovery. Those who consulted it had to undergo lustrations, and to sacrifice a ram, on the skin of which they slept a night in the temple, where in their dreams they expected the means of their recovery to be revealed to them.⁸ If they recovered, they had to throw some pieces of money into the well of Amphiaraus in his sanctuary. The oracle was said to have been founded by the Thebans.⁹

2. *Oracle of Amphilochus*. He was the son of Amphiaraus, and had an oracle at Mallos, in Cilicia, which Pausanias calls the most trustworthy of his time.¹⁰

3. *Oracle of Trophonius* at Lebadeia, in Bœotia.¹¹ Those who wished to consult this oracle had first to purify themselves by spending some days in the sanctuary of the good spirit and good luck (*ἀγαθὸν Δαίμονος καὶ ἀγαθῆς Τύχης*), to live sober and pure, to abstain from warm baths, but to bathe in the river Hercyna, to offer sacrifices to Trophonius and his children, to Apollo, Cronos, King Zeus, Hera Heniocha, and to Demeter Euproe, who was said to have nursed Trophonius; and during these sacrifices a soothsayer explained from the intestines of the victims whether Trophonius would be pleased to admit the consultant. In the night in which the consultant was to be allowed to descend into the cave of Trophonius, he had to sacrifice a ram to Agamedes, and only in case the signs of this sacrifice were favourable, the hero was thought to be pleased

to admit the person into his cave. What took place after this was as follows: Two boys, 13 years old, led him again to the river Hercyna, and bathed and anointed him. The priests then made him drink from the well of oblivion (*Ἀθήνη*), that he might forget all his former thoughts, and from the well of recollection (*Μνημοσύνη*), that he might remember the visions which he was going to have. They then showed him a mysterious representation of Trophonius, made him worship it, and led him into the sanctuary, dressed in linen garments, with girdles around his body, and wearing a peculiar kind of shoes (*κηπίδες*) which were customary at Lebadeia. Within the sanctuary, which stood on an eminence, there was a cave, into which the person was now allowed to descend by means of a ladder. Close to the bottom, in the side of the cave, there was an opening into which he put his feet, whereupon the other parts of the body were likewise drawn into the opening by some invisible power. What the persons here saw was different at different times. They returned through the same opening at which they had entered, and the priests now placed them on the throne of Mnemosyne, asked them what they had seen, and led them back to the sanctuary of the good spirit and good luck. As soon as they had recovered from their fear, they were obliged to write down their vision on a little tablet which was dedicated in the temple. This is the account given by Pausanias, who had himself descended into the cave, and writes as an eyewitness.¹ The answers were probably given by the priests according to the report of what persons had seen in the cave. This oracle was held in very great esteem, and did not become extinct until a very late period; and though the army of Sulla had plundered the temple, the oracle was much consulted by the Romans,² and in the time of Plutarch it was the only one among the numerous Bœotian oracles that had not become silent.³

4. *Oracle of Calchas*, in Daunia, in southern Italy. Here answers were given in dreams, for those who consulted the oracle had to sacrifice a black ram, and slept a night in the temple, lying on the skin of the victim.⁴

5. *Oracles of Asclepius* (*Æsculapius*). The oracles of Asclepius were very numerous; but the most important and most celebrated was that of Epidaurus. His temple here was covered with votive tablets, on which persons had recorded their recovery by spending a night in the temple. In the temples of Asclepius and Serapis at Rome, recovery was likewise sought by incubatio in his temple.⁵ F. A. Wolf has written an essay, *Beitrag zur Gesch. des Somnambulismus aus dem Alterthum*,⁶ in which he endeavours to show that what is now called Mesmerism, or animal magnetism, was known to the priests of those temples where sick persons spent one or more nights for the purpose of recovering their health. Other oracles of the same kind are mentioned in that essay, together with some of the votive tablets still extant.

6. *Oracle of Heracles* at Bura, in Achaia. Those who consulted it prayed and put their questions to the god, and then cast four dice painted with figures, and the answer was given according to the position of these figures.⁷

7. *Oracle of Pasiphaë* at Thalamia, in Laconia, where answers were given in dreams while persons spent the night in the temple.⁸

8. *Oracle of Phrixus*, in Iberia, near Mount Can-

casus, where no rams were allowed to be sacrificed.¹

V. ORACLES OF THE DEAD.

Another class of oracles are the *Oracles of the Dead* (*νεκρομαντεῖον* or *ψυχοπομπεῖον*), in which those who consulted called up the spirits of the dead, and offered sacrifices to the gods of the lower world. One of the most ancient and most celebrated places of this kind was in the country of the Thesprotians, near Lake Aornos.² Another oracle of this kind was at Heraclea, on the Propontis.³

Respecting the Greek oracles in general, see Wachsmuth, *Hellen. Alterth.*, ii., 2, p. 260, &c.—Klausen in *Ersch und Gruber's Encyclop.*, s. v. *Orakel*.

VI. ITALIAN ORACLES.

Oracles in which a god revealed his will through the mouth of an inspired individual did not exist in Italy. The oracles of Calchas and Æsculapius, mentioned above, were of Greek origin, and the former was in a Greek heroum on Mount Garganus. The Romans, in the ordinary course of things, did not feel the want of such oracles as those of Greece, for they had numerous other means to discover the will of the gods; such as the Sibylline books, augury, haruspices, signs in the heavens, and the like, which are partly described in separate articles, and partly in *Divinatio*.⁴ The only Italian oracles known to us are the following:

1. *Oracle of Faunus*.—His oracles are said to have been given in the Saturnian verse, and collections of his vaticinia seem to have existed at an early period.⁵ The places where his oracles were given were two groves, the one in the neighbourhood of Tibur, round the well of Albunea, and the other on the Aventine.⁶ Those who consulted the god in the grove of Albunea, which is said to have been resorted to by all the Italians, had to observe the following points: The priest first offered a sheep and other sacrifices to the god. The skin of the victim was spread on the ground, and the consultant was obliged to sleep upon it during the night, after his head had been thrice sprinkled with pure water from the well, and touched with the branch of a sacred beech-tree. He was, moreover, obliged, several days before this night, to abstain from animal food and from matrimonial connexions, to be clothed in simple garments, and not to wear a ring on his fingers. After he fell asleep on the sheepskin, he was believed to receive his answer in wonderful visions, and in converse with the god himself.⁷ Ovid⁸ transfers some of the points to be observed in order to obtain the oracle on the Albunea, to the oracle on the Aventine. Both may have had much in common, but from the story which he relates of Numa, it seems to be clear that on the Aventine certain different ceremonies also were observed.

2. *Oracles of Fortuna* existed in several Italian towns, especially in Latium, as at Antium and Præneste. In the former of these towns two sisters Fortuna were worshipped, and their statues used to bend forward when oracles were given.⁹ At Præneste the oracles were derived from lots (*sorites*), consisting of sticks of oak with ancient characters graven upon them. These lots were said to have been found by a noble Prænestine of the name of Numerius Suffucius, inside of a rock which he had clift open at the command of a dream by which

he had been haunted. The lots, when an oracle was to be given, were shaken up together by a boy, after which one was drawn for the person who consulted the goddess.¹ The lots of Præneste were, at least with the vulgar, in great esteem as late as the time of Cicero, while in other places of Latium they were mostly neglected. The Etruscan Cære, in early times, had likewise its sortes.²

3. *An Oracle of Mars* was, in very ancient times, according to Dionysius,³ at Tiora Matiena, not far from Teate. The manner in which oracles were here given resembled that of the pigeon oracle at Dodona; for a woodpecker (*picus*), a bird sacred to Mars, was sent by the god and settled upon a wooden column, whence he pronounced the oracle.

On Roman oracles in general, see Niebuhr, *Hist. of Rome*, i., p. 508, &c.

ORACULUM was a small handkerchief used for wiping the face, and appears to have been employed for much the same purposes as our pocket-handkerchief. It was made of silk or linen. In the *Etym. Mag.*⁴ it is explained by *προσώπου ἐκμαγνέον*. Aurelian introduced the practice of giving *oraria* to the Roman people to use *ad favorem*, which appears to mean for the purpose of waving in the public games in token of applause, as we use our hats and handkerchiefs for the same purpose.⁵

ORATIONES PRINCIPUM. The orationes principum are frequently mentioned by the Roman writers under the Empire; but those which are discussed under this head have reference to legislation only, and were addressed to the senate. Under the Christian emperors particularly, these orationes were only a mode of promulgating law as constituted by the emperor; and we have an instance of this even in the reign of Probus (*“Leges, quas Probus ederet, senatus consultiis propriis consecrarent”*). Under the earlier emperors, the orationes were in the form of propositions for laws addressed to the senate, who had still, in appearance, though not in reality, the legislative, that is, the sovereign power. This second kind of orationes are often cited by the classical jurists, as in the following instance from Gaius: *“ex oratione divi Hadriani senatus consultum factum est.”*⁶

Many of the orationes of the Roman emperors, such as are quoted by the Augustæ Historiæ Scriptores, are merely communications to the senate, such, for instance, as the announcement of a victory.⁷ These orationes are sometimes called *litteræ* or *epistolæ* by the non-juristical writers; but the juristical writers appear to have generally avoided the use of *epistola* in this sense, in order not to confound the imperial orationes with the rescripta, which were often called *epistolæ*. It appears that the Roman jurists used the terms *libellus* and *oratio principis* as equivalent; for the passages which have been referred to in support of the opinion that these two words had a different sense,⁸ show that *libellus* and *oratio principis* are the same, for the *oratio* is here spoken of by both names. These orationes were sometimes pronounced by the emperor himself, but apparently they were commonly in the form of a written message, which was read by the quæstors.⁹ In the passage last referred to, these imperial messages are called indifferently *libri* and *epistolæ*. Accordingly, we read of *litteræ* and *orationes* being sent by the emperor to the senate.¹¹ The mode of proceeding upon the receipt of one of these orationes may be collected from the preamble

of the *senatus consultum* contained in the Digest.¹ These orationes were the foundation of the *senatus consulta* which were framed upon them, and when the orationes were drawn up with much regard to detail, they contained, in fact, the provisions of the subsequent *senatus consultum*. This appears from the fact that the *oratio* and the *senatus consultum* are often cited indifferently by the classical jurists, as appears from numerous passages.² The *oratio* is cited as containing the reasons or grounds of the law, and the *senatus consultum* for the particular provisions and words of the law. To the time of Sep. Severus and his son Caracalla, numerous *senatus consulta*, founded on orationes, are mentioned; and numerous orationes of these two emperors are cited. But after this time they seem to have fallen into disuse, and the form of making and promulgating law by imperial constitutiones was the ordinary mode of legislation.

There has been much discussion on the amount of the influence exercised by the orationes principum on the legislation of the senate. But it seems to be tolerably clear, from the evidence that we have, and from the nature of the case, that the *oratio* might either recommend generally some legislative measure, and leave the details to the senate, or it might contain all the details of the proposed measure, and so be in substance, though not in form, a *senatus consultum*; and it would become a *senatus consultum* on being adopted by the senate, which, in the case supposed, would be merely a matter of form. In the case of an *oratio*, expressed in more general terms, there is no reason to suppose that the recommendation of the emperor was less of a command; it was merely a command in more general terms.

(Zimmern, *Gesch. des Röm. Privatrechts*, i., p. 79, and Dirksen, *Ueber die Reden der Röm. Kaiser und deren Einfluss auf die Gesetzgebung*, Rhein. Mus. für Jurisprudenz, ii.)

ORATOR. Cicero remarks³ that a "certain kind of causes belong to *jus civile*, and that *jus civile* is conversant about laws (*lex*) and custom (*mos*) appertaining to things public and private, the knowledge of which, though neglected by most orators, seems to me to be necessary for the purposes of oratory." In his treatise on the Orator, and particularly in the first book, Cicero has given his opinion of the duties of an orator, and his requisite qualifications, in the form of a dialogue, in which Lucius Licinius Crassus and M. Antonius are the chief speakers. Crassus was himself a model of the highest excellence in oratory; and the opinions attributed to him as to the qualifications of an orator were those of Cicero himself, who, in the introductory part of the first book,⁴ declares that "in his opinion no man can deserve the title of a perfect orator unless he has acquired a knowledge of all important things and of all arts, for it is out of knowledge that oratory must blossom and expand; and if it is not founded on matter which the orator has fully mastered and understood, it is idle talk, and may almost be called peurile." According to Crassus, the province of the orator embraces everything: he must be enabled to speak well on all subjects. Consequently, he must have a knowledge of the *jus civile*,⁵ the necessity for which Crassus illustrates by instances; and he should not only know the *jus civile* as being necessary when he has to speak in causes relating to private matters and to private judicicia, but he should also have a knowledge of the *jus publicum*, which is conversant about a state as such, and he should be familiar

with the events of history, and instances derived from the experience of the past. Antonius⁶ limits the qualifications of the orator to the command of language pleasant to the ear, and of arguments adapted to convince in causes in the Forum and on ordinary occasions. He farther requires the orator to have competent voice and action, and sufficient grace and ease. Antonius⁷ contends that an orator does not require a knowledge of the *jus civile*, and he instances the case of himself, for Crassus allowed that Antonius could satisfactorily conduct a cause, though Antonius, according to his own admission, had never learned the *jus civile*, and had never felt the want of it in such cases as he had defended (*in jure*).

The profession, then, of the orator, who, with reference to his undertaking a client's case, is also called *patronus*,⁸ was quite distinct from that of the *jurisconsultus* (*vid. Jurisconsulti*), and also from that of the *advocatus*, at least in the time of Cicero,⁹ and even later.¹⁰ An orator who possessed a competent knowledge of the *jus civile* would, however, have an advantage in it, as Antonius admits;¹¹ but as there were many essentials to an orator which were of difficult attainment, he says that it would be unwise to distract him with other things. Some requisites of oratory, such as voice and gesture, could only be acquired by discipline; whereas a competent knowledge of the law of a case (*juris utilitas*) could be got at any time from the *jurisconsulti* (*periti*) or from books. Antonius thinks that the Roman orators in this manner acted more wisely than the Greek orators, who, being ignorant of law, had the assistance of practitioners called *Pragmatici*: the Roman orators intrusted the maintenance of the law to the high character of their professed jurists.

So far as the profession of an advocate consists in the skilful conduct of a cause, and in the supporting of his own side of the question by proper argument, it must be admitted, with Antonius, that a very moderate knowledge of law is sufficient; and, indeed, even a purely legal argument requires not so much the accumulation of a vast store of legal knowledge, as the power of handling the matter when it has been collected. The method in which this consummate master of his art managed a cause is stated by himself;¹² and Cicero, in another passage,¹³ has recorded his merits as an orator. Servius Sulpicius, who was the greatest lawyer of his age, had a good practical knowledge of the law, but others had this also; and it was something else which distinguished Sulpicius from all his contemporaries: "Many others, as well as Sulpicius, had a great knowledge of the law; he alone possessed it as an art. But the knowledge of law by itself would never have helped him to this, without the possession of that art which teaches us to divide the whole of a thing into its parts, by exact definition to develop what is imperfectly seen, by explanation to clear up what is obscure; first of all, to see ambiguities, then to disentangle them: lastly, to have a rule by which truth and falsehood are distinguished, and by which it shall appear what consequences follow from premises, and what do not."¹⁴ With such a power Sulpicius combined a knowledge of letters and a pleasing style of speaking. As a forensic orator, then, he must have been one of the first that ever lived; but still, among the Romans, his reputation was that of a jurist, while Antonius, who had no knowledge of the law, is put on a level, as an orator (*patronus*), with L. Cras-

1. (5, tit. 3.)—2. (Dig. 2, tit. 15, s. 8; 5, tit. 3, s. 20, 22, 40; 11, tit. 4, s. 3, &c.)—3. (Or. Part., c. 28.)—4. (c. 6.)—5. (ii., 44, &c.)

aus, who, of all the eloquent men of Rome, had the best acquaintance with the law.

Oratory was a serious study among the Romans. The master of the art, Cicero, tells us by what painful labour he attained to excellence.¹ Roman oratory reached its perfection in the century which preceded the Christian æra. Its decline dates from the establishment of the imperial power under Augustus and his successors; for though there were many good speakers, and more skilful rhetoricians under the Empire, the oratory of the Republic was rendered by circumstances unsuitable for the senate, for popular assemblies, or for cases of crimes and high misdemeanours.

In the dialogue *De Oratoribus*, which is attributed to Tacitus, Messala, one of the speakers,² attempts to assign the reasons for the low state of oratory in the time of Vespasian, when the dialogue was written, compared with its condition in the age of Cicero and of Cicero's predecessors. He attributes its decline to the neglect of the discipline under which children were formerly brought up, and to the practice of resorting to rhetoricians (*rhetores*), who professed to teach the oratorical art. This gives occasion to speak more at length of the early discipline of the old orators, and of Cicero's course of study as described in the *Brutus*. The old orators³ learned their art by constant attendance on some eminent orator and by actual experience of business: the orators of Messala's time were formed in the schools of rhetoric, and their powers were developed in exercises on fictitious matters. These, however, it is obvious, were only secondary causes. The immediate causes of the decline of eloquence appear to be indicated by Maternus, another speaker in the dialogue, who attributes the former flourishing condition of eloquence to the political power which oratory conferred on the orator under the Republic, and to the party struggles and even the violence that are incident to such a state of society. The allusion to the effect produced by the establishment of the imperial power is clear enough in the following words, which refer both to the imperial and the republican periods: "*cum mixtis omnibus et moderatore uno carentibus, tantum quisque orator saperet, quantum erranti populo persuaderi poterat.*"

ORBUS. (*Vid. JULIÆ LEGES*, p. 557.)

ORCA. (*Vid. SITTILLA*.)

ORCHE'SIS (ὄρχησις). (*Vid. SALTATIO*.)

ORCHESTRA. (*Vid. THEATRUM*.)

ORCHIA LEX. (*Vid. SUMTUARIÆ LEGES*.)

*ORCHILUS (ὄρχιλος), a species of Bird. "In the Lexicon of Photius it is explained by βασιλικός, and Gesner holds that it is identical with the πρέσβυς, βασιλεύς, and τροχίλος, although it is to be remarked that Aristotle treats separately of the βασιλεύς. Gesner applies all these terms to the *Regulus*, or Golden-crested Wren. It must be admitted, however, that the ancient descriptions of the small birds, or *Passeres*, are so brief, that they often cannot be recognised or distinguished from one another with any degree of accuracy. But, at the same time, Aristotle's description of the *τύραννος* is so graphic that no ornithologist can fail to recognise the Golden-crested Wren in it. Aristophanes also identifies the βασιλεύς and the ὄρχιλος."⁴

*ORCHIS (ὄρχις). "Sibthorp seems to have settled that the κύνος ὄρχις of Galen and Dioscorides is the *Orchis papilionacea*. The *σεράπις* cannot be ascertained with any certainty. Fuchsius refers this last, and Stackhouse the ὄρχις of Theophrastus, to the *Orchis morio*, or Meadow Orchis."⁵

1. (*Brut.*, 91, &c.)—2. (*c. 28*, &c.)—3. (*c. 34*.)—4. (*Aristoph.*, *Av.*, l. 565.—*Adams*, *Append.*, s. v.)—5. (*Theophrast.*, *H. P.*, *ix.*, 18.—*Dioscor.*, *iii.*, 131, 132.—*Adams*, *Append.*, s. v.)

ORCINUS LIBERTIUS. (*Vid. MANUMISSIO*, p. 616.)

ORCINUS SENATOR. (*Vid. SENATUS*.)

ORDINARIUS JUDEX. (*Vid. JUDEX PEDANEUS*.)

ORDO is applied to any body of men who form a distinct class in the community, either by possessing distinct privileges, pursuing certain trades or professions, or in any other way. Thus Cicero speaks of the "*ordo aratorum, sive pecuariorum, sive mercatorum.*" In the same way, the whole body of sacerdotēs at Rome is spoken of as an *ordo*,² and separate ecclesiastical corporations are called by the same title (*ordo collegii nostri*;³ *ordo seviratum*).⁴ The libertini and scribe also formed separate ordines.⁵ The senate and the equites are also spoken of respectively as the *ordo senatorius* and *ordo equestris* (*vid. SENATUS*; *EQUITES*, p. 417); but this name is never applied to the plebes. Accordingly, we find the expression "*uterque ordo*" used without any farther explanation to designate the senatorial and equestrian ordines.⁶ The senatorial *ordo*, as the highest, is sometimes distinguished as "*amplissimus ordo*."⁷

The senate in colonies and municipia was called *ordo decurionum*⁸ (*vid. COLONIA*, p. 282), and sometimes simply *ordo*,⁹ *ordo amplissimus*,¹⁰ or *ordo splendidissimus*.¹¹

The term *ordo* is also applied to a company or troop of soldiers, and is used as equivalent to *centuria*: thus centurions are sometimes called "*qui ordines duxerunt*,"¹² and the first centuries in a legion "*primi ordines*."¹³ Even the centurions of the first centuries are occasionally called "*primi ordines*."¹⁴

O'RGANUM. (*Vid. HYDRAULA*.)

O'RGIA. (*Vid. MYSTERIA*.)

*OREICHALCUM. (*Vid. ÆS*.)

*OREOSELINUM (ὀρεοσέλινον), a plant, which Dodonæus makes to be the *Selinum Oreoselinon*. According to Sprengel, however, the plant just mentioned is not indigenous in Greece; he inclines, therefore, with Gesner, to the opinion that it is the *Athamanta libanotis*.¹⁵

*ORIG'ANUS (ὀρίγανος or -ον). "Galen and Dioscorides describe three species; the ὀρίγανος ἡρακλειωτική, ὄνιτις, and ἀγριορίγανος. The first, according to Sprengel, is the *Origanum Heracleoticum*; the second, the *Onites* or *Creticum*; and the third, the *O. sylvestre album*. Theophrastus distinguishes the ὀρίγανος into two species, λευκή and μέλαινα, which Stackhouse refers simply to the *Origanum majorana*, or Bastard Marjorum."¹⁶

ORNAMENTA TRIUMPHALIA. (*Vid. TRIUMPHUS*.)

ORNA'TRIX (κοσμήτρια), a female slave who dressed and adorned ladies' hair.¹⁷ So much attention was paid by the Roman ladies to the dressing of their hair, that they kept slaves specially for this purpose, and also had them instructed by a master in the art.¹⁸ These slaves were frequently the confidants of their mistresses, and were sometimes highly prized, whence we find them mention-

1. (*c. Verr.*, *II.*, *ii.*, 6.)—2. (*Festus*, s. v. *Ordo Sacerdotum*.)—3. (*Orelli*, *Inscr.*, n. 2417.)—4. (*Id.*, n. 2299.)—5. (*Suet.*, *De Grammat.*, 18.—*Cic.*, *c. eu in inscriptions.¹ Some attained great skill in their art, as Cypassis, whom Ovid² addresses,

"*Ponendis in mille modos perfecta capillis,
Comere sed solas digna Cypassis deas;*"

and Nape, whom Ovid³ also describes as skilled

"*Colligere incertos et in ordine ponere crines.*"⁴

*OROBAN'CHE (ὀροβάγχη). "The ὀροβάγχη of Theophrastus," observes Adams, "would appear decidedly to be a species of *Cuscuta*, or dodder of Thyme. The ὀροβάγχη of Dioscorides is held by Sprengel to be the *Orobancha caryophyllæa*. The ὀροβάγχη is called *δοττορολέων* by writers of a later age."⁵

*OROBOS (ὀροβος), the *Ervum ervilia*, or Tare, according to Stackhouse, Dierbach, and Sprengel.⁶

*OROSPIZOS (ὀροσπίζος), a bird, a species of mountain Chaffinch. Adams makes it the Brambling, or *Fringilla montifringilla*.⁷

*ORTYGOMETRA (ὀρνυγομήτρα). According to Gesner and Hardouin, it is the bird called in Italy *Re de Qualie*, or "King of the Quails." Ornithologists now give the name of *Ortygometra crex* to the common Landrail.⁸

*ORTYX (ὀρνυξ), the *Tetrao coturnix*, L., or Quail.⁹

*ORYX (ὀρύξ). "Dr. Shaw inclines to the opinion, that the *Oryx* of the Greeks, or *Thau* of the Hebrews, was the Buffalo. It is much more probable, however, that it was a species of Antelope. It is graphically described in the *Cynegetica* of Opius."¹⁰

*ORYZA (ὀρυζα), the *Oryza sativa*, or Rice.¹¹

OSCHOPHORIA (Ὠσχοφορία or Ὀσχοφορία), an Attic festival, which, according to some writers, was celebrated in honour of Athena and Dionysus,¹² and according to others, in honour of Dionysus and Ariadne.¹³ The time of its celebration is not mentioned by any ancient writer, but Corsini¹⁴ supposes, with great probability, that it was held at the commencement of the Attic month Pyanepsion. It is said to have been instituted by Theseus. Its name is derived from ὄσχος, ὄχος, or ὄσχη, a branch of vines with grapes, for it was a vintage festival; and on the day of its celebration, two youths, called ὄσχοφοροί, whose parents were alive, and who were elected from among the noblest and wealthiest citizens,¹⁵ carried, in the disguise of women, branches of vines with fresh grapes from the Temple of Dionysus in Athens to the ancient Temple of Athena Skiras in Phalerus. These youths were followed by a procession of persons who likewise carried vine-branches, and a chorus sang hymns called Ὠσχοφορικὰ μέλη, which were accompanied by dances.¹⁶ In the sacrifice which was offered on this occasion, women also took part; they were called δειπνοφόροι, for they represented the mothers of the youths, carried the provisions (ὄψα καὶ στυία) for them, and related stories to them. During the sacrifice, the staff of the herald was adorned with garlands, and when the libation was performed, the spectators cried out ἐλεεῖτε, ἰὸν, ἰὸν.¹⁷ The ephēbi taken from all the tribes had on this day a contest in racing from the city to the Temple of Athena Skiras, during which they also carried the ὄσχη, and the victor received a cup filled with five different

things (πεντάπλοος, πενταπλόα or πενταπλή), viz. wine, honey, cheese, flour, and a little oil.¹ According to other accounts, only the victor drank from this cup. The story which was symbolically represented in the rites and ceremonies of this festival, and which was said to have given rise to it, is related by Plutarch² and by Proclus.³

OSCILLUM, a diminutive through *osculum* from *os*, meaning "a little face," was the term applied to faces or heads of Bacchus, which were suspended in the vineyards to be turned in every direction by the wind. Whichever way they looked, they were supposed to make the vines in that quarter fruitful.⁴ The left-hand figure in the annexed wood-

cut is taken from an oscillum of white marble in the British Museum. The back of the head is wanting, and it is concave within. The mouth and pupils of the eyes are perforated. It represents the countenance of Bacchus with a mild and propitious expression (*molle, honestum*).⁵ A fillet, spirally twisted about a kind of wreath, surrounds the head, and descends by the ears towards the neck. The metallic ring by which the marble was suspended still remains. The other figure is from an ancient gem,⁶ representing a tree with four oscilla hung upon its branches. A SYRINX and a PEXUS are placed at the root of the tree.

From this noun came the verb *oscillo*, meaning "to swing." Swinging (*oscillatio*) was among the bodily exercises practised by the Romans.⁷

OSTIARIUM was a tax upon the doors of houses, which appears to have been sometimes levied in the provinces.⁸ Cicero⁹ calls it *accrissima exactio*. There was a similar tax, called *columnarium*, imposed upon every pillar that supported a house.¹⁰

O'STIUM. (Vid. JANUA.)

OSTRACISMUS. (Vid. BANISHMENT, GREEK, p. 135.)

*OSTRACODERMA (ὀστρακόδερμα). "This term," says Adams, "in its most extensive sense, comprehended two great orders of marine animals, namely, the σκληρόστρακα and the μαλακόστρακα. Under the σκληρόστρακα were ranked oysters, urchins, mussels, &c.; under the μαλακόστρακα, crabs of all kinds, craw-fish, &c. It must be borne in mind, however, that the general term ὀστρακόδερμα is often applied in a restricted sense to the σκληρόστρακα, or *Testacea*, and that ὀστρεα and ὀστράκια are occasionally used in the same sense, i. e., are applied to the *Testacea*."¹¹

OSTRAKON (ὀστράκον). (Vid. FICTILE.)

*OSTREUM (ὀστρεον), a term most properly applied to the *Ostrea edulis*, or common Oyster, but sometimes to the whole class of *Crustacea*, or ὀστρακόδερμα. "The Greeks, and more especially the

(Cæsar, l. c.—Cic. ad Att., xii., 6.—Burmans, De Vect., c. 12, p. 205.)—11. (Adams, Append., s. v.—Id., Commentary on Paul of Ægina, p. 129.)

Romans, when they levied contributions upon land and sea, throughout the then known world, to cover the table of a Lucullus or an Apicius, held oysters in very high estimation, and attached no small importance to the localities from which they were imported. Those of the Hellespont, of Venice, of the Bay of Cumæ in Italy, and of Rutupia (Richborough) in England, were the kinds which they preferred; but they especially attached a very great value to those which, brought from these different places, and perhaps from quarters still more remote, were transported in large boats (*lacubus lignis*) and deposited in the Lucrine lake, where they grew remarkably fat. The first Roman who entertained the notion of establishing this sort of park or oyster-bed was Sergius Orata, at Baia, in the time of the Marsian war. It appears that the Romans preferred those oysters which have the edges of the mouth of a deep brown, almost black, and that they gave them a particular name, that of *Calliblephara*, a word which is nevertheless supposed to be corrupted. The Romans ate oysters raw, and also cooked with various seasonings, into which entered pepper, the yolks of eggs, vinegar, oil, wine, &c. But it is not probable that they made so great a consumption of them as do modern nations.¹¹

***OSTRITES** (*οστρίτης*). Sprengel supposes this to be petrified oysters; but it would rather seem to have been a peculiar stone of the *Ollaris* kind.¹²

***OSTRYA** (*οστρία*), a species of tree, which Stackhouse makes to have been the *Carpinus betulus*, or Hornbeam-tree. Sprengel, however, more correctly prefers the *Ostrya vulgaris*, which, according to Sibthorp, still retains its ancient name in Greece.³

***OTIS** (*ώτις*), the Bustard. "It is the *Tarda* of Pliny, and hence its scientific name of *Otis Tarda*. The poet Nemesianus gives it the appellation of *Tetrax*." The Greek name comes from the long feathers near the ears (*ὠς, ὠτός*, "an ear").⁴

OULAMOI (*ούλαμοί*). (Vid. ARMY, GREEK, p. 98.)

ΟΥΣΙΑΣ ΔΙΚΗ (*ουσίας δίκη*). (Vid. ΕΞΟΥΛΗΣ ΔΙΚΗ.)

OVATIO, a lesser triumph; the terms employed by the Greek writers on Roman history are *εὐα, εὐαστής, πεδός θρίαμβος*. The circumstances by which it was distinguished from the more imposing solemnity (*vid. TRIUMPHUS*) were the following: The general did not enter the city in a chariot drawn by four horses, but on foot; he was not arrayed in the gorgeous gold-embroidered robe, but in the simple toga prætexta of a magistrate; his brows were encircled with a wreath, not of laurel, but of myrtle; he bore no sceptre in his hand; the procession was not heralded by trumpets, headed by the senate, and thronged with victorious troops, but was enlivened by a crowd of flute-players, attended chiefly by knights and plebeians, frequently without soldiers; the ceremonies were concluded by the sacrifice, not of a bull, but of a sheep.⁵ The word *ovatio* seems clearly to be derived from the kind of victim offered; and we need pay little respect to the opinion of Festus,⁶ who supposes it to have been formed from the glad shout *O! O!* frequently reiterated, nor to that of Dionysius, whose system required him to trace every custom to a Grecian origin, and who therefore maintains that it is corrupted from the Bacchanalian *εβοι*. Dionysius makes another mistake in assigning a bay chaplet to the conqueror on these occasions, since all the Roman writers agree with Plutarch in representing

that the myrtle crown, hence called *ovalis corona*, was a characteristic of the ovation.¹ (Compare CORONA, p. 311, 312.)

In later times the victor entered upon horseback,² and the ovations celebrated by Octavianus, Drusus, Tiberius, &c., are usually recorded by Dion Cassius by a reference to this circumstance.³

An ovation was granted when the advantage gained, although considerable, was not sufficient to constitute a legitimate claim to the higher distinction of a triumph, or when the victory had been achieved with little bloodshed, as in the case of Postumius Tubertus, who first received this honour;⁴ or when hostilities had not been regularly proclaimed;⁵ or when the war had not been completely terminated, which was one of the ostensible reasons for refusing a triumph to Marcellus on his return from Sicily;⁶ or when the contest had been carried on against base and unworthy foes; and hence, when the servile bands of Athenion and Spartacus were destroyed by Perperna and Crassus, these leaders celebrated ovations only,⁷ although the latter, by a special resolution of the senate, was permitted to wear a laurel crown.

OVILE. (Vid. COMITIA, p. 297.)

OVINA LEX. (Vid. LEX, p. 584.)

***OVIS** (*ός*), the common Sheep, or *Capra Ovis*. The terms *ός*, *πρόβατον*, and *μήλον* are applied indiscriminately to this animal by the Greek writers. "The *Azis* of Pliny is applied by Buffon to the animal known by the vague names of the *Hind of Sar-dinia* and the *Deer of the Ganges*."⁸

OXYBAPHUM. (Vid. ACETABULUM.)

P. Φ. Ψ.

PACTIO, PACTUM. (Vid. OBLIGATIONES, p. 675, 676.)

***PADUS** (*πάδος*), the *Prunus Padus*, or Bird-cherry-tree.⁹

PÆAN (*παίων, παίων, παίων*), a hymn or song, which was originally sung in honour of Apollo, and seems to be as old as the worship of this deity. The etymology of the word is doubtful. Some suppose that it obtained its name from Pæon, the god of healing; but in the Homeric poems Pæon is always spoken of as a separate divinity, distinct from Apollo. Other writers, with still less probability, connect it with *παίω*, "to strike."

The pæan was always of a joyous nature, and its tune and sounds expressed hope and confidence. The sound of *ή* appears to have been invariably connected with it.¹⁰ It was sung by several persons, one of whom probably led the others, and the singers either marched onward or sat together at table. Thus Achilles, after the death of Hector, calls upon his companions to return to the ships, singing a pæan on account of the glory they had gained;¹¹ and the Achæans, after restoring Chryseis to her father, are represented as singing a pæan to Apollo at the end of the sacrificial feast, in order to appease his wrath.¹² From these passages it is clear that the pæan was a song of thanksgiving when danger was passed, and also a hymn to propitiate the god. It was sung at the solemn festivals of Apollo, and especially at the Hyacinthia (*ελς τὰ Ὑακινθία ἐπὶ τὸν παῖνα*¹³), and was also sung from very early times in the Pythian temples.¹⁴

1. (Griffith's Cuvier, vol. xii., p. 372.)—2. (Adams, Append., s. v.)—3. (Theophrast., H. P. i., 8.—Adams, Append., s. v.)—4. (Aristot., H. A. ii., 12.—Zellian, N. A., ii., 28.)—5. (Plut., Marcell., c. 22.—Dionys. Hal., v., 47.—Gell., v., 6.—Liv., iii., 10.—Id., xvi., 21.)—6. (s. v. Ovantes.)

1. (Festus, s. v. Ovalis Corona.—Plin., II. N., xv., 29.—Plut., Gell., II. cc.)—2. (Serv. in Virg., Æn., iv., 543.)—3. (Dion Cass., xlviii., 31.—Id., xlix., 15.—Id., lv., 8, 33.—Id., lv., 2.)—4. (Plin., H. N., xv., 29.)—5. (Festus.—Gell., II. cc.)—6. (Plut., I. c.—Liv., xxv., 21.)—7. (Florus, iii., 19.—Plin., Gell., I. c.)—8. (Adams, Append., s. v.)—9. (Theophrast., H. P., iv., 1.)—10. (Athen., xv., p. 696, c., f., 701, b., c.)—11. (H. P., xii., 391.)—12. (H. i., 473.)—13. (Xen., Hell., iv., 5, § 11.—Ages., ii., 17.)—14. (Hom., Hymn. ad Apoll., 514.—Eurip., Ion, 125, &c.)

The pæan was also sung as a battle-song, both before an attack on the enemy and after the battle was finished.¹ This practice seems to have chiefly prevailed among the Dorians, but was also common among the other Greek states. The origin of it is said to have arisen from the fact that Apollo sung it after his victory over the Pythian dragon. The pæan sung previous to an engagement was called by the Spartans *παιὼν ἐμβατήριος*.² The scholiast on Thucydides³ says that the pæan which was sung before the battle was sacred to Ares, and the one sung after to Apollo; but there are strong reasons for believing that the pæan, as a battle-song, was in later times not particularly connected with the worship of Apollo.⁴ It is certain that the pæan was in later times sung to the honour of other gods besides Apollo. Thus Xenophon relates that the Lacedæmonians on one occasion sung a pæan to Poseidon, to propitiate him after an earthquake,⁵ and also that the Greek army in Asia sung a pæan to Zeus.⁶

In still later times pæans were sung in honour of mortals. Thus Aratus sung pæans to the honour of the Macedonian Antigonus;⁷ a pæan, composed by Alexinus, was sung at Delphi in honour of the Macedonian Craterus; and the Rhodians celebrated Ptolemæus I., king of Egypt, in the same manner.⁸ The Chalcidians, in Plutarch's time, still continued to celebrate in a pæan the praises of their benefactor, Titus Flaminus.⁹

The practice of singing the pæan at banquets, and especially at the end of the feast, when libations were poured out to the gods, was very ancient. It is mentioned by Alcman, who lived in the seventh century B.C.¹⁰ The pæan continued to be sung on such occasions till a late period.¹¹

PÆDAGO'GIA. (Vid. PÆDAGOGUS.)

PÆDAGO'GUS (παιδαγωγός), a Tutor. The office of tutor in a Grecian family of rank and opulence¹² was assigned to one of the most trustworthy of the slaves. The sons of his master were committed to his care on attaining their sixth or seventh year, their previous education having been conducted by females. They remained with the tutor (*magister*) until they attained the age of puberty.¹³ His duty was rather to guard them from evil, both physical and moral, than to communicate instruction, to cultivate their minds, or to impart accomplishments. He went with them to and from the school or the GYMNASIUM;¹⁴ he accompanied them out of doors on all occasions; he was responsible for their personal safety, and for their avoidance of bad company.¹⁵ The formation of their morals by direct superintendence belonged to the *παιδονόμοι* as public officers, and their instruction in the various branches of learning, *i. e.*, in grammar, music, and gymnastics, to the *διδασκαλοὶ* or *πρæceptores*, whom Plato,¹⁶ Xenophon,¹⁷ Plutarch,¹⁸ and Quintilian¹⁹ expressly distinguish from the *pædagogi*. These latter even carried the books and instruments which were requisite for their young masters in studying under the sophists and professors.

This account of the office is sufficient to explain why the *παιδαγωγός* so often appears on the Greek stage, both in tragedy, as in the *Medea*, *Phænissæ*, and *Ion* of Euripides, and in comedy, as in the *Bacchides* of Plautus. The condition of slavery ac-

counts for the circumstance, that the tutor was often a Thracian,¹ an Asiatic, as is indicated by such names as Lydus,² and sometimes a eunuch.³ Hence, also, we see why these persons spoke Greek with a foreign accent (*ὑποβαρβαρίζοντες*).⁴ On rare occasions the tutor was admitted to the presence of the daughters, as when the slave, sustaining this office in the royal palace at Thebes, accompanies Antigone while she surveys the besieging army from the tower.⁵

Among the Romans, the attendance of the tutor on girls as well as boys was much more frequent, as they were not confined at home according to the Grecian custom.⁶ As luxury advanced under the emperors, it was strikingly manifested in the dress and training of the beautiful young slaves who were destined to become *pædagogi*, or, as they were also termed, *pædagogia* and *pueri pædagogiani*.⁷ Augustus assigned to them a separate place, near his own, at the public spectacles.⁸ Nero gave offence by causing free boys to be brought up in the delicate habits of *pædagogi*.⁹ After this period numbers of them were attached to the imperial family for the sake of taste and ornament, and not only is the modern word *page* a corruption of the ancient appellation, but it aptly expresses the nature of the service which the *pædagogia* at this later era afforded.

In palaces and other great houses the pages slept and lived in a separate apartment, which was also called *pædagogium*.¹⁰

*PÆDEROS (παῖδερως), I. a name applied to the Opal. (Vid. OPALUS.)—II. Most probably the same as the *σμίλας* 'Ἀρκάδιον, or, in other words, according to Sprengel, the *Quercus faginea*.¹¹

PÆNULA was a thick cloak, chiefly used by the Romans in travelling instead of the toga, as a protection against the cold and rain.¹² Hence we find the expression of *scindere pænulam*¹³ used in the sense of greatly pressing a traveller to stay at one's house. The pænula was worn by women as well as by men in travelling.¹⁴ It appears to have been a long cloak without sleeves, and with only an opening for the head, as is shown in the following figure taken from Bartholini. If this is a real example of a pænula, it would seem that the dress was

1. (Thucyd., i., 50; iv., 43; ii., 91; vii., 44.—Xen., Anab., i., 8, 17, &c.)—2. (Plut., Lyc., 22.)—3. (i., 50.)—4. (Pode, Cosch. der Lyrisch. Dichtkunst der Hellenen, vol. i., p. 9, 10, &c.)—5. sewed in front about half way down, and was divided into two parts, which might be thrown back by the wearer so as to leave the arms comparatively free: it must have been put on over the head. This figure explains the expression of Cicero,¹ "*pænula irretitus*;" and of the author of the *Dialogus de Oratoribus*,² "*pænilis adstricti et velut in-culus*."

Under the emperors the *pænula* was worn in the city as a protection against the rain and cold,³ but women were forbidden by Alexander Severus to wear it in the city.⁴ At one time, however, the *pænula* appears to have been commonly worn in the city instead of the toga, as we even find mention of orators wearing it when pleading causes;⁵ but this fashion was probably of short duration.

The *pænula* was usually made of wool,⁶ and particularly of that kind which was called *Gausapa* (*vid. GAUSAPA*) (*pænula gausapina*⁷). It was also sometimes made of leather (*pænula scortea*⁸). Seneca⁹ speaks of "*pænula aut scortea*," but he appears only to use this expression because *pænulae* were usually made of wool.¹⁰

**PAENONIA* (*παωνία*), the same with the *Glycyside* (*γλυκυσίδη*) or *Paeny*, which see.

PAGANA'LIA. (*Vid. PAGI.*)

PAGANI. (*Vid. PAGI.*)

PAGANICA. (*Vid. PILA.*)

PAGI were fortified places, to which the country-people might retreat in case of a hostile inroad, and are said to have been instituted by Servius Tullius,¹¹ though the division of the country-people into pagi is as old as the time of Numa.¹² Each of the country tribes was divided into a certain number of pagi, which name was given to the country adjoining the fortified village as well as to the village itself. There was a magistrate at the head of each pagus, who kept a register of the names and of the property of all persons in the pagus, raised the taxes, and summoned the people, when necessary, to war. Each pagus had its own sacred rites, and an annual festival called *Paganalia*.¹³ The *pagan*, or inhabitants, of the pagi, had their regular meetings, at which they passed resolutions, many of which have come down to us.¹⁴ The division of the country-people into pagi continued to the latest times of the Roman Empire, and we find frequent mention of the magistrates of the pagi under the names of *magistri*, *præfecti*, or *præpositi pagorum*.¹⁵

The term *pagani* is often used in opposition to *milites*, and is applied to all who were not soldiers, even though they did not live in the country (*milites et pagani*).¹⁶ Hence we find *pagani* or citizens applied as a term of reproach to soldiers who did not perform their duty,¹⁷ in the same way as Julius Cæsar addressed his rebellious soldiers on one occasion as *Quirites*. The Christian writers gave the name of *pagani* to those persons who adhered to the old Roman religion, because the latter continued to be generally believed by the country-people after Christianity became the prevailing religion of the inhabitants of the towns.

PAIDONOMOS (*παιδονόμος*) was a magistrate at Sparta, who had the general superintendence of the education of the boys. His office was consid-

ered very honourable, and he was always chosen from the noblest citizens. He had to make a general inspection of the boys, and to punish very severely all those who had been negligent or idle; for which purpose *πατιγοφόροι* were assigned to him by Lycurgus. Those who were refractory he might bring before the ephors. The more immediate inspection of the gymnastic exercises of the boys belonged to magistrates called *βιδάιοι*.¹ (*Vid. BI DÆI.*)

PAIDOTRIBAI (*παιδотριβαί*). (*Vid. GYMNASIUM*, p. 483.)

PAINTING (*Pictura; Ars delineandi; Γραφή, Γραφική, Ζωγραφία*). 1. The art of imitating the appearances of bodies upon an even surface, by means of light and shade of colour, was an art most extensively cultivated by the ancients, but especially by the Greeks, among whom it was certainly carried to the highest degree of technical development.

II. *Authorities.*—The principal original sources of information upon the history of ancient art, are Pausanias, the elder Pliny, and Quintilian; the writings also of Lucian, Elian, Aristotle, Athenæus, Plutarch, the elder and younger Philostratus, and Cicero, contain many hints and maxims invaluable to the historian of art. The best modern works on the subject are: Junius, "*De Pictura Veterum*," and the "*Catalogus Artificum*," Roter., 1694, folio, which contain almost all the passages in ancient authors relating to the arts; but the Catalogue is the more valuable portion of the work. Sillig, "*Catalogus Artificum*," Dresden, 1827, 8vo, an indispensable supplement to the Catalogue of Junius; this excellent work, written equally for the scholar and the artist, has been translated into English under the title of a "*Dictionary of the Artists of Antiquity*," 1837 (an important error, however, in this translation demands notice; the term *enamel* is throughout erroneously used in the place of *encaustic*); Müller, "*Handbuch der Archæologie der Kunst*," Breslau, 1835, 8vo, 2d ed., a most useful work, but written more for the antiquary than the artist; Böttiger, "*Ideen zur Archæologie der Malerei*," Dresden, 1811, 8vo, first part, from the earliest times until Polygnotus and his contemporaries, inclusive; Durand, "*Histoire de la Peinture Ancienne*," London, 1725, folio, a translation of book xxxv. of Pliny, with copious notes; Carlo Dati, "*Vite dei Pittori Antichi*," Florence, 1667, 4to, the lives of Zeuxis, Parrhasius, Apelles, and Protogenes; Thiersch, "*Ueber die epochen der bildenden Kunst unter den Griechen*," Munich, 1829, 8vo., 2d ed.; Raoul Rochette, "*Recherches sur l'emploi de la Peinture*," &c., Paris, 1836, 4to.; and the lectures of Fuseli upon ancient painting, and of Flaxman upon sculpture. Other works have been written upon general and particular subjects bearing more or less upon painting, such as those of Heyne, Meyer, Hirt, Hermann, Kugler, Völkel, Jacobs, Creuzer, Grund, Caylus, Levesque, Millin, D'Hancarville, Quatremère de Quincy, Inghirami, Visconti, Millingen, and others too numerous to mention here. Of the celebrated work of Winckelmann, "*Geschichte der Kunst des Alterthums*," only a very small portion is devoted to painting.

III. *Painting in its earliest state.*—The legends relating to the origin of painting in Greece, though they may have no real historical value, are at least interesting to the lovers of art. One legend, which is recorded by Pliny,² and is adverted to by Athenagoras,³ relates the origin of the delineation of a

shadow or shade (*σκία, σκιαγραφία*¹), which is the essential principle of design, the basis of the imitative and plastic arts. The legend runs as follows: The daughter of a certain Dibutades, a potter of Sicyon, at Corinth, struck with the shadow of her lover, who was about to leave her, cast by her lamp upon the wall, drew its outline (*umbram ex facie lineis circumscrisit*) with such force and fidelity, that her father cut away the plaster within the outline, and took an impression from the wall in clay, which he baked with the rest of his pottery. This singular production, according to tradition, was still preserved in Corinth until the destruction of the city by Mummus. There seem to be, however, other claimants to the honour of having invented skiagraphy (*σκιαγραφία*). Athenagoras² mentions Saurias of Samos, who traced his horse's shadow in the sun with the point of his spear, and Crato of Sicyon, whom he styles the inventor of drawing or outline (*γραφική*), for he was the first to practise the art upon tablets with prepared grounds (*ἐν πίνακι λελευκωμένῳ*). Pliny³ mentions, upon the testimony of Aristotle, that Euehir (*Εὐχίρ*), a relation of Daedalus, invented painting in Greece. Although Pliny's account⁴ of the origin and progress of painting in Greece is somewhat circumstantial, his information can still not be considered as authentic matter of history; and the existence of several of the most ancient artists, mentioned by Pliny and many Greek writers, is very questionable. Besides those already spoken of, we find mention of Philocles of Egypt; Cleantes, Ardices, and Cleophantus of Corinth; Telephanes of Sicyon, Eugrammus, and others. (Upon the meanings of some of these names, see Böttiger, *Ideen zur Archäologie*, p. 138, and Thiersch, *Epoch.*, &c., note 22.)

Sculpture is generally supposed to be a more ancient art than *painting*; but this arises from an imperfect comprehension of the nature of the two arts, which are *one* in origin, end, and principle, and differ only in their development. Design is the basis of both; colour is essential to neither, nor can it be said to belong more particularly to the latter (*γραφική*) than to the former (*πλαστική*). Coloured works in plastic, in imitation of nature, were in ancient times as common, and probably more so, than coloured designs; the majority of the illustrations upon the vases are colourless. The staining of the human body, or the colouring of images, is the common notion of the origin of painting; but simple *colouring* and *painting*, strictly speaking, are quite distinct; the distinction between "to colour," *χρῶζειν, colorem inducere*, and "to paint," *ζωγραφεῖν, pingere, delineare*.⁵ The colouring of the early wooden images, the ancient *ξύανα* or the *ἔρμαι*, the *παλῶδια* and the *δαίδαλα*, must have certainly preceded any important essays in painting, or the representation of forms upon an even surface by means of colour and light and shade combined. But this is no stage in the art of painting, and these figures were most probably coloured by the artists who made them, by the old *πλάσται* or *ἐρμολόφαι* themselves; the existence, however, of the art of design is established by the existence of the plastic art. It is perhaps to this species of painting that Pliny alludes when he says,⁶ "*Plastæ laudatissimi fuerit Damophilus et Gorgasus idemque pictores.*"

We will now, as briefly as possible, consider the gradual development of painting, and the information relating to its progressive steps, preserved in ancient writers. The simplest form of design or drawing (*γραφική*) is the outline of a shadow, without any intermediate markings, or the shape of a

shadow itself (*a silhouette*), in black, white, or in colour (*umbra hominis lineis circumducta*); this kind of drawing was termed *σκιαγραφία*. But this simple figure or shade, *σκία* (*σκιαγράμμα*), when in colour, was also essentially a monochrom (*μονοχρόματος*). The next step was the outline, the "*pictura linearis*," the monogram (*μονόγραμμα*); this is said to have been invented by Philocles of Egypt or Cleantes of Corinth, but first practised by Ardices of Corinth and Telephanes of Sicyon; it was the complete outline with the inner markings, still without colour, such as we find upon the ancient vases, or such as the celebrated designs of Flaxman, which are perfect monograms. These outlines were most probably originally practised upon a white ground (*ἐν πίνακι λελευκωμένῳ*), for Pliny remarks that they were first coloured by Cleophantus of Corinth, who used "*testa trita*," by which we should perhaps understand that he was the first to draw them upon a coloured or red ground, such as that of the vases.¹

The next step is the more perfect form of the monochrom, alluded to above; in this, light and shade were introduced, and in its most perfect state it was, in everything that is essential, a perfect picture. "These "*monochromata*" were practised in all times, and by the greatest masters. Pliny, speaking of Zeuxis,² says, "*pinxit et monochromata ex albo*;" *ex albo*, that is, in gray and gray, similar to the *chiariscuri* of the Italians. They are described by Quintilian,³ "*qui singulis pinxerunt coloribus, alia tamen eminentiora, alia reductione fecerunt.*" They were painted also red in red. Pliny⁴ tells us that the old masters painted them in vermilion, "*Cinnabari veteres, quæ etiam nunc vocant chromata, pingebant,*" and also in red lead, but that afterward the rubrica or red ochre was substituted for these colours, being of a more delicate and more agreeable tint.

Hygiemon, Dinias, and Charnadas are mentioned by Pliny⁵ as having been famous ancient monochromists; their age is not known, but they most probably practised the simpler form, such as we find upon the most ancient vases. Four monochroms in the latter style, red in red, were discovered in Herculaneum.⁶ They are paintings of a late date, and are of considerable merit in every respect, but the colours have been nearly destroyed by the heat, and the pictures are in some places defaced; they are painted upon marble. They were probably all executed by the same artist, Alexander of Athens. ΑΛΕΞΑΝΔΡΟΣ ΑΘΗΝΑΙΟΣ ΕΤΡΑΦΕΝ is an inscription upon one of them,⁷ which represents five females, with their names attached, two of whom are playing at the ancient game with the *tali* (*ἀστραγαλισμός*). These tablets are in the collection of ancient paintings of the Museo-Borbonico at Naples, Nos. 408, 409, 410, 411.

The next and last essential step towards the full development or establishment of the art of painting (*ζωγραφία*) was the proper application of local colours in accordance with nature. This is, however, quite a distinct process from the simple application of a variety of colours before light and shade were properly understood, although each subject may have had its own absolute colour. The local colour of an object is the colour or appearance it assumes in a particular light or position, which colour depends upon, and changes with, the light and the surrounding objects; this was not thoroughly understood until a very late period, but there will be occasion to speak of this hereafter. Probably Eumarus of Athens, and certainly Cimon of Cleonæ, belonged to the class of ancient tetrachromists or

1. (Pollux, Onom., vii., 128.)—2. (l. c.)—3. (H. N., vii., 57.)—4. (H. N., xxxv., 5.)—5. (Pollux, Onom., vii., 126.)—6. (xxxv., 46.)

1. (Plin., H. N., xxxv., 5.)—2. (xxxv., 36.)—3. (xi., 3, § 46.)—4. (xxxviii., 39.)—5. (xxxv., 34.)—6. (Le Antichità d'Ercolano, vol. i., pl. 1, 2, 3, 4.)—7. (pl. 1.)

polychromists, for painting in a variety of colours, without a due, or, at least, a partial observance of the laws of light and shade, is simply polychromy; and a picture of this latter description is a much more simple effort than the rudest forms of the monochrom in chiaroscuro. There are a few examples of this kind of polychrom upon the most ancient vases. In the works of Eumarus of Athens, however, there must have been some attention to light and shade, and in those of Cimon of Cleonæ still more. The names of Eumarus and Cimon are generally connected with each other, but Eumarus must have preceded Cimon some time. He was the first, according to Pliny,¹ who distinguished the male from the female in painting: "*qui primus in pictura marem feminamque disceverit, . . . figuras omnes imitari ausum.*" The most obvious distinction which here suggests itself can be scarcely alluded to by Pliny, or Eumarus must belong to a very early period, for we find that distinction very decidedly given on even the most ancient vases, whenever the figure is naked. That Eumarus dared or ventured to imitate all figures, may imply that he made every distinction between the male and the female, giving also to each sex a characteristic style of design, and even in the compositions, draperies, attitudes, and complexions of his figures, clearly illustrating the dispositions and attributes of each, exhibiting a robust and vigorous form in the males, and making the females slighter and more delicate. These qualities are all perfectly compatible with the imperfect state of the art of even so early a period, and they may also be very evident, notwithstanding ill-arranged composition, defective design, crude colour, and a hard and tasteless execution.

IV. *Painting in Asia Minor and in Magna Græcia.*—It is singular that the poems of Homer do not contain any mention of painting as an imitative art, nor is there mention of any artist similar to Dædalus, or Hephæstus, or Vulcan, who might represent the class of painters. This is the more remarkable, since Homer speaks of rich and elaborate embroidery as something not uncommon; it is sufficient to mention the splendid diplax of Helen,² in which were worked many battles of the Greeks and Trojans fought on her account. This embroidery is actual painting in principle, and is a species of painting in practice; and it was considered such by the Romans, who termed it "*pictura textilis*,"³ "*textili stragulo, magnificis operibus picto*;"⁴ that is, painted with the needle, embroidered, *acu picto* (*pingebat acu*,⁵ *pictus acu*⁶). The various allusions also to other arts, similar in nature to painting, are sufficient to prove that painting must have existed in some degree in Homer's time, although the only kind of painting he notices is the "red-cheeked" and "purple-cheeked ships" (*νῆες μιλτοπάρροι*; *νῆες φοινικοπαρήροι*),⁷ and an ivory ornament for the faces of horses, which a Mæonian or Carian woman colours with purple.⁸ The description of the shield of Achilles, worked by Vulcan in various coloured metals, satisfactorily establishes the fact that the plastic art must have attained a considerable degree of development in the time of Homer, and therefore determines also the existence of the art of design (*ars delineandi*; *γραφική*).

Painting seems to have made considerable progress in Asia Minor, while it was still in its infancy in Greece, for Candaules, king of Lydia (B.C. 716), is said to have purchased at a high price a painting of Bularchus, which represented a battle of the Magnetes.⁹ This tradition, however, is rejected by

Müller,¹ for the insufficient reason that Pliny, in the second passage quoted, uses the expression "*Magnetum exitii* or *excidii*" instead of "*Magnetum prælium*," as in the first; since the only known destruction of Magnesia took place, according to Archilochus, through the Treres, under Ardyes, the successor of Gyges, after Olym. 26 (B.C. 677), about 40 years after the death of Candaules. This date is, however, doubtful; but, supposing the contrary, the expression "*in qua erat Magnetum prælium*" is sufficiently clear and decisive, independently of it.² It would appear, from the expression of Pliny,³ that Candaules paid the painter as much gold coin as would cover the picture. This painting of Bularchus is not an isolated fact in evidence of the early cultivation of painting in Asia; there is a remarkable passage in Ezekiel, who prophesied about 600 B.C., relating to pictures of the Assyrians:⁴ "Men portrayed upon the wall, the images of the Chaldeans portrayed with vermilion, girded with girdles upon their loins, exceeding in dyed attire upon their heads, all of them princes to look to, after the manner of the Babylonians of Chaldea, the land of their nativity."

The old Ionic or Asiatic painting, the "*genus pictura Asiaticum*," as Pliny⁵ terms it, most probably flourished at the same time with the Ionic architecture, and continued as an independent school until the sixth century B.C., when the Ionians lost their liberty, and with their liberty their art. Herodotus⁶ mentions that, when Harpagus besieged the town of Phocæa (B.C. 544), the inhabitants collected all their valuables, their statues and votive offerings from the temples, leaving only their paintings, and such works in metal or of stone as could not easily be removed, and fled with them to the island of Chios; from which we may conclude that paintings were not only valued by the Phocæans, but also common among them. Herodotus⁷ also informs us that Mandrocles of Samos, who constructed for Darius Hystaspis the bridge of boats across the Bosphorus (B.C. 508), had a picture painted representing the passage of Darius's army, and the king seated on a throne, reviewing the troops as they passed, which he dedicated in the Temple of Hera at Samos.

After the conquest of Ionia, Samos became the seat of the arts.⁸ The Heræum at Samos, in which the picture of Mandrocles was placed, was a general depository for works of art, and in the time of Strabo appears to have been particularly rich in paintings, for he terms it a "picture-gallery" (*πινυακοθήκη*). Consecrated or votive pictures on panels or tablets (*πίνακες ἀνακειμένοι* or *γραφαὶ ἀνακειμένα*) constituted a considerable portion of the *ἀναθήματα* or votive offerings in the temples of Greece, most of which, in a later period, had a distinct building or gallery (*οἰκῆμα*) attached to them, disposed for the reception of pictures and works of this class.⁹

After the decline of the Ionian art, it flourished among the Greeks in Italy and Sicily, and especially in Crotona, Sybaris, and Tarentum. Aristotle¹¹ speaks of a magnificent cloth or pallium (*ὑμᾶτιον*) of Alcisthenes of Sybaris, which measured 15 cubits, was of the richest purple, and in it were worked the representations of cities, of gods, and of men. It came afterward into the possession of the tyrant Dionysius the elder, who sold it to the Carthaginians for 120 talents. This is sufficient evidence of the existence of painting among the Italiots, and even of painting of a high degree.

10. (Plin., H. N., xxxv., 34.)

1. (Archæol., &c., § 74.)—2. (Vid. Clinton, Fast. Hellen., tab. 712, 3.)—3. (vii., 39.)—4. (xxiii., 14, 15.)—5. (xxxv., 36, § 73.)
—6. (I., 164.)—7. (iv., 88.)—8. (Herod., iii., 60.)—9. (xv., p. 637.)—10. (Paus., i., 22, § 4; x., 25, § 1, 2.—Athenæus, xiii., p. 606, b.—Strabo, ix., p. 396.)—11. (De Mirab. Auscult., c. 99.)

Pliny would induce us to believe that painting was established throughout Italy as early as the time of Tarquinius Priscus.¹ He mentions some most ancient paintings at Cære; and a naked group of Helen and Atalanta, of beautiful forms, painted upon the wall of a temple at Lanuvium, and some paintings by the same artist in the Temple of Juno at Ardea, accompanied with an inscription in ancient Latin characters, recording the name of the artist and the gratitude of Ardea.²

V. *Painting in Greece.*—Cimon of Cleonæ is the first important character we meet with in the history of painting in Greece. His exact period is very uncertain, but he was probably a contemporary of Solon, and lived at least a century before Polygnotus. It is not at all necessary, as Pliny supposes, that he must have preceded Bularchus, which would place him two centuries earlier, as he may have easily acquired the art in one of the Ionian cities, for in the time of Solon there was a very extensive intercourse between Greece and the Asiatic colonies. The superior quality of the works of Cimon, to which Pliny and Ælian bear sufficient testimony, is a strong reason for assigning him a later date; but his having been contemporary with Dionysius of Colophon, who copied the works of Polygnotus, is quite out of the question. This has been inferred from the occurrence of the name Cimon in connexion with that of Dionysius in Simonides;³ but, as Müller⁴ has observed, *Μίμων* ought to be there most probably substituted for *Κίμων*.

Cimon improved upon the inventions of Eumares; he was the first who made foreshortenings (*catagrapha*), and drew the figure in a variety of attitudes; he first made muscular articulations, indicated the veins, and gave natural folds to drapery.⁵ The term "*catagrapha*," which Pliny uses, evidently signifies any oblique view of the figure or countenance whatever, whether in profile or otherwise; in technical language, *foreshortenings*.

We learn from Ælian⁶ that Cimon was much better paid for his works than any of his predecessors. This alone implies a great superiority in his works and a vast improvement in art. He appears to have emancipated painting from its archaic rigidity; and his works probably occupied a middle place between the productions of the earlier school and those of Polygnotus of Thasos.

At the time of Polygnotus (B.C. 460), partly on account of the changes which took place in the Greek character subsequent to the Persian invasion, and partly in consequence of his own great works in Athens and at Delphi, painting attracted the attention of all Greece; but, previous to this time, the only cities that had paid any considerable attention to it were Ægina, Sicyon, Corinth, and Athens. Sicyon and Corinth had long been famous for their paintings upon vases and upon articles of furniture; the school of Athens was of much later date than the others, and had attained no celebrity whatever, until the arrival of Polygnotus from Thasos raised it to that pre-eminence which, through various circumstances, it continued to maintain for more than two centuries, although very few of the great painters of Greece were natives of Athens.

It has been attempted hitherto, as far as our space would admit of, to trace the progressive steps of Grecian painting from its infancy until it attained that degree of development requisite to entitle it to the name of an independent art; but, before entering upon the consideration of the painting of the Greeks in its complete development, it will be well

to examine both their technic systems and their mechanical means.

VI. *Technic.*—*Vehicles, Materials, &c.* (φάρμακα, ὕλαι, &c.¹). The Greeks painted with wax, resins, and in water-colours, to which they gave a proper consistency, according to the material upon which they painted, with gum (*gummi*), glue (*glutimum*), and the white of egg (*ovi albumen*); gum and glue were the most common. It does not appear that they ever painted in oil; the only mention of oil in ancient writers in connexion with painting is the small quantity which entered into the composition of encaustic varnish, to temper it.² They painted upon wood, clay, plaster, stone, parchment, and canvass; the last was, according to one account,³ not used till the time of Nero; and though this statement appears to be doubtful ("depictam in tabula sipariove imaginem rei"⁴), the use of canvass must have been of late introduction, as there is no mention of it having been employed by the Greek painters of the best periods. They generally painted upon panels or tablets (πίνακες, πίνακτα, *tabulae, tabellæ*), and very rarely, if ever, upon walls; and an easel similar to what is now used was common among the ancients, who called it *ὀκρίδας* or *καλίσβας*.⁵ Even in the time of Pliny, when wall-painting was common, those only who painted easel-pictures (*tabulae*) were held in esteem: "*sed nulla gloria artificum est nisi eorum qui tabulas pinxerint*;"⁶ that is, those who painted history or fable upon panels, in what is termed the historic or great style, the *megalographia* of Vitruvius,⁷ and the *χρηστογραφία* of Plutarch.⁸ These panels, when finished, were fixed into frames of various descriptions and materials,⁹ and encased in walls.¹⁰ The ornamental panel-painting in the houses of Pompeii is evidently an imitation of this more ancient and more costly system of decorating walls. The wood of which these panels or tablets were generally made was called larch (*abies larix, larix femina, Ἑλλάρη*), and they were grounded or prepared for painting with chalk or white plaster; this prepared ground was termed *λεύκωμα*, which term was applied, also, to the tablet itself when thus prepared¹² (ἐν πίνακι λευκωμένον¹³).

The style or cestrum used in drawing and for spreading the wax colours, pointed at one end and broad and flat at the other, was termed *γραφίς* by the Greeks and cestrum by the Romans; it was generally made of metal. There is a representation of an instrument of this description in one of the paintings of Herculaneum.¹⁴ The hair-pencil (*penicillus, penicillum*) was termed *ὀνογραφίς*, and apparently, also, *παβδίων* (χρῶσεν ὁὖ τοῦ παβδίου¹⁵ vid. Letronne, *Encaustic, Journ. des Sav.*, Sept., 1835, on the meaning of *παβδίων*).

The ancients used also a palette very similar to that used by the moderns, although it appears that there is no absolute mention of the palette in any ancient author. The fact, however, is sufficiently attested by the figure of Painting discovered in the so-called Pantheon at Pompeii, which holds the palette and brushes in her left hand.¹⁶ In the same work (plate 98), a female who is painting is represented holding something in her left hand which ap-

pears to be a palette, but it is not well defined even in the original. (Museum of Naples, No. 383, "La femme Peintre," Pompéi. In the *Antichità d'Ercolano*, it is given as a female copying a Hermes, vol. vii., pl. 1.) In the grotesque drawing of a portrait-painter at work, copied by Mazois¹ from a picture in the Casa Carolina at Pompeii, a small table serves as a palette, and stands close to his right hand; it appears to have seventeen different tints upon it. It is most probable that the "tabella" of Pliny and the *πινάκιον* of Pollux (or even the *πυξίον*)² signified also palette as well as tablet.

The ancient authors have left us less information concerning the media or vehicles (*φάρμακα*) used by the painters of antiquity than on any other matter connected with ancient painting. Gum and glue, commis, gummi, glutinum, glutinum taurinum, were evidently in common use.³ Pliny⁴ speaks of a sarcocolla (*Penau Sarcocolla*, Linnæus) as a gum most useful to painters. The Greeks received it from Persia.⁵ Its substance has been analyzed by M. Pelletier.⁶

Mastic, a resin of the *Pistacia Lentiscus*, now much used by painters, is also mentioned by Greek and Roman writers;⁷ the best was produced in the island of Chios. It was termed *ῥητίνη σχώνη* and *μαστίνη*, also *ἁκανθίνη μαστίνη*, *resina lentiscina*, *mastiche*. There were various kinds; Pliny mentions a kind from Pontus which resembled bitumen. This resin was not improbably mixed with the Punic wax prepared for painting in encaustic; for the Abate Requeno, who made many experiments in encaustic (*Saggi sul ristabilimento dell' antica arte dei Greci e Romani pittori*, Parma, 1787), asserts that it amalgamates well with wax; the same writer is also of opinion that the ancient encaustic painters used also amber (*succinum*) and frankincense or olibanum (*Thus masculum*) in the preparation of their colours. Pliny,⁸ speaking of verdigris, remarks that it was sometimes mixed with frankincense. He also mentions⁹ other resins and substances which are useful to painters, and¹⁰ particularly turpentine (*terebinthina*), of which, as now, there were formerly various kinds.¹¹

The method of preparing wax, or Punic wax (*cera Pumica*), as it was termed, is preserved in Pliny¹² and Dioscorides.¹³ It was the ordinary yellow wax, purified and bleached by being boiled three distinct times in sea-water, with a small quantity of nitre, applying fresh water each time. When taken out of the water the third time, it was covered with a thin cloth and placed in the sun to dry. Wax thus purified was mixed with all species of colours, and prepared for painting; but it was applied, also, to many other uses, as polishing statues, walls, &c.

Pliny speaks of two kinds of bitumen or asphaltum (*ἄσφαλτος*), the ordinary, and a white Babylonian bitumen.¹⁴ It was used as a varnish for bronze statues. For an account of the colours used by the ancient painters, see the article COLORES.

VII. *Methods of Painting*.—There were two distinct classes of painting practised by the ancients, in water colours and in wax, both of which were practised in various ways. Of the former, the principal were fresco, *al fresco*; and the various kinds of distemper (a tempera), with glue, with the white of egg, or with gums (a guazzo); and with wax or resins when these were rendered by any means vehicles that could be worked with water. Wax be-

comes a water-colour medium when boiled with sarcocolla or mastic, according to the Abate Requeno, who mixed five ounces of mastic with two of wax, which, when boiled, he cooled in a basin of water; turpentine becomes such when well mixed with the white of egg and water. The yolk of egg, when mixed with vinegar, also makes a good working vehicle for this species of painting, but it does not require water. Of the latter mode, or painting in wax, the principal was through fire (*διὰ πυρός*), termed encaustic (*ἐγκανστική*, *encaustica*). The painting in wax, *κηρογραφία*, or ship painting (*incementa navium*), was distinct from encaustic¹ (*κηρογραφία κατεπεποικιλτο*, which is distinct from *ἐκόνες* . . . *ἐν ἐγκαύμασι γραφόμεναι διὰ πυρός*).²

Fresco was probably little employed by the ancients for works of imitative art, but it appears to have been the ordinary method of simply colouring walls, especially among the Romans. The walls were divided into compartments or panels, which were termed *abaci*, *ἄβακες*; the composition of the stucco, and the method of preparing the walls for painting, is described by Vitruvius.⁴ They first covered the wall with a layer of ordinary plaster, over which, when dry, were successively added three other layers of a finer quality, mixed with sand; above these were placed still three layers of a composition of chalk and marble dust, the upper one being laid on before the under one was quite dry, and each succeeding coat being of a finer quality than the preceding. By this process the different layers were so bound together, that the whole mass formed one solid and beautiful slab, resembling marble, and was capable of being detached from the wall, and transported in a wooden frame to any distance.⁵ Vitruvius remarks that the composition of the ancient Greek walls was so excellent, that persons were in the habit of cutting away slabs from them and converting them into tables, which had a very beautiful appearance. This colouring *al fresco*, in which the colours were mixed simply in water, as the term implies, was applied when the composition was still wet (*udo tectorio*), and on that account was limited to certain colours, for no colours except earths can be employed in this way, that have not already stood the test of fire. Pliny⁶ mentions those colours which could not be so employed: purpurisum, Indicum, cæruleum, Melinum, auripigmentum, Appianum, and cerussa; instead of Melinum they used *parætonium*, a white from Egypt, which was by the Romans considered the best of whites. (*Vid. COLORES*.)

The care and skill required to execute a work in fresco, and the tedious and expensive process of preparing the walls, must have effectually excluded it from ordinary places. The majority of the walls in Pompeii are in common distemper; but those of the better houses, not only in Pompeii, but in Rome and elsewhere, especially those which constitute the ground of pictures, are in fresco. All the pictures, however, are apparently in distemper of a superior kind, or a guazzo, but the impasto is of various qualities; in some it appears to have the consistency of oil painting without its defects, in others it is very inferior.

Ordinary distemper, that is, with glue or size, is probably the most ancient species of painting; many of the ancient ornamental friezes and painted bassi-relievi in the temples and ruins in Egypt, and also many of the most ancient remains in Italy, are painted in this manner.

The fresco walls, when painted, were covered with an encaustic varnish, both to heighten the

colours, and to preserve them from the injurious effects of the sun or the weather. Vitruvius¹ describes the process as a Greek practice, which they termed *καυσίς*. When the wall was coloured and dry, Punic wax, melted and tempered with a little oil, was rubbed over it with a hard brush (*seta*); this was made smooth and even by applying a *cauterium* (*καυτήριον*), or an iron pan, filled with live coals, over the surface, as near to it as was just necessary to melt the wax: it was then rubbed with a candle (wax?) and a clean linen cloth in the way that naked marble statues were done.² The Abate Requeno supposes that the candles were used as a species of delicate cauterium, simply to keep the wax soft, that it might receive a polish from the friction of the linen; but it is a subject that presents considerable difficulty.

This kind of varnish was applied apparently to plain walls only, for Sir Humphrey Davy discovered no remains whatever, in the baths of Titus, of an encaustic varnish upon paintings, although the plain walls had generally traces of a red varnish of this description. Neither Pliny nor Vitruvius mention anything about colour; but this is evidently a most simple addition, and does not interfere at all either with the principle or the application of the varnish. Paintings may have possibly been executed upon the walls after they were thus varnished.

A method apparently very generally practised by the Roman and later Greek painters was encaustic, which, according to Plutarch,³ was the most durable of all methods; it was in very little use by the earlier painters, and was not generally adopted until after the time of Alexander. Pliny⁴ defines the term thus: "*ceris pingere ac picturam inurere*," to paint with wax or wax colours, and to burn in the picture afterward with the cauterium; it appears, therefore, to have been the simple addition of the process of burning in to the ordinary method of painting with wax colours. There were various kinds of encaustic, with the pencil and with the cestrum; but the difference between them cannot have been very great, for Pausias, whose style was in encaustic with the cestrum, nevertheless undertook to repair the paintings of Polygnotus at Thebes, which were painted in the ordinary manner, in water colours, with the pencil. Pliny,⁵ in enumerating the most celebrated painters of antiquity, speaks separately of those who excelled in either class; chap. 36 is devoted to those who painted in the ordinary method with the pencil, and chap. 40 principally to those who painted in encaustic. *Ceræ* (waxes) was the ordinary term for painters' colours among the Romans, but more especially encaustic colours, and they kept them in partitioned boxes, as painters do at present ("*Pictores loculatas magnas habent arculas, ubi discolores sint ceræ*"⁶). They were most probably kept dry in these boxes, and the wet brush or pencil was rubbed upon them when colour was required, or they were moistened by the artist previous to commencing work. From the term *ceræ*, it would appear that wax constituted the principal ingredient of the colouring vehicle used; but this does not necessarily follow, and it is very improbable that it did; there must have been a great portion of gum or resin in the colours, or they could not have hardened. Wax was undoubtedly a most essential ingredient, since it apparently prevents the colours from cracking: *ceræ*, therefore, might originally simply mean colours which contained wax, in contradistinction to those which did not, but was afterward applied generally by the Romans to the colours of painters, as, for instance, by Sta-

tius,¹ "*Apelleæ cuperent te scribere ceræ.*" The sponge (*σπογγία*, *spongia*), spoken of by Pliny and other writers in connexion with painting, affords some proof that painting in water-colours was the method generally practised by the ancient painters, which is also corroborated by the small vessel placed close to the palette or table of the portrait-painter of the Casa Carolina of Pompeii, evidently for the purpose of washing his single brush in. Seneca² notices the facility and rapidity with which a painter takes and lays on his colours. That wax or resins may be used as vehicles in water-colours has been already mentioned.

The origin of encaustic painting is unknown. It was practised in two ways with the cestrum, namely, in wax and on ivory, and in a third manner with the pencil. The last method, according to Pliny, was applied chiefly to ship-painting; the colours were laid on hot. His words are, "*Encausto pingendi duo fuisse antiquitus genera constat, ceræ, et in ebore, cestro id est viriculo, donec classes pingi cæpere. Hoc tertium accessit, resolutis igni ceris penicillo utendi, quæ pictura in navibus nec sole nec sale ventisque corrumpitur.*"³ This passage, from its conciseness, presents many difficulties. "*Ceræ, cestro*," that is, in wax with the cestrum; this was the method of Pausias: "*in ebore, cestro*;" this must have been a species of drawing with a hot point upon ivory, for it was, as is distinctly said, without wax, "*ceræ, et in ebore.*" The third method, "*resolutis igni ceris penicillo utendi*," though first employed on ships, was not necessarily confined to ship-painting; and if the assertion of Pliny is correct, it must have been a very different style of painting from the ship-colouring of Homer, since he says it was of a later date than the preceding methods. The "*incementa navium*" of Livy, and the *κηρογραφία* of Athenæus, mentioned above, may have been executed in this third method of Pliny; the use of the cauterium, or process of burning in, is here not alluded to; but, since he defined encaustic to be "*ceris pingere ac picturam inurere*,"⁴ its employment may be understood in this case also. It is difficult, however, to understand what effect the action of the cauterium could have in the second method (*in ebore, cestro*), which was without wax. It would appear, therefore, that the definition alluded to is the explanation of the first-mentioned method only; and it is probable that the ancient methods of painting in encaustic were not only three, but several; the *καυσίς* of Vitruvius, mentioned also by himself, is a fourth, and the various modes of ship-painting add others to the number. Pliny⁵ himself speaks of "*zopissa*," a composition of wax and pitch, which was scraped from ships; and it is difficult to suppose that the higher class of encaustic was practised with the cestrum only, since the pencil is such an infinitely more efficient instrument for the proper mixing and application of colours (*Κεράσασθαι τὰ χρώματα, καὶ εὐκαίρον ποιεῖσθαι τὴν ἐπιβολὴν αὐτῶν*⁶). The wax-painting on the fictile vases, mentioned by Athenæus,⁷ can have been scarcely executed with the cestrum; and it is also unlikely that it was done with hot colours, as the painting of the "*figlinum opus*" mentioned by Pliny⁸ may have been. But as there were various methods of painting in encaustic, it follows that the colours designed for this species of painting were also invariably prepared, and those which were suited for one style may have been quite unfit for another. All these styles, however, are comparatively simple, compared with that of Pausias, in wax with the cestrum, "*ceræ, cestro*;" and it is dif-

1. (vii., 9).—2. (Compare Plin., H. N., xxxiii., 40).—3. (l. c.)—4. (xxxv., 39).—5. (xxxv.).—6. (Varro, De Re Rust., iii., 17.)

1. (Sylv., l., i., 100).—2. (Ep., 121, 5).—3. (xxxv., 41).—4. (xxxv., 39).—5. (xvi., 23).—6. (Lucian, Imag., 7, vol. ii., p. 465, R.).—7. (v., p. 200, 6).—8. (xxxiii., 64.)

fact for a modern practitioner to understand how a large and valuable picture could be produced by such a method, unless these colours of cera, which painters of this class, according to Varro,¹ kept in partitioned boxes, were a species of wax crayons, which were worked upon the panel with the broad edge of the cestrum (which may have had a rough edge), within an outline or monogram previously drawn or cut in with the pointed end, and were afterward fixed, and toned or blended by the action of the cauterium. Painters were in the habit of inscribing the word *ἐνέκασεν*, "burned it in," upon pictures executed in encaustic, as *Νικίας ἐνέκασεν*, *Λυσίππος ἐνέκασεν*.²

VIII. *Polychromy*.—The practice of varnishing and polishing marble statues has been already incidentally noticed. The custom was very general; ancient statues were also often painted, and what is now termed polychrome sculpture was very common in Greece, for the acrolithic and the chryselephantine statues were both of this description. Many works of the latter class, which were of extraordinary magnificence and costliness, are described by Pausanias. The term polychromy, thus applied, was apparently unknown to the ancients; this species of painting is called by Plutarch³ *ἀγαλμάτων ἔγκασσις*, and appears to have been executed by a distinct class of artists (*ἀγαλμάτων ἔγκασταί*). They are mentioned also by Plato,⁴ *οἱ ἀνδριάντας γράφοντες* and if it is certain that Plato here alludes to painting statues, it is clear that they were occasionally entirely painted, in exact imitation of nature; for he expressly remarks, that it is not by applying a rich or beautiful colour to any particular part, but by giving its local colour to each part, that the whole is made beautiful (*ἀλλ' ἄρει εἰ τὰ προσήκοντα ἐκάστοις ἀποδιδόντες, τὸ ὅλον καλὸν ποιοῦμεν*). That this was, however, not a general practice, is evident from the dialogue between Lycinus and Polystratus, in Lucian,⁵ where it is clearly, though indirectly stated, that the Venus of Cnidus by Praxiteles, and other celebrated statues, were not coloured, although they may have been ornamented in parts, and covered with an encaustic varnish.

The practice of colouring statues is undoubtedly as ancient as the art of statuary itself; although they were perhaps originally coloured more from a love of colour than from any design of improving the resemblance of the representation. The Jupiter of the Capitol, placed by Tarquinius Priscus, was coloured with minium.⁶ In later times the custom seems to have been reduced to a system, and was practised with more reserve. Considerable attention also seems to have been paid to the effect of the object as a work of art. Praxiteles being asked which of his marble works he most admired, answered, those which Nicias had a hand in, "*quibus Nicias manus admovisset*;" so much, says Pliny,⁷ did he attribute to his circumlition. Nicias, therefore, who painted in encaustic, seems in his youth to have been an *ἀγαλμάτων ἔγκαστής*, or painter of statues, and, from the approval of Praxiteles, excelled apparently in this description of painting or colouring.

This view differs very materially from those which have been hitherto advanced upon this subject, but it has not been adopted without mature consideration.

In the "circumlition" of Nicias, the naked form was, most probably, merely varnished, the colouring being applied only to the eyes, eyebrows, lips, and hair, to the draperies, and the various ornaments of dress; and there can be little doubt that

fine statues, especially of females, when carefully and tastefully coloured in this way, must have been extremely beautiful; the encaustic varnish upon the white marble must have had very much the effect of a pale transparent flesh. Gold was also abundantly employed upon ancient statues; the hair of the Venus de Medicis was gilded; and in some, glass eyes and eyelashes of copper were inserted, examples of which are still extant.

The practice, also, of colouring architecture seems to have been universal among the Greeks, and very general among the Romans. It is difficult to define exactly what the system was, for there is scarcely any notice of it in ancient writers; a few casual remarks in Vitruvius and Pausanias are all we possess of any value. Our information is drawn chiefly from the observations of modern travellers; for traces of colour have been found upon most of the architectural ruins of Greece, and upon the ancient monuments of Italy and Sicily; but, with the exception of the Doric ruins at Corinth and the Temple of Ægina, which are not of marble, the colouring was confined to the mouldings and other ornaments, the friezes, the metopes, and the tympana of the pediments. The exterior of the wall of the cella of the Ægina temple, and the columns of the Corinthian ruins, were covered with stucco and coloured red. It does not appear that the exterior walls, when of marble, were ever coloured, for no traces of colour have been found upon them. At an early age, before the use of marble, when the temples and public edifices were constructed mostly of wood, the use of colour must have been much more considerable and less systematic; but, during the most refined ages, the colouring, otherwise quite arbitrary, appears to have been strictly confined to the ornamental parts. From the traces found upon ancient monuments, we are enabled to form a very tolerable idea of the ancient system of decorating mouldings. They were painted in various ways and in a great variety of colours, and a tasteful combination of colours must have added greatly to the effect of even the richest mouldings. The ordinary decorations were foliage, ova, and beads; but upon the larger mouldings on which foliage was painted, the outlines of the leaves were first engraved in the stone. Gilding and metal-work were also introduced, particularly in the Doric order; the architrave of the Parthenon at Athens was decorated with gilded shields. Friezes that were adorned with sculpture appear to have been invariably coloured, as also the tympana of the pediments; in the Parthenon these parts were of a pale blue; in some of the Sicilian monuments red has been found. Some interior polychrome cornices of Pompeii are given in the work of Zahn.¹

In later times, among the Romans, the practice of colouring buildings seems to have degenerated into a mere taste for gaudy colours. Pliny and Vitruvius both repeatedly deplore the corrupt taste of their own times. Vitruvius² observes that the decorations of the ancients were tastelessly laid aside, and that strong and gaudy colouring and prodigal expense were substituted for the beautiful effects produced by the skill of the ancient artists. Pompeii, with much that is chaste and beautiful, has many traces also of what Vitruvius and Pliny complain of. Plate 99 of Zahn affords a beautiful specimen of the ancient wall-painting of Pompeii in courts and interiors. For a farther account of this subject, see Kugler, "*Ueber die Polychromie der Griechischen Architektur und Sculptur und ihre Grenzen*," Berlin, 1835.

IX. *Vase Painting*.—The fictile vase-painting of the Greeks was an art of itself, and was prac-

1. (L. c.)—2. (Plin., II. N., xxxv., 10, 39.)—3. (De Glor. Athen., 6.)—4. (De Repub., iv., 420, c.)—5. (Imag., 5, 8.)—6. (Plin., xxxv., 45.)—7. (xxxv., 40.)

1. (Die schönsten Ornamente, &c., pl. 91.)—2. (vii., 5.)

tised by a distinct class of artists,¹ who must have required peculiar instruction, and probably exercised the art according to a prescribed system. It is, however, impossible to say anything positive regarding the history of this branch of ancient painting, as scarcely anything is known. The designs upon these vases (which the Greeks termed *λῆκυθοι*) have been variously interpreted, but they have been generally considered to be in some way connected with the initiation into the Eleusinian and other mysteries.² They were given as prizes to the victors at the Panathenæa and other games, and seem to have been always buried with their owners at their death, for they have been discovered only in tombs.

Vase-painting cannot be adduced to determine the general nature or character of ancient painting as a liberal or imitative art; though the rude designs upon the vases throw considerable light upon the progressive development of the art as relates to style of design, and in some degree upon the principles of Grecian composition of the early times; but their chief interest and value consist in the faithful pictures they afford of the traditions, customs, and habits of the ancients.

The ancient vase-painters were probably attached to the potteries, or the establishments in which the vases were made; or themselves constituted distinct bodies, which, from the general similarity of style and execution of the designs upon the vases, is not improbable. They do not seem to have been held in any esteem, for their names have not been preserved by any ancient writer; and we only know the names of four, from their being inscribed upon the vases themselves, viz., Taleides, Assteas, Lasimos, and Calliphon.³

The words *καλός* and *καλή*, found frequently upon the ancient vases, are explained to be simple acclamations of praise and approval, supposed to be addressed to the person to whom the vase was presented; the words are frequently preceded or followed by a name, evidently that of the person for whom the vase was designed. The inscription also *ἡ παῖς καλή* has been found on some vases, which have probably been designed as presents for young females. D'Hancarville⁴ supposes that vase-painting had entirely ceased about the time of the destruction of Corinth, and that the art of manufacturing vases began to decline towards the reign of Trajan, and arrived at its last period about the time of the Antonines and Septimius Severus. Vase-painting had evidently ceased long before the time of Pliny, for in his time the painted vases were of immense value, and were much sought after; but the manufacture of the vases themselves appears to have been still extensive, for he himself mentions fourteen celebrated potteries of his own time, eight in Italy and six elsewhere. The vases, however, appear to have been merely remarkable for the fineness or durability of the clay and the elegance of their shape.⁵ For the composition of the clay with which these fictilia were made, see FICTILE.

Even in the time of the Empire, painted vases were termed "operis antiqui," and were then sought for in the ancient tombs of Campania and other parts of Magna Græcia. Suetonius⁶ mentions the discovery of some vases of this description in the time of Julius Cæsar, in clearing away some very ancient tombs at Capua. It is also remarkable, that not a single painted vase has been yet discovered in

either Pompeii, Herculaneum, or Stabiae, which is of itself almost sufficient to prove that vase-painting was not practised, and also that painted vases were extremely scarce. We may form some idea of their value from the statement of Pliny,¹ that they were more valuable than the Murrhine vases. (Vid. MURRHINE VASA.) The paintings on the vases, considered as works of art, vary exceedingly in the detail of the execution, although in style of design they may be arranged in two principal classes, the black and the yellow; for those which do not come strictly under either of these two heads are either too few or vary too slightly to require a distinct classification. The majority of the vases that have been as yet discovered, have been found in ancient tombs about Capua and Nola.

The black vases, or those with the black figures upon the stained reddish-yellow terra-cotta, the best of which were found at Nola, are the most ancient, and their illustrations consist principally of representations from the early mythological traditions; but the style of these vases was sometimes imitated by later artists. (Plate 56, vol. iv., of D'Hancarville is an example.) The inferior examples of this class have some of them traces of the graphis or cestrum upon them, which appear to have been made when the clay was still soft; some also have lines or scratches upon the figures, which have been added when the painting was completed. The style of the design of these black figures, or skiagrams, is what has been termed the Egyptian or Dædalian style. The varieties in this style are occasionally a purple tint instead of the black; or the addition of a red sash or a white vest, and sometimes a white face and white hands and feet. A curious and interesting example of this kind of polychrom, in black, red, and white, was discovered near Athens in 1813, representing on one side a Minerva with a spear and shield, in the Dædalian style, and on the reverse, in a somewhat better style, a young man driving a biga of most ancient construction; it is supposed to represent Erichthonius. Near the Minerva is the following inscription, written from right to left: ΤΟΝ ΑΘΕΝΕΟΝ ΑΘΑΟΝ ΕΜΙ, τῶν Ἀθηνῆων ἄθλον εἶμι, "I am the prize of the Athenæa" (Panathenæa). It is supposed to be of the time of Solon.²

The vases with the yellow monograms, or, rather, the black monograms upon the yellow grounds, constitute the mass of ancient vases. Their illustrations are executed with various degrees of merit; those of inferior execution, also of this class, have traces of the graphis upon them, which appear to have been drawn upon the soft clay; the only colour upon these, independent of that of the clay, is the dark back-ground, generally black, which renders the figures very prominent. The designs upon the better vases are also merely monograms, with the usual dark back-grounds, but there is a very great difference between the execution of these and that of those just alluded to; there are no traces whatever of the graphis upon them; their outlines are drawn with the hair pencil, in colour, similar to that of the back-ground, which is a species of black varnish, probably asphaltum; or, perhaps, rather prepared with the gagates lapis (jet?) (γαγάτης) of Pliny, for he remarks that it is indelible when used on this kind of earthenware.³

The best of these vases, which probably belong to about the time of Alexander, are conspicuous for a very correct style of design, although they are invariably carelessly executed, especially in the extremities, but exhibit, at the same time, a surprising facility of hand. The celebrated vase of Sir W.

1. (Aristoph., Eccles., 995, 996, ed. Bekker.)—2. (Lanzi, De' Vasi Antichi dipinti.—Christie. Disquisitions upon the painted Greek Vases.—Böttiger, 'Ideen, &c.)—3. 1. (xxxv., 46.)—2. (Millingen. Anc. Uned. Mon., pl. 1.)—3. (xxxvi., 34.)

Hamilton's collection, now in the British Museum, the paintings of which represent Hercules and his companions in the gardens of the Hesperides, and the race of Atalanta and Hippomenes, exhibits, for design, composition, and execution, perhaps the finest specimen of ancient vase-painting that has been yet discovered: the style of design is perfect, but the execution, though on the whole laborious, is in many parts very careless.¹

There appears to be no example of the more perfect monochrom² upon ancient vases, and examples of the polychrom are very rare. In Sir W. Hamilton's collection there are a few examples in which various colours have been added after the ordinary monogram has been completed, for they are not incorporated with the vase, as the black and ground tints are, but are subject to scale, and are easily rubbed off. They consist of white, red, yellow, and blue colours. These vases are apparently of a later date than the above, for the style of design is very inferior.

The museums of Naples, Paris, London, and other cities, afford abundant examples of these ancient vases; the Museo Borbonico at Naples contains alone upward of 2500 specimens. The subjects of the illustrations are almost always connected with ancient mythology, and the execution is generally inferior to the composition.

No opinion of the style of the designs upon ancient vases can be formed from the generality of the great works purporting to illustrate them which have been published of late years. Very few are at all accurate in the lines and proportions, especially of the extremities, and in some even the composition is not faithfully imitated. This is particularly the case with the splendid works published by Dubois-Maissonneuve, Laborde, and some others, in which the illustrations are drawn with a care, precision, and uniformity of character quite foreign to the paintings on the vases. They all appear to be drawn rather according to common and perfect standards of the different styles, than to be the faithful imitations of distinct original designs. Plates 25 and 26 of the first volume of Maissonneuve, purporting to be faithful imitations of the design upon the celebrated Nola vase (in the Museum at Naples, No. 1846), representing a scene from the destruction of Troy, bear but little resemblance to the original. This remark is applicable, also, to the work of D'Hancarville and other productions, but in a less degree. Perhaps the work which illustrates most faithfully the style of the designs upon ancient vases, as far as it goes, is that in course of publication by Gerhard.³ The specimens, also, of ancient paintings published by Raoul Rochette⁴ have every appearance of being faithful imitations of the originals.

X. *Remains of Ancient Painting.*—There is a general prejudice against the opinion that the painting of the Greeks equalled their sculpture; and the earlier discoveries of the remains of ancient paintings at Pompeii and Herculaneum tended rather to increase this prejudice than to correct it. The style of the paintings discovered in these cities was condemned both by Pliny and Vitruvius, and yet almost every species of merit may be discovered in them. What, therefore, must have been the productions which the ancients themselves esteemed their immortal works, and which, singly, were estimated equal to the wealth of cities?⁵

These remains of Pompeii and Herculaneum induced Sir Joshua Reynolds to form a decided opinion upon ancient painting. He remarks,⁶ "From

the various ancient paintings which have come down to us, we may form a judgment, with tolerable accuracy, of the excellences and the defects of the arts among the ancients. There can be no doubt but that the same correctness of design was required from the painter as from the sculptor; and if what has happened in the case of sculpture had likewise happened in regard to their paintings, and we had the good fortune to possess what the ancients themselves esteemed their master-pieces, I have no doubt but we should find their figures as correctly drawn as the Laocoon, and probably coloured like Titian." This opinion has been farther confirmed by later discoveries at Pompeii, especially by the great mosaic of the Casa del Fauno, discovered in 1831, supposed to represent the battle of Issus.¹ But the beauty of ancient sculpture alone is itself a powerful advocate in favour of this opinion; for when art has once attained such a degree of excellence as the Greek sculpture evinces, it is evident that nothing mediocre or even inferior could be tolerated. The principles which guide the practice of both arts are in design and proportion the same; and the style of design in painting cannot have been inferior to that of sculpture. Several of the most celebrated ancient artists were both sculptors and painters: Phidias and Euphranor were both; Zeuxis and Protogenes were both modelers; Polygnotus devoted some attention to statuary; and Lysippus consulted Eupompus upon style in sculpture. The design of Phidias and Euphranor in painting cannot have been inferior in style to that of their sculpture; nor can Eupompus have been an inferior critic in his own art than in that of Lysippus. We have, besides, the testimony of nearly all the Greek and Roman writers of every period, who, in general, speak more frequently and in higher terms of painting than of sculpture. "*Si quid generis istiusmodi me delectat, pictura delectat,*" says Cicero.²

The occasional errors in perspective, detected in some of the architectural decorations in Pompeii, have been assumed as evidence that the Greek painters generally were deficient in perspective. This conclusion by no means follows, and is entirely confuted by the mosaic of the battle of Issus, in which the perspective is admirable; in many other works, also, of minor importance, the perspective has been carefully attended to. We know, moreover, that the Greeks were acquainted with perspective at a very early period; for Vitruvius³ says, that when Æschylus was teaching tragedy at Athens, Agatharcus made a scene, and left a treatise upon it. By the assistance of this, Democritus and Anaxagoras wrote upon the same subject, showing how the extension of rays from a fixed point of sight should be made to correspond to lines according to natural reason; so that the images of buildings in painted scenes might have the appearance of reality, and, although painted upon flat, vertical surfaces, some parts should seem to recede and others to come forward. This class of painting was termed scenography (*σκηνογραφία*) by the Greeks, and appears to have been sometimes practised by architects. Clisthenes of Eretria is mentioned as architect and scenographer (*σκηνογράφος*).⁴ Serapion, Eudorus, and others, were celebrated as scene-painters.⁵ Scene-painting was, perhaps, not generally practised until after the time of Æschylus, for Aristotle⁶ attributes its introduction to Sophocles.

The most valuable and the most considerable of ancient paintings that have yet been discovered are: The so-called Aldobrandini Marriage, Nozze

1. (D'Hancarville, plates 127, 128, 129, 130.)—2. (Vid. No. III., p. 681.)—3. (Auserlesene Griechische Vasenbilder, Berlin, 1839.)—4. (Peintures Antiques.)—5. (Plin., H. N., xxxv., 32.)—6. (Notes to Fresn., 37.)

1. (Mosaic, No. XV.)—2. (ad Fam., vii., 23.)—3. (vii., pref.)—4. (Diog., ii., 125.)—5. (Plin., H. N., xxxv., 37, 40.)—6. (Poet., 4.)

Aldobrandine, originally the property of the Aldobrandini family, which was found on the Esquiline Mount during the pontificate of Clement VIII., Ippolito Aldobrandini, and was placed by Pius VII. in the Vatican: this painting, which is on stucco, and contains ten rather small figures in three groups, is a work of considerable merit in composition, drawing, and colour, and is executed with great freedom;¹ and the following paintings of the Museo Borbonico at Naples, which are conspicuous for freedom of execution and general technical excellence: the two Nereids found in Stabia, Nos. 561 and 562, Cat.; Telephus nourished by the roe, &c., from Herculaneum, No. 495; Chiron and Achilles, also from Herculaneum, No. 730; Briseis delivered to the heralds of Agamemnon, from Pompeii,² No. 684; and the nine Funambuli or rope-dancers, which are executed with remarkable skill and facility. (Mus. Borb., Ant. d'Ercol., and Zahn contain engravings from these works; for fac similes of ancient paintings, see "*Recueil de Peintures antiques, imitées fidèlement pour les couleurs et pour le trait, d'après les desseins coloriés faits par P. S. Bartoli*," &c., Paris, 1757, folio.)

XL. *Period of Development. Essential Style.*—With Polygnotus of Thasos (B.C. 463) painting was fully developed in all the essential principles of imitation, and was established as an independent art in practice. The works of Polygnotus were conspicuous for expression, character, and design; the more minute discriminations of tone and local colour, united with dramatic composition and effect, were not accomplished until a later period. The limited space of this article necessarily precludes anything like a general notice of all the various productions of Greek painters incidentally mentioned in ancient writers. With the exception, therefore, of occasionally mentioning works of extraordinary celebrity, the notices of the various Greek painters of whom we have any satisfactory knowledge will be restricted to those who, by the quality or peculiar character of their works, have contributed towards the establishment of any of the various styles of painting practised by the ancients.

Polygnotus is frequently mentioned by ancient writers, but the passages of most importance relating to his style are in the *Poetica* of Aristotle³ and in the *Imagines* of Lucian.⁴ The notice in Pliny⁵ is very cursory: he mentions him among the many before Olympiad 90, from which time he dates the commencement of his history, and simply states that he added much to the art of painting, such as opening the mouth, showing the teeth, improving the folds of draperies, painting transparent vests for women, or giving them various coloured head-dresses. Aristotle speaks of the general character of the design and expression of Polygnotus, Lucian of the colour; in which respects both writers award him the highest praise. Aristotle,⁶ speaking of imitation, remarks, that it must be either superior, inferior, or equal to its model, which he illustrates by the cases of three painters: "Polygnotus," he says, "paints men better than they are, Pauson worse, and Dionysius as they are." This passage alludes evidently to the general quality of the design of Polygnotus, which appears to have been of an exalted and ideal character. In another passage⁷ he speaks of him as an *ἀγαθὸς ἡθογράφος*, or an excellent delineator of moral character and expression, and assigns him, in this respect, a complete superiority over Zeuxis. From the passage in Lucian, we may infer that Polygnotus, Euphranon, Apelles, and Aëtion were the best colourists among the an-

cients, according to the general opinion (*ἀριστοὶ ἐγένοντο κεράσασθαι τὰ χρώματα, καὶ εὐκαίον ποιῆσαι τὴν ἐπιβολὴν αὐτῶν*). He notices, also, in the same passage, the truth, the elegance, and the flowing lightness of the draperies of Polygnotus.

Pausanias mentions several of the works of Polygnotus, but the most important were his two great paintings, or series of paintings, in the Lesche of the Temple of Apollo at Delphi, to a description of which Pausanias devotes six chapters.¹ On the right, as you entered, was the overthrow of Troy, and the Greeks sailing to their native land; on the other side was painted the descent of Ulysses to Hades, to consult the soul of Tiresias concerning his safe return to his native country. These paintings, in the composition of which Polygnotus seems to have illustrated every existing poem upon the subjects, were termed the *Iliad* and *Odyssey* of Polygnotus. They excited the wonder and admiration of Pausanias, although they had been already painted six hundred years when he saw them. Polygnotus has been termed the Michael Angelo of antiquity. From the method adopted by Pausanias in describing these pictures, their composition has been generally condemned. It is, however, by no means certain that they were not a series of pictures painted upon panels of wood, and inserted into the wall, according to the ancient practice; but, even supposing them to have been distinct groups painted upon the walls themselves, as they have been treated by the brothers Riepenhausen,² their composition should not be hastily condemned.

The painting of the destruction of Troy (and the other was similar in style) seems to have contained three rows of figures, with the names of each written near them, in distinct groups, covering the whole wall, each telling its own story, but all contributing to relate the tale of the destruction of Troy. It is evident, from this description, that we cannot decide upon either the merits or the demerits of the composition, from the principles of art which guide the rules of composition of modern times. Neither perspective nor composition, as a whole, are to be expected in such works as these, for they did not constitute single compositions, nor was any unity of time or action aimed at; they were painted histories, and each group was no farther connected with its contiguous groups, than that they all tended to illustrate different facts of the same story.

The style of Polygnotus was strictly ethic, for his whole art seems to have been employed in illustrating the human character; and that he did it well, the surname of *Ethograph* (*Ἠθογράφος*), given to him by Aristotle and others, sufficiently testifies. His principles of imitation may be defined to be those of individual representation, independently of any accidental combination of accessories; neither the picturesque, nor a general and indiscriminate picture of nature, formed any part of the art of Polygnotus or of the period. Whatever, therefore, was not absolutely necessary to illustrate the principal object, was indicated merely by a symbol: two or three warriors represented an army, a single hut an encampment, a ship a fleet, and a single house a city; and, generally, the laws of basso-relievo appear to have been the laws of painting, and both were still, to a great extent, subservient to architecture.

The principal contemporaries of Polygnotus were Dionysius of Colophon, Plistænetus and Panæus of Athens, brothers of Phidias, and Micon, also of Athens.

Dionysius was apparently an excellent portrait

painter, the Holbein of antiquity; for, besides the testimony of Aristotle, quoted above, Plutarch¹ remarks, that the works of Dionysius wanted neither force nor spirit, but that they had the appearance of being too much laboured. Polygnotus also painted portraits, for Plutarch² mentions that he painted his mistress Elpinice, the sister of Cimon, as Laodice, in a picture in the Πικίλη στοά, or Pœcile at Athens, which received its name from the paintings of Polygnotus, Micon, Panæus, and others, executed in the periods of Cimon and Pericles; this colonnade was previously called στοά Πεισιανάκτιος.³ What these paintings were we learn from Pausanias,⁴ viz., the battle of the Athenians and Spartans at Cænæ; the painter of this piece is not known, but it was probably Plistænus, who is mentioned by Plutarch⁵ as a famous battle painter; the battle of Theseus and the Athenians with the Amazons, by Micon;⁶ the battle of Marathon, by Panæus;⁷ and the rape of Cassandra, &c., by Polygnotus.⁸ These paintings, after adorning the Pœcile for about eight centuries, were removed from Athens in the time of Arcadius.⁹ Raoul Rochette infers from this that they were upon panels.

Panæus is termed by Strabo¹⁰ the nephew of Phidias: he assisted Phidias in decorating the statue and throne of the Olympian Jupiter. Micon was particularly distinguished for the skill with which he painted horses. Ælian¹¹ relates that he was once ridiculed by a certain Simon, skilled in such matters, for having painted eyelashes to the under eyelids of one of his horses—a critical nicety scarcely to have been expected in so early an age.

Prize contests, also, were already established, in this early period, at Corinth and at Delphi. Pliny¹² mentions that Panæus was defeated in one of these at the Pythian games, by Timagoras of Chalcis, who himself celebrated his own victory in verse.

The remarks of Quintilian¹³ respecting the style of this period are very curious and interesting, although they do not accord entirely with the testimonies from Greek writers quoted above. He says that, notwithstanding the simple colouring of Polygnotus, which was little more than a rude foundation of what was afterward accomplished, there were those who even preferred his style to the styles of the greatest painters who succeeded him; not, as Quintilian thinks, without a certain degree of affectation.

XII. Establishment of Painting. Dramatic Style.

In the succeeding generation, about 420 B.C., through the efforts of Apollodorus of Athens and Zeuxis of Heraclea, dramatic effect was added to the essential style of Polygnotus, causing an epoch in the art of painting, which henceforth comprehended a unity of sentiment and action, and the imitation of the local and accidental appearances of objects, combined with the historic and generic representations of Polygnotus. The contemporaries of Apollodorus and Zeuxis, and those who carried out their principles, were Parrhasius of Ephesus, Eupompus of Sicyon, and Timanthes of Cythnus, all painters of the greatest fame. Athens and Sicyon were the principal seats of the art at this period.

Apollodorus, says Plutarch,¹⁴ invented *tonē* (ῥοπήν καὶ ἀποχρῶσιν σκιᾶς), which is well defined by Fuseli¹⁵ as “the element of the ancient Ἀρμολογία, that imperceptible transition which, without opacity, confusion, or hardness, united local colour, demitint,

shade, and reflexes.” This must, however, not be altogether denied to the earlier painters; for Plutarch himself¹ attributes the same property to the works of Dionysius (ἰσχυρὸν ἐχόντα καὶ τόνον), though in a less degree. The distinction is, that what in the works of Dionysius was really merely a gradation of *light and shade*, or gradual diminution of light, was in those of Apollodorus a gradation *also of tints*, the tint gradually changing according to the degree of light. The former was termed *τόνος*, the latter *ἀρμολογία*; but the English term *tone*, when applied to a coloured picture, comprehends both; it is equivalent to the “splendor” of Pliny.²

Apollodorus first painted men and things as they really appeared; this is what Pliny³ means by “*Hic primus species exprimere instituit.*” The rich effect of the combination of light and shade with colour is also clearly expressed in the words which follow: “*primusque gloriam penicillo jure contulit;*” also, “*neque ante eum tabula ullius ostenditur, quæ teneat oculos.*” We may almost imagine the works of a Rembrandt to be spoken of; his pictures riveted the eye. Through this striking quality of his works, he was surnamed the *shadower*, σκιαγράφος.⁴ He was in the habit of writing upon his works, “It is easier to find fault than to imitate,” μωρὴν εἶναι τὴν μάλλον ἢ μὴ εἶναι,⁵ which Pliny⁶ relates of Zeuxis.

Zeuxis combined a certain degree of ideal form with the rich effect of Apollodorus. Quintilian⁷ says that he followed Homer, and was pleased with powerful forms even in women. Cicero⁸ also praises his design. Zeuxis painted many celebrated works, but the Helen of Croton, which was painted from five of the most beautiful virgins in the city, was the most renowned, and under which he inscribed three verses⁹ in the third book of the Iliad.¹⁰ Stobæus¹¹ relates an anecdote of the painter Nicomachus and this Helen, where the painter is reported to have observed to one who did not understand why the picture was so much admired, “Take my eyes, and you will see a goddess.” We learn from another anecdote, recorded by Plutarch,¹² that Zeuxis painted very slowly.

Parrhasius is spoken of by ancient writers in terms of the very highest praise. He appears to have combined the magic tone of Apollodorus and the exquisite design of Zeuxis with the classic invention and expression of Polygnotus; and he so circumscribed all the powers and ends of art, says Quintilian,¹³ that he was called the “Legislator.” He was himself not less aware of his ability, for he termed himself the prince of painters (Ἐλλήνων πρῶτα φέροντα τέχνης¹⁴). He was, says Pliny,¹⁵ the most insolent and most arrogant of artists.

Timanthes of Cythnus or Sicyon was distinguished for invention and expression; the particular charm of his invention was, that he left much to be supplied by the spectator's own fancy; and, although his productions were always admirable works of art, still the execution was surpassed by the invention. As an instance of the ingenuity of his invention, Pliny¹⁶ mentions a sleeping Cyclops that he painted upon a small panel, yet conveyed an idea of his gigantic form by means of some small satyrs, who were painted measuring his thumb with a thyrsus. He was celebrated also for a picture of the sacrifice of Iphigenia. (See the admirable remarks of Fuseli upon this picture, *Lecture i.*) Timanthes defeated Parrhasius in a professional contest, in which the subject was the

combat of Ulysses and Ajax for the arms of Achilles.¹

Eupompus of Sicily was the founder of the celebrated Sicilian school of painting which was afterward established by Pamphilus. Such was the influence of Eupompus's style, that he added a third, the Sicilian, to the only two distinct styles of painting then recognised, the Hellenic or Grecian and the Asiatic, but subsequently to Eupompus distinguished as the Attic and the Ionic; which, with his own style, the Sicilian, henceforth constituted the three characteristic styles of Grecian painting.² We may judge, from the advice which Eupompus gave Lysippus, that the predominant characteristic of this style was individuality; for upon being consulted by Lysippus whom of his predecessors he should imitate, he is reported to have said, pointing to the surrounding crowd, "Let nature be your model, not an artist."³ This celebrated maxim, which eventually had so much influence upon the arts of Greece, was the first professed deviation from the principles of the generic style of Polygnotus and Phidias.

XIII. *Period of Refinement.*—The art of this period, which has been termed the Alexandrian, because the most celebrated artists of this period lived about the time of Alexander the Great, was the last of progression or acquisition; but it only added variety of effect to the tones it could not improve, and was principally characterized by the diversity of the styles of so many contemporary artists. The decadence of the art immediately succeeded; the necessary consequence, when, instead of excellence, variety and originality became the end of the artist. "*Floruit circa Philippum, et usque ad successores Alexandri,*" says Quintilian,⁴ "*pictura precipue, sed diversis virtutibus;*" and he then enumerates some of the principal painters of this time, with the excellences for which each was distinguished. Protogenes was distinguished for high finish; Pamphilus and Melanthius for composition; Antiphilus for facility; Theon of Samos for his prolific fancy; and for grace Apelles was unrivalled; Euphranor was in all things excellent; Pausias and Nicias were remarkable for chiaroscuro of various kinds; Nicomachus was celebrated for a bold and rapid pencil; and his brother Aristides surpassed all in the depth of expression. There were also other painters of great celebrity during this period: Philoxenus of Eretria, Asclepiodorus of Athens, Athenion of Maronea, Echion, Cydias, Philochares, Theonnestus, Pyreicus, &c.

This general revolution in the theories and practice of painting appears to have been greatly owing to the principles taught by Eupompus at Sicily. Pamphilus of Amphipolis succeeded Eupompus in the school of Sicily, which from that time became the most celebrated school of art in Greece. Pamphilus had the reputation of being the most scientific artist of his time; and such was his authority, says Pliny,⁵ that chiefly through his influence, first in Sicily, then throughout all Greece, noble youths were taught the art of drawing before all others. "*Graphice, hoc est, pictura in buxo,*" that is, drawing, in which the elementary process consisted in drawing lines or outlines with the graphis upon tablets of box; the first exercise was probably to draw a simple line (*Γραμμήν ἐλκύσαι*).⁶ It was considered among the first of liberal arts, and was practised exclusively by the freeborn, for there was a special edict prohibiting slaves from exercising it. The course of study in this school occupied ten years, and the fee of admission was an At-

tatic talent: Pliny mentions that Apelles and Melanthius both paid this fee. Apelles studied under Ephorus of Ephesus before he became the pupil of Pamphilus: Pausias also studied encaustic under Pamphilus. The course of study comprehended instruction in drawing, arithmetic, geometry, anatomy, and painting in all its branches. Pamphilus was the first painter, says Pliny, who was skilled in all the sciences, particularly arithmetic and geometry, without which he denied that art could be perfected. By these sciences, as applied to painting, we must probably understand those principles of proportion and motion which can be reduced to rule: by arithmetic, the system of the construction and the proportions of the parts of the human body; by geometry, perspective, and the laws of motion, that is, so much of them as is necessary to give a correct representation of, and a proper balance to, the figure. Pamphilus seems to have painted but few pictures, but they were all conspicuous for beauty of composition.

Nicomachus of Thebes was, according to Pliny,¹ the most rapid painter of his time; but he was as conspicuous for the force and power of his pencil as for its rapidity; Plutarch² compares his paintings with the verses of Homer. Nicomachus had many scholars, of whom Philoxenus of Eretria was celebrated as a painter of battles; a battle of Alexander and Darius by him, is mentioned by Pliny³ as one of the most celebrated paintings of antiquity; but they were all surpassed by his own brother Aristides, who appears to have been the greatest master of expression among the Greeks. We must, however, apply some modification to the expression of Pliny,⁴ that Aristides first painted the mind and expressed the feelings and passions of man, since *ἦθη*, as it is explained by Pliny in this passage, cannot be denied to Polygnotus, Apollodorus, Parrhasius, Timanthes, and many others.

The picture of Aristides, which represented an infant at the breast of its wounded and dying mother at the sack of a city, was one of the most celebrated paintings of the ancients. It was remarkable for the expression of the agony of the mother lest the child should suck blood instead of milk from her failing breast. It was sent by Alexander to Pella.⁵

The works of Aristides were in such repute, that Attalus, king of Pergamus, gave a hundred talents for only one of his pictures. This was nearly two centuries after his death; but he also received great prices himself. Pliny mentions that a certain Mnason, tyrant of Elatea, paid him for a battle of the Persians, in which were a hundred figures (most probably of a small size), at the rate of ten minæ for each figure. The same prince, who appears to have been a great patron of the arts, gave Asclepiodorus, for pictures of the twelve gods, 300 minæ each; and he gave also to Theonnestus (otherwise unknown) for every picture of a hero, 100 minæ. Asclepiodorus was a native of Athens; he was celebrated for composition or grouping; Plutarch⁶ classes him with Euphranor and Nicias.

Pausias of Sicily painted in encaustic with the cestrum, and seems to have surpassed all others in this method of painting; Pliny⁷ terms him "*primus in hoc genere nobilis,*" from which it would appear that he either distinguished himself earlier than Euphranor or Nicias, who both excelled in this style; he was, however, the pupil of Pamphilus and the contemporary of Apelles. Pausias was conspicuous for a bold and powerful effect of light and shade, which he enhanced by contrasts and strong foreshortenings. A large picture of a sacrifice of a

1. (Ælian, l. c.—Plin., l. c.)—2. (Plin., xxxv., 36, § 7.)—3. (Plin., xxxiv., 19, § 6.)—4. (l. c.)—5. (xxxv., 36.)—6. (Pollux, Onom., vii., 128.)

bull, of this description, was very celebrated; he painted a black bull upon a light ground; the animal was powerfully foreshortened, and its shadow was thrown upon a part of the surrounding crowd, by which a remarkable effect was produced.¹

Apelles was a native of Ephesus or of Colophon,² according to the general testimony of Greek writers, although Pliny³ terms him of Cos. Pliny asserts that he surpassed all who either preceded or succeeded him; the quality, however, in which he surpassed all other painters will scarcely bear a definition; it has been termed grace, elegance, beauty, *χάρις*, *venustas*. Fuseli⁴ defines the style of Apelles thus: "His great prerogative consisted more in the union than the extent of his powers; he knew better what he could do, what ought to be done, at what point he could arrive, and what lay beyond his reach, than any other artist. Grace of conception and refinement of taste were his elements, and went hand in hand with grace of execution and taste in finish; powerful and seldom possessed singly, irresistible when united."

The most celebrated work of Apelles was perhaps his Venus Anadyomene, Venus rising out of the waters.⁵

"In Veneris tabula summam sibi ponit Apelles."

The beautiful goddess was represented squeezing the water with her fingers from her hair, and her only veil was the silver shower which fell from her shining locks. Ovid elegantly alludes to it in the following lines.⁶

"Sic madidos siccant digitis Venus uola capillos,
Et modo maternis tectis videtur aquis."

So great, indeed, was the admiration of the ancients for this picture, that, according to the same poet,⁷ Venus chiefly owed to it her great reputation for beauty.

"Si Venerem Cous nunquam pinxisset Apelles,
Mersa sub æquoreis illa lateret aquis."

Apelles excelled in portrait, and, indeed, all his works appear to have been portraits in an extended sense; for his pictures, both historical and allegorical, consisted nearly all of single figures. He enjoyed the exclusive privilege of painting the portraits of Alexander.⁸ One of these, which represented Alexander wielding the thunder-bolts of Jupiter, termed the Alexander *Κεραυνόφορος*, so pleased the monarch that he ordered twenty talents of gold to be given to him. Plutarch⁹ says that this picture was the origin of the saying that there were two Alexanders, the one of Philip the invincible, the other of Apelles the inimitable. It appears to have been a master-piece of effect; the hand and lightning, says Pliny, seemed to start from the picture; and Plutarch¹⁰ informs us that the complexion was browner than Alexander's, thus making a finer contrast with the fire in his hand, which apparently constituted the light of the picture. Pliny¹¹ tells us that Apelles glazed his pictures in a manner peculiar to himself, and in which no one could imitate him. When his works were finished, he covered them with a dark transparent varnish (most probably containing asphaltum), which had a remarkable effect in harmonizing and toning the colours, and in giving brilliancy to the shadows. Sir J. Reynolds discovered in this account of Pliny "an artist-like description of the effect of glazing or scumbling, such as was practised by Titian and the rest of the Venetian painters."¹² There is a valuable though incidental remark in Cicero¹³ relating to the

colouring of Apelles, where he says that the tints of the Venus Anadyomene were not blood, but a resemblance of blood. The females, and the pictures generally, of Apelles, were most probably simple and unadorned: their absolute merits, and not their effect, constituting their chief attraction. Clemens Alexandrinus¹⁴ has preserved a memorable reproof of Apelles to one of his scholars, who, in a picture of Helen, had been lavish of ornament: "Youth, since you could not paint her beautiful, you have made her rich."

Protagenes of Canus, a contemporary of Apelles, was both statuary and painter; he was remarkable for the high finish of his works. Petronius¹⁵ remarks, that the excessive detail and finish of the works of Protagenes, vying with nature itself, inspired him with a certain feeling of horror ("non sine quodam horrore tractavi"). His most celebrated work was his figure of Ialysus with his dog; Pliny¹⁶ and Plutarch¹⁷ both mention that Protagenes was occupied seven years with this picture; and Pliny says he painted it over four times ("*huc picturæ quater colorem induxit*"); from which it would appear that the way in which the ancients imbodied their colours in their pictures can have differed little, if at all, from the manner practised by the majority of the artists of the modern schools of painting. The four times of Protagenes most probably were the dead colouring, a first and a second painting, and, lastly, scumbling with glazing. Plutarch¹⁸ says that when Apelles saw this picture, he was at first speechless with astonishment, but presently remarked that it was a great and a wonderful work, but that it was deficient in those graces for which his own pictures were so famous.

Euphranor the Isthmian was celebrated equally as painter and statuary; he was, says Pliny,¹⁹ in all things excellent, and at all times equal to himself. He was distinguished for a peculiarity of style of design; he was fond of a muscular limb, and adopted a more decided anatomical display generally, but he kept the body light in proportion to the head and limbs. Pliny says that Euphranor first represented heroes with dignity. Parrhasius was said to have established the canon of art for heroes; but the heroes of Parrhasius were apparently more divine, those of Euphranor more human. We have examples of both these styles in the Apollo and the Laocoön, and in the Melæger and the Gladiator, or the Antinous and the Discobolus. It was to this distinction of style which Euphranor apparently alluded when he said that the Theseus of Parrhasius had been fed upon roses, but his own upon beef.²⁰ Euphranor painted in encaustic, and executed many famous works; the principal were, a battle of Mantinea, and a picture of the twelve gods.²¹

Nicias of Athens was celebrated for the delicacy with which he painted females, and for the rich tone of chiaroscuro which distinguished his paintings. He also painted in encaustic. His most celebrated work was the *νεκρία*, or the region of the shades of Homer (*necromantia* Homeri), which he declined to sell to Ptolemy I. of Egypt, who had offered sixty talents for it, and preferred presenting to his native city, Athens, as he was then sufficiently wealthy. Nicias also painted some of the marble statues of Praxiteles.²²

Athenion of Maronea, who painted also in encaustic, was, according to Pliny,²³ compared with, and even preferred by some to, Nicias; he was more austere in colouring, but in his austerity more pleas-

ing; and if he had not died young, says Pliny, he would have surpassed all men in painting. He appears to have looked upon colours as a mere means, to have neglected pictorial effect, and, retaining individuality, and much of the refinement of design of his contemporaries, to have endeavoured to combine them with the generic style of Polygnotus and Phidias (*ut in ipsa pictura eruditio eluceat*). His picture of a groom with a horse is mentioned by Pliny as a remarkable painting.

Philochares, the brother of the orator Æschines, was also a painter of the greatest merit, according to Pliny,¹ although he is contemptuously termed by Demosthenes² "a painter of perfume-pots and tambours" (*ὑλαστροθήκας καὶ τύμπανα*).

Echion also, of uncertain country, is mentioned by Cicero³ and Pliny⁴ as a famous painter. Pliny speaks of a picture of a bride by him as a noble painting, distinguished for its expression of modesty. A great compliment is also incidentally paid to the works of Echion by Cicero,⁵ where he is apparently ranked with Polycleetus.

Theon of Samos was distinguished for what the Greeks termed *φαντασία*, according to Quintilian,⁶ who also ranks him with painters of the highest class. Pliny,⁷ however, classes him with those of the second degree. Ælian gives a spirited description of a young warrior painted by Theon.⁸

XIV. *Decline*.—The causes of the decline of painting in Greece are very evident. The political revolutions with which it was convulsed, and the various dynastic changes which took place after the death of Alexander, were perhaps the principal obstacles to any important efforts of art; the intelligent and higher classes of the population, upon whom painters chiefly depend, being to a great extent engrossed by politics or engaged in war. Another influential cause was, that the public buildings were already rich in works of art, almost even to the exhaustion of the national mythology and history; and the new rulers found the transfer of works already renowned a more sure and a more expeditious method of adorning their public halls and palaces, than the more tardy and hazardous alternative of requiring original productions from contemporary artists.

The consequence was, that the artists of those times were under the necessity of trying other fields of art; of attracting attention by novelty and variety: thus rhyparography (*ῥυπαρογραφία*), pornography, and all the lower classes of art, attained the ascendancy, and became the characteristic styles of the period. Yet, during the early part of this period of decline, from about B.C. 300 until the destruction of Corinth by Mummius, B.C. 146, there were still several names which upheld the ancient glory of Grecian painting; but subsequent to the conquest of Greece by the Romans, what was previously but a gradual and scarcely sensible decline, then became a rapid and a total decay.

In the lower descriptions of painting which prevailed in this period, Pyreicus was pre-eminent; he was termed Rhyparographos (*ῥυπαρογράφος*), on account of the mean quality of his subjects. He belonged to the class of genre-painters, or "peintres du genre bas," as the French term them. The Greek *ῥυπαρογραφία*, therefore, is apparently equivalent to our expression, the Dutch style. Pyreicus,⁹ says Pliny, painted barbers' shops and cobblers' stalls, shell-fish, eatables of all sorts, and the like; and, although an humble walk, he excelled so greatly that he obtained the highest fame; and his small pictures were more valuable than the greatest works of many masters; in execution, few surpassed him.

"Pyreicus parva vindicat arte locum,"

says Propertius¹ (*Pyreicus* is the emendation of Welcker² on the authority of Cod. Vat., I., iv. With the common reading, Parrhasius, the line is unintelligible.) Pornography, or obscene painting, which in the time of the Romans was practised with the grossest license,³ prevailed especially at no particular period in Greece, but was apparently tolerated to a considerable extent at all times. Parrhasius, Aristides, Pausanias, Nicophanes, Chærephanes, Arellius, and a few other *παρνογράφοι* are mentioned as having made themselves notorious for this species of license.⁴

Of the few painters who still maintained the dignity of the dying art, the following may be mentioned: Mydon of Soli; Neales, Leontiscus, and Timanthes of Sicily; Arcesilaus, Erigonus, and Papias, of uncertain country; and Metrodorus of Athens, equally eminent as painter and as philosopher. The school of Sicily, to which the majority of the distinguished painters of this period belonged, is expressly mentioned by Plutarch⁵ as the only one which still retained any traces of the purity and the greatness of style of the art of the renowned ages. It appears to have been still active in the time of Aratus, about 250 B.C., who seems to have instilled some of his own enterprising spirit into the artists of his time. Aratus was a great lover of the arts, but this did not hinder him from destroying the portraits of the Tyrants of Sicily; one only, and that but partially, was saved.⁶

It was already the fashion in this age to talk of the inimitable works of the great masters; and the artists generally, instead of exerting themselves to imitate the master-pieces of past ages, seem to have been content to admire them. All works bearing great names were of the very highest value, and were sold at enormous prices. Plutarch mentions that Aratus bought up some old pictures, but particularly those of Melanthus and Pamphilus, and sent them as presents to Ptolemy III. of Egypt, to conciliate his favour, and to induce him to join the Achæan league. Ptolemy, who was a great admirer of the arts, was gratified with these presents, and presented Aratus with 150 talents in consideration of them.⁷ These were, however, by no means the first works of the great painters of Greece which had found their way into Egypt. Ptolemy Soter had employed agents in Greece to purchase the works of celebrated masters.⁸ Athenæus also⁹ expressly mentions the pictures of Sicilyan masters which contributed to add to the pomp and display of the celebrated festival of Ptolemy Philadelphus at Alexandria.

From the time of Alexander the spirit of the Greeks animated Egyptian artists, who adopted the standard of Grecian beauty in proportion and character. Antiphius, one of the most celebrated painters of antiquity, was a native of Egypt, perhaps of Naucratis, and appears to have lived at the court of Ptolemy Soter. Many other Greek painters also were established in Egypt, and both the population and arts of Alexandria were more Greek than Egyptian.¹⁰

Among the most remarkable productions of this period were the celebrated ship of Hiero II. of Syracuse, which had Mosaic floors, in which the whole history of the fall of Troy was worked with admirable skill,¹¹ and the immense ship of Ptolemy Philopator, on the prow and stern of which were carved

colossal figures eighteen feet in height; and the whole vessel, both interior and exterior, was decorated with painting of various descriptions.¹

Nearly a century later than Aratus we have still mention of two painters at Athens of more than ordinary distinction, Heracleides a Macedonian, and Metrodorus an Athenian. The names of several painters, however, of these times are preserved in Pliny, but he notices them only in a cursory manner. When Paulus Æmilius had conquered Perseus, B.C. 168, he commanded the Athenians to send him their most distinguished painter to perpetuate his triumph, and their most approved philosopher to educate his sons. The Athenians selected Metrodorus the painter, professing that he was pre-eminent in both respects. Heracleides was a Macedonian, and originally a ship-painter; he repaired to Athens after the defeat of Perseus.² Plutarch, in his description of the triumph of Paulus Æmilius,³ says that the paintings and statues brought by him from Greece were so numerous that they required 250 wagons to carry them in procession, and that the spectacle lasted the entire day. P. Æmilius appears at all times to have been a great admirer of the arts, for Plutarch⁴ mentions that after his first consulship he took especial care to have his sons educated in the arts of Greece, and, among others, in painting and sculpture, and that he accordingly entertained masters of those arts (*παιδῶν καὶ ζωγράφων*) in his family; from which it is evident that the migration of Greek artists to Rome had already commenced before the general spoiliations of Greece. Indeed, Livy⁵ expressly mentions that many artists came from Greece to Rome upon the occasion of the ten days' games appointed by Fulvius Nobilior, B.C. 186. But Rome must have had its Greek painters even before this time; for the picture of the feast of Gracchus's soldiers after the battle of Beneventum, consecrated by him in the Temple of Liberty on the Aventine, B.C. 213,⁶ was in all probability the work of a Greek artist.

The system adopted by the Romans of plundering Greece of its works of art, reprobated by Polybius,⁷ was not without a precedent. The Carthaginians before them had plundered all the coast towns of Sicily, and the Persians, and even the Macedonians, carried off all works of art as the lawful prize of conquest.⁸ The Roman conquerors, however, at first plundered with a certain degree of moderation;⁹ as Marcellus at Syracuse, and Fabius Maximus at Tarentum, who carried away no more works of art than were necessary to adorn their triumphs or decorate some of the public buildings.¹⁰ The works of Greek art brought from Sicily by Marcellus were the first to inspire the Romans with the desire of adorning their public edifices with statues and paintings; which taste was converted into a passion when they became acquainted with the great treasures and almost inexhaustible resources of Greece, and their rapacity knew no bounds. Plutarch says that Marcellus¹¹ was accused of having corrupted the public morals through the introduction of works of art into Rome, since from that period the people wasted much of their time in disputing about arts and artists. But Marcellus gloried in the fact, and boasted, even before Greeks, that he was the first to teach the Romans to esteem and to admire the exquisite productions of Greek art. We learn from Livy¹² that one of the ornaments of the triumph of Marcellus, 214 B.C., was a picture of the capture of Syracuse.

These spoiliations of Greece, of the Grecian kingdoms of Asia, and of Sicily, continued uninterrupted for about two centuries; yet, according to Mucianus, says Pliny,¹ such was the inconceivable wealth of Greece in works of art, that Rhodes alone still contained upward of 3000 statues, and that there could not have been less at Athens, at Olympia, or at Delphi. The men who contributed principally to fill the public edifices and temples of Rome with the works of Grecian art, were Cn. Manlius, Fulvius Nobilior, who plundered the temples of Ambracia,² Mummius, Sulla, Lucullus, Scæurus, and Verres.³

Mummius, after the destruction of Corinth, B.C. 146, carried off or destroyed more works of art than all his predecessors put together. Some of his soldiers were found by Polybius playing at dice upon the celebrated picture of Dionysius by Aristides.⁴ Many valuable works, also, were purchased on this occasion by Attalus III., and sent to Pergamum; but they all found their way to Rome on his death, B.C. 133, as he bequeathed all his property to the Roman people.⁵ Scæurus, in his ædileship, B.C. 58, had all the public pictures still remaining in Sicily transported to Rome on account of the debts of the former city, and he adorned the great temporary theatre which he erected upon that occasion with 3000 bronze statues.⁶ Verres ransacked Asia and Achaia, and plundered almost every temple and public edifice in Sicily of whatever was valuable in it. Among the numerous robberies of Verres, Cicero⁷ mentions particularly twenty-seven beautiful pictures taken from the Temple of Minerva at Syracuse, consisting of portraits of the kings and tyrants of Sicily.

From the destruction of Corinth by Mummius, and the spoliation of Athens by Sulla, the higher branches of art, especially in painting, experienced so sensible a decay in Greece, that only two painters are mentioned who can be classed with the great masters of former times: Timomachus of Byzantium, contemporary with Cæsar,⁸ and Aëtion, mentioned by Lucian,⁹ who lived apparently about the time of Hadrian.¹⁰ Yet Rome was, about the end of the Republic, full of painters, who appear, however, to have been chiefly occupied in portrait, or decorative and arabesque painting: painters must also have been very numerous in Egypt and in Asia. Paintings of various descriptions still continued to perform a conspicuous part in the triumphs of the Roman conquerors. In the triumph of Pompey over Mithradates, the portraits of the children and family of that monarch were carried in the procession;¹¹ and in one of Cæsar's triumphs, the portraits of his principal enemies in the civil war were displayed, with the exception of that of Pompey.¹²

The school of art at Rhodes appears to have been the only one that had experienced no great change, for works of the highest class in sculpture were still produced there. The course of painting seems to have been much more capricious than that of sculpture, in which master-pieces, exhibiting various beauties, appear to have been produced in nearly every age from Phidias to Hadrian. A decided decay in painting, on the other hand, is repeatedly acknowledged in the later Greek and in the best Roman writers. One of the causes of this decay may be, that the highest excellence in painting requires the combination of a much greater variety of qualities; whereas invention and design,

(Id., De Bell. Civ. ii., 101.)

identical in both arts, are the sole elements of sculpture. Painters, also, are addicted to the pernicious, though lucrative practice of dashing off or despatching their works, from which sculptors, from the very nature of their materials, are exempt: to paint quickly was all that was required from some of the Roman painters.¹ Works in sculpture, also, through the durability of their material, are more easily preserved than paintings, and they serve, therefore, as models and incentives to the artists of after ages. Artists, therefore, who may have had ability to excel in sculpture, would naturally choose that art in preference to painting. It is only thus that we can account for the production of such works as the Antinous, the Laocoon, the Torso of Apollonius, and many others of surpassing excellence, at a period when the art of painting was comparatively extinct, or, at least, principally practised as mere decorative colouring, such as the majority of the paintings at Rome, Herculaneum, and Pompeii, now extant; though it must be remembered that these were the inferior works of an inferior age.

XV. *Roman Painting*.—The early painting of Italy and Magna Græcia has been already noticed, and we know nothing of Roman painting independent of that of Greece, though Pliny² tells us that it was cultivated at an early period by the Romans. The head of the noble house of the Fabii received the surname of Pictor, which remained in his family, through some paintings which he executed in the Temple of Salus at Rome, B.C. 304, which lasted until the time of the Emperor Claudius, when they were destroyed by the fire that consumed that temple. Pacuvius also, the tragic poet, and nephew of Ennius, distinguished himself by some paintings in the Temple of Hercules, in the Forum Boarium, about 180 B.C. Afterward, says Pliny,³ painting was not practised by *polite hands* (*honestis manibus*) among the Romans, except, perhaps, in the case of Turpilius, a Roman knight of his own times, who executed some beautiful works with his left hand at Verona. Yet Quintus Pedius, nephew of Q. Pedius, coheir of Cæsar with Augustus, was instructed in painting, and became a great proficient in the art, though he died when young. Antistius Labeo also amused himself with painting small pictures.

Julius Cæsar, Agrippa, and Augustus were among the earliest great patrons of artists. Suetonius⁴ informs us that Cæsar expended great sums in the purchase of pictures by the old masters; and Pliny⁵ mentions that he gave as much as 80 talents for two pictures by his contemporary Timomachus of Byzantium, one an Ajax, and the other a Medea meditating the murder of her children. These pictures, which were painted in encaustic, were very celebrated works; they are alluded to by Ovid,⁶ and are mentioned by many other ancient writers.

There are two circumstances connected with the earlier history of painting in Rome which deserve mention. One is recorded by Livy,⁷ who informs us that the consul Tib. Sempronius Gracchus dedicated in the Temple of Mater Matuta, upon his return from Sardinia, B.C. 174, a picture of apparently a singular description; it consisted of a plan of the island of Sardinia, with representations of various battles he had fought there painted upon it. The other is mentioned by Pliny,⁸ who says that Lucius Hostilius Mancinus, B.C. 147, exposed to view in the Forum a picture of the taking of Carthage, in which he had performed a conspicuous part, and explained its various incidents to the peo-

ple. Whether these pictures were the productions of Greek or Roman artists, is doubtful; nor have we any guide as to their rank as works of art.

The Romans generally have not the slightest claims to the merit of having promoted the fine arts. We have seen that, before the spoiliations of Greece and Sicily, the arts were held in no consideration in Rome; and even afterward, until the time of the emperors, painting and sculpture seem to have been practised very rarely by Romans; and the works which were then produced were chiefly characterized by their bad taste, being mere military records and gaudy displays of colour, although the city was crowded with the finest productions of ancient Greece.

There are three distinct periods observable in the history of painting in Rome. The first, or great period of Græco-Roman art, may be dated from the conquest of Greece until the time of Augustus, when the artists were chiefly Greeks. The second, from the time of Augustus to the so-called Thirty Tyrants and Dioclesian, or from the beginning of the Christian era until about the latter end of the third century, during which time the great majority of Roman works of art were produced. The third comprehends the state of the arts during the exarchate; when Rome, in consequence of the foundation of Constantinople, and the changes it involved, suffered similar spoiliations to those which it had previously inflicted upon Greece. This was the period of the total decay of the imitative arts among the ancients.

The establishment of Christianity, the division of the Empire, and the incursions of barbarians, were the first great causes of the important revolution experienced by the imitative arts, and the serious check they received; but it was reserved for the fanatic fury of the iconoclasts effectually to destroy all traces of their former splendour.

Of the first of these three periods sufficient has been already said; of the second there remain still a few observations to be made. About the beginning of the second period is the earliest age in which we have any notice of portrait-painters (*imaginum pictores*) as a distinct class. Pliny mentions particularly Dionysius and Sopolis as the most celebrated at about the time of Augustus, or perhaps earlier, who filled picture-galleries with their works; the former was surnamed the anthropograph, because he painted nothing but men. About the same age, also, Lala of Cyzicus was very celebrated; she painted, however, chiefly female portraits, but received greater prices than the other two.¹

Portraits must have been exceedingly numerous among the Romans; Varro made a collection of the portraits of 700 eminent men.² The portraits or statues of men who had performed any public service were placed in the temples and other public places, and several edicts were passed by the emperors of Rome respecting the placing of them.³ The portraits of authors, also, were placed in the public libraries; they were apparently fixed above the cases which contained their writings, below which chairs were placed for the convenience of readers.⁴ They were painted, also, at the beginning of manuscripts.⁵ Respecting the images on wax portraits, which were preserved in "armaria" in the atria of private houses,⁶ there is an interesting account in Polybius.⁷ With the exception of Aetion, as already mentioned, not a single painter of this period rose to eminence, although some were, of course, more distinguished than others; as

1. (Juv., ix., 146.)—2. (II. N., xxxv., 7.)—3. (I. c.)—4. (Jul. Cæs., 47.)—5. (H. N., xxxv., 40.)—6. (Tibull., ii., 525.)—7. (xli., 23.)—8. (II. N., xxxv., 7.)

1. (Plin., H. N., xxxv., 37, 40.)—2. (Plin., H. N., xxxv., 2.)—3. (Sueton., Tib., 26.—Calig., 34.)—4. (Cic. ad Att., iv., 10.—Sueton., Tib., 70.—Calig., 34.)—5. (Martial., xiv., 186.)—6. (Plin., xxxv., 2.—Senec., De Benef., in., 28.)—7. (vi., 53.)

the profligate Arellius; Fabullus, who painted Nero's golden house; Dorotheus, who copied for Nero the Venus Anadyomene of Apelles; Cornelius Pinus, Accius Priscus, Marcus Ludius, Mallius, and others.¹ Portrait, decorative, and scene painting seem to have engrossed the art. Pliny and Vitruvius regret in strong terms the deplorable state of painting in their times, which was but the commencement of the decay; Vitruvius has devoted an entire chapter² to a lamentation over its fallen state; and Pliny speaks of it as a dying art.³ The latter writer instances,⁴ as a sign of the madness of his time (*nostra ætatis insaniam*), the colossal portrait of Nero, 120 feet high, which was painted upon canvass, a thing unknown till that time.

Marcus Ludius, in the time of Augustus, became very celebrated for his landscape decorations, which were illustrated with figures actively employed in occupations suited to the scenes; which kind of painting became universal after his time, and apparently with every species of license. Vitruvius contrasts the state of decorative painting in his own age with what it was formerly, and he enumerates the various kinds of wall-painting in use among the ancients. They first imitated the arrangement and varieties of slabs of marble, then the variegated frames and cornices of panels, to which were afterward added architectural decorations; and, finally, in the exedrae were painted tragic, comic, or satyric scenes, and in the long galleries and corridors various kinds of landscapes, or even subjects from the poets and the higher walks of history. But these things were in the time of Vitruvius tastelessly laid aside, and had given place to mere gaudy display, or the most fantastic and wild conceptions, such as many of the paintings which have been discovered in Pompeii.

Painting now came to be practised by slaves, and painters, as a body, were held in little or no esteem. Respecting the depraved application of the arts at this period, see Plin., xxxv., 33.—Petron., *Sat.*, 88.—Propert., ii., 6.—Sueton., *Tib.*, 43.—Juven., ix., 145; xii., 28.

Mosaic, or *pictura de musivo*, *opus musivum*, was very general in Rome in the time of the early emperors. It was also common in Greece and Asia Minor at an earlier period, but at the time of which we are now treating it began to a great extent even to supersede painting. It was used chiefly for floors, but walls and also ceilings were sometimes ornamented in the same way.⁵ There were various kinds of mosaic; the *lithostrotata* were distinct from the *pictura de musivo*. There were several kinds of the former, as the *sectile*, the *tessellatum*, and the *vermiculatum*, which are all mechanical and ornamental styles, unapplicable to painting, as they were worked in regular figures. As a general distinction between musivum and lithostrotum, it may be observed, that the picture itself was *de musivo* or *opus musivum*, and its frame, which was often very large and beautiful, was *lithostrotum*. The former was made of various coloured small cubes (*tessera* or *tessella*) of different materials, and the latter of small thin slabs, *crustæ*, of various marbles, &c.; the artists were termed *musivarii* and *quadratarii* or *tessellarii* respectively. Pliny⁶ attributes the origin of mosaic pavements to the Greeks. He mentions the "asarotus oecus" at Pergamum, by Sosos, the most celebrated of the Greek musivarii, the pavement of which represented the remnants of a supper. He mentions, also at Pergamum, the famous Cantharus with the doves, of which the

"Doves of the Capitol" is supposed to be a copy.⁷ Another musivarius of antiquity was Dioscorides of Samos, whose name is found upon two mosaics of Pompeii.⁸ Five others are mentioned by Müller.⁹ There are still many great mosaics of the ancients extant. (See the works of Ciampini, Furietti, and Laborde.) The most interesting and most valuable is the one lately discovered in Pompeii, which is supposed to represent the battle of Issus. This mosaic is certainly one of the most valuable relics of ancient art, and the design and composition of the work are so superior to its execution, that the original has evidently been the production of an age long anterior to the degenerate period of the mosaic itself. The composition is simple, forcible, and beautiful, and the design exhibits in many respects merits of the highest order. (See Nicolini, *Quadro in musaico scoperto in Pompeii*.—Mazois, *Pompéi*, iv., 48 and 49; and Müller, *Denkmäler der alten Kunst*, i., 55.)

PALA (*πάλαιον*), a Spade.⁴ The spade was but little used in ancient husbandry, the ground having been broken and turned over by the plough, and also by the use of large hoes and rakes. (*Vid. LIGŒ, RASTRUM*.) But in some cases a broad cutting edge was necessary for this purpose, as, for example, when the ground was full of the roots of rushes or other plants.⁵ Also in gardening it was an indispensable instrument, and it was then made on the same principle as the ploughshare, viz., by casing its extremity with iron.⁶ The annexed woodcut, taken from a funeral monument at

Rome,⁷ exhibits a deceased countryman with his falx and bidens, and also with a pala, modified by the addition of a strong crossbar, by the use of which he was enabled to drive it nearly twice as deep into the ground as he could have done without it. In this form the instrument was called *bipalium*, being employed in trenching (*pastinatio*), or, when the ground was full of roots to a considerable depth, in loosening them, turning them over, and extirpating them, so as to prepare the soil for planting vines and other trees. By means of this implement, which is still used in Italy, and called *vanga*, the ground was dug to the depth of two spades, or nearly two feet.⁸

Cato⁹ mentions wooden spades (*pala lignea*) among the implements necessary to the husbandman. One principal application of them was in

1 (Plin., H. N., xxxv., 37, &c.)—2. (vii., 5.)—3. (H. N., xxxv., 11.)—4. (xxxv., 33.)—5. (Plin., H. N., xxxvi., 60, 64.—Athenæus, xii., p. 542, d.—Senec., Ep., 86.—Lucan, x., 116.)—6. (H. N., xxxvi., 60.)

winnowing. The winnowing-shovel, also called in Latin *ventilabrum*, is still generally used in Greece, and the mode of employing it is exhibited by Stuart in his "Antiquities of Athens." The corn which has been threshed lies in a heap upon the floor, and the labourer throws it to a distance with his shovel, while the wind, blowing strongly across the direction in which it is thrown, drives the chaff and refuse to one side.¹ The fruit of leguminous plants was purified and adapted to be used for food in the same manner.²

The term *pala* was applied anciently, as it is in modern Italian, to the blade or broad part of an oar. (*Vid. REMUS.*) In a RING, the broad part which held the gem was called by that name.

PALÆSTRĀ (*παλαιστρά*) properly means a place for wrestling (*παλαίειν, πάλη*), and appears to have originally formed a part of the gymnasium. The word was, however, used in different senses at various periods, and its exact meaning, especially in relation to the gymnasium, has occasioned much controversy among modern writers. It first occurs in Herodotus,³ who says that Clisthenes of Sicyon built a dromos and a palæstrā, both of which he calls by the general name of palæstrā. At Athens, however, there was a considerable number of palæstræ quite distinct from the gymnasia, which were called by the names either of their founders, or of the teachers who gave instruction there; thus, for example, we read of the palæstrā of Taureas.⁴ Krause⁵ contends that the palæstrā at Athens were appropriated to the gymnastic exercises of boys and youths (*παῖδες* and *μετράκια*), and the gymnasia to those of men; but Becker⁶ has shown that this cannot be the true distinction, although it appears that certain places were, for obvious reasons, appropriated to the exclusive use of boys.⁷ But that the boys exercised in the gymnasia as well, is plain from many passages⁸ (*ταῖς ὁραίς ὑπὸ γυμνασίου*), while, on the other hand, we read of men visiting the palæstræ.¹⁰

It appears most probable that the palæstræ were, during the flourishing times of the Greek republics, chiefly appropriated to the exercises of wrestling and of the pancratium, and were principally intended for the athlete, who, it must be recollected, were persons that contended in the public games, and therefore needed special training. This is expressly stated by Plutarch,¹¹ who says "that the place in which all the athlete exercise is called a palæstrā;" and we also learn from Pausanias¹² that there were at Olympia palæstræ especially devoted to the athlete. In Athenæus¹³ we read of the great athletes Damippus coming out of the palæstrā; and Galen (*περὶ τοῦ διὰ μικρὰς σφαίρας γυμνασίου*, c. 5) places the athlete in the palæstrā.¹⁴

The Romans had originally no places corresponding to the Greek gymnasia and palæstræ; and when, towards the close of the Republic, wealthy Romans, in imitation of the Greeks, began to build places for exercise in their villas, they called them indifferently *gymnasia* and *palæstræ*.¹⁵ The words were thus used by the Romans as synonymous; and, accordingly, we find that Vitruvius¹⁶ gives a description of a Greek gymnasium under the name of *palæstrā*.

PALE (*πάλη, πάλαισμα, παλαισμός*, or *κτα-δλητική, λυτά, luctatio*), Wrestling. The word *πάλη* is sometimes used in a wider sense, embracing all gymnastic exercises with the exception of dancing, whence the schools of the athlete were called *palæstrā*, that is, schools in which the *πάλη* in its widest sense was taught.¹ (*Vid. PALÆSTRĀ.*) There are also many passages in ancient writers in which *πάλη* and *παλαίειν* are used to designate any particular species of athletic games besides wrestling, or a combination of several games.²

The Greeks ascribed the invention of wrestling to mythical personages, such as Palæstrā, the daughter of Hermes,³ Antæus and Cercyon,⁴ Phorbas of Athens, or Theseus.⁵ Hermes, the god of all gymnastic exercises, also presided over the *πάλη*. Theseus is said by Pausanias⁶ to have been the first who reduced the game of wrestling to certain rules, and to have thus raised it to the rank of an art, whereas before his time it was a rude fight, in which bodily size and strength alone decided the victory. The most celebrated wrestler in the heroic age was Heracles. In the Homeric age wrestling was much practised, and a beautiful description of a wrestling match is given in the Iliad.⁷ During this period wrestlers contended naked, and only the loins were covered with the *περίζωμα*,⁸ and this custom probably remained throughout Greece until Ol. 15, from which time the *perizonia* was no longer used, and wrestlers fought entirely naked.⁹ In the Homeric age, the custom of anointing the body for the purpose of wrestling does not appear to have been known; but in the time of Solon it was quite general, and was said to have been adopted by the Cretans and Lacedæmonians at a very early period.¹⁰ After the body was anointed, it was strewn over with sand or dust, in order to enable the wrestlers to take a firm hold of each other. At the festival of the Sthenia in Argos, the *πάλη* was accompanied by flute-music. (*Vid. STHENIA.*)

When two athlete began their contest, each might use a variety of means to seize his antagonist in the most advantageous manner, and to throw him down without exposing himself;¹¹ but one of the great objects was to make every attack with elegance and beauty, and the fight was for this, as well as for other purposes, regulated by certain laws.¹² Striking, for instance, was not allowed, but pushing an antagonist backward (*ὠθισμός*) was frequently resorted to.¹³ It is probably on account of the laws by which this game was regulated, and the great art which it required in consequence, that Plutarch¹⁴ calls it the *τεχνικώτατον καὶ πανουργώτατον τῶν ἀθλημάτων*. But, notwithstanding these laws, wrestling admitted of greater cunning, and more tricks and stratagems, than any other game, with the exception of the pancratium,¹⁵ and the Greeks had a great many technical terms to express the various stratagems, positions, and attitudes in which wrestlers might be placed. Numerous scenes of wrestlers are represented on ancient works of art.¹⁶ (See woodcut in PANCRA TIUM.)

The contest in wrestling was divided by the ancients into two parts, viz., the *πάλη ὁρῆ* or *ὁρθία* (*ὁρθοστάτην παλαίειν*), that is, the fight of the ath-

etæ as long as they stood upright, and the ἀλίνθη-
 ρις or κύλισις (*lucta volutatoria*), in which the athle-
 tæ struggled with each other while lying on the
 ground. Unless they contrived to rise again, the
 ἀλίνθησις was the last stage of the contest, which
 continued until one of them acknowledged himself
 to be conquered. The πάλη ὁρθή appears to have
 been the only one which was fought in the times of
 Homer, as well as afterward in the great national
 games of the Greeks; and as soon as one athlete
 fell, the other allowed him to rise and continue the
 contest if he still felt inclined.¹ But if the same
 athlete fell thrice, the victory was decided, and he
 was not allowed to go on.² The ἀλίνθησις was only
 fought in later times, at the smaller games, and es-
 pecially in the pancratium. The place where the
 wrestlers contended was generally soft ground, and
 covered with sand.³ Effeminate persons sometimes
 spread large and magnificent carpets on the place
 where they wrestled.⁴ Each of the various tribes
 of the Greeks seems to have shown its peculiar and
 national character in the game of wrestling in some
 particular trick or stratagem, by which it excelled
 the others.

In a dietetic point of view, the ἀλίνθησις was con-
 sidered beneficial to the interior parts of the body,
 the loins, and the lower parts in general, but inju-
 rious to the head, whereas the πάλη ὁρθή was be-
 lieved to act beneficially upon the upper parts of the
 body. It was owing to these salutary effects that
 wrestling was practised in all the gymnasia as well
 as in the palaestra, and that in Ol. 37 wrestling for
 boys was introduced at the Olympic games, and
 soon after in the other great games, and at Athens
 in the Eleusinia, and Thesea also.⁵ The most re-
 nowned of all the Greek wrestlers in the historical
 age was Milon of Croton, whose name was known
 throughout the ancient world.⁶ Other distinguished
 wrestlers are enumerated by Krause,⁷ who has also
 given a very minute account of the game of wrest-
 ling, and everything connected with it, in his *Gym-
 nastik und Agon. d. Hell.*, p. 400-439.

PALILIA, a festival celebrated at Rome every
 year on the 21st of April, in honour of Pales, the
 tutelary divinity of shepherds. Some of the ancient
 writers call this festival *Parilia*, deriving the name
 from *pario*, because sacrifices were offered on that
 day *pro partu pecoris*.⁸ The 21st of April was the
 day on which, according to the early traditions of
 Rome, Romulus had commenced the building of the
 city, so that the festival was at the same time sol-
 emnized as the dies natalis of Rome;⁹ and some
 of the rights customary in later times were said to
 have been first performed by Romulus when he fix-
 ed the pomerium.¹⁰ Ovid¹¹ gives a description of
 the rites of the Palilia, which clearly shows that he
 regarded it as a shepherd-festival, such as it must
 originally have been when the Romans were real
 shepherds and husbandmen, and as it must have
 continued to be among country people in his own
 time, as is expressly stated by Dionysius; for in
 the city itself it must have lost its original charac-
 ter, and have been regarded only as the dies natali-
 tius. The connexion, however, between these two
 characters of the festival is manifest, as the found-
 ers of the city were, as it were, the kings of shep-

herds, and the founders of a religion suited to shep-
 herds.

The first part of the solemnities, as described by
 Ovid, was a public purification by fire and smoke.
 The things burned in order to produce this purify-
 ing smoke were the blood of the *October-horse*, the
 ashes of the calves sacrificed at the festival of Ceres,
 and the shells of beans. The people were also
 sprinkled with water; they washed their hands in
 spring-water, and drank milk mixed with must.¹
 As regards the *October-horse* (*equus October*), it must
 be observed, that in early times no bloody sacrifice
 was allowed to be offered at the Palilia, and the
 blood of the *October-horse*, mentioned above, was
 the blood which had dropped from the tail of the
 horse sacrificed in the month of October to Mars in
 the Campus Martius. This blood was preserved by
 the vestal virgins in the Temple of Vesta, for the
 purpose of being used at the Palilia.² When, to-
 wards the evening, the shepherds had fed their flocks,
 branches of bay were used as brooms for cleaning
 the stables and for sprinkling water through them,
 and, lastly, the stables were adorned with bay
 boughs. Hereupon the shepherds burned sulphur,
 rosemary, fir-wood, and incense, and made the
 smoke pass through the stables to purify them; the
 flocks themselves were likewise purified by this
 smoke. The sacrifices which were offered on this
 day consisted of cakes, millet, milk, and other kinds
 of eatables. The shepherds then offered a prayer
 to Pales. After these solemn rites were over, the
 cheerful part of the festival began: bonfires were
 made of heaps of hay and straw, and under the
 sounds of cymbals and flutes the sheep were again
 purified by being compelled to run three times
 through the fire, and the shepherds themselves did
 the same. The festival was concluded by a feast
 in the open air, at which the people sat or lay upon
 benches of turf, and drank plentifully.³

In the city of Rome the festival must, at least in
 later times, have been celebrated in a different man-
 ner; its character of a shepherd-festival was forgot-
 ten, and it was merely looked upon as the day on
 which Rome had been built, and was celebrated as
 such with great rejoicings.⁴ In the reign of Calig-
 ula, it was decreed that the day on which the em-
 peror had come to the throne should be celebrated
 under the name of Palilia, as if the Empire had
 been revived by him, and had commenced its sec-
 ond existence.⁵ Athenæus⁶ says that before his
 time the name *Pulilia* had been changed into *Ro-
 mana* (Ρωμαία). Whether this change of name was
 occasioned by the decree in the reign of Caligula
 just mentioned, is unknown.⁷

or waste either into four parts¹ or into twelve.² It was, indeed, used in the very form in which it was taken from the loom (*vid.* ΤΕΛΑ), being made entirely by the weaver (*τὸ ἱμάτιον ὀφθαί*), without any aid from the tailor except to repair (*sarcire, ἀκείσθαι*) the injuries which it sustained by time. Although it was often ornamented, more especially among the northern nations of Europe, with a fringe (*vid.* ΦΙΜΒΛΕΑ), yet this was commonly of the same piece with the pall or blanket itself. Also, whatever additional richness and beauty it received from the art of the dyer, was bestowed upon it before its materials were woven into cloth, or even spun into thread. Most commonly it was used without having undergone any process of this kind. The raw material, such as wool, flax, or cotton, was manufactured in its natural state, and hence blankets and sheets were commonly white (*λευκὰ ἱμάτια*³), although, from the same cause, brown, drab, and gray were also prevailing colours. The more splendid and elegant tints were produced by the application of the murex (*purpurata, conchyliata, purpurea, vestis; πορφύρεον, ἀλουργή, ἱμάτια*), the kermes (*coccineus, κόκκινον*), the argol (*fucatus*), and the saffron (*croceus, κροκωτόν*). (*Vid.* CROCOTΑ.) Pale green was also worn (*ὀμβράκινον*⁴). Black and gray pallia were either made from the wool of black sheep,⁵ or were the result of the art of the dyer. They were worn in mourning (*μέλανα ἱμάτια*,⁶ *φαῖν ἐσθῆτα*⁷), and by sorceresses.⁸ The pallium of one colour (*ἰδύχρουν ἱμάτιον*, literally "the self-coloured blanket"⁹) was distinguished from the variegated (*ποικίλον*); and of this latter class the simplest kinds were the striped (*δαδύων¹⁰*), in which the effect was produced by inserting alternately a woof of different colours, and the check or plaid (*scutulatum, tessellatum*), in which the same colours were made to alternate in the warp also. Zcuxis, the painter, exhibited at the Olympic games a plaid having his name woven in the squares (*τεσσαῖα, πλυνθία*) in golden letters.¹¹ An endless variety was produced by interweaving sprigs or flowers in the woof (*ὀνθεῖα πεποικιλμένον¹²*). By the same process, carried to a higher degree of complexity and refinement, whole figures, and even historical or mythological subjects, were introduced, and in this state of advancement the weaving of pallia was the elegant and worthy employment of females of the first distinction,¹³ and of Minerva, the inventress of the art, herself.¹⁴ The greatest splendour was imparted by the use of gold thread.¹⁵ Homer represents Penelope weaving a purple blanket for Ulysses, which also displayed a beautiful hunting-piece wrought in gold.¹⁶ The epithet *δίπταξ*, which is commonly applied by the poets to these figured palls, probably denoted that they were made on the principle of a quilt or a Scotch carpet, in which two cloths of different colours are so interlaced as to form one double cloth, which displays a pattern of any kind, according to the fancy of the artist.

Although pallia were finished for use without the intervention of the tailor, they were submitted to the embroiderer (*Phrygio; ποικιλτής, πλουμαρῖς*¹⁷), and still more commonly to the fuller (*τὸν ΦΥΛΟ*), who received them both when they were new from the

loom and when they were sullied through use. Hence it was a recommendation of this article of attire to be well trodden (*ἐύσπιπτον¹*) and well washed (*εὐπλυνέ²*). The men who performed the operation are called *οἱ πλυννῆς, i. e.*, the washers, in an inscription found in the stadium at Athens. Another appellation which they bore, viz., *οἱ στίβει*, the treaders,³ is well illustrated by the woodcut representing them at their work in p. 453.

Considering pallium and palla, *ἱμάτιον* and *ῥάρος*, as generic terms, we find specific terms included under them, and denoting distinctions which depended on the materials of which the cloth was made. Among the Greeks and Romans, by far the most common material was wool.⁴ The blanket made of it (*lanæum pallium*⁵) was called (from the root of *lana*, wool) in Latin *LÆNA*, in Greek *χλαῖνα*; and as the blanket varied, not only in colour and ornament, but also in fineness, in closeness of texture (*ἱματίων λεπτότητας⁶*), and in size, some of these differences were expressed by the diminutives of *χλαῖνα*, such as *χλαῖνιον, χλαῖνις⁷, χλαῖνιδιον⁸, χλαῖνίσκιον⁹, and χλαῖνισκίδιον¹⁰*. In like manner, we find the sheet not only designated by epithets added to the general terms in order to denote that it was made of flax, *e. g.* *ἱμάτιον λινού, λίνιον νεόπλυτα φάρα¹¹, pallium lineum¹²*, but also distinguished by the specific terms *linæum, linæamen; sindon¹³, συνδών¹⁴*, and its diminutive *σινδονίον¹⁵*. A coarse linen sheet was also called *ῥάσαν¹⁶* and a fine one *ὀδών, δάμ. ὀδονίον¹⁷*. These specific terms are no doubt of Egyptian origin, having been introduced among the Hebrews, the Greeks, and the Romans, together with the articles of merchandise to which they were applied. On the same principle, a cotton sheet is called *palla carthæa¹⁸* and a silk shawl is denominated *pallium Scicum¹⁹* and *ὀδονίον Σηρικόν²⁰*.

The following instances of the application of sheets and blankets to the purposes of common life, show that their uses were still more various among the Greeks and Romans than with us; and although, in some of these cases, the application may have been accidental, it serves not the less on that account to demonstrate the form and properties of the thing spoken of, and the true meaning of the various names by which it was called:

I. They were used, as we use them, to spread over beds and couches, and to cover the body during sleep (*ἱμάτιον, ἱματισμός²¹, ῥάρος²², χλαῖνα²³, χλαῖνίσκιον²⁴, pallium²⁵*). In many of these cases, it is to be observed that the same blanket which was worn as a garment by day served to sleep in at night, in exact agreement with the practice which to the present day prevails among the Bedouin Arabs, who constantly use their large hykes for both purposes. (*Vid.* LECTUS, LUDIX, TAPES.)

II. They were spread on the ground and used for carpets. Clitus, the friend of Alexander, when he held a levee, appeared walking *ἐπὶ πορφύρεον ἱμα-*

τιων.¹ This was an affectation of Eastern luxury. When the people at Jerusalem spread their hykes upon the ground,² they intended thereby to recognise Jesus as a king. (*Vid. TAPES.*)

III. They were hung over doors,³ and used as awnings or curtains.⁴ Thus Antigonus, sitting in his tent, heard two common soldiers reviling him, a blanket or sheet (*palla*) being interposed; he shook it a little, and said, "Go farther off, lest the king should hear you."⁵

IV. At the bath persons wiped and rubbed themselves not only with linen sheets (*lintheis*), but with very soft blankets (*pallis ex mollissima lana factis*).⁶ The coarse linen cloth used for this purpose was called *sabanum* (*σάβανον*).

V. Agamemnon⁷ holds in his hand "a great purple *pharos*" to serve as a banner floating in the air.

VI. Pallia, especially of linen and cotton, were used for sads (*φώσσωνες*,⁸ *λινόχροκον φάρος*).⁹

VII. When Anthony's ships were on fire, his soldiers, having failed to extinguish it by water, which they could not obtain in sufficient quantity, threw upon it their thick blankets (*ἱμάτια αὐτῶν τὰ παχέα*).¹⁰

VIII. Thick coarse blankets, which had not been to the fuller (*ἱμάτια ἀγνάπτα*), were wrapped round ice and snow to keep them from melting. (*Vid. Nix.*)

IX. A fine white blanket was sometimes used as a shroud (*φάρος ταφῆιον*,¹¹ *ἱμάτιον*).¹²

X. In Asia, horses and other animals used to ride upon were covered with beautiful pallia, especially upon occasions of ceremony or of rejoicing. Cyrus had 200 horses covered with striped cloths.¹⁴ When the Persian ambassador, a few years ago, went to the levee in London, his horses were in like manner covered *βάδωτοῖς ἱματίοις*.¹⁵ (*Vid. TAPES.*) From this we must distinguish the use of woollen horsecloths in Europe.¹⁶

XI. The newly-born infant was wrapped in a blanket (*φάρσιον*).¹⁷ (*Vid. INCUNABULA.*)

XII. Lastly, the blanket was the most common article of the *Amictus*. (*Vid. CHLAMYD.*) Hence we find it continually mentioned in conjunction with the *Tunica*, which constituted the indutus. Such phrases as "coat and waistcoat," or "shoes and stockings," are not more common with us than such as those which follow in ancient authors: *tunica palliumque*,¹⁸ *ἱμάτιον καὶ χιτῶν*, in the will of a certain philosopher;¹⁹ *τὸ ἱμάτιον καὶ τὸν χιτωνίσκον*; *φάρος ἢ δὲ χιτῶν*;²⁰ *χλαῖνιν ἢ δὲ χιτῶνα*;²¹ *χλανὶς καὶ χιτωνίσκος*.²² The passages referred to in the note also exemplify the practice of naming these two articles of dress together.²³

But, although the pallium and tunica were always regarded as essential parts of an entire dress, yet each of them might be worn without the other. Cases in which the tunic was retained and the blanket laid aside are explained under the article *Nubus*. It is also evident that the pallium would not be the most convenient kind of dress when the

wearet of it had occasion to run; and we find that in such circumstances he either put it away entirely,¹ or folded it up as a Scottish Highlander folds his plaid, and threw it round his neck or over his shoulder.² Telemachus, in like manner, puts off his purple pallium, together with his swordbelt, when he is preparing to try his father's bow.³ On the other hand, to wear the blanket without the under-clothing indicated poverty or severity of manners, as in the case of Socrates,⁴ Agesilaus,⁵ and Gelon, king of Syracuse.⁶

The blanket was no doubt often folded about the body simply with a view to defend it from cold, and without any regard to gracefulness of appearance. It is thus seen on the persons of Polynices and Parthenopæus in the celebrated intaglio, now preserved at Berlin, representing five of the heroes who fought against Thebes, and copied on an enlarged scale in the annexed woodcut. The names of the several

heroes are placed beside them in Etruscan letters. This precious relic was found at Perugia. Winckelmann⁷ reckons it the most ancient of all the works of art, and says that "it holds among intaglios the same place which Homer occupies among poets." It shows, therefore, how, from the remotest periods of antiquity, a man "swathed" himself in his blanket (*παργανῶν ἑαυτὸν τοῖς τριβωνίοις*).⁸ By a slight adaptation, the mode of wearing it was rendered both more graceful and more convenient. It was first passed over the left shoulder, then drawn so

hind the back and under the right arm, leaving it bare, and then thrown again over the left shoulder. Of this we see an example in a bas-relief engraved by Dodwell.¹ Another very common method was to fasten the blanket with a brooch (*vid.* *FIGURA*) over the right shoulder (*ἀμφιπερονῶσθαι*), leaving the right arm at liberty, and to pass the middle of it either under the left arm, so as to leave that arm at liberty also, or over the left shoulder, so as to cover the left arm. We see Phocion attired in the last-mentioned fashion in the admired statue of him preserved in the Vatican at Rome.² (See woodcut.) The attachment of the blanket by means of the brooch caused it to depend in a graceful manner (*demissa ex humeris*), and contributed mainly to the production of those dignified and elegant forms which we so much admire in ancient sculptures. When a person sat, he often allowed his blanket to fall from his shoulder, so as to envelop the lower part of his body only.

The sagum of the northern nations of Europe (see woodcut, p. 171) was a woollen pallium, fastened, like that of the Greeks, by means of a brooch, or with a large thorn as a substitute for a brooch.³ The Gauls wore in summer one which was striped and checkered, so as to agree exactly with the plaid which still distinguishes their Scottish descendants; in winter it was thick, and much more simple in colour and pattern.⁴ The Greeks and Romans also wore different pallia in summer and in winter. The thin pallium made for summer wear was called *λῆδος*, *dim.* *λῆδριον*,⁵ and *σπεῖρον*, *dim.* *σπεῖριον*,⁶ in contradistinction from the warm blanket with a long nap, which was worn in winter (*lana*,⁷ *χλαῖνα*,⁸ *ἄχλαιον*⁹). This distinction in dress was, however, practised only by those who could afford it. Socrates wore the same blanket both in summer and winter.¹²

One kind of blanket was worn by boys, another by men (*τὸ παιδικόν, τὸ ἀνδρείον ἱμάτιον*).¹³ Women wore this garment as well as men. "Phocion's wife," says *Ælian*,¹⁴ "wore Phocion's blanket;" but *Xanthippe*, as related by the same author,¹⁵ would not wear that of her husband Socrates.¹⁶ When the means were not wanting, women wore blankets, which were in general smaller, finer, and of more splendid and beautiful colours than those of men (*δομῆα ἄνδρεα*).¹⁷ although men also sometimes displayed their fondness for dress by adopting in these respects the female costume. Thus Alcibiades was distinguished by his purple blanket, which trailed upon the ground;¹⁸ for a train was one of the ornaments of Grecian as well as Oriental dress (*ἱματίον ἐλκεῖ*).¹⁹ the general rule being that the upper garment should reach the knee, but not the ground.²⁰ When a marriage was celebrated, the bridegroom was conspicuous from the gay colour of this part of his dress.²¹ The works of ancient art show that weights (*glandes*) were often attached to the corners of the pallium to keep it in its proper place and form.

Philosophers wore a coarse and cheap blanket, which, from being exposed to much wear, was

called *τρίβων* and *τρίβωνιον*¹ (*palliastrum*).² The same was worn, also, by poor persons,³ by the Spartans,⁴ and in a later age by monks and hermits (*φαῖον τρίβωνιον*,⁵ *sagum rusticum*). These blanketers (*τρίβωνοφόροι*)⁶ often went without a tunic, and they sometimes supplied its place by the greater size of their pallium. It is recorded of the philosopher Antisthenes that "he first doubled his blanket,"⁷ in which contrivance he was followed by his brother Cynics,⁸ and especially by Diogenes, who also slept and died in it, and who, according to some, was the inventor of this fashion.¹⁰ The large pallium, thus used, was called *διπλοῖς* (*diplaxis*),¹¹ and also *Exomis*, because, being worn without the fibula, it left the right shoulder bare, as seen in the preceding figure of Polynices, and in the bas-relief in Dodwell's *Tour* already referred to;¹² and, when a girdle was added round the waist, it approached still more near to the appearance of the single-sleeved tunic, the use of which it superseded.

In addition to the ordinary modes of wearing the pallium, mentioned above, it was, on particular occasions, worn over the head, and sometimes so as to cover the face, more especially, I. In concealing grief, or any other violent emotion of the mind;¹³ II. In case of rain;¹⁴ III. In offering sacrifices, and in other acts of religion.¹⁵ Of this custom Timanthes availed himself in his famous picture of the sacrifice of Iphigenia.¹⁶ It is obvious how convenient the pallium was for concealing weapons or poison. The use of this garment to envelop the whole person gave origin to the metaphorical application of the verb *palliare*, meaning to hide or dissemble. (*Vid.* *ABOLLA*.)

Under the Roman Republic and the early emperors, the *Toga* was worn by men instead of the pallium. They were proud of this distinction, and therefore considered that to be *palliat* or *sagari* instead of being *togatus* indicated an affectation of Grecian or even barbarian manners (*Græco pallio amictus*,¹⁷ *Græci palliati*).¹⁸ Cæcina, on his return from the north of Europe, offended the Romans (*togatos*) by addressing them in a plaid (*versicolore sagulo*) and trowsers. (*Vid.* *BRACCÆ*).¹⁹ A small square cloth (*palliolum*) was, however, worn by the Romans on their heads instead of a hat, when they were sickly or infirm;²⁰ and some of them even adopted the Greek pallium instead of the Roman toga.²¹

Among the Greeks as among ourselves, the manufacture of sheets, blankets, and other kinds of cloth employed different classes of work-people. The coarser kinds of blankets were made in Megaris, where this was the staple trade of the country, the work being performed by slaves.²² At Athens there was a general cloth-market, called *ἱματιοπώλις ἀγορά*.²³

Festus,¹ originally signified any military decoration; but the word is always used to denote the cloak worn by a Roman general commanding an army, his principal officers and personal attendants, in contradistinction to the sagum (*vid. SAGUM*) of the common soldiers, and the toga, or garb of peace. It was the practice for a Roman magistrate, after he had received *imperium* from the comitia curiata, and offered up his vows in the Capitol, to march out of the city arrayed in the paludamentum (*exire paludatus*²), attended by his lictors in similar attire (*paludatis lictoribus*³); nor could he again enter the gates until he had formally divested himself of this emblem of military power, a ceremony considered so solemn and so indispensable that even the emperors observed it.⁴ Hence Cicero declared that Verres had sinned "*contra auspicia, contra omnes divinas et humanas religiones*," because, after leaving the city in his paludamentum (*cum paludatus exisset*), he stole back in a litter to visit his mistress.⁵

The paludamentum was open in front, reached down to the knees or a little lower, and hung loosely over the shoulders, being fastened across the chest by a clasp. A foolish controversy has arisen among antiquaries with regard to the position of this clasp, some asserting that it rested on the right shoulder, others on the left, both parties appealing to ancient statues and sculptures in support of their several opinions. It is evident, from the nature of the garment, as represented in the three following illustrations, that the buckle must have shifted from place to place, according to the movements of the wearer; accordingly, in the first cut, which contains two figures from Trajan's column, one representing an officer, the other the emperor with a tunic and fringed paludamentum, we observe the clasp on the right shoulder, and this would manifestly be its usual position when the cloak was not used for warmth, for thus the right hand and arm would be free and unembarrassed; but in the second cut, copied from the Raccolta Maffei, representing also a Roman emperor, we perceive that the

the paludamentum were essentially, if not absolutely, the same. Nonius Marcellus considers the two terms synonymous, and Tacitus⁶ tells how the splendid naumachia exhibited by Claudius was viewed by Agrippina dressed *chlamyde aurata*, while Pliny⁷ and Dion Cassius,⁸ in narrating the same story, use respectively the expressions *paludamento aurotextili* and *χλαμύδι διαχρυσόφ.*

The colour of the paludamentum was commonly white or purple, and hence it was marked and remembered that Crassus, on the morning of the fatal battle of Carrhæ, went forth in a dark-coloured mantle.⁹

PALUS, a Pole or Stake, was used in the military exercises of the Romans. It was stuck into the ground, and the tirones had to attack it as if it had been a real enemy; hence this kind of exercise is sometimes called *Palaria*.¹⁰ Juvenal¹¹ alludes to it when he says, "*Quis non vidit vulnere pali?*" and Martial¹² speaks of it under the name of *stipes*, "*Aut nudi stipitis ictus hebes*."¹³

PAMBOIOTIA (Παμβοιότρια), a festive panegyria of all the Bœotians, which the grammarians compare with the Panathenæa of the Atticans and the Panionia of the Ionians. The principal object of the meeting was the common worship of Athena Itonia, who had a temple in the neighbourhood of Coronea, near which the panegyria was held.¹⁴ From Polybius,¹⁵ it appears, that during this national festival no war was allowed to be carried on, and that in case of a war a truce was always concluded. The panegyria is also mentioned by Plutarch.¹⁶ It is a disputed point whether the Pamboiotia had any

clasp is on the left shoulder; while in the third, the noble head of a warrior from the great mosaic of Pompeii, we see the paludamentum flying back in the charge, and the clasp nearly in front. It may be said that the last is a Grecian figure; but this, if true, is of no importance, since the chlamys and

PANATHENÆA (*Παναθηναία*), the greatest and most splendid of the festivals celebrated in Attica in honour of Athena, in the character of Athena Polias, or the protectress of the city. It was said to have been instituted by Erichthonius,¹ and its original name, down to the time of Theseus, was believed to have been Athenæa; but when Theseus united all the Atticans into one body, this festival, which then became the common festival of all Atticans, was called Panathenæa.² According to this account, it would seem as if the name of the festival was derived from that of the city; but the original name Athenæa was undoubtedly derived from that of the goddess, and the subsequent appellation Panathenæa merely signifies the festival of Athena, common to, or celebrated by, all the Attic tribes conjointly. Panathenæa are indeed mentioned as having been celebrated previous to the reign of Theseus,³ but these writers merely transfer a name common in their own days to a time when it was not yet applicable. The Panathenæa, which, as far as the character implied in the name is concerned, must be regarded as an institution of Theseus, were celebrated once in every year.⁴ All writers who have occasion to speak of this festival agree in distinguishing two kinds of Panathenæa, the greater and the lesser, and in stating that the former were held every fifth year (*πενταετηρίς*), while the latter were celebrated once in every year. Libanius,⁵ by mistake, calls the lesser Panathenæa *τριετηρίς*.

The time when the lesser Panathenæa (which are mostly called Panathenæa, without any epithet, while the greater are generally distinguished by the adjective *μεγάλα*) were celebrated, is described by Proclus,⁶ in a vague manner, as following the celebration of the Bendidia; from which Meursius infers that the Panathenæa were held on the day after the Bendidia, that is, on the 20th of Thargelion. Petitus,⁷ on the other hand, has shown from Demosthenes⁸ that the Panathenæa must have fallen in the month of Hecatombæon, and Corsini⁹ has farther proved, from the same passage of Demosthenes, that the festival must have commenced before the 20th of this month, and we may add that it was probably on the 17th. Clinton¹⁰ has revived the opinion of Meursius.¹¹

The great Panathenæa were, according to the unanimous accounts of the ancients, a pentæsteris, and were held in the third year of every olympiad.¹² Proclus¹³ states that the great Panathenæa were held on the 28th of Hecatombæon. This statement, however, must not lead us to suppose that the great Panathenæa only lasted for one day; but Proclus, in mentioning this particular day, was probably thinking of the most solemn day of the festival on which the great procession took place,¹⁴ and which was, in all probability, the last day of the festival, for it is expressly stated that the festival lasted for several

days.¹ We have, moreover, every reason to suppose, with Böckh, that the great Panathenæa took place on the same days of the month of Hecatombæon on which the lesser Panathenæa were held, and that the latter were not held at all in those years in which the former were celebrated. Now if, as we have supposed, the lesser Panathenæa commenced on the 17th, and the last day of the greater festival fell on the 28th of Hecatombæon, we may, perhaps, be justified in believing that the lesser, as well as the greater Panathenæa, lasted for twelve days, that is, from the 17th to the 28th of Hecatombæon. This time is not too long, if we consider that the ancients themselves call the Panathenæa the longest of all festivals,² and if we bear in mind the great variety of games and ceremonies that took place during the season. When the distinction between the greater and lesser Panathenæa was introduced is not certain, but the former are not mentioned before Ol. 66, 3,³ and it may, therefore, be supposed that they were instituted a short time before Ol. 66, perhaps by Pisistratus, for about his time certain innovations were made in the celebration of the Panathenæa, as is mentioned below. The principal difference between the two festivals only was, that the greater one was more solemn, and that on this occasion the peplos of Athena was carried to her temple in a most magnificent procession, which was not held at the lesser Panathenæa.

The solemnities, games, and amusements of the Panathenæa were: rich sacrifices of bulls, foot, horse, and chariot races, gymnastic and musical contests, and the lampadephoria; rhapsodists recited the poems of Homer and other epic poets, philosophers disputed, cockfights were exhibited, and the people indulged in a variety of other amusements and entertainments. It is, however, not to be supposed that all these solemnities and games took place at the Panathenæa from the earliest times. Gymnastic contests, horse and chariot races and sacrifices are mentioned in the legends belonging to the period anterior to the reign of Theseus.⁴ The prize in these contests was a vase filled with oil from the ancient and sacred olive-tree of Athena on the acropolis.⁵ A great many of such vases, called Panathenæic vases (*ἀμφορείς Παναθηναϊκοί*), have in late years been found in Etruria, Southern Italy, Sicily, and Greece. They represent on one side the figure of Athena, and on the other the various contests and games in which these vases were given as prizes to the victors. The contests themselves have been accurately described from these vases by Ambrosch,⁷ and the probable order in which they took place has been defined by Müller.⁸

The poems of Homer were only read by rhapsodists at the great Panathenæa;⁹ and this custom commenced in the time of Pisistratus or of his son Hipparchus, after these poems had been collected. Afterward the works of other epic poets were also recited on this occasion.¹⁰ Songs in praise of Harmodius and Aristogiton appear to have been among the standing customs at the Panathenæa. Musical contests in singing, and in playing the flute and the cithara, were not introduced at the Panathenæa until the time of Pericles; they were held in the Odeum.¹¹ The first who gained the victory in these contests was Phrynus, in Ol. 81, 1.¹² The prize for

the victors in the musical contests was, as in the gymnastic contests, a vase, but with an additional chaplet of olive-branches.¹ Cyclic choruses and other kinds of dances were also performed at the Panathenæa,² and the pyrrhic dance in armour is expressly mentioned.³ Of the discussions of philosophers and orators at the Panathenæa we still possess two specimens, the *λόγος Παναθηναϊκός* of Isocrates, and that of Aristides. Herodotus is said to have recited his history to the Athenians at the Panathenæa. The management of the games and contests was intrusted to persons called *ἀθλοθέται*, whose number was ten, one being taken from every tribe. Their office lasted from one great Panathenæic festival to the other.⁴ It was formerly believed, on the statement of Diogenes Laertius,⁵ that dramatic representations also took place at the Panathenæa, but this mistake has been clearly refuted by Böckh.⁶

The lampadephoría, or torch-race of the Panathenæa, has been confounded by many writers, and even by Wachsmuth,⁷ with that of the Bendidia. On what day it was held, and in what relation it stood to the other contests, is unknown, though it is clear that it must have taken place in the evening. It has been supposed by some writers that the lampadephoría only took place at the great Panathenæa, but this rests upon the feeble testimony of Libanius,⁸ while all other writers who mention this lampadephoría speak of it as a part of the Panathenæa in general, without the epithet *μεγάλα*, which is itself a sufficient proof that it was common to both festivals. The same is implied in a statement of the author of the *Etymologicum Magnum*.⁹ The prize of the victor in the lampadephoría was probably the lampas itself, which he dedicated to Hermes.¹⁰

It is impossible to determine the exact order in which the solemnities took place. We may, however, believe that those parts which were the most ancient preceded those which were of later introduction. Another instance, in this respect, are the sculptures of the Parthenon (now in the British Museum), in which a series of the solemnities of the Panathenæa is represented in the great procession. But they neither represent all the solemnities—for the lampadephoría and some of the gymnastic contests are not represented—nor can it be supposed that the artists should have sacrificed beauty and symmetry merely to give the solemnities in precisely the same order as they succeeded one another at the festival. In fact, we see in these sculptures the flute and cithara players represented as preceding the chariots and men on horseback, though the contests in chariot and horse racing probably preceded the musical contests. But we may infer, from the analogy of other great festivals, that the solemnities commenced with sacrifices. The sacrifices at the Panathenæa were very munificent; for each town of Attica, as well as every colony of Athens, and, during the time of her greatness, every subject town, had to contribute to this sacrifice by sending one bull each.¹¹ The meat of the victims appears to have been distributed among the people; but, before the feasting commenced, the public herald prayed for the welfare and prosperity of the Republic. After the battle of Marathon the Platæans were included in this prayer.¹²

The chief solemnity of the great Panathenæa

was the magnificent procession to the Temple of Athena Polias, which, as stated above, probably took place on the last day of the festive season. The opinion of Crenzer,¹ that this procession also took place at the lesser Panathenæa, is opposed to all ancient authorities with the exception of the scholiasts on Plato² and on Aristophanes,³ and these scholiasts are evidently in utter confusion about the whole matter. The whole of this procession is represented in the frieze of the Parthenon, the work of Phidias and his disciples. The description and explanation of this magnificent work of art, and of the procession it represents, would lead us too far.⁴ The chief object of this procession was to carry the peplos of the goddess to her temple. This peplos was a crocus-coloured garment for the goddess, and made by maidens called *ἐργαστιναι*.⁵ (Compare ARREPHORIA.) In it were woven Enceladus and the giants, as they were conquered by the goddess.⁶ Proclus⁷ says that the figures on the peplos represented the Olympic gods conquering the giants, and this, indeed, is the subject represented on a peplos worn by an Athena preserved in the Museum of Dresden. On one occasion, in later times, when the Athenians overwhelmed Demetrius and Antigonus with their flatteries, they also decreed that their images, along with those of the gods, should be woven into the peplos.⁸ The peplos was not carried to the temple by men, but suspended from the mast of a ship;⁹ and this ship, which was at other times kept near the Areopagus,¹⁰ was moved along on land, it is said, by *subterraneous machines*. What these machines may have been is involved in utter obscurity. The procession proceeded from the Ceramicus, near a monument called Leocorium,¹¹ to the temple of Demeter at Eleusis, and thence along the Pelasgic wall and the Temple of Apollo Pythius to the Pnyx, and thence to the Acropolis, where the statue of Minerva Polias was adorned with the peplos.

In this procession nearly the whole population of Attica appears to have taken part, either on foot, on horseback, or in chariots, as may be seen in the frieze of the Parthenon. Aged men carried olive-branches, and were called *θαλλοφόροι*;¹² young men attended, at least in earlier times, in armour;¹³ and maidens who belonged to the noblest families of Athens carried baskets, containing offerings for the goddess, whence they were called *κανηφόροι*.¹⁴ Respecting the part which aliens took in this procession, and the duties they had to perform, see HYDRIAPHORIA.

Men who had deserved well of the Republic were rewarded with a gold crown at the great Panathenæa, and the herald had to announce the event during the gymnastic contests.¹⁵ Prisoners, also, were allowed to enjoy freedom during the great Panathenæa.¹⁶

PANCRATIASTÆ. (*Vid.* PANCRATIUM.)

PANCRATIUM (*παγκράτιον*) is derived from *πάν* and *κράτος*, and accordingly signifies an athletic game, in which all the powers of the fighter were called into action. The pancratium was one of the games or gymnastic contests which were exhibited at all the great festivals of Greece; it consisted of boxing and wrestling (*πυγμή* and *πάλη*), and was reckoned to be one of the heavy or hard exercises (*ἀγωνίσματα βαρέα* or *βαρύτερα*), on account of the violent exertions it required, and for this reason it was not much practised in the gymnasia; and where it was practised, it was probably not without modifications, to render it easier for the boys. According to the ancient physicians, it had very rarely a beneficial influence upon health.¹

At Sparta the regular pancratium was forbidden, but the name was there applied to a fierce and irregular fight, not controlled by any rules, in which even biting and scratching were not uncommon, and in which, in short, everything was allowed by which one of the parties might hope to overcome the other. In Homer we neither find the game nor the name of the pancratium mentioned, and, as it was not introduced at the Olympic games until Ol. 33,² we may presume that the game, though it may have existed long before in a rude state, was not brought to any degree of perfection until a short time before that event. It is scarcely possible to speak of an inventor of the pancratium, as it must have gradually arisen out of a rude mode of fighting, which is customary among all uncivilized nations, and which was kept up at Sparta in its original state. But the Greeks regarded Theseus as the inventor of the pancratium, who, for want of a sword, was said to have used this mode of fighting against the Minotaurus.³ Other legends represented Heracles as having been victor in the pancratium,⁴ and later writers make other heroes also fight the pancratium;⁵ but these are mere fictions. After the pancratium was once introduced at Olympia, it soon found its way also into the other great games of Greece, and in the times of the Roman emperors, we also find it practised in Italy. In Ol. 145 the pancratium for boys was introduced at the Olympic games, and the first boy who gained the victory was Phædimus, a native of a town in Troas.⁶ This innovation had been adopted before in others of the national games, and in the 61st Pythiad (Ol. 108) we find a Theban boy of the name of Olaidas as victor in the pancratium in the Pythian games.⁷ At the Isthmian games the pancratium for boys is not mentioned till the reign of Domitian;⁸ but this may be merely accidental, and the game may have been practised long before that time.

Philostratus⁹ says that the pancratium of men was the most beautiful of all athletic contests; and the combatants must certainly have shown to the spectators a variety of beautiful and exciting spectacles, as all the arts of boxing and wrestling appeared here united.¹⁰ The combatants in the pancratium did not use the cestus, or if they did, it was the *ἱμαντες μαλακώτεροι* (*vid.* CESTUS), so that the hands remained free, and wounds were not easily inflicted.

The name of these combatants was pancratiastæ (*παγκρατισταί*) or *πύμμαχοι*.¹¹ They fought naked, and had their bodies anointed and covered with sand, by which they were enabled to take hold of

one another.¹ In cases where the contests of the pancratiastæ were not regulated by strict rules, it might, as at Sparta, sometimes happen, that the fighters made use of their teeth and nails;² but such irregularities probably did not occur at any of the great public games.

When two pancratiastæ began their contest, the first object which each of them attempted to accomplish was to gain a favourable position, each trying to make the other stand so that the sun might shine in his face, or that other inconveniences might prevent his fighting with success. This struggle (*ἀγὼν περὶ τῆς στάσεως*)³ was only the introduction to the real contest, though, in certain cases, this preparatory struggle might terminate the whole game, as one of the parties might wear out the other by a series of stratagems, and compel him to give up farther resistance. Sostatus of Sicyon had gained many a victory by such tricks.⁴ When the real contest began, each of the fighters might commence by boxing or wrestling, accordingly as he thought he should be more successful in the one than in the other. The victory was not decided until one of the parties was killed or lifted up a finger, thereby declaring that he was unable to continue the contest either from pain or fatigue.⁵ It usually happened that one of the combatants, by some trick or other, made his antagonist fall to the ground, and the wrestling which then commenced was called *ἀνακλινοπάλη*, and continued till one of the parties declared himself conquered or was strangled, as was the case at Olympia with Arrhichion or Arrachion, of Phigalia in Ol. 54.⁶ A lively description of a struggle of this kind is given by Philostratus.⁷ Sometimes one of the fighters fell down on his back, on purpose that he might thus ward off the attacks of his antagonist more easily, and this is perhaps the trick called *ὑπὸ πτερύγεσσιν*. The usual mode of making a person fall was to put one foot behind his, and then to push him backward, or to seize him round his body in such a manner that, the upper part being the heavier, the person lost his balance and thus fell. Hence the expressions *μέσον λαμβάνειν*, *μεσολαβεῖν*, *μέσον αἰρῖν*, *τὰ μέσα ἔχειν*, *διὰ μηρῶν σπᾶν*, &c.⁸ The annexed woodcut rep-

resents two pairs of pancratiastæ; the one on the right hand is an example of the *ἀνακλινοπάλη*, and that on the left of the *μεσολαβεῖν*. They are taken from Krause's *Gymnastik und Agonistik d. Hellen.*, Taf. xxi, b, fig. 35, b. 31 b., where they are copied respectively from Grivaud, *Rec. d. Mon. Ant.*, vol. i., pl. 20, 21, and Krause, *Signorum. vet. icones*, tab. 10.

At Rome the pancratium is first mentioned in the games which Caligula gave to the people.⁹ After this time it seems to have become extremely popu-

lar, and Justinian (*Novell.*, cv., c. 1, provided *πάγκρατον* be, as some suppose, a mistake for *παγκράτιον*) made it one of the seven solemnities (*πρόδοσις*) which the consuls had to provide for the amusement of the people.

Several of the Greek *pancratiastæ* have been immortalized in the epinician odes of Pindar, namely, Timodemus of Athens,¹ Melissus and Strepsicles of Thebes,² Aristocides, Cleander, and Phylacides of Ægina,³ and a boy, Pytheas of Ægina.⁴ But, besides these, the names of a great many other victors in the pancratium are known.⁵

The diet and training of the *pancratiastæ* was the same as that of other *athletæ*.⁶ (*Vid. ATHLETÆ.*)

PANDECTÆ or DIGESTA. In the last month of the year A.D. 530, Justinian, by a constitution addressed to Tribonian, empowered him to name a commission for the purpose of forming a code out of the writings of those jurists who had enjoyed the *jus respondendi*, or, as it is expressed by the emperor, "*antiquorum prudentium quibus auctoritatem conscribendarum interpretandarumque legum sacratissimi principes præbuerunt.*" The compilation, however, comprises extracts from some writers of the republican period.⁷ Ten years were allowed for the completion of the work. The instructions of the emperor were, to select what was useful, to omit what was antiquated or superfluous, to avoid unnecessary repetitions, to get rid of contradictions, and to make such other changes as should produce, out of the mass of ancient juristical writings, a useful and complete body of law (*jus antiquum*). The compilation was to be distributed into fifty books, and the books were to be subdivided into titles (*tituli*). The work was to be named *Digesta*, a Latin term indicating an arrangement of materials, or *Pandectæ*, a Greek word expressive of the comprehensiveness of the work. It was also declared that no commentaries should be written on this compilation, but permission was given to make paratitla or references to parallel passages, with a short statement of their contents.⁸ It was also declared that abbreviations (*sigla*) should not be used in forming the text of the Digest. The work was completed in three years (17 Cal. Jan., 533), as appears by a constitution, both in Greek and Latin, which confirmed the work, and gave to it legal authority.⁹

Besides Tribonian, who had the general conduct of the undertaking, sixteen other persons are mentioned as having been employed on the work, among whom were the professors Dorotheus and Anatolus, who for that purpose had been invited from the law-school of Berytus, and Theophilus and Cratinus, who resided at Constantinople. The compilers made use of about two thousand different treatises, which contained above 3,000,000 lines (*versus, στίχοι*), but the amount retained in the compilation was only 150,000 lines. Tribonian procured this large collection of treatises, many of which had entirely fallen into oblivion, and a list of them was prefixed to the work, pursuant to the instructions of Justinian.¹⁰ Such a list is at present only found in the Florentine MS. of the Digest, but it is far from being accurate. Still it is probably the index mentioned in the Constitution Tanta, &c.¹¹

The work is thus distributed into fifty books, which are subdivided into titles, of which there are

said to be 422. Under each title are placed the extracts from the several jurists, numbered 1, 2, 3, and so on, with the writer's name and the name and division of the work from which the extract is made. These extracts are said to amount to 9123. No name corresponding to *liber* or *titulus* is given to these subdivisions of *tituli* which are formed by the extracts from the several writers, but Justinian has called them "*leges*," and, though not "*laws*" in the strict sense of the term, they were, in fact, "*law*;" and in the same sense the emperor calls the jurists "*legislatores*."¹² The fifty books differ materially, both in bulk, number of titles, and number of extracts. The glossatores and their followers, in referring to the Digest, sometimes indicate the work by P, p, or II, and sometimes by D or ff, which according to some writers represents D, and according to others represents II.

There was also a division of the whole fifty books into seven larger masses, called *partes*, which corresponded to the seven main divisions of the works on the Edict, and had also a special reference to the course of instruction then established. Thus the first *pars* comprises four books, the second *pars* comprises seven books, and so on.¹³

The number of writers from whose works extracts were made is thirty-nine, comprehending those jurists from whom extracts were made at second hand, as Qu. Mucius Scævola, the pontifex, from whom four fragments, and Ælius Gallus, from whom one fragment is taken; but omitting Servius Sulpicius Rufus, who is represented by Alfenus, distinguishing Ælius Gallus from Julius Aquila, Vennuleius from Claudius Saturninus; assuming that there is only one Pomponius, and omitting Sabinus, whose name is erroneously inserted in the Florentine Index.¹⁴

The following is the list of jurists from whose writings the Digest was constructed, as it is given in the *Palingenesia* of Hommelius, who has arranged the matter taken from each writer under his name, and placed the names in alphabetical order. The dates of the jurists are chiefly founded on the authority of Zimmern. The figures in the third column indicate the proportions contributed to the Digest by each jurist, estimated in the pages of Hommelius: (a) denotes that the contribution is under one page of the *Palingenesia*. This list includes Sabinus. The extracts from many of the writers are few and short: those from Ulpian, which are more than a third of the whole, Paulus, Papinian, Julianus, Pomponius, Q. Cervidius Scævola, and Gaius are the largest.

C. Ælius, the sixth on this list, must not be confounded with C. Aquilius Gallus, one of the masters of Servius Sulpicius, from whom there is no extract in the Digest. It follows, from the instructions of the emperor and the plan of the work, that the extracts from the jurists are not always given in their exact words. It is probable that many short passages were interpolated or altered, as a matter of necessity, though there seems to be no reason for supposing that these changes were carried farther than the nature of the case required. Still there is no doubt that the changes are such that the extracts from the old jurists cannot be used for many purposes without some caution and judgment.

The distribution of the matter of the Digest into books and titles has evidently been made according to a plan, as will be obvious on inspecting the list of tituli prefixed to the editions. Thus the 28th book treats of testaments, of the institution of a heres, &c., and the 29th of military testaments, and of codicils, &c.; in fact, of matters appertaining to universal succession by testament: the 30th, 31st, and 32d books treat of legacies and fiduciary bequests. There is a method of arrangement, therefore, so far as generally to bring things of the same kind together, but the compilation has no claims to being considered as a scientific arrangement of the

matter of law. And, indeed, the compilers were evidently fettered in this respect by the emperor's instructions, which required them to arrange (*digere*) the whole body of the law comprised in the Digest, according to the Code and the Edictum Perpetuum.

It has long been a matter of dispute whether the compilers of the Digest were guided by any, and if any, by what principle in the arrangement of the several extracts under the respective titles. This subject is examined in a very learned essay by Bluhme, entitled "Die Ordnung der Fragmente in den Pandektentiteln."¹ The investigation is, of course, founded on the titles of the several works of the jurists, which, as already observed, are given at the head of each extract: thus, for instance, in the beginning of the third book, the first seven extracts are headed as follows: "Ulpianus Libro sexagesimo quarto ad Edictum;" "Idem Libro primo Fideicommissorum;" "Idem Libro quarto ad Sabinum;" "Idem Libro quinto ad Sabinum;" "Paulus Libro primo ad Sabinum;" "Julianus Libro trigesimo tertio Digestorum;" "Paulus Libro secundo ad Sabinum." These will serve as samples of the whole, and will explain the following remarks from Bluhme, whose conclusions are these: "The compilers separated all the writings from which extracts were to be made into three parts, and formed themselves into three committees. Each committee read through in order the books that had fallen to its lot, yet so that books which were closely related as to their contents were extracted at the same time. The books were compared with the Code of Justinian, and what was selected for the new compilation was placed under a title taken either from the Code, the Edict, or, in case of necessity, from the work itself which was extracted. What came under the same title was compared; repetitions were erased; contradictions were got rid of; and alterations were made when the contents of the extracts seemed to require it. When the three committees had finished their labours, the present Digest was formed out of the three collections of extracts. In order to accomplish this, they made that collection the foundation of each title which contained the most numerous, or, at least, the longest extracts. With these they compared the smaller collections, striking out, as they had done before, repetitions and contradictions, making the necessary additions, and giving more exact definitions and general principles. What remained over of the smaller collections without having had an appropriate place assigned to it, was placed after the first collection, and its place in the series after the first collection was generally determined by the number of extracts.

"The Digest does not seem to have been subjected to any farther revision."

Bluhme remarks, that although the constitutions *Deo Auctore, Imperatoriam, Tanta*, and *Cordi* contain much information on the economy of the Digest and the mode of proceeding of the compilers, only the two following facts are distinctly stated: 1. That the extracts from the writings of the jurists were arranged according to the titles of the Code and the Edict. 2. That the extracts were compared with the Code. Accordingly, everything else must be proved from an examination of the work itself, and this is the object of Bluhme's laborious essay. He observes, that if a person will examine the extracts in the titles *De Verborum Significatione* and *De Regulis Juris*,² he will find a regular order observable in the titles of the juristical works from which the extracts are taken. Gen-

erally, the series of the books quoted shows that the original order of the works from which the extracts were to be made has not been altered; and the several works generally follow in both these titles in the same order. A similar remark applies to the title *De Verborum Obligationibus*,¹ though there is a variation in all the three titles as to the relative order of the three masses, which are presently to be mentioned. "In the remaining titles of the Digest," adds Bluhme, "at first sight it appears as if one could find no other distinction in the titles of the extracts than this, that one part of them has a certain kind of connexion, and another part merely indicates a motley assemblage of books out of which the extracts have been made. But, on a closer comparison, not only are three masses clearly distinguishable, but this comparison leads to the certain conclusion that all the writings which were used in the compilation of the Digest may be referred to three classes. The Commentaries on Sabinus (ad Sabinum), on the Edict (ad Edictum), and Papinian's writings, are at the head of these three classes. We may accordingly denote these three masses respectively by the names Sabinian, Papinian, and the Edict. In each of these classes, the several works from which extracts are made always follow in regular order." This order is shown by a table which Bluhme has inserted in his essay.

This article, if read in connexion with the articles *CODEx* and *INSTITUTIONES*, will give some general notion of the legislation of Justinian, the objects of which cannot be expressed better than in the following words:

"Justinian's plan embraced two principal works, one of which was to be a selection from the jurists, and the other from the Constitutions. The first, the Pandect, was very appropriately intended to contain the foundation of the law: it was the first work since the date of the Twelve Tables which in itself, and without supposing the existence of any other, might serve as a central point of the whole body of the law. It may be properly called a code, and the first complete code since the time of the Twelve Tables, though a large part of its contents is not law, but consists of dogmatic and the investigation of particular cases. Instead of the insufficient rules of Valentinian III., the excerpts in the Pandect are taken immediately from the writings of the jurists in great numbers, and arranged according to their matter. The Code also has a more comprehensive plan than the earliest codes, since it comprises both rescripts and edicts. These two works, the Pandect and the Code, ought properly to be considered as the completion of Justinian's design. The *Institutiones* cannot be viewed as a third work, independent of both: it serves as an introduction to them, or as a manual. Lastly, the novelæ are single and subsequent additions and alterations, and it is merely an accidental circumstance that a third edition of the Code was not made at the end of Justinian's reign, which would have comprised the novelæ that had a permanent application."²

There are numerous manuscripts of the Digest, both in libraries of the Continent and of Great Britain. A list of the MSS. of the *Corpus Juris* in the libraries of this country, which are principally in the colleges at Oxford and Cambridge, is given by Dr. Haach in the *Zeitschrift*.³ But the MSS. of the Digest generally contain only parts of the work, and are not older than the twelfth century. The MS. called the Florentine is complete, and probably as old as the seventh century. It had been kept at Amalfi time out of mind, and was given to the Pisans by

Lotharius the Second, after the capture of Amalfi A.D. 1137, as a memorial of his gratitude to them for their aid against Roger the Norman. The Pisans kept it till their city was taken by the Florentines under Gino Caponi, A.D. 1406, who carried this precious MS. to Florence, where it is still preserved. An exact copy of this MS. was published at Florence in 1553, folio, with the title "*Digestorum seu Pandectarum Libri Quingaginta Ex Florentinis Pandectis representati; Florentiæ In Officina Laurentii Tarrentini Ducalis Typographi MDLIII Cum Summi Pontif. Car. V. Imp. Henrici II. Gallorum Regis, Eduardi VI. Angliæ regis, Cosmi Medicis Ducis Florent. II. Privilegio.*" The facts relating to the history of the MS. appear from the dedication of Franciscus Tarellius to Cosmo, duke of Florence. This splendid work is invaluable to a scholar. The orthography of the MS. has been scrupulously observed. Those who cannot consult this work may be satisfied with the edition of the *Corpus Juris* by Charondas, which the distinguished printer of that edition, Christopher Plantinus, affirms to be as exact a copy of the Florentine edition as it could be made. As to the other editions of the Digest, see *CORPUS JURIS*.

PANDIA (πᾶνδία), an Attic festival, the real character of which seems to have been a subject of dispute among the ancients themselves; for, according to the *Etymologicum M.*¹, some derived it from Pandia, who is said to have been a goddess of the moon (this is also Wachsmuth's opinion, ii., 2, p. 140); others from the Attic king Pandion; others, again, from the Attic tribe Dias, so that the Pandia would have been in the same relation to this tribe as the Panathenæa to Athens; and others from Διός, and call it a festival of Zeus. Welcker² considers it to have been originally a festival of Zeus celebrated by all the Attic tribes, analogous to the Panathenæa, and thinks that when the confederacy, of which this festival was, as it were, the central point, became dissolved, the old festival remained, though its character was changed. It was celebrated at Athens in the time of Demosthenes.³ Taylor, in his note on this passage, strangely confounds it with the Diasia, though it is well known that this festival was held on the 19th of Munychion, while the Pandia took place on the 14th of Elaphebolion.⁴

PANDOCEION (πανδοκεῖον). (*Vid.* CAUPONA.)

PANEGYRIS (πανήγυρις) signifies a meeting or assembly of a whole people for the purpose of worshipping at a common sanctuary. But the word is used in three ways: 1. For a meeting of the inhabitants of one particular town and its vicinity (*vid.* EPHEŒIA); 2. For a meeting of the inhabitants of a whole district, a province, or of the whole body of people belonging to a particular tribe (*vid.* DELIA, ΠΑΜΒΟΙΩΤΙΑ, ΠΑΝΙΟΝΙΑ); and, 3. For great national meetings, as the Olympic, Pythian, Isthmian, and Nemean games. Although, in all panegyreis which we know, the religious character forms the most prominent feature, other subjects, political discussions and resolutions, as well as a variety of amusements, were not excluded, though they were, perhaps, more a consequence of the presence of many persons than objects of the meeting. As regards their religious character, the panegyreis were real festivals, in which prayers were performed, sacrifices offered, processions held, &c. The amusements comprehended the whole variety of games, gymnastic and musical contests, and entertainments. Every panegyris, moreover, was made by tradespeople a source of gain, and it may be pre-

1. (Dig. 45, tit. 1.)—2. (Savigny, Geschichte der Röm. Rechts im Mittelalter, i., p. 14.)—3. (vol. v.)

1. (s. v. Πᾶνδία).—2. (Æsch., Trilog., p. 303.)—3. (c. Mid., p. 517.)—4. (Compare Suidas and Hesych., s. v. Πᾶνδία — Böckh, Abhandl. der Berlin-Akademie, 1818, p. 65, &c.)

sumed that such a meeting was never held without a fair, at which all sorts of things were exhibited for sale.¹ In later times, when the love of gain had become stronger than religious feeling, the fairs appear to have become a more prominent characteristic of a panegyris than before; hence the Olympic games are called *mercatus Olympiacus*, or *ludi et mercatus Olympiorum*.² Festive orations were also frequently addressed to a panegyris, whence they are called *λόγοι πανηγυρικοί*. The Panegyricus of Isocrates, though it was never delivered, is an imaginary discourse of this kind. In later times, any oration in praise of a person was called panegyricus, as that of Pliny on the Emperor Trajan.

Each panegyris is treated of in a separate article. For a general account, see Wachsmuth, *Hell. Alt.*, i., 1, p. 104, &c.—Böckh *ad Pind.*, *Ol.*, vii., p. 175, &c.—Hermann, *Polit. Ant.*, § 10.

PANELLE'NIA (*πανελλήνια*), a festival, or, perhaps, rather a panegyris of all the Greeks, which seems to have been instituted by the Emperor Hadrian, with the well meant but impracticable view of reviving a national spirit among the Greeks.³

*PANICUM, Panic. (*Vid.* MELINE.)

PANION'IA (*πανιώνια*), the great national panegyris of the Ionians on Mount Mycale, where their national god Poseidon Heliconius had his sanctuary, called the Panionium.⁴ One of the principal objects of this national meeting was the common worship of Poseidon, to whom splendid sacrifices were offered on the occasion.⁵ As a chief-priest for the conduct of the sacrifices, they always appointed a young man of Priene, with the title of king, and it is mentioned as one of the peculiar superstitions of the Ionians on this occasion, that they thought the bull which they sacrificed to be pleasing to the god if it roared at the moment it was killed.⁶ But religious worship was not the only object for which they assembled at the Panionium; on certain emergencies, especially in case of any danger threatening their country, the Ionians discussed at their meetings political questions, and passed resolutions which were binding upon all.⁷ But the political union among the Ionians appears, nevertheless, to have been very loose, and their confederacy to have been without any regular internal organization, for the Lydians conquered one Ionian town after another, without there appearing anything like the spirit of a political confederacy; and we also find that single cities concluded separate treaties for themselves, and abandoned their confederates to their fate.⁸

Diodorus⁹ says that in later times the Ionians used to hold their meeting in the neighbourhood of Ephesus instead of at Mycale. Strabo, on the other hand, who speaks of the Panionic panegyris as still held in his own time, does not only not mention any such change, but appears to imply that the panegyris was at all times held on the same spot, viz., on Mount Mycale. Diodorus, therefore, seems to consider the Ephesian panegyris (*vid.* EPHESIA) as having been instituted instead of the Panionia. But both panegyris existed simultaneously, and were connected with the worship of two distinct divinities, as is clear from a comparison of two passages of Strabo, viii., 7, p. 220; xiv., i., p. 174.¹⁰

PANOPLIA (*πανοπλία*), a panoply or suit of armour.¹¹ The articles of which it consisted, both in the Greek and in the Roman army, are enumerated

under ARMA. Josephus, in a passage where he mentions all the essential parts of the Roman heavy armour except the spear (*viz.*, *ὑποδήματα, θύρεος, ξίφος, κράνος, θώραξ*), applies to them collectively the term *πανοπλία*.² According to Plutarch,³ the ordinary weight of a panoply was a talent, *i. e.*, about 70 lbs.; but he states that the suit worn by one soldier of uncommon strength, viz., Alcimus, the Epirote, weighed two talents, or about a hundred weight. In estimating the military force of any country, the number of panoplies which it had in readiness was a most important item. Polybius mentions⁴ that the citizens of Sinope, expecting to be attacked by Mithradates, obtained, among other preparations, a thousand suits of armour (*πανοπλίας χιλίας*). When one man slew another in battle, he was entitled to receive the panoply of the fallen.⁵

*PANTHE'RA. (*Vid.* PARDALIS.)

PANTOMI'MUS is the name of a kind of actors peculiar to the Romans, who very nearly resembled in their mode of acting the modern dancers in the ballet. They did not speak on the stage, but merely acted by gestures, movements, and attitudes. All movements, however, were rhythmical, like those in the ballet, whence the general term for them is *sallatio*, *saltare*; the whole art was called *musica muta*); and to represent Niobe or Leda was expressed by *saltare Nioben* and *saltare Ledam*.

Mimic dances of this kind are common to all nations, and hence we find them in Greece and Italy; in the former country they acquired a degree of perfection of which we can scarcely form an idea. But pantomimes, in a narrower sense, were peculiar to the Romans, to whom we shall therefore confine ourselves. During the time of the Republic the name pantomimus does not occur, though the art itself was known to the Romans at an early period; for the first *histriones* said to have been introduced from Etruria were, in fact, nothing but pantomimic dancers (*vid.* HISTRIO, p. 434), whence we find that under the Empire the names *histrion* and *pantomimus* were used as synonymous. The pantomimic art, however, was not carried to any degree of perfection until the time of Augustus; whence some writers ascribe its invention to Augustus himself, or to the great artists who flourished in his reign.⁷ The greatest pantomimes of this time were Bathyllus, a freedman and favourite of Mæcenas, and Pyllades and Hylas.⁸ The great popularity which the pantomimes acquired at Rome in the time of Augustus, through these distinguished actors, was the cause of their spreading, not only in Italy, but also in the provinces, and Tiberius found it necessary to put a check upon the great partiality for them: he forbade all senators to frequent the houses of such pantomimes, and the equites were not allowed to be seen walking with them in the streets of Rome, or to attend their performances in any other place than the public theatres, for wealthy Romans frequently engaged male and female pantomimes to amuse their guests at their repasts.⁹ But Caligula was so fond of pantomimes, that one of them, M. Lepidus Mnester, became his favourite, and, through his influence, the whole class of pantomimes again recovered their ascendancy.¹⁰ Nero not only patronised them, but acted himself as pantomime,¹¹ and from this time they retained the highest degree of popularity at Rome down to the latest times of the Empire.

Ὀρχήσις παντομίμος.)—8. (Juv., vi., 63.—Suet., Octav., 45.—Macrobi., Sat., ii., 7.—Athen., i., p. 70.)—9. (Tacit., Annal., i., 77.)—10. (Suet., Calig., 36, 55, 57.—Tacit., Annal., xiv., 21.)—11. (Suet., Nero, 16, 26.)

As regards their mode of acting, we must first state that all pantomimes wore masks, so that the features of the countenance were lost in their acting. All the other parts of their body, however, were called into action, and especially the arms and hands, whence the expressions *manus loquacissima*, *digitii elamosi*, *chæipæ paræphoroi*, &c. Notwithstanding their acting with masks, the ancients agree that the pantomimes expressed actions, feelings, passions, &c., more beautifully, correctly, and intelligibly than it would be possible to do by speaking or writing. They were, however, assisted in their acting by the circumstance that they only represented mythological characters, which were known to every spectator.¹ There were, moreover, certain conventional gestures and movements which everybody understood. Their costume appears to have been like that of the dancers in a ballet, so as to show the beauty of the human form to the greatest advantage, though the costume, of course, varied according to the various characters which were represented. See the manner in which Plancius is described by Velleius² to have danced the character of Glaucus. In the time of Augustus there was never more than one dancer at a time on the stage, and he represented all the characters of the story, both male and female, in succession.³ This remained the custom till towards the end of the second century of our æra, when the several parts of a story began to be acted by several pantomimes dancing together. Women, during the earlier period of the Empire, never appeared as pantomimes on the stage, though they did not scruple to act as such at the private parties of the great. During the latter time of the Empire women acted as pantomimes in public, and in some cases they threw aside all regard to decency, and appeared naked before the public. The Christian writers, therefore, represent the pantomimic exhibitions as the school of every vice and licentiousness.⁴

Mythological love-stories were from the first the favourite subjects of the pantomimes,⁵ and the evil effects of such sensual representations upon women are described in strong colours by Juvenal.⁶ Every representation was based upon a text written for the purpose. This text was called the *canticum*,⁷ and was mostly written in the Greek language. Some of them may have represented scenes from, or the whole subjects of, Greek dramas; but when Arnobius⁸ states that whole tragedies of Sophocles and Euripides were used as texts for pantomimic representations, he perhaps only means to say that a pantomimus sometimes represented the same story contained in such a tragedy, without being obliged to act or dance every sentiment expressed in it. The texts of the pantomimes or cantica were sung by a chorus standing in the background of the stage, and the sentiments and feelings expressed by this chorus were represented by the pantomimus in his dance and gesticulation. The time was indicated by the *scabellum*, a peculiar kind of sole, made of wood or metal, which either the dancer or one of the chorus wore. The whole performance was accompanied by musical instruments, but in most cases by the flute. In Sicily pantomimic dances were called *βαλλισμοί*, whence, perhaps, the modern words ball and ballet.⁹

Pantomimische Kunst des Alterthums.—Weicker, Die Griechischen Tragödien, p. 1317, &c., 1409, &c., 1443, 1477, &c.)

*PAPA'VEP (μήκων), the Poppy. "With the aid of Matthiolus, Bauhin, and Sprengel," observes Adams, "I would arrange the poppies of the ancients as follows: 1st. The *ήμερος*, or domesticated, is the *Papaver Rhæas*, or common red Poppy. 2d. The *βοιδίς* is the *Papaver dubium*, or long, smooth-headed Poppy. 3d. The *κερατρίς* is the *Glaucium luteum*, Scop. 4th. The *ἀρρώδης* is the *Gratiola officinalis*, called in English Hedge-hyssop." As regards the acquaintance of the ancients with Opium, consult the articles NEPENTHES and PHARMACEUTICA, p. 656, 765.¹

ΠΑΡΙΑ ΠΟΠΠÆΑ ΛΕΧ. (Vid. JULIÆ LEGES, p. 556.)

*ΠΑΠΥΛΙΟ (ψύχη), the Butterfly. "The metamorphosis of the Butterfly is distinctly described by Aristotle. The beautiful allegory of Psyche is derived from it."²

ΠΑΠΥΡΙΑ ΛΕΧ. (Vid. LEX, p. 584.)

ΠΑΠΥΡΟΣ, Ι. (Vid. LIBER.)

*ΙΙ. The *Cyperus Papyrus*, L. The Papyrus is an aquatic plant, growing abundantly in the waters of the Nile. Its roots are large and tortuous; its stem is triangular, gradually tapering as it shoots up gracefully to the height of fifteen or twenty feet, where it is very slender, and is surmounted by a fibrous tuft of fine filaments, which are again subdivided into others, bearing small seedy flowerets; the whole of the umbel forming a beautiful flowing plume. Paper was made from the inner rind of the stem. The plates or pellicles obtained near the centre were the best, and each cut diminished in value in proportion as it was distant from that part of the stem. (Vid. LIBER.)³

ΠΑΡ ΙΜΠΑΡ ΛΥΔΕΡΕ (ἀρτιασμός, ἄρτ ἄζειν, ἄρτια ἢ περιττὰ παίζειν), the game at odd and even, was a favourite game among the Greeks and Romans. A person held in his hand a certain number of astragali or other things, and his opponent had to guess whether the number was odd or even.⁴

ΠΑΡΑΒΑΣΙΣ. (Vid. COMEDIA.)

ΠΑΡΑΒΟΛΟΝ or PARABOLION (παράβολον, παρὰβόλιον), a small fee paid by the appellant party on an appeal (ἐφεσις) from an inferior to a superior tribunal; as, for instance, from an arbitrator or a magistrate, or from the court of the *δημόται*, or from the senate of Five Hundred, to the jury or heliastic court. As to the sum to be paid and other particulars, we are uninformed.⁵

ΠΑΡΑΧΥΤΕΣ (παραχύτης). (Vid. LOUTRON, p. 599.)

ΠΑΡΑΔΪΣΟΣ (παράδεισος) was the name given by the Greeks to the parks or pleasure-grounds which surrounded the country residences of the Persian kings and satraps. They were generally stocked with animals for the chase, were full of all kinds of trees, watered by numerous streams, and enclosed with walls.⁶ These paradises were frequently of great extent; thus Cyrus, on one occasion, reviewed the Greek army in his paradise at Celæne,⁷ and on another occasion the Greeks were alarmed by a report that there was a great army in a neighbouring paradise.⁸

Pollux⁹ says that *παράδεισος* was a Persian word, and there can be no doubt that the Greeks obtained it from the Persians. The word, however, seems to have been used by other Eastern nations, and not to have been peculiar to the Persians. Gese-

nius¹ and other writers suppose it to be the same as the Sanscrit **पदेश** (*paradēsa*), but this word does not mean a *land elevated and cultivated*, as Gesenius and others say, but merely a *foreign country*, whence is derived **पदेशिनी** (*paradēsini*), a *foreigner*.² The word occurs in Hebrew (**פָּרֶדֶס**, *parēdēs*) as early as the time of Solomon,³ and is also found in Arabic (**فردوس**, *firdaus*) and Armenian (*par-*

des).⁴ PARAGAUDA (*παγαῶδης*), the border of a tunic (*vid. LIMBUS*), enriched with gold thread, worn by ladies, but not allowed to men except as one of the insignia of office. These borders were among the rich presents given by *Furius Placidus*, A.D. 343, when he was made consul.⁵ Under the later emperors the manufacture of them was forbidden except in their own gynæcea.⁶ The term *paragaula*, which is probably of Oriental origin, seems also to have been converted into an adjective, and thus to have become the denomination of the tunic which was decorated with such borders.⁶

PARAGRAPHE (*παράγραφη*). This word does not exactly correspond with any term in our language, but may, without much impropriety, be called a *plea*. It is an objection raised by the defendant to the admissibility of the plaintiff's action: "*exceptio rei adversus actorem, actionemve, querentis aut de foro haud competente, aut de tempore, modoque procedendi illegitima.*"⁷ Sir William Jones, in the preface to his translation of *Isæus*, compares it with a *demurrer*; but this is not so correct, because a *demurrer* is an objection arising out of an adversary's own statement of his case, whereas the *παράγραφη* was an objection depending on facts stated by the defendant himself, and therefore rather resembles a *plea*, or (more strictly) a special *plea*. This appears from the *πααραγραφικοί λόγοι* of Demosthenes, in which we find the defendant introducing new allegations into the cause, and supporting them by proof. Thus, in the speech against *Nausimachus* and *Xenophanes*, the ground of objection is, that the father of the defendants having obtained a release from the plaintiffs, it was no longer open to the plaintiffs to bring an action for the same cause. But the first mention of this release is made by the defendants in their plea. In the speech against *Zenonem*, the defendant objects that the *ἐμπορικὴ δίκη* does not lie, because there was no written contract between him and the plaintiff on a voyage to or from Athens; and this (says he) appears from the declaration itself (*ἐν τῷ ἐγκλήματι*). As parties could not be defeated at Athens by a technical objection to the pleadings, the defendant in the above case, notwithstanding the defective statement of the plaintiff in the declaration, was compelled to bring forward his objection by plea, and to support it before the jury. In the speech against *Phormio*, the plaintiff says that, as the defendant only denies that he has committed a breach of the contract, there was no occasion for a *παράγραφη*: the question merely was, whether the plaintiff's charge was true. It seems that a *παράγραφη* might be put in, not only when the defendant could show that the cause of action was discharged, or that it was not maintainable in point of law, but also when the form of action was misconceived, or when it was commenced at a wrong time, or brought before the wrong magistrate (*ἡγεμῶν δικαστηρίου*). In the last

case the *παράγραφη* would answer to our *plea to the jurisdiction*.¹

The *παράγραφη*, like every other answer (*ἀντιγραφῇ*) made by the defendant to the plaintiff's charge, was given in writing, as the word itself implies.² If the defendant merely denied the plaintiff's allegations, or (as we might say) *pleaded the general issue*, he was said *εὐθὺς δικάζειν* or *τὴν εὐθείαν εἰπέναι*, or *ἀπολογεῖσθαι τὴν εὐθὺς δικάζειν εἰπόναι*. In this case a court was at once held for the trial of the cause. If, however, he put in a *παράγραφη*, he maintained that the cause was not *εἰσαγωγίμος* (*παρεγράφατο μὴ εἰσαγωγίμον εἶναι τὴν δίκην*), and in that case a court was to be held to try the preliminary question, whether the cause could be brought into court or not. Upon this previous trial the defendant was considered the *actor*, and hence is said by Demosthenes³ *κατηγορεῖν τοῦ δίκοντος*. He began, and had to maintain the ground of objection which he relied upon.⁴ If he succeeded, the whole cause was at an end; unless the objection was only to the form of the action, or some other such technicality, in which case it might be recommenced in the proper manner. If, however, the plaintiff succeeded, the jury merely decided *εἰσαγωγίμον εἶναι τὴν δίκην*, and then the original action, which in the mean time had been suspended, was proceeded with.⁵ Both parties on the trial of the *παράγραφη* were liable to the *ἐπὶ ὥβελιαν* on failure to obtain a fifth part of the votes.

The course of proceeding on a *παράγραφη* was obviously calculated to delay the progress of the cause, and was therefore not looked on with favour by the dicasts. *Πρόφασεις, ὑπαιμῶσαι, παραγραφαί, τὰ ἐκ τῶν νόμων, excuses, delays, pleas, legal objections*, are classed together by the orator as being the *manœuvres* of defendants to defeat justice. Hence we find in the extant *πααραγραφικοί λόγοι*, that the defendant, in order to remove the prejudice of the dicasts against himself, not only supports the ground of the *παράγραφη*, but discusses the general merits of the cause, and endeavours to show that there is no foundation for the plaintiff's complaint; and there is no doubt that the dicasts were materially influenced by such discussion, however in strictness irrelevant.⁶ The same observation applies to the *διαμαρτυρία*. (*Vid. HERES, GREEK.*)

There was no such thing as this proceeding by *παράγραφη* until after the expulsion of the thirty tyrants, when a law was passed, on the proposal of *Archinus*, *ὅτι τις δικάζηται παρὰ τοὺς ὄρκους, εἴεσθαι τῷ φεγόντι παραγράφασθαι, τοὺς δὲ ἄρχοντας περὶ τούτου πρῶτον εἰσάγειν, λέγειν δὲ πρότερον τὸν παραγραφάμενον, ὁπότερος δ' ἂν ἡττηθῇ, τὴν ἐπὶ ὥβελιαν ὕφελειν*. The object of this law appears to have been, to enable any person against whom an information or prosecution might be brought, or action commenced, for any matter arising out of the late political troubles, to obtain the benefit of the general amnesty, by specially pleading the same, and so bringing his defence in a more solemn manner before the court. The same privilege was afterwards extended to other grounds of defence (See the opening of the speech of *Isocrates* against *Callimachus*.) Before this time all special objections to the adversary's course of proceeding seem to have been called *ἀντιγραφαί*, and sometimes *ἐξωμοσίαι*, because an oath was taken by the party who tendered them.⁸

PARACATABOLE (παρακαταβολή), a sum of money required of a plaintiff or petitioner in certain cases, as a security that his complaint or demand was not frivolous, or made on slight and insufficient grounds. Such was the deposit made in certain inheritance cases, viz., a tenth part of the value of the property sought to be recovered. (*Vid.* HERES, GREEK.) So, also, in the proceeding termed *ἐνεπίσκημα*, which was a suit instituted against the public treasury by a creditor to obtain payment out of his debtor's confiscated goods, a fifth part of the value was deposited. It was returned to the petitioner if successful, otherwise it went to the state.¹ The money was deposited either at the *ἀνάκρισις* or on the commencement of the cause. The word *παρακαταβολή* signifies both the paying of the deposit and the money deposited; and, being a word of more general import, we find it used to denote other kinds of deposits, as the *πρωτανεία* and *παύσασις*.²

PARACATATHE'CE (παρακαταθήκη) generally signifies a deposit of something valuable with a friend or other person for the benefit of the owner. Thus, if I deliver my goods to a friend, to be taken care of for me, or if I deposit money with a banker, such delivery or *bailment*, or the goods bailed or delivered, or the money deposited, may be called *παρακαταθήκη*,³ and the word is often applied metaphorically to any important trust committed by one person to another.⁴ As every bailee is bound to restore to the bailor the thing deposited, either on demand (in case of a simple bailment), or on performance of the conditions on which it was received, the Athenians gave a *παρακαταθήκης δίκη* against a bailee who unjustly withheld his property from the owner, *ὑπεστέρησε τὴν παρακαταθήκην*.⁵ An example of such an action against a banker is the *τοραπευτικὸς λόγος* of Isocrates. A pledge given to a creditor could not be recovered except on payment of the money owed to him; but, after selling the article, and satisfying his debt out of the proceeds, he would, of course, be bound to restore the surplus (if any) to the pledgor. It follows, from the nature of the *παρακ. δίκη*, that it was *ἀτίμητος*, but it is not improbable that the additional penalty of *ἀτίμια* might be inflicted on a defendant who fraudulently denied that he had ever received the deposit.

The difficulty of procuring safe custody for money, and the general insecurity of movable property in Greece, induced many rich persons to make valuable deposits in the principal temples, such as that of Apollo at Delphi, Jupiter at Olympia, and others.⁶ It may be observed that *τίθεσθαι*, *παρακατατίθεσθαι*, in the middle voice, are always used of a person making a deposit for his own benefit, with the intention of taking it up again. Hence the expression *θέσθαι χάριν*, to confer an obligation, which gives the right (as it were) of drawing upon the obliged party for a return of the favour at some future time. *Κομίζεσθαι* is to recover your property or right.⁷

ΠΑΡΑΚΑΤΑΘΗΚΗΣ ΔΙΚΗ. (*Vid.* PARACATATHECE.)

ΠΑΡΑΝΟΙΑΣ ΓΡΑΦΗ'. This proceeding may be compared to our commission of luncy, or writ *de lunatico inquirendo*. It was a suit at Athens that might be instituted by a son or other near relative against one who, by reason of madness or mental imbecility, had become incapable of managing his own affairs. If the complaint was well-grounded,

the court decreed that the next heir should take possession of the lunatic's property, and probably, also, made some provision for his being put in confinement, or under proper care and guardianship.¹ It is related of Sophocles, that, having continued to write tragedies to an advanced age, and by reason thereof neglected his family affairs, he was brought before the court by his sons, and accused of lunacy; that he then read to the judges his *Cædipus Coloneus*, which he had just composed, and asked them if a man out of his mind could write such a poem as that; whereupon they acquitted him.² The story is told differently by the anonymous author of the life of Sophocles, who speaks of the suit as taking place between Iophon and his father, and seems to intimate that it was preferred before the *φράτορες*. In this last point he is supported by the scholiast on Aristophanes; but it can hardly be correct, as we have no other authority for supposing that the *φράτορες* had such a jurisdiction, and Pollux³ expressly says that the *παρανοίας γραφή* came before the archon, to whom, indeed, it peculiarly belonged, as being a matter connected with family rights; and, if so, we are to understand that it came before the archon in the regular way, as *ἡγεμὼν δικαστηρίου*.⁴ It is highly probable that there was some foundation for this anecdote of Sophocles. He might, perhaps, have given offence to his sons by that penuriousness which is said to have crept upon him in his old age; and Iophon, being a poet, and lying under the suspicion of being assisted by his father, might possibly be induced, by a mean jealousy, to bring this charge against him.⁵ The play of *Cædipus Coloneus* appears to exhibit the wounded feelings of the writer. (See more especially v. 337, 441.)

ΠΑΡΑΝΟΜΩΝ ΓΡΑΦΗ'. An indictment for procuring an illegal, or, rather, unconstitutional measure or law. We have seen (*vid.* ΝΟΜΟΘΗΤΕΣ) that any Athenian citizen was at liberty to make a motion in the popular assembly to pass a new law or amend an old one. In order to check rash and hasty legislation, the mover of any law or decree, though he succeeded in causing it to be passed, was still amenable to criminal justice if his enactment was found to be inconsistent with other laws that remained in force, or with the public interest.⁶ Any person might institute against him the *γραφὴ παρανόμων* within a year from the passing of the law. If he was convicted, not only did the law become void, but any punishment might be inflicted on him, at the discretion of the judges before whom he was tried; for it was a *τιμωρὶς ἀγών*. A person thrice so convicted lost the right of proposing laws in future. The cognizance of the cause belonged to the *thesmothetæ*.⁷ The prosecutor was compelled to take an oath, called by the same name as that taken to obtain delay in courts of justice (*ὅρκωσις*), because it had the effect of delaying the operation of the proposed measure, which otherwise might have come into force immediately.⁸ Examples of such prosecutions are the speech of Demosthenes against Timocrates, and that of Æschines against Ctesiphon. They both comment on the importance of the prosecution, as tending to preserve the existing laws and maintain constitutional liberty.⁹ Notwithstanding this check, the mania for legislation appears to have increased so greatly at Athens in later times, that Demosthenes¹⁰ declares that *ψηφισμάτων οὐδ' ὅτι οὐδὲν διαφέρουσιν οἱ νόμοι*. This arose

from the relaxation of that precautionary law of Solon, which required every measure to be approved by the *νομοῦται* before it could pass into law. (*Vid.* ΝΟΜΟΤΗΤΕΣ, and Schömann.¹) It is obvious that, while the people in assembly had the power of making decrees which could remain in force for a year, if they wished to evade the law of Solon, all they had to do was to renew their decree from year to year, and thus, in practice, the *ψήφισμα* became νόμος.

If the year had elapsed, the propounder of the law could not be punished, though the law itself might be repealed in the ordinary way by the institution of proceedings before the *νομοῦται*, before whom it was defended by the five *σύνδοκοι*. The speech against Leptines was made in a proceeding against the law itself, and not against the mover. As the author of the second argument says, *παρελθόντος τοῦ χρόνου, ἐν ᾧ ὑπεύθυνος ἦν κρίσει καὶ τιμωρίᾳ γράφον τις νόμον, ἐξάινετο Δελπίτιος ἀκίδυνος ὅθεν πρὸς αὐτὸν, ἀλλ' οὐ κατ' αὐτοῦ ὁ λόγος.*²

ΠΑΡΑΠΕΤΑΣΜΑ (*παπαπέτασμα*). (*Vid.* VELUM.)

ΠΑΡΑΠΕΡΝΑ (*παρ. Dos, ROMAN.*)

ΠΑΡΑΠΡΕΣΒΕΙΑ (*παπαπροεβεία*) signifies any corrupt conduct, misfeasance, or neglect of duty on the part of an ambassador, for which he was liable to be called to account and prosecuted on his return home.³ Ambassadors were usually elected by the people in assembly; they either had instructions given to them or not; in the latter case they were called *αὐτοκράτορες*, envoys with full powers, or plenipotentiary.⁴ To act contrary to their instructions (*παρὰ τὸ ψήφισμα προεβείναι*) was a high misdemeanour.⁵ On their return home they were required immediately to make a report of their proceedings (*ἀπαγγέλλειν τὴν προεβείαν*), first to the Senate of Five Hundred, and afterward to the people in assembly.⁶ This done, they were *functi officio*; but still, like all other persons who had held an office of trust, they were liable to render an account (*εὐθύνας*) of the manner in which they had discharged their duty.⁷ The persons to whom such account was to be rendered were the *λογισταί*, and the officers associated with them, called *εὐθύναι*. A pecuniary account was only rendered in cases where money had passed through the hands of the party; in other cases, after stating that he had neither spent nor received any of the public money, the accounting party was discharged, unless there was reason for thinking that he deserved to be proceeded against for misconduct. The *λογισταί* themselves had power to summon the party at once to appear as a criminal, and undergo the *ἀνάκρισις* in their office (*λογιστήριον*), upon which they would direct the *συνήγοροι* to prosecute; and this probably was the ordinary course in case of any pecuniary malversation. Accusations, however, of a more general nature were commonly preferred by individuals, giving information to the *λογισταί*, who, for the purpose of giving any citizen an opportunity of so doing, caused their *κνήρυξ* to make proclamation in public assembly, that such a person was about to render his account, and to ask if any one intended to accuse him. If an accuser appeared, his charge would be reduced to the form of a *γραφὴ*, and the prosecution would be conducted in the usual way, the *λογισταί* being the superintending magistrates.⁸ Magistrates who were annually elect-

ed rendered their accounts at the end of the official year; but ambassadors, who were extraordinary functionaries, had no time limited for this purpose. Æschines delayed giving an account of his embassy to Philip for three years.¹ We can hardly suppose, however (as Thirlwall states), that the time of rendering the account was optional with the ambassador himself, since, not to mention the power of the *λογισταί*, it was open to any man to move for a special decree of the people, that the party should be called to account immediately. The *γραφὴ παπαπροεβείας* was a *τιμωρὴς ἄγων*;² and as it might comprise charges of the most serious kind, such as treachery and treason against the state, the defendant might have to apprehend the heaviest punishment. Æschines³ reminds the dicasts of the great peril to which he is exposed, and makes a merit of submitting to his trial without fear. Besides the *γραφὴ*, an *εἰσαγγελία* might be brought against an ambassador, upon which the accused would be committed to prison, or compelled to give bail for his appearance. This course was taken by Hyperides against Philocrates, who avoided his trial by voluntary exile.⁴

ΠΑΡΑΠΡΕΣΒΕΙΑΣ ΓΡΑΦΗ. (*Vid.* PARAPRESBEIA.)

PARASANG (ὁ παρασάγγης), a Persian measure of length, frequently mentioned by the Greek writers. It is still used by the Persians, who call it

فرسنگ (*ferseng*), which has been changed in Arabic into فرسخ (*farsakh*).

According to Herodotus,⁵ the parasang was equal to 30 Greek stadia. Suidas⁶ and Hesychius⁷ assign it the same length; and Xenophon must also have calculated it at the same, as he says⁸ that 16,050 stadia are equal to 535 parasangs (16,050 ÷ 535 = 30). Agathias,⁹ however, who quotes the testimony of Herodotus and Xenophon to the parasang being 30 stadia, says that in his time the Iberi and Persians made it only 21 stadia. Strabo¹⁰ also states that some writers reckoned it at 60, others at 40, and others at 30 stadia; and Pliny¹¹ informs us that the Persians themselves assigned different lengths to it. Modern English travellers estimate it variously at from 3½ to 4 English miles, which nearly agrees with the calculation of Herodotus.

The etymology of parasang is doubtful. Rödig¹² supposes the latter part of the word to be the same as the Persian سنگ (*seng*), "a stone," and the former part to be connected with the Sanscrit परा (*pāra*), "end," and thinks that it may have derived its name from the stones placed at the end of certain distances on the public roads of Persia.

PARASEMON (*παράσημον*). (*Vid.* INSIGNE.)

PARASITI (*παράσιτοι*) properly denotes persons who dine with others. In the early history of Greece the word had a very different meaning from that in which it was used in later times. Τὸ δὲ τοῦ παρασίτου ὄνομα πάλαι μὲν ἦν σεμνὸν καὶ ἱερὸν, says Athenæus;¹³ and he proves from various decrees (*ψηφίσματα*) and other authorities that anciently the name *παράσιτος* was given to distinguished persons who were appointed as assistants to certain priests and to the highest magistrates. As regards the priestly and civil parasites, the accounts of their office are so obscure that we are scarcely able to form any definite notion of it. An ancient law¹⁴ ordained

that each of the priestly parasites should select from the *βουκολία* the sixth part of a medimnus of barley, and supply with it the Athenians who were present in the temple, according to the custom of their fathers; and this sixth of a medimnus was to be given by the parasites of Acharnæ. The meaning of this very obscure law is discussed by Preller.¹ Thus much, however, is clear, that the parasites were elected in the demi of Attica from among the most distinguished and most ancient families. We find their number to have been twelve, so that it did not coincide with that of the demi. This may be accounted for by supposing that in one demos two or more gods were worshipped, whose service required a parasite, while in another there was no such divinity. The gods in whose service parasites are mentioned are Heracles, Apollo, the Anaces, and Athena of Pallene. Their services appear to have been rewarded with a third of the victims sacrificed to their respective gods. Such officers existed down to a late period of Greek history, for Clearchus, a disciple of Aristotle, said that parasites in his own days continued to be appointed in most Grecian states to the most distinguished magistrates.² These, however, must have been different from the priestly parasites. Solon, in his legislation, called the act of giving public meals to certain magistrates and foreign ambassadors in the *prytaneum*, *παρσιτεῖν*,³ and it may be that the parasites were connected with this institution.⁴

The class of persons whom we call parasites was very numerous in ancient Greece, and appears to have existed from early times, though they were not designated by this name. The comedies of Aristophanes contain various allusions to them, and Philippos, who is introduced in the Symposium of Xenophon, as well as a person described in some verses of Epicharmos preserved in Athenæus, are perfect specimens of parasites. But the first writer who designated these persons by the name of *παράσιτοι* was Alexis, in one of his comedies.⁵ In the so-called middle and new Attic comedy, and in their Roman imitations, the parasites are standing characters; and although they are described in very strong colours in these comedies, yet the description does not seem to be much exaggerated, if we may judge from other accounts of real parasites. We shall not, therefore, be much mistaken in borrowing our description of parasites chiefly from these comedies.

The characteristic features common to all parasites are importunity, love of sensual pleasures, and, above all, the desire of getting a good dinner without paying for it. According to the various means they employed to obtain this object, they may be divided into three classes. The first are the *γελωτοποιοί*, or jesters, who, in order to get some invitation, not only tried to amuse persons with their jokes, but even exposed their own person to ridicule, and would bear all kinds of insult and abuse if they could only hope to gain the desired object. Among these we may class Philippos in the Symposium of Xenophon, Ergastilus in the Captivi, and Gelasimus in the Stichus of Plautus. The second class are the *κόλακες* or flatterers (*assentatores*), who, by praising and admiring vain persons, endeavoured to obtain an invitation to their house. Gnatho in the Eunuchus of Terence, and the Artotrogus in the Miles Gloriosus of Plautus, are admirable delineations of such characters. The third class are the *θεραπευτικοί*, or the officious, who, by a variety of services, even of the lowest and most degrading description, endeavoured to acquire claims

to invitations.¹ Characters of this class are the parasites in the Asinaria and Menæchmi of Plautus, and more especially the Curculio and Sauturio in the Persa of Plautus and the Phormio of Terence. From the various statements in comedies and the treatise of Plutarch, *De Adulatoris et Amici Discrimine*, we see that parasites always tried to discover where a good dinner was to be had, and for this purpose they lounged about in the market, the palaestra, the baths, and other public places of resort. After they had fixed upon a person, who was in most cases, probably, an inexperienced young man, they used every possible means to induce him to invite them. No humiliation and no abuse could deter them from pursuing their plans. Some examples of the most disgusting humiliations which parasites endured, and even rejoiced in, are mentioned by Athenæus² and Plutarch.³ During the time of the Roman emperors, a parasite seems to have been a constant guest at the tables of the wealthy.⁴

PARASTADES (παρστάδες). (Vid. ANTÆ.)

PARASTASIS (παράστασις). A fee of one drachm paid to an arbitrator by the plaintiff on bringing his cause before him, and by the defendant on putting in his answer. The same name was given to the fee (perhaps a drachm) paid by the prosecutor in most public causes.⁵ (Compare DICTÆÆ, p. 353.)

PARASTATÆ (παρστάται). (Vid. ELEVEN, THE.)

PARAZONIUM. (Vid. ZONA.)

*PARDALIS (πάρδαλις). "Oppian describes two species of *Pardalis*, namely, the greater and the smaller. According to Buffon, the former is the Panther, and the latter the Ounce. It is beyond a doubt," he remarks, "that the little Panther of Oppian, the *Phet* or *Phed* of the Arabians, the *Foadh* of Barbary, the *Onza* or Ounce of the Europeans, are one and the same animal. There is great reason to think that it is also the *Pardus* of the ancients, and the *Panthera* of Pliny." Buffon adds, "It is highly probable, moreover, that the little Panther was called simply *Pard* or *Pardus*, and that, in process of time, the large Panther obtained the name of *Leopard* or *Leopardus*." "The Greeks," says Smith, speaking of the Panther and Leopard, "knew one of these from the time of Homer, which they named *Pardalis*, as Menelaus is said in the Iliad to have covered himself with the spotted skin of this animal. This they compared, on account of its strength and cruelty, to the lion, and represented it as having its skin varied with spots. Its name, even, was synonymous with spotted. The Greek translators of the Scriptures used the name *Pardalis* as synonymous with *Namer*, which word, with a slight modification, signifies 'the Panther,' at present, among the Arabians. The name *Pardalis* gave place among the Romans to those of *Panthera* and *Varia*. These are the words they used during the two first ages, whenever they had occasion to translate the Greek passages which mentioned the *Pardalis*, or when they themselves mentioned this animal. They sometimes used the word *Pardus* either for *Pardalis* or for *Namer*. Pliny even says that *Pardus* signified the male of *Panthera* or *Varia*. So, reciprocally, the Greeks translated *Panthera* by the word *Pardalis*. The term *Panthera*, although of Greek root, did not, then, preserve the sense of the word *πάνθηρ*, which is constantly marked as

1. (Plut., *De Adul.*, 23; *De Educat.*, 17.)—2. (vi., p. 249.)—3. (*De Occult. viv.*, 1.—Sympos., vii., 6.—Compare Diog. Laert., ii., 67.)—4. (Lucian, *De Parasit.*, 58.—Compare Becker, *Charikles*, i., p. 490, &c.—Le Beau, in the *Hist. de l'Acad. des Inscriptions*, vol. xxxi., p. 51, &c.—M. H. E. Meyer, in *Ersch und Gruber's Encyclopædie*, s. v. *Parasiten*.)—5. (Harpoc., s. v. *Παρστάσις*.—Meier, *Att. Proc.*, 614, 615.)

1. (Polemonis *Fragm.*, p. 115, &c.)—2. (Athen., vi., p. 235.)—3. (Plut., Sol., 24.)—4. (Compare Pollux, vi., c. 7.)—5. (Athen., vi., p. 235.)

different from *Iardalis*, and by Oppian is said to be small and of little courage. The Romans, nevertheless, sometimes employed it to translate the word *πάνθηρ*, and the Greeks of the lower empire, induced by the resemblance of the names, have probably attributed to the Panther some of the characters which they found among the Romans on the Panthera. Bochart, without knowing these animals himself, has collected and compared with much sagacity everything that the ancients and the Orientalists have said about them. He endeavours to clear up these apparent contradictions by a passage in which Oppian characterizes two species of *Pardalis*, the great, with a shorter tail than the less. It is to this smaller species that Bochart would apply the word *πάνθηρ*. But there are found in the country known to the ancients two animals with spotted skins: the common Panther of naturalists, and another animal, which, after Daubenton, is named the Guepard (or Hunting Leopard). The Arabian authors have there also known and distinguished two of these animals; the first under the name of *Nemer*, the other under that of *Fehd*; and although Bochart considers the *Fehd* to be the Lynx, Cuvier rather inclines to think it the Hunting Leopard. The Guepard, then, would be the Panther, and there is nothing stated by the Greeks repugnant to this idea.¹¹

*II. One of the large fishes mentioned by Ælian and Oppian, and by Suidas under *κῆτος*. Many conjectures have been made respecting it, the most probable of which, according to Adams, is, that it was the *Squalus tigrinus*, a species of Shark.²

*PARDALOS (πάρδαλος), a bird noticed by Aristotle. "Aldrovandi and Buffon agree in holding it to be the *Tringa squatarola*, L., or the Gray Plover; but Dr. Trail prefers the *Charadrius pluvialis*, or Golden Plover. Schneider mentions that Billerbeck had advanced the opinion that it is the common Starling, or *Sturnus vulgaris*. This opinion, however, is entitled to no credit."³

*PARDION (πάρδιον). Schneider follows Pallas in referring this to the Camelopard, or *Giraffa Camelopardalis*.⁴

PAREDRI (πάρεδροι). Each of the three superior archons was at liberty to have two assessors (πάρεδροι), chosen by himself, to assist him, by advice and otherwise, in the performance of his various duties. The assessor, like the magistrate himself, had to undergo a *δοκιμασία* in the Senate of Five Hundred and before a judicial tribunal before he could be permitted to enter upon his labours. He was also to render an account (εὐθύνη) at the end of the year. The office is called an *ἀρχή* by Demosthenes.⁵ The duties of the archon, magisterial and judicial, were so numerous, that one of the principal objects of having assessors must have been to enable them to get through their business. We find the *πάρεδρος* assisting the archon at the *λήξεις δίκης*.⁶ He had authority to keep order at public festivals and theatres, and to impose a fine on the disorderly.⁷ As the archons were chosen by lot (κληρωτοί), and might be persons of inferior capacity, and not very well fitted for their station, it might often be useful, or even necessary, for them to procure the assistance of clever men of business.⁸ And perhaps it was intended that the *πάρεδρος* should not only assist, but in some measure check and control the power of their principals. They are spoken of as being *βοηθοί, σύμβουλοι καὶ φύλα-*

κες. Demosthenes accuses Stephanus of buying his place of the *Ἀρχων βασιλεύς*.¹ It was usual to choose relatives and friends to be assessors; but they might at any time be dismissed, at least for good cause.² The thesmothetæ, though they had no regular *πάρεδροι*, used to have counsellors (σύμβουλοι), who answered the same purpose.³ The office of *πάρεδρος* was called *παριδρία*, and to exercise it *παρεδρεύειν*.

From the *πάρεδροι* of the archons we must distinguish those who assisted the *εὐθύναι* in examining and auditing magistrates' accounts. The *εὐθύναι* were a board of ten, and each of them chose two assessors.⁴ (Vid. ΕΥΘΥΝΕ.)

*PAREIAS (παρείας), a species of Serpent, sacred to Æsculapius. Gesner concludes that it is the serpent called *Baron* in certain parts of Italy. According to the author of the Etymologicon Magnum, it is innocuous.⁵

PAREISGRAPHE (παρεισγραφή) signifies a fraudulent enrolment in the register of citizens. For this an indictment lay at Athens, called *ξενίας γραφή*; and, besides, the *δημόται* might, by their *διαψήφισις*, eject any person who was illegally enrolled among them. From their decision there might be an appeal to a court of dicasts; of which the speech of Demosthenes against Eubulides furnishes an example. If the dicasts confirmed the decision of the *δημόται*, the appellant party was sold for a slave. Spurious citizens are sometimes called *παρέγγραπτοι, παρεγγεγραμμένοι*.⁶ The expression *παρεισγραφῆς γραφή* is not Attic.⁷

ΠΑΡΕΙΣΓΡΑΦΗ'Σ ΓΡΑΦΗ'. (Vid. PAREISGRAPHE.)

PARENTALIA. (Vid. FUNUS, p. 462.)

PARIES (τείχιον,⁸ whence the epithet *τειχέεσσα*, "full of houses," applied to cities; ⁹ *τοιχος*,¹⁰ whence *τοιχωρύκτης* and *τοιχωρύχος*, "a house-breaker, a thief," and *τοιχωρυχία*, "burglary"), the wall of a house, in contradistinction from *murus*, the wall of a city. Among the numerous methods employed by the ancients in constructing walls, we find mention of the following:

I. The *parus cratitius*, i. e., the wattled or the lath-and-plaster wall, made of canes or hurdles (vid. CRATES) covered with clay.¹¹ These were used in the original city of Rome to form entire houses;¹² afterward they were coated with mortar instead of clay, and introduced like our lath-and-plaster walls in the interior of houses.

II. Vitruvius¹³ mentions as the next step the practice, common in his time among the Gauls, and continued to our own in Devonshire, of drying square lumps of clay and building them into walls, which were strengthened by means of horizontal bond-timbers (*jugamenta*) laid at intervals, and which were then covered with thatch.

III. The *paries formaceus*, i. e., the *pisé* wall, made of rammed earth. (Vid. FORMA.)

IV. In districts abounding with wood, loghouses were common, constructed, like those of the Siberians and of the modern Americans in the back settlements, of the trunks of trees, which were more or less squared, were then laid upon one another in a horizontal position, and had their interstices filled with chips (*schidiis*), moss, and clay. After this

manner the Colchians erected houses several stories high.¹

V. The *paries lateritius*, i. e., the brick wall. (Vid. LATER.) Among the Romans, the ordinary thickness of an outside wall was 18 inches (*sesquipes*), being the length of the common or Lydian brick; but, if the building was more than one story high, the walls at the bottom were either two or three bricks thick (*diplinthi aut triplinthii*), according to circumstances. The Egyptians sometimes exhibited a checkered pattern, and perhaps other devices, upon the walls of their houses by the alternation of white and black bricks.² The Romans, probably in imitation of the Etrurians, often cased the highest part of a brick wall with a range of terra cottas (*structura and lorica testacea*³), eighteen inches high, with projecting cornices, and spouts for discharging the water from the roof. (Vid. ANTEFIXA.)

VI. The *reticulata structura*,⁴ i. e., the reticulated, or resembling network. This structure consists in placing square or lozenge-shaped stones side by side upon their edges, the stones being of small dimensions, and cemented by mortar (*materia ex calce et arena*). In many cases the mortar has proved more durable than the stone, especially where volcanic tufa is the material employed, as at Baiæ in the Bay of Naples, and in the villa of Hadrian near Tivoli. This kind of building is very common in the ancient edifices of Italy. Vitruvius says⁵ that it was universally adopted in his time. Walls thus constructed were considered more pleasing to the eye, but less secure than those in which the stones lay upon their flat surfaces. The front of the wall was the only part in which the structure was regular, or the stones cut into a certain form, the interior being rubble-work or concrete (*fartura*), i. e., fragments and chippings of stone (*camenta*, χιλιε) imbedded in mortar. Only part of the wall was reticulated: to give it firmness and durability, the sides and base were built of brick or of squared stones, and horizontal courses of bricks were laid at intervals, extending through the length and thickness of the wall. These circumstances are well exemplified in the annexed woodcut, which is copied from the drawing of a wall at Pompeii, executed on the spot by Mr. Mocatta.

VII. The *structura antiqua or incerta*, i. e., the wall of irregular masonry, built of stones, which were not squared or cut into any exact form. The necessary consequence of this method of construction was, that a great part of the wall consisted of mortar and rubble-work.¹

VIII. The *emplecton*, i. e., the complicated wall, consisting, in fact, of three walls joined together. Each side presented regular masonry or brickwork; but the interior was filled with rubble (*fartura*). To bind together the two outside walls, and thus render the whole firm and durable, large stones or courses of brickwork (*coagmenta*) were placed at intervals, extending through the whole thickness of the wall, as was done also in the *structura reticulata*. Walls of this description are not uncommon, especially in buildings of considerable size.

IX. The *paries e lapide quadrato*, i. e., the ashlar wall, consisting entirely of stones cut and squared by the chisel. (Vid. DOLABRA.) This was the most perfect kind of wall, especially when built of marble. The construction of such walls was carried to the highest perfection by the architects of Greece: the temples of Athens, Corinth, and many cities of Asia Minor still attesting in their ruins the extreme skill bestowed upon the erection of walls. Considerable excellence in this art must have been attained by the Greeks even as early as the age of Homer, who derives one of his similes from the "nicely-fitted stones" of the wall of a house.² But probably in this the Greeks only copied the Asiatics; for Xenophon came to a deserted city in Mesopotamia, the brick walls of which were capped by a parapet of "polished shell marble."³ Instead of using mortar, as in the last four kinds, the ancients gave solidity to their ashlar walls by cutting the stones so exactly as to leave no perceptible space between their contiguous surfaces. A tenon and mortice often united a stone to that which was above it, and the stones which were placed side by side were fastened together with iron cramps (*ansis ferreis*) and lead.⁴ Hence the Coliseum at Rome, and the other grand remains of ancient architecture throughout Europe, have been regarded by the moderns as iron and lead mines, and we see them mutilated by the pickaxe over all those points where cramps and tenons were known to be inserted. As a farther method of making the walls firm and compact, the Greeks placed at intervals bond-stones, which they called *δαρῖνοι*, because they extended through the whole thickness of the wall. The walls of the Temple of Jupiter at Cyzicus, built of the marble (the Proconnesian) for which that locality has always been renowned, were ornamented with a gold thread placed over all the seams of the stones.⁵ Besides conferring the highest degree of beauty and solidity, another important recommendation of ashlar walls was, that they were the most secure against fire, an advantage to which St. Paul alludes when he contrasts the stones, valuable both for material and for workmanship (*λίθους τιμίους*), and the gold and silver which were exhibited in the walls of such a temple as that just mentioned, with the logs of wood, the thatch, the straw and cane, employed in building walls of the first four kinds.⁷ Vitruvius also strongly objects to the *paries cratilius* on account of its great combustibility.⁸

Cicero, in a single passage of his *Topica*,⁹ uses four epithets which were applied to walls. He opposes the *paries solidus* to the *fornicatus*, and the *communis* to the *directus*. The passage, at the same time, shows that the Romans inserted arches

1. (Vitruv., l. c.)—2. (H., xvi., 212.)—3. (Anab., iii., 4, § 10.)—4. (Vitruv., l. c.)—5. (Herod., i., 186.—Thucyd., i., 93.)—6. (Plin., H. N., xxxvi., 15, s. 22.)—7. (1 Cor., iii., 10-15.)—8. (ii., 8, ad fin.)—9. (§ 4.)

(*vid.* FORNIX) into their "common" or party-walls. The annexed woodcut, representing a portion of the supposed *Therma* at Trèves,¹ exemplifies the frequent occurrence of arches in all Roman buildings, not only when they were intended for windows or doorways, but also when they could serve no other use than to strengthen the wall. In this "*paries fornicatus*" each arch is a combination of two or more concentric arches, all built of brick.

This specimen also shows the alternation of courses of brick and stone, which is a common characteristic of Roman masonry. The "*paries solidus*," i. e., the wall without openings for windows or doorways, was also called "a blind wall,"² and the *paries communis*,³ *κοινὸς τοίχος*,⁴ which was the boundary between two tenements and common to them both, was called *intergerinus*, al. *intergerinus*,⁵ and in Greek *μεσότοιχος*⁶ or *μεσότοιχον*.⁷ The walls, built at right angles to the party-wall for the convenience of the respective families, were the *parietes directi*.

Walls were adorned, especially in the interior of buildings, in a great variety of ways. Their plane surface was broken by panels. (*Vid.* *ABACUS*.) However coarse and rough their construction might be, every unevenness was removed by a coating, two or three inches thick, of mortar or of plaster with rough cast, consisting of sand, together with stone, brick, and marble, broken and ground to various degrees of fineness.⁸ Gypsum also, in the state which we call plaster of Paris, was much used in the more splendid edifices, and was decorated with an endless variety of tasteful devices in bas-relief. Of these ornaments, wrought in stucco (*opus albarium*), specimens remain in the "Baths of Titus" at Rome. When the plasterer (*tektor*, *κοιτῆρς*) had finished his work (*trullissatio*, i. e., trowelling, *opus tectorium*), in all of which he was directed by the use of the square (*vid.* *NORMA*), the rule, and the line and plummet (*vid.* *PERPENDICULUM*), and in which he aimed at producing a surface not only smooth and shining, but as little as possible liable to crack or decay,⁹ he was often succeeded by the painter in fresco (*udo tectorio*¹⁰). In many cases the plaster or stucco was left without any additional ornament; and its whiteness and freshness were occasionally restored by washing it with certain fine calcareous or aluminous earths dissolved in milk (*paratonium*,¹¹ *terra Selinusia*¹²). A painted wall was commonly divided

by the artist into rectangular compartments, which he filled, according to his taste and fancy, with an endless variety of landscapes, buildings, gardens, animals, &c.¹ (*Vid.* *PAINTING*, p. 715.)

Another method of decorating walls was by incrusting them with slabs of marble (*crustæ*). The blocks designed for this purpose were cut into thin slabs by the aid of sawmills. (*Vid.* *MOLA*.) Various kinds of sand were used in the operation, according to the hardness of the stone, emery (*naxia*?) being used for the hardest. This art was of high antiquity, and probably Oriental in its origin. The brick walls of the Mausoleum at Halicarnassus, built as early as 355 B. C., were covered with slabs of Proconnesian marble,² and this is the most ancient example upon record. In the time of Pliny,³ slabs of a uniform colour were sometimes curiously inlaid with variously-coloured materials in such a way as to represent animals and other objects. In short, the beautiful invention now called Florentine Mosaic was then in use for the decoration of the walls of apartments. (*Vid.* *EMBLEMA*.) The common kind of Mosaic was also sometimes used in walls, as well as in floors and ceilings. The greatest refinement was the attempt to produce the effect of mirrors, which was done by inserting into the wall pieces of black glass manufactured in imitation of obsidian.⁴ (*Vid.* *HOUSE, ROMAN*, p. 516, 520; *PAINTING*, p. 715.)

PARILILIA. (*Vid.* *PALILIA*.)

**PARIUM MARMOR* (*Πάριον λίθος*), Parian Marble, a species of marble much celebrated in ancient times, and procured from the island of Paros. It was used, for the most part, in statuary. "Among the marbles enumerated by Theophrastus and Pliny, that ranks first," remarks Dr. Moore, "with both, which, from the island of Paros, where it was obtained, was called Parian; and from the manner in which it was quarried, by the light of lamps, was sometimes, as Pliny, on the authority of Varro, tells us, designated by the name *Lychnites*. This is the stone 'whose colour was considered as pleasing to the gods; which was used by Praxiteles and other ancient sculptors, and celebrated for its whiteness by Pindar and Theocritus.'⁶ Of this marble are the *Venus de Medici*, the *Diana Venatrix*, the colossal *Minerva* (called *Pallas* of Velletri), *Ariadne* (called *Cleopatra*), *Juno* (called *Capitolina*), and others. Of this are also the celebrated Oxford marbles, known as the *Parian Chronicle*." For a detailed account of the Parian quarries, and the marble contained there, consult *Clarke's Travels*, vol. 6, p. 133, *seq.*, *Lond. ed.*

PARMA, dim. PARMULA,⁷ a round shield, three feet in diameter, carried by the *velites* in the Roman army (see p. 104). Though small, compared with the *Clipeus*, it was so strongly made as to be a very effectual protection.⁸ This was probably owing to the use of iron in its framework. In the Pyrrhic dance it was raised above the head and struck with a sword, so as to emit a loud, ringing noise.⁹ The *parma* was also worn by the *Equires*,¹⁰ and for the sake of state and fashion, it was sometimes adorned with precious stones.¹¹

We find the term *parma* often applied to the target (*vid.* *CETRA*), which was also a small round shield, and, therefore, very similar to the *parma*.¹² Virgil, in like manner, applies the term to the clipeus of the Palladium, because, the statue being small, the shield was small in proportion.¹³

The annexed woodcut represents a votive parma,

embossed (*σφρηγίσαν*) (*vid.* MALLEUS) and gilded, representing on its border, as is supposed, the taking of Rome by the Gauls under Brennus, and its recovery by Camillus. It belonged formerly to the Woodwardian Museum, and is supposed by antiquaries to have been made in the time of Claudius or Nero. The boss (*umbo*) is a grotesque face, surrounded with ram's horns, foliage, and a twisted beard.¹

*PARNOPS (*πάρωνος*), a species of *Locusta*, or Grasshopper.²

*PARONYCHIA (*παρωνυχία*), a species of Grass. "There is great uncertainty about it," remarks Adams. "Conformity of names gives some countenance to the conjecture of Lobelius, who held it to be our Whitlow Grass, namely, the *Draba verna*, L."³

PAROPSIS (*παρόψις*). Two different meanings are given to this word by the Greek grammarians; some interpret it as meaning any food eaten with the *ὄψον* (*vid.* ORSONIUM), as the *μάζα*, a kind of frumenty or soft cake, broth, or any kind of condiment or sauce;⁴ and others a saucer, plate, or small dish.⁵ It is plain, however, from the numerous passages collected by Athenæus,⁶ that the word was used in both significations, and was the name of the dish or plate, as well as of its contents.⁷ The Roman writers seem always to use it in the sense of a dish or plate;⁸ and, according to Charisius, it was so called, "*quia in eo reponuntur obsonia, et ex eo in mensa comeduntur.*" The word is also written Parapsis.⁹

*PARRA, a bird of evil omen, about which great difference of opinion exists. Vanderbourg, one of the commentators on Horace (by which poet the *Parra* is once mentioned), is in favour of the Screech Owl.¹⁰

PARJUCI¹¹. (*Vid.* CORNELIA LEX DE SICARIIS.)

PARTHENIAI or PARTHENEIAI (*παρθενιαί* or *παρθεनियाί*) are, according to the literal meaning of the word, children born by unmarried women (*παρθενoi*).¹² Some writers also designated by this name those legitimate children at Sparta who were born before the mother was introduced into the house of her husband.¹³ The partheniæ, however,

as a distinct class of citizens, appear at Sparta after the first Messenian war, and in connexion with the foundation of Tarentum; but the legends as to who they were differ from one another. Hesychius says that they were the children of Spartan citizens and female slaves; Antiochus¹ states that they were the sons of those Spartans who took no part in the war against the Messenians. These Spartans were made Helots, and their children were called partheniæ, and declared *ἀτιμοί*. When they grew up, and were unable to bear their degrading position at home, they emigrated, and became the founders of Tarentum. Ephorus,² again, related the story in a different manner. When the Messenian war had lasted for a considerable number of years, the Spartans women sent an embassy to the camp of their husbands, complained of their long absence, and stated that the Republic would suffer for want of an increase in the number of citizens if the war should continue much longer. Their husbands, who were bound by an oath not to leave the field until the Messenians were conquered, sent home all the young men in the camp, who were not bound by that oath, and requested them to cohabit with the maidens at Sparta. The children thus produced were called partheniæ. On the return of the Spartans from Messenia, these partheniæ were not treated as citizens, and, accordingly, united with the Helots to wage war against the Spartans. But, when this plan was found impracticable, they emigrated, and founded the colony of Tarentum.³ (*Vid.* ΕΡΕΥΝΑΚΤΑΙ.) These stories seem to be nothing but distortions of some historical fact. The Spartans, at a time of great distress, had perhaps allowed marriages between Spartans and slaves or Lacedæmonians, or had admitted a number of persons to the franchise, but afterward endeavoured to curtail the privileges of these new citizens, which led to insurrection and emigration.⁴

*PARTHENION (*παρθένιον*), a species of plant, which Sprengel makes to be the *Matricaria Parthenium*, the same with the *Pyrethrum Parthenium*, Hooker, in English, Fever-few. Sibthorp, with some hesitation, however, advocates the same opinion.⁵

*PASSER (*στρουθός*), the Sparrow. "The Greek term *στρουθός* is used by Paulus Ægineta in the same sense that *Passeres* is by Linnæus, as applying to the order of small birds. It is more particularly applied to the *Passer domesticus*, or House Sparrow. Gesner supposes the *πυργίτης* and *πρωγλοδότης* mere varieties of it; but it is more probable that the latter was the Hedge Sparrow, or *Accentor modularis*, Cuvier."⁶

PASSUS, a measure of length, which consisted of five Roman feet.⁷ (*Vid.* PES.) The passus was not the step, or distance from heel to heel, when the feet were at their utmost ordinary extension, but the distance from the point which the heel leaves to that in which it is set down. The *mille passuum*, or thousand paces, was the common name of the Roman mile. (*Vid.* MILLIARE.)

PASTOPHORUS (*παστοφόρος*). The shawl, richly interwoven with gold (*χρυσόπαστος*), and displaying various symbolical or mythological figures, was much used in religious ceremonies to conduce to their splendour, to explain their signification, and also to veil their solemnity. The maidens who carried the figured peplus in the Panathenæa at Athens were called *ἀρρηφόροι*. In Egypt, the priests of Isis and Osiris, who probably fulfilled a similar

office, were denominated *παστοφόροι*, and were incorporated.¹ They appear to have extended themselves, together with the extension of the Egyptian worship, over parts of Greece and Italy, so that "the College of the Pastophori of Industria," a city of Liguria, is mentioned in an inscription found near Turin.² The Egyptian college was divided into minor companies, each containing ten pastophori, and each having at its head a leader who was called *decurio quinquennalis*, because he was appointed for five years.³ Besides carrying the *παστός*, or sacred ornamental shawl, they performed other duties in connexion with the worship of the temple. It was the office of this class of priests to raise the shawl with the performance of an appropriate chant, so as to discover the god seated or standing in the adytum,⁴ and generally to show the temple with its sacred utensils, of which, like modern sacristans, they had the custody.⁵ In consequence of the supposed influence of Isis and her priesthood in healing diseases, the pastophori obtained a high rank as physicians.⁶

It must be observed, that, according to another interpretation of *παστός*, the pastophori were so denominated from carrying, not a shawl, but a shrine or small chapel, containing the image of the god. Supposing this etymology to be correct, it is no less true that the pastophori sustained the various offices which have been here assigned to them.

It was indispensible requisite that so numerous and important a body of men should have a residence appropriated to them in the temple to which they belonged. This residence was called *παστοφόριον*. The common use of the term, as applied by the Greeks to Egyptian temples, led to its application to the corresponding part of the Temple at Jerusalem by Josephus,⁷ and by the authors of the Alexandrine version of the Old Testament.⁸

PATER FAMILIÆ. (*Vid.* FAMILIA, MARRIAGE (ROMAN), PATRIA POTESTAS.)

PATER PATRATUS. (*Vid.* FETIALES.)

PATERA, *dim.* PATELLA (*πιάλη*), a round dish, a plate, a saucer. Macrobius,⁹ explaining the difference between the *patera* and the *CARCHESIUM*, says that the former received its name from its flat, expanded form (*planum ac patens*). The *pateræ* of the most common kind are thus described by Festus:¹⁰ "*Vasa picta parva, sacrificiis faciendis apta*" (*Nigra patella*,¹¹ *Rubicunda testa*).¹² They were small plates of the common red earthenware, on which an ornamental pattern was drawn in the manner described under the article *PICTILE*,¹³ and which were sometimes entirely black. Numerous specimens of them may be seen in the British Museum, and in other collections of ancient fictile vases. The more valuable *pateræ* were metallic, being chiefly of bronze; but every family, raised above poverty, possessed one of silver (*ἀργυρίς*), together with a silver salt-cellar. (*Vid.* SALINUM.)¹⁴ In opulent houses there was a plate of gold (*χρυσίς*).¹⁵ These metallic plates were often adorned with figures, engraved or embossed upon them.¹⁶ A beautiful specimen is presented in the woodcut to the article *LIBRA*; and the accompanying woodcut exhibits a highly ornamented dish, also of bronze, designed to be used in the worship of Mars, and found at

Pompeii. The view of the upper surface is accompanied by a side view, showing the form and depth

of the vessel. The ornamental *pateræ* sometimes represented leaves of fern, which probably diverged from the centre (*filicatae*). Gems were set in others.³ We read also of an amber dish (*electrinam*), having in the centre the countenance of Alexander the Great, and his history represented on the border.⁴ The annexed woodcut contains a view and section of a plate of white marble in the British Museum, which was found in the ruins of Hadrian's Villa, and purchased by Mr. Townley. It is 14

inches in diameter, and 1½ high. It is cut with skill and delicacy, the marble not being much more than a quarter of an inch thick. In the centre is sculptured a female bacchante, in a long tunic and with a scarf (*vid.* CHLAMYD) floating over her head. This centre-piece is encircled by a wreath of ivy. The decorations indicate the appropriation of the plate to the worship of Bacchus.

Plates were sometimes made so as to be used with either side downward, and were then distinguished by the epithet *ἀμφίθετος*.⁵ In these the under surface was ornamented as well as the upper. The Massilians and other Ionic Greeks commonly placed the under surface uppermost. Plates were farther distinguished from one another by being either with or without a base (*πυθμήν*), a boss in the middle (*μεγαλωτή, μεσόμφαλος, φθούς*), feet (*βαλανωτή*), and handles.⁶ In the preceding woodcuts the

bronze patera has one handle : both the pateræ are made to stand upon a low base.

Small plates were sometimes used in cooking,¹ an operation more commonly performed in pots (*vid. OLLA*) and basins or bowls. (*Vid. PATINA.*) They were used at meals to eat upon as we use them,² although it appears that very religious persons abstained from this practice on account of the customary employment of them in sacrificing to the gods.³ A larger plate, in fact a round dish, was used to bring to table such an article of food as a flat fish.⁴ Mustard⁵ and ointments⁶ were brought in saucers. The Greeks also drank wine out of plates or saucers,⁷ as we see in the woodcut on p. 326, which represents a symposium, and in which the second and third figures from the right hand have each a saucer. It was, however, one of the refinements of luxury among the Asiatics, that the cup-bearer used the plate as a waiter to hold the cup into which he poured the wine; and, as the plate was without a handle (*ἀνευ ὤρου*), he took hold of it adroitly with three of his fingers.⁸

The use of pateræ at meals no doubt gave origin to the employment of them in sacrifices. On these occasions they held either solid food (*μικρὸν κρέας*,⁹ *cibus*¹⁰), or any liquid intended to be poured out as a libation.¹¹ We find them continually represented in conjunction with the other instruments of sacrifice upon coins, gems, altars, bas-reliefs, and the friezes of temples. In the ancient Doric temple at Rome, now dedicated to St. Adrian, the tasteful patera and the cranium of the bull are alternately sculptured on the metopes.¹²

Plates of the most precious materials and of the finest workmanship were sometimes given as prizes at the public games.¹³

PATHOLOGIA (*Παθολογική*), one of the five parts into which, according to some authors, the science of medicine among the ancients was divided (*vid. MEDICINA*), which, as its name implies (*πάθος*, *disease*, and *λόγος*, *a discourse*), had for its especial object the whole doctrine of disease, in what it consists, from what it springs, what changes it effects in the human frame, &c. It would be impossible here to attempt anything like a complete analysis of the opinions of the ancients on this subject; it will, perhaps, be sufficient to notice the doctrines of the two principal physicians of antiquity, Hippocrates and Galen, and to give a list of such of their treatises on the subject as are still extant, referring the reader for a more detailed account to the Histories of Medicine by Le Clerc and Sprengel, and especially to a little work by Sophocles ab Æconomus, entitled "*Specimen Pathologiæ Generalis Veterum Græcorum*," Berol., 8vo, 1833. Hippocrates, says Sprengel,¹⁴ in his pathology occupied himself much less about the *immediate* than the *remote* causes of diseases. It is true that he admitted the theory of elementary humours, but he very rarely makes use of it in the explanation of the causes of different affections, and always in an indirect and obscure manner. We find in his writings very few speculations upon the essence of diseases. In the treatise *Περὶ τῶν ἐν Κεφαλῇ Τραυμάτων*, "*De Capitis Vulneribus*,"¹⁵ he explains inflammation by the blood's flowing into parts into which it had not penetrated

before. In another passage¹ he has recourse to the elementary qualities to account for barrenness. He points out two general causes of spasms, fulness and emptiness,² and refers all external irritations to these two causes. He explains the formation of urinary calculi in a very simple manner : these extraneous bodies are owing to the accumulation of sandy particles contained in the urine.³ Galen, in a very important passage,⁴ says that "Hippocrates never deigned to admit the causes of diseases according to his imagination; he was convinced that it was always safer to refer them to phenomena that were plainly recognised. Thus he never proposes his own method of cure but when he believes it founded on experience." He rendered a great service to pathology by not multiplying to infinity, like the physicians of the Cnidian school (*vid. MEDICINA*, p. 629), the number of the sorts of diseases, and by observing with scrupulous attention the essential difference which exists between the same symptoms according as they arise from different causes.⁵ It is upon these principles that he founded his excellent axioms of diagnosis, and complained that physicians had not sufficient experience to recognise whether weakness in diseases was the consequence of the emptiness of the vessels, of some other irritation, or of pain and the intensity of the malady; nor could they discern the accidents occasioned by the constitution of the individual. Thus he established between active and passive symptoms a distinction which he believed to be much more important than the classification of diseases according to species founded upon pure subtleties. He devoted his whole attention to the remote causes of disease, particularly to the air and winds. He began by explaining the action of heat and cold upon the human body,⁶ and then pointed out the changes that the influence of the season and weather occasions in the general constitution. He thought a dry atmosphere more healthy than a very damp one.⁷ He regarded the variations of the weather in the different seasons as a sufficient cause for a number of diseases peculiar to each part of the year. Many of these principles have perhaps only been founded upon a single observation; indeed, sometimes his observations were incorrect, because they were based upon insufficient reasonings. When, for example, he met with a disease in a town, situated opposite to such or such a quarter of the heavens, he did not fail to attribute it to the influence of the climate. For this reason he attributed abortion and hydrocele to the north wind, and the fecundity of women to the east wind. He even went so far as to think that water possessed particular qualities according to the different countries where it was met with and the winds to which it was exposed. The Humoral Pathology, as it is called, or the theory according to which all maladies are explained by the mixture of the four cardinal humours, viz., Blood, Bile, Mucus or Phlegm (*φλέγμα*), and Water, is found in the writings of Hippocrates, and is still more developed by Plato. The common source of all these humours is the stomach, from whence they are attracted by different organs when diseases develop themselves.⁸ To each of these four humours was assigned a particular source; the bile is prepared in the liver, the mucus in the head, and the water in the spleen.⁹ The bile causes all the acute diseases; the mucus contained in the head occasions catarrhs and rheumatism;¹⁰ dropsy depends upon an affection of the

spleen.¹ The quantity of the bile determines the type of the fever, which is *continued* (σύνχος) if the mass of this fluid is as considerable as it can be; *quotidian* if it is less abundant; *tertian* if it is still less; and *quartan* if there is mixed with it a certain proportion of viscous black bile, or *atrabile*.² This theory of the Humours is also exposed in a much more simple manner in another work, in which the author attributes all diseases to the mucus and bile.³ The Humoral Pathology was developed by the pupils of Hippocrates with much greater precision than it had been before; it formed the most essential part of the system of the Dogmatici, and has been the basis of all those invented since. (*Vid. DOGMATICI*.)

The following is Sprengel's analysis of the Pathology of Galen. He defines health to be that state in which the body is exempt from pain, and performs its usual functions without obstacle; and disease to be the contrary to this, viz., that state of the body (διάθεσις, κατασκευή) in which the functions are disturbed.⁴ One must not confound with this state the *affection* (πάθος), that is to say, the effect of this disturbance of the functions.⁵ That which determines this injury is the cause of the disease, the sensible effects of which are the *επιγενηνόμενα*, or symptoms.⁶ Diseases (διαθέσεις) are unnatural states either of the similar parts (μοιομερῆ), or of the organs themselves (ὀργανικά).⁷ Those of the similar parts proceed in general from the want of proportion among the elements,⁸ of which one or two predominate.⁹ In this manner arise eight different *δυσκράσια*.¹⁰ The affections of the organs themselves depend upon the number, the figure, the quantity, or the situation of the parts.¹¹ Symptoms consist either in the derangement of a function or in the vicious state of the secretions.¹² The causes of disease are remote or proximate: the former contribute, up to a certain point, to the development of diseases; but they must agree perfectly with each other to give rise to a proximate cause. They may be external or internal; Galen calls the latter *antecedent*, προηγούμενα, and the former *primitive*, προκαταρκτικά.¹³ Those which are internal depend almost always upon the superabundance (πληθος) or the deterioration of the humours (κακοχυσία).¹⁴ When the blood is in too great a quantity, it is of importance to determine whether this superabundance is absolute, or only with reference to the strength of the patient. Hence arise two kinds of plethora which the modern schools have adopted.¹⁵ Galen gives to every disorder of the humours the name of *putridity*, which takes place every time that a stagnant humour is exposed to a high temperature without evaporating.¹⁶ For this reason, suppuration, and even the sediment of urine, are proofs of putridity.¹⁷ In every fever there is a kind of putridity which gives out an unnatural heat, which becomes the cause of fever, because the heart, and afterward the arterial system, takes part in it.¹⁸ All fevers arise from a deterioration of humours, with the exception of the ephemeral fever, which proceeds

from a particular affection of the πνεῦμα.¹ Among the intermittent fevers, Galen attributes the *quotidian* to the disorder of the phlegm, the *tertian* to that of the bile, and the *quartan* to the putrefaction of the black bile, or *atrabile*. This last humour being the most difficult to set in motion, requires also the most time to bring on the attack. A very extraordinary thing, says Sprengel, is, that this arbitrary hypothesis is really supported by a great number of facts; and hence it has found, even in modern times, many supporters of no common merit.² Galen, like Hippocrates, explains inflammation very simply by the introduction of the blood into a part which did not before contain any.³ If the *pneuma* insinuates itself at the same time, the inflammation is then *pneumatic*, πνευματώδης: it is, on the other hand, *pure*, φλεγμονώδης, when the blood penetrates alone; *ædematous*, οἰδηματώδης, if it is accompanied by phlegm; *erysipelatous*, ἐρυσιπελατώδης, when bile is joined with it; and *schirrous*, οκρίβρώδης, if accompanied by atrabile.⁴ He made the same division of hemorrhage as is admitted in the present day; he divides it into that which is produced by anastomosis, dilatation, &c.⁵

The following are the titles of the works relating to Pathology that are found in the collection of writings that bear the name of Hippocrates, but of these none are undoubtedly genuine (see Choulant, "Handbuch der Bücherkunde für die Ältere Medicin," Leipzig, 1841): 1. *Περὶ Νόσων*, "De Morbis;" 2. *Περὶ Παθῶν*, "De Affectionibus;" 3. *Περὶ τῶν Ἑντὸς Παθῶν*, "De Internis Affectionibus;" 4. *Περὶ Παρθένων*, "De Virginitate Morbis;" 5. *Περὶ Γυναικείας Φύσεως*, "De Natura Mulieris;" 6. *Περὶ Γυναικείων*, "De Mulierum Morbis;" 7. *Περὶ Ἀφώρων*, "De Sterilibus;" and 8. *Περὶ Ὀφθαλμῶν*, "De Visu." The principal pathological works of Galen are, 1. his six books *Περὶ τῶν Πεποιηθῶτων Τύπων*, "De Locis Affectis;" 2. *Περὶ Διαφορᾶς Νοσημάτων*, "De Differentiis Morborum;" 3. *Περὶ τῶν ἐν τοῖς Νοσήμασι Αἰτιῶν*, "De Morborum Causis." There is also much matter relating to the subject of Pathology to be found in several other parts of his works.

PATIBULUM. (*Vid. FERCA*.)

PATINA (Λεκάνη, *dim. λεκάμιον al. λεκάριον, λεκανίσκη, λεκανίς, second dim. λεκανίδιον*), a basin or bowl of earthenware, rarely of bronze¹ or silver.²

A patina, covered with a lid (*operculum*), was sometimes used to keep grapes instead of a jar,³ a proof that this vessel was of a form intermediate between the PATERA and the OLLA, not so flat as the former, nor so deep as the latter. Hence it is compared to the crater.⁴ (*Vid. CRATER*.) This account of its shape accords with a variety of uses to which it was applied, viz., to hold water and a sponge for washing,⁵ and clay for making bricks,⁶ in vomiting,⁷ and in smelting the ore of quicksilver.⁸ But its most frequent use was in cookery and pharmacy.⁹ Although the patera and the olla were also used, the articles of diet were commonly prepared, sometimes over a fire,¹⁰ and sometimes without fire, in a patina, and more especially when they were accompanied with sauce or fluid.¹¹ Hence the word occurs in almost every page of Apicius, *De Opsoniis* (*vid. OPSONIUM*); and hence came its synonyme *θη-*

δόκη.¹ In the same bowl the food was commonly brought to table,² an example of which is λεκάνιον τῶν λαγῶν κρεῖον, i. e., "a basin of stewed hare."³ But it is to be observed, that dishes (*vid. LANX, PATERA*) were used to bring to table those articles of food, the form and solidity of which were adapted to such vessels.

The silver bowl was sometimes ornamented, as with ivy-leaves (*hederata**), or by the insertion of mirrors (*speculata**). These bowls weighed from 10 to 20 lbs. each. Vitellius, wishing to obtain an earthenware bowl of immense size, had a furnace constructed on purpose to bake it.⁴

A method of divination by the use of a basin (λεκανομαντεία) is mentioned by Tzetzes on Lycophron, v. 813.

PATRES. (*Vid. PATRICH.*)

PATRIA POTESTAS. Potestas signifies generally a power or faculty of any kind by which we do anything. "Potestas," says Paulus,⁵ "has several significations: when applied to magistratus, it is imperium; in the case of children, it is the patria potestas; in the case of slaves, it is dominium." According to Paulus, then, potestas, as applied to magistratus, is equivalent to imperium. Thus we find potestas associated with the adjectives prætoria, consularis. But potestas is applied to magistrates who had not the imperium, as, for instance, to quæstors and tribuni plebis;⁶ and potestas and imperium are often opposed in Cicero. Thus it seems that this word potestas, like many other Roman terms, had both a wider signification and a narrower one. In its wider signification it might mean all the power that was delegated to any person by the state, whatever might be the extent of that power. In its narrower significations, it was, on the one hand, equivalent to imperium; and, on the other, it expressed the power of those functionaries who had not the imperium. Sometimes it was used to express a magistratus, as a person,⁷ and hence, in the Italian language, the word potestà signifies a magistrate.

Potestas is also one of the words by which is expressed the power that one private person has over another, the other two being manus and mancipium. The potestas is either dominica, that is, ownership, as exhibited in the relation of master and slave (*vid. SERVUS*), or patria, as exhibited in the relation of father and child. The mancipium was framed after the analogy of the potestas dominica. (*Vid. MANCIPIUM.*)

Patria potestas, then, signifies the power which a Roman father had over the persons of his children, grandchildren, and other descendants (*filifamilias, filiafamilias*), and generally all the rights which he had by virtue of his paternity. The foundation of the patria potestas was a legal marriage, and the birth of a child gave it full effect. (*Vid. MARRIAGE, ROMAN.*)

It does not seem that the patria potestas was ever viewed among the Romans as absolutely equivalent to the dominica potestas, or as involving ownership of the child; and yet the original notion of the patria came very near to that of the dominica potestas. Originally the father had the power of life and death over his son as a member of his familia: he could sell him, and so bring him into the mancipii causa; and he had the jus noxæ dandi as a necessary consequence of his being liable for the delicts of his child. He could also give his

daughter in marriage, or give a wife to his son, divorce his child, give him in adoption, and emancipate him at his pleasure.

The father could exheredate his son, he could substitute another person as heir to him (*vid. HERES*), and he could, by his will, appoint him a tutor.

The general rights and disabilities of a filiusfamilias may be thus briefly expressed: "The child is incapable, in his private rights, of any power or dominion; in every other respect he is capable of legal rights." The incapacity of the child is not really an incapacity of acquiring legal rights, for the child could acquire by contract, for instance; but everything that he acquired was acquired for his father.

As to matters that belonged to the jus publicum, the son laboured under no incapacities: he could vote at the comitia tributa, he could fill a magistratus, and he could be a tutor: for the tutela was considered a part of jus publicum.

The child had connubium and commercium, like any Roman citizen who was sui juris, but these legal capacities brought to him no present power or ownership. His marriage was legal (*justum*), but if it was accompanied with the in manum conventio, his wife came into the power of his father, and not into the power of the son. The son's children were in all cases in the power of their grandfather when the son was.

Inasmuch as he had commercium, he could be a witness to mancipationes and testaments, but he could not have property nor servitudes. He had the testamenti factio, as already stated, so far as to be a witness to a testament, but he could not make a testament, for he had nothing to dispose of; and he could not have a heres.

He could, as already observed, acquire rights for his father by contract, but none for himself, except in the case of an adstipulatio, an instance which shows the difference between a son and a slave. (*Vid. OBLIGATIONES.*) But he could incur obligations and could be sued like a paterfamilias. The foundation of these rules of law was the maxim that the condition of a master could be improved by the acts of his slaves, but not made worse; and this maxim applied equally to a son and a slave. Between the father and the son no civiles obligationes could exist; neither of them, consequently, could have a right of action against the other. Some writers have supposed that there was a difference between the capacities and incapacities of a filiusfamilias and a filiafamilias as to obligationes; but the reasons alleged by Savigny seem conclusively to show that there was no difference at all.

The incapacity of the child to acquire for himself, and his capacity to acquire for his father, as well as their mutual incapacity of acquiring rights of action against one another, are viewed by some modern writers as a consequence of a legal unity of person, while others affirm that there is no trace of such a fiction in the Roman law, and that the assumption is by no means necessary to explain the rule of law. Indeed, the fiction of such a unity is quite unnecessary, for the fundamental maxim already referred to, that a man may be made richer, but not poorer, by his slaves and children, is a simple positive rule. Though the child could not acquire for himself, yet all that he did acquire for his father might become his own in the event of his father's death, a circumstance which materially distinguished the acquisitions of a son from those of a slave; and, accordingly, the son is sometimes, though not with strict propriety, considered as a kind of joint owner with his father.

1. (Photius, Lex., s. v.)—2. (Xen., Cyr. i., 3, § 4.—Athen., iv., p. 149, f.—Plaut., Mil. III., i., 164.—Ter., Eun., IV, vii., 46.—Hor., Sat., II., viii., 43.)—3. (Aristoph., Acharn., 1109)—4. (Trebb. Poll., l. c.)—5. (Fi. Voisic., Prob., p. 234, ed. Salmas.)—6. (Phin., H. N., xxxv., 12, s. 46.—Juv., iv., 130-134.)—7. (Dig. 50, tit. 16, s. 225.)—8. (Cic., Pro Cluent., c. 97.—Sueton., Claud., 13.—Juv., Sat., x., 100.)

The rule as to the incapacity of a *filiusfamilias* for acquiring property was first varied about the time of Augustus, when the son was empowered to acquire for himself and to treat as his own whatever he got in military service. This was the *castrense peculium*, with respect to which the son was considered as a person *sui juris*.¹ But if the *filiusfamilias* died without having made any disposition of this peculium, it came to the father, and this continued to be the law till Justinian altered it; but in this case the property came as peculium, not as hereditas. The privileges of a *filiusfamilias* as to the acquisition of property were extended under Constantine to his acquisitions made during the discharge of civil offices; and as this new privilege was framed after the analogy of the *castrense peculium*, it was designated by the name *quasi castrense-peculium*. Farther privileges of the same kind were also given by Constantine and extended under subsequent emperors (*bona quæ patri non adquiruntur*).

The patria potestas began with the birth of a child in lawful marriage. If a Roman had by mistake married a woman with whom he had no concubium, thinking that concubium existed, he was allowed to prove his case (*causæ erroris probatio*), upon doing which, the child that had been born and the wife also became Roman citizens, and from that time the son was in the power of the father. This *causæ probatio* was allowed by a *senatus consultum*,² which, as it appears from the context, and a comparison with Ulpian's Fragments,³ was an amendment of the *lex Ælia Sentia*. Other instances of the *causæ probatio* are mentioned by Gaius.

It was a condition of the patria potestas that the child should be born in marriage. By the old law, then, the subsequent marriage of the parents did not legitimize a child born before the marriage. But it seems to have early become the fashion for the emperor, as an act of grace, to place such child on the same footing as legitimate children. The legitimation per subsequens matrimonium only became an established rule of law under Constantine, and was introduced for the advantage of children who were born in concubinage. (*Vid. CONCUBINA.*) In the time of Theodosius II., the rule was established by which a child was legitimated per oblationem curiæ. To these two modes of legitimation Justinian added that per rescriptum principis. The child thus legitimated came into the familia and the potestas of his father as if he had been born in lawful marriage.

The patria potestas could also be acquired by either of the modes of adoption. (*Vid. ADOPTION, ROMAN.*)

The patria potestas was dissolved in various ways. It was dissolved by the death of the father, upon which event the grandchildren, if there were any, who had hitherto been in the power of their grandfather, came into the power of their father, who was now *sui juris*. It could also be dissolved in various ways during the lifetime of the father. A *maxima* or *media capitis diminutio*, either of the parent or child, dissolved the patria potestas; though, in the case of either party sustaining a *capitis diminutio* by falling into the hands of an enemy, the relation might be revived by postliminium. A father who was adrogated, and, consequently, sustained a *minima capitis diminutio*, came, together with his children, who had hitherto been in his power, into the power of his adoptive father. The emancipation of the child by the father was a common mode of dissolving the patria potestas, and was accompanied by the *minima capitis diminutio*.

If a son was elected *flamen* *dialis*, or a daughter was chosen a *vestal*, the patria potestas ceased; and in the later period it was also dissolved by the son's attaining certain civil or ecclesiastical honours. The potestas of the father might cease without the son becoming *sui juris*, as in the case of the son being given in adoption.

The term patria potestas strictly expresses the power of the father, as such, which arises from the paternal relation; but the term also imports the rights of the child as a *filiusfamilias* or *filiafamilias*. Of these rights the most important was the capacity of being the *suus heres* of the father. Generally the parent could emancipate his child at his pleasure, and thus deprive him of the rights of agnation; but the law in this respect was altered by Justinian,⁴ who made the consent of the child necessary.

PATRICII. This word is evidently a derivative from *pater*, which frequently occurs in the Roman writers as equivalent to senator. *Patricii* therefore signifies those who belonged to the *patres* "*rex patres eos (senatores) voluit nominari, patriciosque eorum liberos*;"⁵ though it seems to be a mistake in these writers to suppose that the *patricii* were only the offspring of the *patres* in the sense of senators, and necessarily connected with them by blood. The connexion was, as we shall see hereafter, a much wider one, but, in consequence of it, *patres* and *patricii* are sometimes used as convertible terms, so that *patricii* stands for senators.⁶ The words *patres* and *patricii* have thus radically the same meaning, and some of the ancients believed that the name *patres* was given to that particular class of the Roman population from the fact that they were fathers of families;⁷ others that they were called so from their age,⁸ or because they distributed land among the poorer citizens, as fathers did among their children.⁶ But most writers refer the name to the *patrocinium* which the patricians exercised over the whole state, and over all classes of persons of whom it was composed.⁷

In considering who the patricians were, we have to distinguish three periods in the history of Rome. The first extends from the foundation of the city down to the establishment of the plebeians as a second order: the second, from this event down to the time of Constantine, during which time the patricians were a real aristocracy of birth, and, as such, formed a distinct class of Roman citizens opposed to the plebeians, and afterward to the new plebeian aristocracy of the nobles: the third period extends from Constantine down to the middle ages, during which the patricians were no longer an aristocracy of birth, but were persons who merely enjoyed a title, first granted by the emperors, and afterward by the popes also.

First Period: from the foundation of the city to the establishment of the plebeian order. Niebuhr's researches into the early history of Rome have established it as a fact beyond all doubt, that during this period the patricians were the whole body of Roman citizens; that they were the *populus Romanus*; and that there were no other real citizens besides them.⁹ The other parts of the Roman population, namely, clients and slaves, did not belong to the *populus Romanus*, and were not burghers or patricians. The senators or *patres* (in the narrower

1. (Nov., 89, c. 11.)—2. (Cic., *De Repub.*, ii., 12.—Liv., i. 2.—Dionys., ii., p. 83, ed. Sylburg.)—3. (Niebuhr, *Hist. of Rome*, ii., p. 224, 225, note 507.—Cic., *Pro Cæcina*, 35.)

sense of the word) were a select body of the populus of patricians, which acted as their representative. The burghers or patricians consisted originally of three distinct tribes, which afterward became united into the sovereign populus. These tribes had founded settlements upon several of the hills which were subsequently included within the precincts of the city of Rome. Their names were Ramnes, Tities, and Luceres, or Ramnenses, Titienenses, and Lucerenses. Each of these tribes consisted of ten curiae, and each curia of ten gentes, and of the same number of decuries, which were established for representative and military purposes. (*Vid. SENATUS.*) The first tribe, or the Ramnes, were a Latin colony on the Palatine Hill, said to have been founded by Romulus. As long as it stood alone it contained only one hundred gentes, and had a senate of one hundred members. When the Tities, or Sabine settlers on the Quirinal and Viminal Hills, under King Tatius, became united with the Ramnes, the number of gentes, as well as that of senators, was increased to 200. These two tribes, after their union, continued probably for a considerable time to be the patricians of Rome, until the third tribe, the Luceres, which chiefly consisted of Etruscans, who had settled on the Caelian Hill, also became united with the other two as a third tribe. When this settlement was made is not certain: some say that it was in the time of Romulus; others, that it took place at a later time.² But the Etruscan settlement was in all probability older than that of the Sabines,³ though it seems occasionally to have received new bands of Etruscan settlers even as late as after the establishment of the Republic.

The amalgamation of these three tribes did not take place at once: the union between Latins and Sabines is ascribed to the reign of Romulus, though it does not appear to have been quite perfect, since the Latins on some occasions claimed a superiority over the Sabines.⁴ The Luceres existed for a long time as a separate tribe without enjoying the same rights as the two other tribes, until Tarquinius Priscus, himself an Etruscan, caused them to be placed on a footing of equality with the others. For this reason he is said to have increased the number of senators to 300⁵ (compare *SENATUS*), and to have added two vestal virgins to the existing number of four.⁶ The Luceres, however, are, notwithstanding this equalization, sometimes distinguished from the other tribes by the name *patres* or *patricii minorum gentium*; though this name is also applied to other members of the patricians, e. g., to those plebeian families who were admitted by Tarquinius Priscus into the three tribes, and in comparison with these, the Luceres are again called *patres majorum gentium*.⁷ That this distinction between *patricii majorum* and *minorum gentium* was kept up in private life at a time when it had no value whatever in a political point of view, is clear from Cicero.⁸ Tullius Hostilius admitted several of the noble gentes of Alba among the patricians (*in patres legit*),⁹ viz., the Tullii (Julii!), Servilii, Quinctii, Gegani, Curiatii, and Clœlii, to which Dionysius¹⁰ adds the gens Metilia. Ancus Marcius admitted the Tarquinii,¹¹ Tarquinius Priscus the Tullii,¹² Servius Tullius the Octavii,¹³ and even Tarquinius Superbus seems to have had simi-

lar intentions.¹ We do not hear that the number of gentes was increased by these admissions, and must therefore suppose that some of them had already become extinct, and that the vacancies which thus arose were filled up with these new burghers.² During the time of the Republic, distinguished strangers and wealthy plebeians were occasionally made Roman patricians, e. g., Appius Claudius and his gens,³ and Domitius Enobarbus.⁴ As regards the kingly period, the Roman historians speak as if the kings had had the power of raising a gens or an individual to the rank of a patrician; but it is evident that the king could not do this without the consent of the senate and the curies; and hence Livy⁵ makes Canuleius say, "per cooptationem in patres, aut ab regibus lecti," which lectio, of course, required the sanction of the body of patricians. In the time of the Republic, such an elevation to the rank of patrician could only be granted by the senate and the populus.⁶

Since there were no other Roman citizens but the patricians during this period, we cannot speak of any rights or privileges belonging to them exclusively; they are all comprehended under *CIVITAS* (ROMAN) and *GENS*. Respecting their relations to the kings, see *COMITIA CURIATA* and *SENATUS*. During this early period we can scarcely speak of the patricians as an aristocracy, unless we regard their relation to the clients in this light. (*Vid. CLIENS.*)

Second Period: from the establishment of the plebeian order to the time of Constantine. At the time when the plebeians became a distinct class of citizens, who shared certain rights with the patricians, the latter lost in so far as these rights no longer belonged to them exclusively. But by far the greater number of rights, and those the most important ones, still remained in the exclusive possession of the patricians, who alone were *cives optimo jure*, and were the *patres* of the nation in the same sense as before. All civil and religious offices were in their possession, and they continued, as before, to be the populus, the nation now consisting of the populus and the plebes. This distinction, which Livy found in ancient documents,⁷ seems, however, in the course of time, to have fallen into oblivion, so that the historian seems to be scarcely aware of it, and uses *populus* for the whole body of citizens, including the plebeians. Under the Antonines, the term *populus* signified all the citizens with the exception of the *patricii*.⁸ In their relation to the plebeians or the commonalty, the patricians now were a real aristocracy of birth. A person born of a patrician family was and remained a patrician, whether he was rich or poor, whether he was a member of the senate or an eque, or held any of the great offices of the state or not; there was no power that could make a patrician a plebeian. As regards the census, he might, indeed, not belong to the wealthy classes, but his rank remained the same. Instances of reduced patricians in the latter period of the Republic are the father of M. Æmilius Scaurus, and the family of the Sullas posterior to the time of the great dictator of that name. The only way in which a patrician might become a plebeian was when, of his own accord, he left his gens and curia, gave up the *sacra*, &c.⁹ A plebeian, on the other hand, or even a stranger, might, as we stated above, be made a patrician by a *lex curiata*. But this appears to have been done very seldom; and the

Dr. J.)

consequence was, that in the course of a few centuries the number of patrician families became so rapidly diminished, that towards the close of the Republic there were not more than fifty such families.¹ Julius Cæsar, by the *lex Cassia*, raised several plebeian families to the rank of patricians, in order that they might be able to continue to hold the ancient priestly offices which still belonged to their order.² Augustus soon found it necessary to do the same by a *lex Sænia*.³ Other emperors followed these examples: Claudius raised a number of senators, and such persons as were born of illustrious parents, to the rank of patricians;⁴ Vespasian, Titus, and other emperors did the same.⁵ The expression for this act of raising persons to the rank of patricians was in *patricios* or in *familiam patriciam adhibere*.

Although the patricians, throughout this whole period, had the character of an aristocracy of birth, yet their political rights were not the same at all times. The first centuries of this period are an almost uninterrupted struggle between patricians and plebeians, in which the former exerted every means to retain their exclusive rights, but which ended in the establishment of the political equality of the two orders. (*Vid. PLEBS*.) Only a few insignificant priestly offices, and the performance of certain ancient religious rites and ceremonies, remained the exclusive privilege of the patricians, of which they were the prouder, as in former days their religious power and significance were the basis of their political superiority.⁶ At the time when the struggle between patricians and plebeians ceased, a new kind of aristocracy began to arise at Rome, which was partly based upon wealth and partly upon the great offices of the Republic, and the term nobles was given to all persons whose ancestors had held any of the curule offices. (*Compare Novi Homines*.) This aristocracy of nobles threw the old patricians, as a body, still more into the shade, though both classes of aristocrats united as far as was possible to monopolize all the great offices of the state;⁷ but, although the old patricians were obliged in many cases to make common cause with the nobles, yet they could never suppress the feeling of their own superiority; and the veneration which historical antiquity alone can bestow, always distinguished them as individuals from the nobles. How much wealth gradually gained the upper hand, is seen from the measure adopted about the first Punic war, by which the expenses for the public games were no longer given from the *ærium*, but were defrayed by the *ædiles*; and as their office was the first step to the great offices of the Republic, that measure was a tacit exclusion of the poorer citizens from those offices. Under the emperors the position of the patricians as a body was not improved; the filling up of the vacancies in their order by the emperors began more and more to assume the character of an especial honour, conferred upon a person for his good services or merely for personal distinction, so that the transition from this period to the third had been gradually preparing.

Respecting the great political and religious privileges which the patricians at first possessed alone, but afterward were compelled to share with the plebeians, see *PLEBS*, and the articles treating of the several Roman magistracies and priestly offices. Compare also *GENS*, *CURIA*, *SENATUS*.

In their dress and appearance the patricians

were scarcely distinguished from the rest of the citizens, unless they were senators, curule magistrates, or equites, in which case they wore, like others, the ensigns peculiar to these classes. The only thing by which they appear to have been distinguished in their appearance from other citizens, was a peculiar kind of shoes, which covered the whole foot and part of the leg, though they were not as high as the shoes of senators and curule magistrates. These shoes were fastened with four strings (*corrigiæ* or *lora patricia*), and adorned with a lunula on the top.¹ Festus² states that *mulleus* was the name of the shoes worn by the patricians; but the passage of Varro which he adduces only shows that the *mullei* (shoes of a purple colour) were worn by the curule magistrates.³

Third Period: from the time of Constantine to the Middle Ages. From the time of Constantine the dignity of patricius was a personal title, which conferred on the person to whom it was granted a very high rank and certain privileges. Hitherto patricians had been only genuine Roman citizens, and the dignity had descended from the father to his children; but the new dignity was created at Constantinople, and was not bestowed on old Roman families; but it was given, without any regard to persons, to such men as had for a long time distinguished themselves by good and faithful services to the Empire or the emperor. This new dignity was not hereditary, but became extinct with the death of the person on whom it was conferred; and when, during this period, we read of patrician families, the meaning is only that the head of such a family was a patricius.⁴ The name patricius, during this period, assumed the conventional meaning of father of the empire,⁵ and those who were thus distinguished occupied the highest rank among the illustres; the consuls alone ranked higher than a patricius.⁶ The titles by which a patricius was distinguished were *magnificentia*, *celsitudo*, *eminentia*, and *magnitudo*. They were either engaged in actual service (for they generally held the highest offices in the state, at the court, and in the provinces), and were then called *patricii præsentales*, or they had only the title, and were called *patricii codicillares* or *honorarii*.⁷ All of them, however, were distinguished in their appearance and dress from ordinary persons, and seldom appeared before the public otherwise than in a carriage. The emperors were generally very cautious in bestowing this great distinction, though some of the most arbitrary despots conferred the honour upon young men, and even on eunuchs. Zeno decreed that no one should be made patricius who had not been consul, præfect, or magister militum.⁸ Justinian, however, did away with some of these restrictions. The elevation to the rank of patricius was testified to the person by a writ called diploma.⁹

This new dignity was not confined to Romans or subjects of the Empire, but was sometimes granted to foreign princes, such as Odoacer, the chief of the Heruli, and others. When the popes of Rome had established their authority, they also assumed the right of bestowing the title of patricius on eminent persons and princes, and many of the German emperors were thus distinguished by the popes. In several of the Germanic kingdoms the sovereigns imitated the Roman emperors and popes by giving to their most distinguished subjects the

title of patricius, but these patricii were at all times much lower in rank than the Roman patricii, a title of which kings and emperors themselves were proud.¹

PATRIMI ET MATRIMI, also called *Patrimēs et Matrimes*, were those children whose parents were both alive² (*matrimēs*; called by Dionysius³ ἀμφότεροι), in the same way as *pater patrimus* signifies a father whose own father is still alive.⁴ Servius,⁵ however, confines the term *patrimi et matrini* to children born of parents who had been married by the religious ceremony called *confarreatio*: it appears probable that this is the correct use of the term, and that it was only applied to such children so long as their parents were alive. We know that the *flamines maiores* were obliged to have been born of parents who had been married by *confarreatio*;⁶ and as the children called *patrimi et matrini* are almost always mentioned in connexion with religious rites and ceremonies,⁷ the statement of Servius is rendered more probable, since the same reason which confined the office of the *flamines maiores* to those born of parents who had been married by *confarreatio*, would also apply to the children of such marriages, who would probably be thought more suitable for the service of the gods than the offspring of other marriages.⁸

PATRONOMI (πατρονόμοι) were magistrates at Sparta, who exercised, as it were, a paternal power over the whole state. Pausanias⁹ says that they were instituted by Cleomenes, who destroyed the power of the *γερονσία* by establishing *patronomi* in their place. The *γερονσία*, however, was not abolished by Cleomenes, as it is again spoken of by Pausanias,¹⁰ and also in inscriptions. The *patronomi* are mentioned by Philostratus¹¹ among the principal magistrates along with the *gymnasiarchs* and *ephori*; and their office is also spoken of by Plutarch.¹² Their number is uncertain; but Böckh¹³ has shown that they succeeded to the powers which the *ephori* formerly possessed, and that the first *patronomus* was the *ἐκὼνμος* of the state, that is, gave his name to the year, as the first *ephor* had formerly done.¹⁴

PATRONUS. The act of manumission created a new relation between the manumissor and the slave, which was analogous to that between father and son. The manumissor became, with respect to the manumitted person, his *patronus*, and the manumitted person became the *libertus* of the manumissor. The word *patronus* (from *pater*) indicates the nature of the relation. If the manumissor was a woman, she became *patrona*; and the use of this word instead of *matrona* appears to be explained by the nature of the paternal rights. Viewed with reference to the early ages of Rome, this paternal relation must be considered a part of the ancient clientela; but from the time of the Twelve Tables at least, which contained legislative provisions generally on the subject of paternal rights, we may consider the relation of *patronus* and *libertus* as the same both in the case of patrician and plebeian manumissores.

The *libertus* adopted the gentile name of the manumissor. Cicero's freedman Tiro was called M. Tullius Tiro. The *libertus* owed respect and gratitude to his patron, and in ancient times the pa-

tron might punish him in a summary way for neglecting those duties. This obligation extended to the children of the *libertus*, and the duty was due to the children of the patron. In later times the patron had the power of relegating an ungrateful freedman to a certain distance from Rome, a law probably passed in the time of Augustus.¹ In the time of Nero it was proposed to pass a *senatus consultum* which should give a patron the power of reducing his freedman to slavery if he misconducted himself towards his patron. The measure was not enacted, but this power was given to the patron under the later emperors. The *lex Ælia Sentia* gave the patron a right of prosecuting his freedman for ingratitude (*ul ingratum accusare*). An *ingratus* was also called *libertus impius*, as being deficient in pietas.

If the *libertus* brought an action against the patron (*in jus vocavit*), he was himself liable to a special action on the case;² and he could not, as a general rule, institute a capital charge against his patron. The *libertus* was bound to support the patron and his children in case of necessity, and to undertake the management of his property and the tutela of his children: if he refused, he was *ingratus*.⁴

If a slave were the property of several masters, and were manumitted by all of them, and became a Roman citizen, all of them were his *patroni*.

The manumissor could secure to himself farther rights over his *libertus* by a stipulatio, or by taking an oath from him. The subjects of such agreements were gifts from the *libertus* to the *patronus* (*dona et munera*) and services (*operæ*). The oath was not valid unless the person was a *libertus* when he took it. If, then, he took the oath as a slave, he had to repeat it as a freeman, which seems to be the meaning of the passage of Cicero in which he speaks of his freedman Chrysogonus.⁵ These *operæ* were of two kinds, *officiales*, which consisted in respect and affection, and *fabriles*, which are explained by the term itself. The *officiales* determined by the death of the *patronus*, unless there was an agreement to the contrary; but the *fabriles*, being of the nature of money or money's worth, passed to the *heredes* of the *patronus* like any other property. The *patronus*, when he commanded the *operæ* of his *libertus*, was said "*ei operas indicere* or *imponere*."⁶

The patron could not command any services which were disgraceful (*turpes*) or dangerous to life, such as prostitution or fighting in the amphitheatre; but if the *libertus* exercised any art or calling (*artificium*), even if he learned it after his manumission, the *operæ* in respect of it were due to the patron.

The *lex Julia et Papia Poppæa* released freedmen (except those who followed the *ars ludicra*, or hired themselves to fight with beasts) from all obligation as to gifts or *operæ* who had begotten two children and had them in their power, or one child five years old.⁷

If *liberty* was given directly by a testament, the testator was the manumissor, and his paternal rights would consequently belong to his children: if it was given indirectly, that is, per *fideicommissum*, the person who performed the act of manumission was the *patronus*. In those cases where a slave obtained his freedom under the *senatus consultum Silianum*, the *prætor* could assign him a *patronus*; and if this was not done, that person was the *patron* of whom the *libertus* had last been the slave.⁸

The paternal rights were somewhat restricted

when the act of manumission was not altogether the free act of the manumissor. For instance, the manumissor per fideicommissum had all the patronal rights, except the power to prosecute for ingratus, the right to be supported by the libertus, and to stipulate for munera and operæ: his rights against the property of the libertus were, however, the same as those of any other manumissor.¹ If a slave had given money to another person in order that this other person might purchase and manumit him, the manumissor had no patronal right, and he lost even the name of patron, if he refused to perform the act for which he had received the money, and allowed the slave to compel him to perform his agreement, which the slave could do by a constitution of M. Aurelius and L. Verus.² If a master manumitted his slave in consideration of a sum of money, he retained all patronal rights, but he could not stipulate for operæ. A person who purchased a slave, and on the occasion of the purchase agreed to manumit him, had all patronal rights except the right of prosecuting for ingratitude in case the slave compelled him to manumit pursuant to the constitution of M. Aurelius and L. Verus.³

It was the duty of the patron to support his freedman in case of necessity, and if he did not, he lost his patronal rights: the consequence was the same if he brought a capital charge against him. The *ex Ælia Sentia*, among its various provisions, contained several that related to the rights and duties of the patron.

A *capitis diminutio*, either of the patron or the libertus, dissolved the relation between them. (See Tacit., *Hist.*, ii., 92, where "jura libertorum" means "jura patronorum" or "jura in libertos.") The relation was dissolved when the libertus obtained ingenuitas by the *natalium restitutio*, but not when he merely obtained the *jus aureorum annulorum*. (*Vid. INGENUUS.*)

The most important of the patronal rights related to the property of liberti who died intestate or having made a testament.

The subject, so far as concerns the Ante-Justinian period, may be distributed under the two following heads: 1. The ordinary rules of law, and, 2. the extraordinary: the former comprehend the rules of the old civil law, and the edict on the bonorum possessio; and the latter, the bonorum possessio contra tabulas liberti and contra suos non naturales, the bonorum possessio contra tabulas libertæ, and the right to a virilis pars which was given by the *lex Papia Poppæa*.

By the law of the Twelve Tables, if a freedman died intestate without sui heredes, the patronus was his heir. This right was viewed as a right of agnation. The *legitima patronorum tutela* was not expressly mentioned in the Twelve Tables, but it was a legal consequence of the rule as to inheritance.⁴ In the case of an intestate liberta, who could not have a suus heres, the patron was heres. The *senatus consultum Orfitianum*, which was passed after Gaius wrote,⁵ and in the last year but one of the reign of M. Aurelius, made an alteration in this respect. The passage of Ulpian,⁶ which was written when this *senatus consultum* was in force, says that, if a liberta died intestate, the patron succeeded to her property, because a mother could not have sui heredes; yet Ulpian himself⁷ says that, whether the mother was ingenua or libertina, the children could succeed to her inheritance by the *senatus consultum Orfitianum*. This apparent contradiction is removed by the supposition that

the *senatus consultum* gave the children in such cases an equal right with the patron.

These patronal rights belonged both to a patronus and a patrona, and to the liberi of a patronus.¹ The male children of the patronus had the same rights as the patronus himself; but the females had only the rights which the Twelve Tables gave to the males, and they had not the bonorum possessio contra tabulas testamenti liberti aut ab intestato contra suos heredes non naturales, until these rights were given them by the *lex Papia Poppæa*.² A difficulty which is raised by a passage in Justinian's legislation on the patronal rights is discussed by Unterholzner.³ It seems that the children of a patrona had not, by the Twelve Tables, the same rights as the children of a patronus; but the *lex Papia Poppæa* probably made some change in this respect.⁴

In order that these patronal rights should exist, it was necessary that the libertus must have been made free by a Roman citizen, and have become a Roman citizen by the act of manumission. Accordingly, if a person obtained the citizenship, it was necessary that he should have a special grant of the *jus patronatus* in order that he might have patronal rights against his then freedmen, who must also, at the same time, become Roman citizens.⁵ A *capitis diminutio*, as already observed, either of the patron or the libertus, destroyed the patronal rights to the inheritance.⁶

If there were several patroni or patronæ, they divided the inheritance equally, though their shares in the libertus when a slave might have been unequal. These patronal rights resembled a jointtenancy in English law, for the survivor or survivors of the patroni had all the patronal rights to the exclusion of any children of a deceased patronus. A son of a patron also claimed the inheritance to the exclusion of the grandson of a patron. If the patroni were all dead, leaving several children, the hereditas was divided among all the children equally (*in capita*), pursuant to the law of succession in the case of agnation.⁷

A *senatus consultum*, which was passed in the time of Claudius, allowed a patron to assign his patronal rights to the inheritance of a libertus to any of his children whom he had in his power, to the exclusion of the rest.⁸

The Edict extended the bonorum possessio to patroni. The patronal rights of the civil law were founded on an assumed agnatio: those of the Edict were founded on an assumed cognatio. The Edict called to the bonorum possessio of liberti, 1. their children; 2. their heredes legitimi; 3. their cognati, who must, of course, be descendants; 4. the familia of the patronus; 5. the patronus and patrona, and their children and parents, by which provision was made in case the patronus or patrona had sustained a *capitis diminutio*, and so could not be called in the fourth order; 6. the husband or wife of the freedwoman or freedman; 7. the cognati of the manumissor.

Originally, if the freedman made a will, he could pass over (*præterire*) the patron. But by the Edict, unless he left him as much as one half of his property, the patron or his male children could obtain the bonorum possessio contra tabulas of one half of the property. If the libertus died intestate, leaving no suus heres except an adopted child, or a wife in manu, or a nurus in the manus of his son, the patron had a bonorum possessio of one half against these sui heredes. But if the libertus had children of his

1. (Frag. Vat., § 225.—Dig. 38, tit. 2, s. 29.)—2. (Dig. 40, tit. 1, s. 4, 5.)—3. (Dig. 40, tit. 9, s. 30.)—4. (Ulp., Frag., xi., 3.)—5. (iii., 51.)—6. (Frag., xxix., 2.)—7. (lib. 12, ad Sabinum.—Dig. 38, tit. 1, s. 1.)

1. (Ulp., Frag., xxvii.)—2. (Ulp., Frag., xxix., 4, 5.)—3. (Zeit schrift, v., p. 37.)—4. (Zeitschrift, v., p. 43, &c.)—5. (Plin. Ep x., 6.)—6. (Gaius, iii., 51.)—7. (Gaius, iii., 16, 59, &c.)—8. (Dig. 38, tit. 4.)

own blood (*naturales*) either in his power at the time of his death, or emancipated, or given in adoption, and if these children were made heredes by his testament, or, being præteriti, claimed the bonorum possessio contra tabulas, the patron had no claim on the freedman's property. The patron was not excluded if the children of the freedman were exheredated.

By the lex Papia Poppæa, if a freedman had a property amounting to a hundred thousand sesterii and fewer than three children, the patronus had an equal share (*virilis pars*) with the children, whether the freedman died testate or intestate; and a patrona ingenua who had three children enjoyed the same privilege. Before the lex Papia, patronæ had only the rights which the Twelve Tables gave them; but this lex put ingenuæ patronæ who had two children, and libertinæ patronæ who had three children, on the same footing with respect to the bonorum possessio contra tabulas, and with respect to an adopted son, a wife in manu, or a nurus in manu filii, as the edict had placed patroni. The lex did the same for daughters of the patronus who had three children. The lex also gave to a patrona ingenua, but not to a libertina, who had three children, the same rights that it gave to a patronus.

According to the old law, as the liberta was in the legitima tutela of her patron, she could make no disposition of her property without his consent (*patrono auctore*). The lex Papia freed a liberta from this tutela if she had four children, and she could, consequently, then make a will without the consent of her patronus, but the law provided that the patronus should have an equal share with her surviving children.

In the case of a liberta dying intestate, the lex Papia gave no farther rights to a patrona who had children (*liberis honoratæ*) than she had before; and, therefore, if there had been no capitis diminutio of the patrona or the liberta, the patrona inherited the property, even if she had no children, to the exclusion of the children of the liberta. If the liberta made a will, the lex Papia gave to the patrona, who had the number of children required by that law, the same rights which the Edict gave to the patronus contra tabulas liberti. The same lex gave to the daughter of a patrona who had a single child, the same rights that the patronus had contra tabulas liberti. (Gaius, iii., 53—a passage which Unterholzner proposes to correct, but on very insufficient grounds.)

The rules of law as to the succession of the patronus to the property of Latini liberti differed in various respects from those that have been explained. Being viewed as a peculium, it had the incidents of such property. It came to the extranei heredes of the manumissor, but not to his exheredated children, in both which respects it differed from the property of a libertus who was a civis Romanus. If there were several patrons, it came to them in proportion to their interests in the former slave, and it was consistent with this doctrine that the share of a deceased patronus should go to his heres. The senatus consultum Largianum, which was passed in the time of Claudius, enacted that the property of Latini should go first to those who had manumitted them, then to their liberi who were not expressly exheredated, according to proximity, and then, according to the old law, to the heredes of the manumissor. The only effect of this senatus consultum was to prefer liberi, who were not expressly exheredated, to extranei heredes. Accordingly, an emancipated son of the patronus, who was præteritus, and who could not claim the bonorum possessio of his father's property contra tabulas testamenti, had

a claim to the property of a Latinus prior to the extranei heredes.

As to the dediticii under the lex Ælia Sentia, there were two rules. The property of those who on their manumission would have become Roman citizens, but for the impediments thereto, came to their patroni as if they had been Roman citizens: they had not, however, the testamenti factio. The property of those who on their manumission would have become Latini, but for the impediments thereto, came to their patroni as if they had been Latini: on this Gaius remarks that in this matter the legislator had not very clearly expressed his intentions. He had already made a similar remark as to a provision of the lex Papia.¹

As to the other meanings of the word patronus, see CLIENS and ORATOR.

The subject of the patronatus is one of considerable importance towards a right understanding of many parts of the Roman polity. This imperfect outline may be filled up by referring to the authorities given in note ².

PAVIMENTUM. (*Vid. HOUSE, ROMAN, p. 519.*)

*PAVO (*ραῦς*), the Peacock, or *Pavo Cristatus*, L. "It is impossible to determine with precision the epocha of the domestication of the Peacock; we know well, however, that it must have been of the remotest antiquity, since the fleets of Solomon, in their distant voyages, brought back, every three years, to Palestine, peacocks, which are enumerated among the riches which the cargoes of these vessels contained. We are informed by Pliny that the orator Hortensius was the first Roman who had a peacock killed at his table, when he entertained the College of Pontiffs at a sumptuous banquet. The first who bred and fattened peacocks for culinary purposes was Aufidius Lurco, who realized by this means a revenue of sixty thousand sesterces. This was towards the time of the war with the pirates. In the feasts of the Emperors Vitellius and Helio gabalus, enormous dishes were frequently served up, composed of ragouts of the tongues and brains of peacocks. Buffon says that at first they were very rare in Europe. At Athens they were exhibited for many years at every festival of the new moon as an object of curiosity, and people used to run in crowds from the neighbouring towns and cities to behold them. This was after the time of Alexander; for that monarch, though well acquainted with Greece, had never seen them until he marched into India, where he found them flying wild on the banks of one of the rivers of the Pendjab. Towards the latter end of his reign they had so greatly multiplied in Greece, that Aristotle speaks of them as perfectly well known in that country." The Peacock was sacred to Juno, and was nurtured in honour of the goddess, in great numbers, at her temple in Samos. It is represented, also, on the coins of this island. According to one explanation, the star-bedecked tail of the bird seemed an image of the vault of heaven, and hence the Peacock was consecrated to Juno Urania as to the Queen of the Skies. Others, however, suppose the bird to have been held sacred to the goddess, from its announcing by its cry the changes of weather, &c.³

PAUPERIE, ACTIO DE. (*Vid. PAUPERIES.*)

PAUPERIES was the legal term for mischief done by an animal (*quadrupes*) contrary to the nature of the animal, as if a man's ox gored another

1. (iii., 47.)—2. (Gaius, iii., 39–76.—Ulpian, Frag., tit. xxvii., xxix.—Dig. 37, tit. 14, 15; 38, tit. 1, 2, 3, &c.—Index to Paulus. Sent. Recept.—For Justinian's legislation, Inst., iii., 8, &c.—Unterholzner, Ueber das Patronatische Erbrecht, Zeitschrift, v., and the article GENS, with the references in Rein, Das Röm. Privatrecht, p. 285, and in Walter, Geschichte des Röm. Rechts, p. 507–516, and 684–689.)—3. (Griffith's Cuvier, vol. viii., 136.—Walpole's Memoirs, vol. i., p. 261.)

man. In such cases the law of the Twelve Tables gave the injured person an action against the owner of the animal for the amount of the damage sustained. The owner was bound either to pay the full amount of damages, or to give up the animal to the injured person (*noxæ dare*). Pauperies excluded the notion of *injuria*; it is defined to be "*dammum sine injuria facientis factum*," for an animal could not be said to have done a thing "*injuria*." The actio de pauperie belonged to the class of *noxales actiones*.¹

PAUSARIUM was the name given to the priests of Isis at Rome, because they were accustomed, in the processions in honour of Isis, to make pauses (*pausa*) at certain chapels or places, called *mansiones*, by the road's side, to sing hymns and perform other sacred rites.²

The *portisculus*, or commander of the rowers in a vessel, was sometimes called *pausarius*,³ because the rowers began and ceased (*pausa*) their strokes according to his commands. (*Ud. Portisculus*.)

*PAUSIA, a species of Olive. Virgil calls its berry bitter, because it was to be gathered before it was quite ripe, it having then a bitter or austere taste.⁴

PECHYS (πῆχυς). (*Ud. Cubitus*.)

PECTEN (πέτεος), a Comb. The Greeks and Romans used combs made of boxwood,⁵ which they obtained, as we do, from the shores of the Euxine Sea. The mountain ridge of Cytorus, in Galatia, was particularly celebrated for this product.⁶ (*Ud. Bucium*.) The Egyptians had ivory combs,⁷ which also came into use by degrees among the Romans.⁸ The golden comb ascribed to the goddesses is, of course, imaginary.⁹ The wooden combs found in Egyptian tombs are toothed on one side only; but the Greeks used them with teeth on both sides, as appears from the remains of combs found at Pompeii,¹⁰ and from the representation of three combs, exactly like our small-tooth combs, on the Amyclæan marbles.¹¹

The principal use of the comb was for dressing the hair,¹² in doing which the Greeks of both sexes were remarkably careful and diligent.¹³ (*Ud. Coma*, p. 293.) To go with uncombed hair was a sign of affliction.¹⁴ The use of the comb in cutting the hair is alluded to by Plautus.¹⁵

A comb with iron teeth was used in cornfields, to separate the grain from the straw while it was yet standing.¹⁶ This method of reaping was called *pectinare segetem*. A painting in the sepulchral grotto of El Kab, in Egypt, represents a man combing flax for the purpose of separating the linseed from the stem. The rake used in making hay is called *rarus pecten*,¹⁷ because its teeth are far apart; but this may be only a poetical use of the term.

Two portions of the Greek lyre were called the combs;¹⁸ they may have been two rows of pegs, to which the strings were tied. In a figurative or metaphorical sense, the term was applied to the fingers of a man¹⁹ and to the ribs of a horse.²⁰ The use of the comb in weaving, and the transference of its name to the plectrum, are explained under *TELA*.

PECUARIUM were a class of the publicani who farmed the public pastures (*pecua publica*²¹).

PECULATUS is properly the misappropriation or theft of public property. Labeo defines it thus: "*pecunia publica aut sacra furtum, non ab eo factum, cuius periculo est*." The person guilty of this offence was *peculator*. Cicero¹ enumerates *peculatores* with *sicarii*, *venefici*, *testamentarii*, and *fures*. The origin of the word appears to be *pecus*, a term which originally denoted that kind of movable property which was the chief sign of wealth. Originally trials for *peculatus* were before the *populus* or the senate.² In the time of Cicero, matters of *peculatus* had become one of the *quaestiones perpetuae*, which imply some *lex De Peculatu*, and such a *lex* is by some writers enumerated among the *leges Sullanæ*, but without stating the authority for this assertion. Two *leges* relating to *peculatus* are cited in the Digest, *lex Julia Peculatus* and *lex Julia de Residuis*,³ but these may be the same *lex*, though quoted as two *leges*, just as the *lex Julia de Adulteriis* comprised a provision *De Fundo Dotali*, which chapter is often quoted as if it were a separate *lex*. Matters relating to sacrilege were also comprised in the *lex Julia Peculatus* (*ne quis ex pecunia sacra, religiosa publicave auferat*, &c.); matters relating to the debasement of the coinage; the erasing or cancelling of *tabulæ publicæ*, &c. The *lex de Residuis* applied to those who had received public money for public purposes, and had retained it (*apud quem pecunia publica resedit*). The penalty under this *lex*, on conviction, was a third part of the sum retained. The punishment, which under the *lex Julia Peculatus* was originally *aquæ et ignis interdictio*, was changed into *deportatio*: the offender lost all his rights, and his property was forfeited. Under the Empire sacrilege was punished with death. A "*sacerlegus*" is one who plunders public sacred places.

PECULIO, ACTIO DE. (*Ud. SERVUS*.)

PECULIUM. (*Ud. SERVUS*.)

PECULIUM CASTRENSE. (*Ud. PATRIA POTESTAS*, p. 742.)

PECUNIA. (*Ud. ÆS, ARGENTUM, AURUM*.)

PECUNIA. (*Ud. HERES, ROMAN*, p. 497.)

PECUNIA CERTA. (*Ud. OBLIGATIONES*, page 673.)

PEDANEUS JUDEX. (*Ud. JUDEX PEDANEUS*.)

PEDARIUM. (*Ud. SENATUS*.)

PEDICA, formed from *pes* on the same analogy with *MANICA* (*περικαλῆς*, *Ion. et Att. πέδη**), a fetter, an ankle-ring.

Fetters were worn for the sake of restraint by lunatics,⁴ criminals, and captives,⁵ and by horses instead of a halter.⁶ Another kind of fetter was the noose (*laqueus curraz*⁷) used to catch birds, which was the appropriate employment of winter.⁸ For the sake of ornament, fetters or ankle-rings were worn by females. (*Ud. PERISCCELIS*.)

PEDISEQUI were a class of slaves, whose duty it was to follow their master when he went out of his house. This name does not appear to have been given to any slave who accompanied his master; but the *pedisequi* seem to have formed a special class, which was almost the lowest of all.¹⁰ There was a similar class of female slaves, called *pedisequæ*.¹¹

PEDUM (κορύνη, λαγυδόλος¹²), a Crook. Its curved extremity was used by the shepherds to lay hold of the sheep or goats, principally by their legs, so as to preserve them from running into danger, or

to rescue them when they were in want of assistance.¹ The accompanying woodcut is taken from a painting found at Civita Vecchia.² It shows the crook in the hand of a shepherdess, who sits upon a rock, tending sheep and other cattle. (See also woodcut to OSCILLUM.)

The herdsman also used a crook, but less curved, with a heavy head, and hence called *καλαυρόν*; he threw it at any of the herd which strayed from the rest.³

On account of its connexion with pastoral life, the crook is continually seen in works of ancient art in the hands of Pan,⁴ and of satyrs, fauns, and shepherds. It was also the usual attribute of Thalia, as the muse of pastoral poetry.⁵

*PEG'ANON (*πήγανον*), the herb Rue. The two species described by Dioscorides are, in all probability, the *Ruta montana* and *hortensis*, the Mountain and Garden Rue: Linnæus named the former the *Peganum harmala*. Schneider thinks that the *πήγανον* of Theophrastus applies to the *Ruta graveolens* and *montana*.⁶

PEGMA (*πήγμα*), a Pageant, i. e., an edifice of wood, consisting of two or more stages (*tabulata*), which were raised or depressed at pleasure by means of balance-weights (*ponderibus reductis*).⁷ These great machines were used in the Roman amphitheatres,⁸ the gladiators who fought upon them being called *pegmares*.⁹ They were supported upon wheels, so as to be drawn into the circus, glittering with silver and a profusion of wealth.¹⁰ At other times they exhibited a magnificent though dangerous¹¹ display of fireworks.¹² Accidents sometimes happened to the musicians and other performers who were carried upon them.¹³ When Vespasian and Titus celebrated their triumph over the Jews, the procession included pageants of extraordinary magnitude and splendour, consisting of three or four stages above one another, hung with rich tapestry, and inlaid with ivory and gold. By the aid of various contrivances, they represented battles and their numerous incidents, and the attack and defence of the cities of Judæa.¹⁴

The pageant was also used in sacrifices. A bull having been slain on one of the stages, the highpriest placed himself below, in a cavern, so as to receive the blood upon his person and his garments, and in this state he was produced by the flamines before the worshippers.¹⁵

The pegmata mentioned by Cicero¹⁶ may have been movable bookcases.

*PE'LAMYS (*πύλαμης*), a species of *Scomber* or Thunny. According to Pallas, the *πύλαμης* mentioned by Strabo as a fish of the Black Sea, is the *Mugil cephalus*, Linn. A species of *πύλαμης* is at the present day denominated *Palymede* by the fishermen at Marseilles. The *σάρδα* was a pickle made from the *πύλαμης*.¹

*PE'LARGUS (*πέλαργος*), the common Stork, or *Ciconia alba*, Belon, the same as the *Ardia Ciconia*, L. Aristotle errs in making the Stork a hybernating bird. Ælian and Pliny state, more correctly, that it migrates like the Crane. (Vid. CICONIA.)²

PELATAI (*πελάται*) are defined by Pollux³ and other authorities to be free labourers working for hire, like the *θήτες*, in contradistinction to the Helots and Penestæ, who were bondsmen or serfs, having lost their freedom by conquest or otherwise. Aristotle⁴ thus connects their name with *πέλας*: *Πελάται*, he says, from *πέλας*, *ὅλον ἐγγιστα διὰ πέναν προσόντες*: i. e., persons who are obliged by poverty to attach themselves to others. Timæus⁵ gives the same explanation: *Πελάτης, ὁ ἀντὶ τροφῶν ὑπηρετῶν καὶ προσπελάζων*. In the later Greek writers, such as Dionysius of Halicarnassus and Plutarch, the word is used for the Latin clients, though the relations expressed by the two terms are by no means similar. Plutarch⁶ also uses the word rather loosely for Helots; and we are told of a nation of Illyrians (the *Arđiæi*) who possessed 300,000 *prospelatae*, compared by Theopompus⁷ with the Helots of Laconia.⁸

*PELECAN (*πελεκάν*), the Pelican, called also, in Greek, *πελεκίνος*. It is the *Onocrotalus* of Pliny, and hence its scientific name of *Pelecanus Onocrotalus*. The Greek name is derived from the axe-shaped bill of the bird (*πέλεκυν*, "an axe").⁹

*PELECINUS (*πελεκίνος*), a plant, which Stackhouse and Sprengel refer to the *Coronilla scurvidaca*, or Joint-plodded Calutea. Dioscorides enumerates the *πελεκίνος* among the synonyms of (the *Hedysarum* (*ῥόδισρον*)).¹⁰

*Π. (*πύλαμης*), a plant, the *Biserrula Pelecinus* Stackhouse, however, makes it the same with the preceding.¹¹

*PELEIAS (*πελειάς*), the Rock Dove or Stock Pigeon, the *Columba livia*, Brisson. It is particularly timid, and hence Homer gives it the epithet of *τρήμων*.¹²

PELLEX. (Vid. CONCUBINA, ROMAN.)

PELLIS (*δέρμα, δορά*), the hide or skin of a quadruped.

Before weaving was introduced into Europe, there is reason to believe that its inhabitants were universally clothed in skins. The practice continued among the less civilized nations,¹³ and is often ascribed by the poets to heroes and imaginary beings. The following is an enumeration of the skins which were thus employed either in fiction or in real life: 1. The lion's skin (*λεοντή*). The story of the Nemean lion may have been founded in fact. The existence of these animals in Northern Greece, Thessaly, and Macedonia, is attested by Herodotus¹⁴ and Aristotle,¹⁵ and that they were comparatively abundant in Asia Minor is manifest from the descriptions in the Homeric poems. Hence Agamemnon, preparing to walk out from his tent by night, puts on, instead of a blanket (*vid. PALLIUM*), the hide of a great lion, while Menelaus clothes himself

that of a leopard.¹ For this purpose the claws of the lion were carefully retained, and sometimes covered with thin plates of gold.² The manner of wearing the skin is described in the article *ARMA*, p. 93.³ 2. The skin of the tigress was worn in the same manner as the lion's, covering the back from head to foot,⁴ and with the claws gilded.⁵ 3. The leopard's or panther's skin (*παρδαλίνη*) is represented in the Iliad as worn, not only by Menelaus as above quoted, but by Paris, who adorns himself with it in the day, and in sight of the two armies.⁶ It is also attributed to Jason.⁷ It was greatly admired on account of its spots, and was thrown over the left shoulder like a pallium.⁸ (*Vid. DIONYSIA*, p. 365.) The high-priest of the Egyptians wore a leopard's skin on grand occasions.⁹ 4. Pan wore the skin of the lynx.¹⁰ 5. The wolfskin (*λυκῆ*) seems to constitute the dress of Amphiaræus, who is the middle figure in the woodcut at p. 719. It was adopted as a defence from the nightly cold by Dolon.¹¹ 6. The foxskin is attributed only to barbarous nations, such as the Scythæ.¹² 7. The ermine derives its name from Armenia, with which country the ancients, especially the Ionians, carried on a trade in furs. Ermine skins were greatly admired for their delicacy and softness, and were taken to Persia to make robes for the grandees by being sewed together.¹³ 8. The doeskin, worn by Pan over his left side.¹⁴ (*Vid. NEBRIS*.) 9. The bear's skin was constantly worn instead of the blanket (*χλαίνα*) by Ancaeus, one of the Argonauts.¹⁵ 10. The bull's hide was employed in like manner (*vid. ARMA*, p. 93), especially that of the young bull (*juvenis*)¹⁶. 11. The goatskin (*αἰγίς*, *νύκος*) is mentioned, not only as the attribute of divine and mythological beings¹⁷ (*vid. ÆGIS*), but as the common clothing of the goatherd¹⁸ and the labouring man.¹⁹ Nevertheless, the language of Varro²⁰ implies that his countrymen had ceased to clothe themselves in goatskins, which were abandoned to the less refined inhabitants of Gætulia and Sardinia. The uncouth goatskin garment of the Sardinians was called *mastruca*. The term *σιούρα* or *σιούρνα* denoted an article of domestic furniture, which was made by sewing together several goatskins with the hair on.²¹ 12. The sheepskin (*δία*, *νύκος*, *διόφθηρα*) was worn not only by the Lacedæmonian Helots, but frequently by the laborious poor, as is still the case in many parts of Europe. The lambskin was called *ἀρναικίς*, and a dress, supposed to have had a sheepskin sewed to it below, *κατωνάκη*.

The preceding statement shows that, as civilization advanced among the Greeks and Romans, the use of hides for clothing was gradually abandoned, the pallium or blanket being substituted for them, and worn very much after the same fashion. Skins, however, continued to be used as coverings for beds and couches,²² and as clothing for slaves and the poor, especially in the country. The northern nations of Europe retained the use of them in the highest ranks of society²³ (*pellita Gætarum curia*²⁴), while the Greeks and Romans constantly regarded it as a sign of rusticity and savage barbarism to be so clothed. Hence it was matter of censure and indignation when Rufinus, prime minister of the

Emperor Honorius, first occupied the seat of justice in a furred robe (*maerent captivæ pellito judice leges*). Nevertheless, the taste which now prevails for the beautiful furs of the north of Europe and Asia, as is shown by Mr. Aikin in his admirable essay on this subject,²⁵ made at this time a rapid progress throughout the Roman Empire.

*PELORIAS (*πελωρίας* or *-ις*), "a testaceous fish, of the genus *Chauræ*. Athenæus says it is so called from *πελώριος*, as indicating its great size. Casaubon, however, contends that the name is derived from Pelorus, the Sicilian promontory. Its French name is *Pelourde*."

PELTA (*πέλτη*), a small Shield. Iphicrates, observing that the ancient *CLYPEUS* was cumbersome and inconvenient, introduced among the Greeks a much smaller and lighter shield, from which those who bore it took the name of *pelastæ*.³ (*Vid. ARMA*, p. 94; *ARMV*, p. 99.) It consisted principally of a frame of wood or wickerwork,⁴ covered with skin or leather, without the metallic rim. (*Vid. ANTYP*.)⁵ Light and small shields of a great variety of shapes were used by numerous nations before the adoption of them by the Greeks. The round target (*vid. CETRA*) was a species of the pelta, so that the ancient Spaniards were all, as Strabo says,⁶ *pelastæ*. The pelta is also said to have been quadrangular.⁷ The Mosynæci, on the southern shore of the Euxine Sea, used peltæ (*γέρρα*) made of the hides of white oxen with the hair on, and in shape resembling an ivy-leaf.⁸ A light shield of similar construction was part of the national armour of Thrace⁹ and of various parts of Asia, and was, on this account, attributed to the Amazons, in whose hands it appears on the works of ancient art sometimes elliptic, as in the bronzes of Siris (woodcut, p. 598), and at other times variously sinuated on the margin, but most commonly with a semicircular indentation on one side (*lunatis peltis*¹⁰). An elegant form of the pelta is exhibited in the annexed woodcut, taken from a sepulchral urn in the Capitoline Museum at Rome, and representing Penthesilea, queen of the Amazons, in the act of offering aid to Priam.

Notwithstanding the general absence of metal, the pelta was sometimes ornamented.¹¹ That borne

by Telamon in the attack on the Calydonian boar was adorned with a golden eagle.¹

*PENELOPS (πηνέλοψ), the *Anas Penelope*, or Wildgean. (Vid. ANAS.)

PENE'ATAI (πενέσται), probably from πένεσθαι, *operari*.² The Penestæ of Thessaly are generally conceived to have stood in nearly the same relation to their Thessalian lords as the Helots of Laconia did to the Dorian Spartans, although their condition seems to have been, on the whole, superior.³ They were the descendants of the old Pelasgic or Æolian inhabitants of Thessaly proper, and the following account is given of them by an author called Archemachus, in his *Euboica*.⁴ "The Æolian Bœotians who did not emigrate when their country, Thessaly, was conquered by the Thessalians,⁵ surrendered themselves to the victors on condition that they should not be carried out of the country (whence, he adds, they were formerly called Μένεσται, but afterward Πενέσται) nor be put to death, but should cultivate the land for the new owners of the soil, paying, by way of rent, a portion of the produce of it: and many of them are richer than their masters." They were also called Λάρτεις. It appears, then, that they occupied an intermediate position between freemen and purchased slaves, being reduced to servitude by conquest, and resembling, in their fixed payments, the Ἐκτημόριοι of Attica. Moreover, they were not subject to the whole community, but belonged to particular houses, whence also they were called Θεσσαλοικέται. They were very numerous, for instance, in the families of the Aleuadæ and Scopadæ.⁶ We may add, that among the Thessalian Penestæ Theopompus includes the descendants of the conquered Magnesians and Perrhæbians,⁷ a statement which can only apply to a part of these nations, as, though reduced to dependence, they were not made entirely subject.⁸

From a passage in Demosthenes,⁹ it appears that the Penestæ sometimes accompanied their masters to battle, and fought on horseback, as their knights or vassals: a circumstance which need not excite surprise, as Thessaly was so famous for cavalry. The Penestæ of Thessaly also resembled the Laconian Helots in another respect, for they often rose up in arms against their lords.¹⁰ There were Penestæ among the Macedonians also.¹¹

PENETRA'LE. (Vid. TEMPLUM.)

*PEN'IA (πηνία), an insect noticed by Aristotle, which Schneider suggests may have been the *Phalana geometrica*.¹²

PENICILLUS. (Vid. PAINTING, p. 702.)

PENTACOSIOMEDIMNI. (Vid. CENSUS.)

PENTALITHOS (πεντάλιθος). (Vid. GYMNASIUM, p. 433.)

*PENTAPHYLLON (πεντάφυλλον). "We may be certain," says Adams, "that we are not far from the truth in tracing this down for the *Tormentilla officinalis*, or common Tormentil, although the resemblance between it and its cognate genus, the *Potentilla*, be so great, that, in all probability, the ancients sometimes applied the same name to both."¹³

PENTATHLON (πένταθλον, *quinquertium*) was, next to the pancratium, the most beautiful of all athletic performances.¹⁴ It does not appear to have been known in the heroic ages of Greece, although Apollodorus,¹⁵ according to the usual practice of later times, describes Perseus as killing Acrisius in

the pentathlon, and although its invention was attributed to Peleus.¹ These accounts are fabulous; the pentathlon was not practised until the time when the great national games of Greece began to flourish. The persons engaged in it were called pentathli (πένταθλοι). The pentathlon consisted of five distinct kinds of games, viz., leaping (ἄλμα), footrace (δρόμος), the throwing of the discus (δίσκος), the throwing of the spear (σῆληννος or ἄκοντιον), and wrestling (πάλη),² which were all performed in one day and in a certain order, one after the other, by the same athlete.³ The pentathlon was introduced in the Olympic games in Ol. 18, and we may presume that soon after this it was also introduced at the other national games, as well as at some of the less important festivals, such as the Erotidia in Thespiæ.⁴

The order in which the different games of the pentathlon followed one another has been the subject of much discussion in modern times. The most probable opinion, however, is Böckh's,⁵ which has been adopted by Dissem, Krause, and others, although G. Hermann has combated it in a little work called *De Sogenis Æginetæ victoria quinquert.*, Lipsiæ, 1822. The order adopted by Böckh is as follows: 1. The ἄλμα. This was the most prominent part of the pentathlon, and was sometimes used to designate the whole game. It was accompanied by flute-music.⁷ Other writers, as Pausanias himself,⁸ and Plutarch,⁹ speak as if the whole pentathlon had been accompanied by the flute, but in these passages the whole game seems to be mentioned instead of that particular one which formed the chief part of it. 2. The footrace. 3. The discus. 4. The throwing of the spear. 5. Wrestling. In later times, probably after Ol. 77, the footrace may have been the fourth game instead of the second, so that the three games which gave to the pentathlon its peculiar character, viz., leaping, discus, and the spear, preceded the footrace and wrestling, and thus formed the so-called *τριαγμός*. The footrace of the pentathlon was probably the simple stadion or the dianlos, and not a race in armour, as has been supposed by some; for the statues of the victors in the pentathlon are never seen with a shield, but only with the halteres; besides which, it should be remembered that the race in armour was not introduced at Olympia until Ol. 65,¹⁰ while the pentathlon had been performed long before that time. It is, moreover, highly improbable that even after Ol. 65 the race in armour should have formed a part of the pentathlon. In Ol. 38 the pentathlon for boys was introduced at Olympia, but it was only exhibited this one time, and afterward abolished.¹¹

In leaping, racing, and in throwing the discus or spear, it was easy enough to decide who won the victory, even if several athletes took part in it and contended for the prize simultaneously. In wrestling, however, no more than two persons could be engaged together at a time, and it is not clear how the victory was decided if there were several pairs of wrestlers. The arrangement probably was, that if a man had conquered his antagonist, he might begin a fresh contest with a second, third, &c., and he who thus conquered the greatest number of adversaries was the victor. It is difficult to conceive in what manner the prize was awarded to the victor in the whole pentathlon; for an athlete might be conquered in one or two games and be victorious in the others, whereas it can have occurred but seldom

that one and the same man gained the victory in all the five. Who of the pentathli, then, was the victor? Modern writers have said that the prize was either awarded to him who had been victorious in all the five games, or to the person who had conquered his antagonist in at least three of the games; but nothing can be determined on this point with any certainty. That the decision as to who was to be rewarded was considered difficult by the Greeks themselves, seems to be implied by the fact that at Olympia there were three hellanodicae for the pentathlon alone.¹

As regards the *τριαγμός* mentioned above, several statements of ancient writers suggest that the whole of the pentathlon was not always performed regularly, and from beginning to end; and the words by which they designate the abridged game, *τριαγμός*, *ἀποτριάξεν*, and *τρισι περιεῖναι*, lead us to suppose that the abridged contest only consisted of three games, and most probably of those three which gave to the pentathlon its peculiar character, viz., leaping, and throwing the discus and the spear.² The reason for abridging the pentathlon in this manner may have been the wish to save time, or the circumstance that athlete who had been conquered in the first three games were frequently discouraged, and declined continuing the contest. When the triagmos was introduced at Olympia is not mentioned anywhere, but Krause infers, with great probability, from Pausanias,³ that it was in Ol. 77.

The pentathlon required and developed very great elasticity of all parts of the body, whence it was principally performed by young men;⁴ and it is probably owing to the fact that this game gave to all parts of the body their harmonious development, that Aristotle⁵ calls the pentathli the most handsome of all athlete. The pentathlon was, for the same reason, also regarded as very beneficial in a medical point of view; and the Elean Hysnon, who had, from his childhood, suffered from rheumatism, was cured by practising the pentathlon, and became one of the most distinguished athlete.⁶ (Compare G. Fr. Philipp, *De pentathlo sive quinqertio commentatio*, Berlin, 1827.—Krause, *Gymnastik und Agonistik der Hellenen*, p. 476-497.)

ΠΕΝΤΗΚΟΣΤΗ, a duty of two per cent. levied upon all exports and imports at Athens.⁷ Thus it was levied on corn,⁸ which, however, could only be imported, exportation being prohibited by law;⁹ and also on woollen cloth, and other manufactured goods.¹⁰ On imports the duty was payable on the unloading;¹¹ on exports, probably, when they were put on board. The money was collected by persons called *πεντηκοστολόγοι*, who kept a book in which they entered all customs received. Demosthenes refers to their entry (*ἀπογραφή*) to prove that a ship was not laden with more than a certain quantity of goods.¹² The merchant who paid the duty was said *πεντηκοντεύεσθαι*. All the customs appear to have been let to farm, and probably from year to year. They were let to the highest bidders by the ten *πρωταί*, acting under the authority of the senate. The farmers were called *τελώναι*, and were said *ὠνεῖσθαι τὴν πεντηκοστήν*. They might either collect the duty themselves, or employ others for that purpose. Several persons often joined together in the speculation, in which case the principal, in whose name the bidding took place, and who was responsible to the state, was called *ἀρχώνης* or *τελωνάρχης*.

1. (Paus., v., 9, § 5) — 2. (Dion Chrysost., *Διωγ.*, i., p. 279, ed. Rouske. — Schol. ad Aristid. ap. Phot., Cod., p. 409, Bekker. — Müller, *Archæol. d. Kunst*, § 423, 3.) — 3. (v., 9, § 3.) — 4. (Schol. ad Plat., *Amnt.*, p. 135, D., &c.) — 5. (Rhet., i., 5.) — 6. (Paus., vi., 3, § 4) — 7. (Harpoc., s. v. *Πεντηκοστή*.) — 8. (Demosth., c. *Neer.*, 1353.) — 9. (Demosth., c. *Lacr.*, 941.) — 10. (Demosth., c. *Meid.*, 558.) — 11. (Demosth., c. *Lacr.*, 932.) — 12. (c. *Phorm.*, 109.)

Sureties were usually required.¹ Whether the customs on different articles of merchandise were farmed altogether or separately, does not appear. The corn-duty, at least, was kept distinct;² and this was the case with another tax.³ With respect to the amount of the revenue derived from this source, the reader may consult Böckh, *Staatshaush. der Ath.*, i., 337-342. The *πεντηκοστή* has been thought by some to be the same with the *ἐλλαμένιον* mentioned by Pollux;⁴ but this was more probably a duty paid for the use of the harbour, whether goods were unladen or not, and was perhaps the same as the *ἐκατοστή*, mentioned by Xenophon⁵ as being paid by foreign ships entering the Piræus, and alluded to by Aristophanes.⁶ Böckh's conjecture, that, besides a personal harbour due, a duty was levied of one per cent. on all the goods on board, appears less probable; for it would be unreasonable to exact a customs duty on goods not landed; and if they were to be landed, why should the *πεντηκοστή* be required in addition to the *ἐκατοστή*?⁷

PENTECOSTYS (*πεντηκοστής*). (*Vid.* ARMY, GREEK, p. 98.)

*PENTELEICUM MARMOR (*Πεντελεϊκὸς λίθος*), Pentelic Marble, obtained from Mount Pentelcus, near Athens, the modern name of which is *Pentelide*. With this marble the Parthenon was built, as also the Temple of Ceres at Eleusis. Many celebrated statues were made of it. Its grain is finer than the Parian, but it does not retain its polish and beauty so well as the latter, being less homogeneous, and, consequently, more liable to decomposition.⁸

*PEPERI (*πέπερι*), Pepper. "Theophrastus describes the two kinds of pepper, *ὅτι τὸν δ' αὐτοῦ τὸ γένος, τὸ μὲν γὰρ σπρόγγυλον, τὸ δὲ πρὸνκης*. The former is the *white*, the other the *black* Pepper. Solinus and Pliny give a full account of the ancient Peppers, containing, however, some errors, arising from want of information. Dr. Hill says 'the oldest Greek writers knew the three kinds of pepper in use at present, and have described them very well, although they erred in supposing them the fruit of the same plant in different degrees of maturity.' The plant which produces both the black and white kinds is named *Piper nigrum*; that which produces the long, *Piper longum*.⁹

*PEPLIS and PEPLUS (*πεπλῖς*, -ος), two species of Spurge, namely, the *Euphorbia Peplis* and *Peplus*.¹⁰

PEPLUM (*πέπλος*), a Shawl, differing from the scarf (*vid.* CHLAMYs) in being much larger, and from the blanket (*vid.* PALIUM) in being finer and thinner, and also considerably larger. It was sometimes used as a cover to protect valuable articles of furniture¹¹ or to adorn a throne,¹² but most commonly as a part of the dress of females;¹³ although instances occur, even among the Greeks, in which it is worn by the other sex, unless we suppose the term to be in these instances improperly put for *φόρος*.¹⁴ In Persia and other Eastern countries, the shawl was no doubt worn anciently, as it is at the present day, by both sexes.¹⁵ Also in Bacchanalian processions it was worn by men, both in allusion to Oriental habits, and because they then avowedly assumed the dress of females.¹⁶ This was commonly the

garment which the Orientals rent as an expression of rage or grief.¹ Women of high rank wore their shawls so long as to trail upon the ground (Τρωάδας ἔλκεσιπέπλους,² Ἐλένη πανύπεπλος³). A shawl was sometimes wrapped about the head during sleep.⁴ Like all other pieces of cloth used for the AMICTUS, it was often fastened by means of a brooch (vid. FIBULA⁵), and was thus displayed upon the statues of female divinities, such as Diana⁶ and the goddess Rome.⁷ It was, however, frequently worn without a brooch, in the manner represented in the annexed woodcut, which is copied from one of Sir Wm.

Hamilton's vases.⁸ Each of the females in this group wears a shift falling down to her feet (vid. TUNICA), and over it an ample shawl, which she passes entirely round her body, and then throws the loose extremity of it over her left shoulder and behind her back, as is distinctly seen in the sitting figure. The shawl was also often worn so as to cover the head while it enveloped the body, and more especially on occasion of a funeral (see woodcuts, p. 458), or of a marriage, when a very splendid shawl (πατόρις⁹) was worn by the bride. The following woodcut¹⁰ may be supposed to represent

the moment when the bride, so veiled, is delivered to her husband at the door of the nuptial chamber.

1. (Æschyl., II. cc.—Eurip., Hec., 553-555.—Xen., Cyrop., iii., 1, § 13.—Id. ib., iii., 3, § 67.—Id. ib., v., 1, § 6.)—2. (Hom., II., vi., 442.)—3. (Od., iv., 305.)—4. (Apollon. Rhod., iv., 1294, 1314, 1351.)—5. (Soph., Trach., 920.—Callim., Lav. Pall., 70.—Apollon. Rhod., iii., 833.)—6. (Bruck, Anal., iii., 206.)—7. (Apollon. Rhod., Carm., v., 18.)—8. (vol. iii., pl. 58.)—9. (1 Maccab., i., 27.)—10. (from Bartoli. Admir. Rom. Ant., pl. 57.)

He wears the PALLIUM only; she has a long shift¹ beneath her shawl, and is supported by the pronuba. Thus veiled the poets represented Aurora and Night, but with this difference, that the one arose expanding a shawl dyed with saffron (χρκοτόπελος Ἥως²), whereas a black one enveloped the other (μελάμπελος Νύξ³). In reference to the bridal shawl, the epithet πατόριος was given to Venus.⁴

Of all the productions of the loom, shawls were those on which the greatest skill and labour were bestowed. So various and tasteful were the subjects which they represented, that poets delighted to describe them. The art of weaving them was entirely Oriental (βαρβάρων ὑφάσματα⁵): those of the most splendid dyes and curious workmanship were imported from Tyre and Sidon:⁶ a whole book was written by Polemo "concerning the Shawls at Carthage."⁷ Hence "Shawls" (πέπλοι) was one of the titles of works of an imaginative or descriptive character, and was adopted to intimate the variety of their subjects, and the beautiful mode of displaying them. A book, intended to depict some of the characters in the Iliad, and denominated "The Shawl," was ascribed to Aristotle.⁸ As a specimen of the subjects delineated, a shawl may be mentioned which exhibited the frame of the world.⁹ Euripides describes one which represented the sun, moon, and stars, and which, with various others containing hunting-pieces and a great variety of subjects, belonged to the Temple of Apollo at Delphi, and was used to form a magnificent tent for the purpose of an entertainment;¹⁰ for it is to be observed, that stores of shawls were not only kept by wealthy individuals,¹¹ but often constituted a very important part of the treasures of a temple,¹² having been presented to the divinity on numerous occasions by suplicants and devotees.¹³ (Vid. DONARIA, p. 376, PANATHENÆA, PASTOPHORUS.)

PER CONDICTIONEM. This legis actio, says Gaius, was so called because the plaintiff gave notice to the defendant to be present on the thirtieth day after the notice, in order that a judex might be appointed. It was an actio in personam, and applicable to those cases in which the plaintiff required the defendant to give something (*qua intendit dari oportere*). This legis actio was introduced by a lex Silia in the case of a fixed sum of money (*certa pecunia*), and by a lex Sempronia in the case of any definite thing. Gaius observes that it does not appear why this form of action was needed, for in a case of *dari oportere* there was the sacramentum and the *per judicis postulationem*. The name *condictio* was applied to actiones in personam, after the legis actiones fell into disuse, though improperly, for the notice (*denuntiatio*) whence the legis actio took its name was discontinued.¹⁴

PER JUDICIS POSTULATIONEM was one of the legis actiones. The passage in Gaius is wanting in which this form of action is described. It was applicable to a great variety of cases, and to some cases the same as the sacramentum was applicable. (Vid. PER CONDICTIONEM.)

PER MANUS INJECTIONEM. (Vid. MANUS INJECTION.)

PER PIGNORIS CAPIONEM or CAPTIONEM. This was one of the legis actiones, or old forms of procedure, which in some cases was founded on custom (*mos*), in others on enactments (*lex*). It was founded on military usage in the following

cases. A soldier might seize as a pledge (*pignus capere*) anything belonging to the person who had to distribute the *æs militare*, in case he did not make the proper payments; he might also make a seizure in respect of the money due to him for the purchase of a horse (*æs equestre*), and also in respect of the allowance for the food of his horse (*æs hordiarium*). The law of the Twelve Tables allowed a *pignoris capio* in respect of pay due for the hire of a beast, when the hire-money was intended for a sacrifice. By a special law (the name is not legible in the MS. of Gaius) the publicani had the right *pignoris capionis* in respect of vectigalia publica which were due by any lex. The thing was seized (*pignus capiebatur*) with certain formal words, and for this reason it was by some considered to be a *legis actio*. Others did not allow it to be a *legis actio*, because the proceeding was *extra jus*, that is, not before the prætor, and generally, also, in the absence of the person whose property was seized. The *pignus* could also be seized on a *dies nefastus*, or one on which a *legis actio* was not permitted.

It appears from a passage of Gaius, in which he speaks of the legal fiction that was afterward introduced into the formula by which the publicani recovered the vectigalia, that the thing seized was only taken as a security, and was redeemed by payment of the sum of money in respect of which it was seized. In case of non-payment, there must, however, have been a power of sale, and, accordingly, this *pignoris capio* resembles in all respects a *pignus* proper, except as to the want of consent on the part of the person whose property was seized. It does not appear whether this *legis actio* was the origin of the law of pledge, as subsequently developed, but it seems not improbable.¹

PERA, *dim.* PERULA (*πῆρα*), a Wallet, made of leather, worn suspended at the side by rustics and by travellers to carry their provisions,² and adopted, in imitation of them, by the Cynic philosophers.³ (*Vid.* BACULUS.) The cup for drinking was carried in the wallet.⁴ The sower carried a wallet depending from his right shoulder to hold his seed.⁵ The annexed woodcut is the representation of a goatherd with his staff and wallet, from the column of Theodosius, formerly at Constantinople.⁶

1. (Gaius, iv., 26, &c. — Cic., Verr., iii., 11. — "Pignoris capio." Gell., vii., 10.) — 2. (Mart., xiv., 81.) — 3. (Diog. Laert., vi., 13. — Bruck, Anal., i., 223. — Id. ib., ii., 22, 28. — Auson., Epigr., 73.) — 4. (Senec., Epist., 91.) — 5. (Bruck, Anal., ii., 215.) — 6. (Monestrier, Dér. de la Col. Hist. Par., 1702, pl. 16.)

*PERCA (*πέρκη*), the Perch. The River Perch, or *Perca fluviatilis*, is noticed by Aristotle, Ælian, Dioscorides, Pliny, &c.; the Sea Perch, or *Perca marina*, by Aristotle, Oppian, Ovid, Pliny, Marcellus Sidetæ, &c.¹

*PERCNOTPETERUS. (*Vid.* AQUILA.)

*PERCNUS. (*Vid.* AQUILA.)

*PERDIC'ION (*περδικιον*), a plant, most probably, as Adams thinks, the Pellitory of the Wall, or *Parietaria officinalis*, which Sibthorp says still retains the name of *περδικακι* in Greece. It is the *ἐλξίνη ἑτέρα* of Dioscorides.²

*PERDIX (*πέρδις*), the Partridge, or *Tetrao Perdix*. "Athenæus, I believe, is the only ancient author who takes notice of the Red-legged Partridge, or *Tetrao rufus*, L., sometimes called *Perdix Græca*. Gesner mentions that it is called 'the Quail' by the Italians." The *Tetrao rufus* is brought from Cephallenia to Zante, says Sibthorp, where it is kept in cages to sing, or, rather, call. The Red-legged and Gray Partridge were both seen in the vicinity of Salonica by Mr. Hawkins. The former frequented entirely the rocks and hills, the latter the cultivated ground in the plain.³

PERDUELLIO. (*Vid.* MAJESTAS, p. 609.)

PERDUELLIO'NIS DUUMVIRI were two officers or judges appointed for the purpose of trying persons who were accused of the crime of *perduellio*. Niebuhr believes that they were the same as the *quæstores parricidii*, and Walter⁴ agrees with him, though in a later part of his work⁵ he admits that they were distinct. It appears from a comparison of the following passages—Liv., i., 26.—Dig. 1, tit 2, s. 2, § 23.—Fest., s. v. *Parici* and *Sororium*—either that some of the ancient writers confound the *duumviri perduellionis* and the *quæstores parricidii*, or that, at least during the kingly period, they were the same persons; for, in giving an account of the same occurrence, some writers call the judges *quæstores parricidii*, while others call them *duumviri perduellionis*. After the establishment of the Republic, however, there can be no doubt that they were two distinct offices, for the *quæstores* were appointed regularly every year, whereas the *duumviri* were appointed very rarely, and only in cases of emergency, as had been the case during the kingly period.⁶ Livy⁷ represents the *duumviri perduellionis* as being appointed by the kings, but from Junius Gracchanus⁸ it appears that they were proposed by the king and appointed by the *populus* (*reges populi suffragio creabant*). During the early part of the Republic they were appointed by the *comitia curiata*, and afterward by the *comitia centuriata*, on the proposal of the consuls.⁹ In the case of Rabirius (B.C. 63), however, this custom was violated, as the *duumviri* were appointed by the prætor instead of by the *comitia centuriata*.¹⁰ In the time of the emperors, no *duumviri perduellionis* were ever appointed.

The punishment for those who were found guilty of *perduellio* was death: they were either hanged on the *arbor infelix*, or thrown from the Tarpeian Rock. But when the *duumviri* found a person guilty, he might appeal to the people (in early times the *populus*, afterward the *comitia centuriata*), as was done in the first case which is on record,¹¹ and in the last, which is that of Rabirius, whom Cicero

defended before the people in the oration still extant. Marcus Horatius, who had slain his sister, was acquitted, but was nevertheless obliged to undergo some symbolical punishment, as he had to pass under a yoke with his head covered. The house of those who were executed for perduellio was razed to the ground, and their relatives were not allowed to mourn for them.¹

PEREGRINUS, a stranger or foreigner. In ancient times the word peregrinus was used as synonymous with *hostis*,² but in the times of which we have historical records, a peregrinus was any person who was not a Roman citizen, though he might belong to an allied people, for the allied Latins and Hernicans are called peregrini,³ and even the plebeians are sometimes designated by this name. All peregrini were either connected with Rome by ties of hospitality, or they were not. Respecting the former, *vid. Hosprum*. The latter, if they had any business to transact at Rome, required a patronus, who undertook the management of their causes in the courts of justice. When the dominion of Rome became extended over a great part of Italy, whole towns and nations sometimes entered into the relation of client to some influential Roman, who then acted as their patronus. But in B.C. 247 a second prætor (*prætor peregrinus*) was appointed for the purpose of administering justice in matters between such peregrini as had taken up their abode at Rome. (*Vid. Prætor*.) Whether a peregrinus had commercium or connubium with Rome depended upon the relation of his native country or town to Rome. The number of such peregrini who lived in the city of Rome appears to have had an injurious influence upon the poorer classes of Roman citizens, whence, on some occasions, they were driven out of the city. The first example of this kind was set in B.C. 127, by the tribune M. Junius Pennus.⁴ They were expelled a second time by the tribune C. Papirius, in B.C. 66.⁵ The same measure was sometimes also adopted by the early emperors.⁶ As peregrini were not citizens, they had none of the rights of citizens; their existence at Rome was merely an act of toleration on the part of the Romans.

During the last period of the Republic and the first centuries of the Empire, all the free inhabitants of the Roman world were, in regard to their political rights, either Roman citizens, or Latins, or peregrini, and the latter had, as before, neither commercium nor connubium with the Romans. They were either free provincials or citizens who had forfeited their civitas, and were degraded to the rank of peregrini,⁷ or a certain class of freedmen, called peregrini dediticii.⁸ (*Vid. Dediticii*.) The most numerous class was, of course, that consisting of free provincials, many of whom also lived at Rome and in Italy. In matters concerning their own families or their property, they enjoyed in Roman courts of justice all those rights which the *jus gentium* claimed for them,⁹ and even parts of the Roman law were transferred and applied to them.¹⁰ If a peregrinus died at Rome, his property went either to the ærarium, or, if he had a patronus, the latter succeeded to it *jure applicationis*.¹¹ In the provinces, also, the peregrini were allowed to live according to their own laws and customs.¹² It appears that, from the time of the Marsic war, the peregrini were allowed to serve in the Roman armies. The Jews alone seem

to have formed an exception on account of their religious duties.¹ This service in the Roman armies was in many cases the first step towards the civitas, for many were made citizens after the time of their service had elapsed; and in the reign of M. Aurelius, provincials are even said to have obtained the civitas immediately on their enlisting in the armies.² Since, in the reign of Antoninus Caracalla,³ all the free inhabitants of the Empire were made citizens Romani, peregrini henceforth no longer existed within the boundaries of the Empire, except in cases when barbarians, not subject to it, entered the Roman armies, or when new conquests were made, and in the case of peregrini dediticii. But, on the whole, it may be said that the Romans at that time divided the inhabitants of the whole world into Romans and barbarians.⁴

PERGULA appears to have been a kind of booth or small house, which afforded scarcely any protection except by its roof, so that those who passed by could easily look into it. It served both as a workshop⁵ and a stall where things were exhibited for sale. We find, for instance, that painters exhibited their works in a pergula, that they might be seen by those who passed by;⁶ and Apelles is said to have concealed himself in his pergula, behind his pictures, that he might overhear the remarks of those who looked at them.⁷ Such places were occupied by persons who, either by working or sitting in them, wished to attract the attention of the public. Hence we find them inhabited by poor philosophers and grammarians, who gave instruction, and wished to attract notice in order to obtain pupils.⁸

It should be observed that scholars do not agree as to the real meaning of pergula: Scaliger⁹ describes it as a part of a house built out into the street, as in some old houses of modern times; Ernesti¹⁰ thinks that a pergula is a little room in the upper part of a house, which was occasionally used by poor philosophers as an observatory. But neither of these two definitions is so applicable to all the passages in which the word occurs as that which we have proposed.

*PERICLYMENON (*περικλύμενον*), the common Honeysuckle or Woodbine, the *Lonicera periclymenon*. Some botanical writers, however, prefer the other species, namely, the *L. caprifolium*.¹¹

PERIDEIPNON (*περίδειπνον*). (*Vid. Fumus*, p. 458.)

PERICEI (*περίοικοι*). This word properly denotes the inhabitants of a district lying around some particular locality, but is generally used to describe a dependant population, living without the walls or in the country provinces of a dominant city, and, although personally free, deprived of the enjoyment of citizenship, and the political rights conferred by it. The words *σύνοικοι* and *μέτοικοι* have an analogous meaning.

A political condition such as that of the *περίοικοι* of Greece, and like the vassalage of the Germanic nations, could hardly have originated in anything else than foreign conquest, and the *περίοικοι* of Laconia furnish a striking illustration of this. Their origin dates from the Dorian conquest of the Peloponnesus, when the old inhabitants of the country, the Achæans, submitted to their conquerors on certain conditions, by which, according to Ephorus,¹²

they were left in possession of their private rights of citizenship (*ἰσοτυμία*), such as the right of intermarriage with the Dorians, and also of their political franchise. They suffered, indeed, a partial deprivation of their lands, and were obliged to submit to a king of foreign race, but still they remained equal in law to their conquerors, and were eligible to all offices of state except the sovereignty. *ἰσόνμοιοι μετέχοντες καὶ πολιτείας καὶ ἀρχῶν.*¹ But this state of things did not last long: in the next generation after the conquest, either from the lust of increased dominion on the part of the Dorians, or from an unsuccessful attempt by the Achæians to regain their independence, the relation between the two parties was changed. The Achæians were reduced from citizens to vassals; they were made tributary to Sparta (*συντελεῖς*), and their lands were subjected to a tax, perhaps not so much for the sake of revenue as in token of their dependance;² they lost their rights of citizenship (*ἰσοτυμία*), such as that of intermarriage with the Dorians, the right of voting in the general assembly, and their eligibility to important offices in the state, such as that of a senator, &c. It does not, however, appear that the Periæci (especially in the historic times) were generally an oppressed people, though kept in a state of political inferiority to their conquerors. On the contrary, the most distinguished among them were admitted to offices of trust,³ and sometimes invested with naval command,⁴ but probably only because they were better suited for it than the Spartans themselves, who did not set a high value on good sailanship. Moreover, the Periæci sometimes served as heavy-armed soldiers or troops of the line: at the battle of Platæa, for instance, they supplied 10,000 men, 5000 hoplites and 5000 light-armed,⁵ a circumstance which seems to imply a difference of rank connected with a difference of occupation among the Periæci themselves. Again, at Sphacteria 292 prisoners were taken, of whom 120 were Spartans and the rest *περίοικοι*.⁶ We also read of *καλοὶ γάβαοι*, or "accomplished and well-born" gentlemen, among the Periæci, serving as volunteers in the Spartan service.⁷ But still it is not to be expected, it is not natural, that men competent to the discharge of high functions in a state, and bearing its burdens, should patiently submit to an exclusion from all political rights. Accordingly, we find that, on the rising of the Helots in B.C. 464, some of the Periæci joined them.⁸ When the Thebans invaded Laconia (B.C. 369), the Periæci were ready to help them.⁹ In connexion with the insurrection of Cinadon, are told that the Periæci were most bitter against the ruling Spartans.¹⁰ From these and other facts,¹¹ it appears that the Periæci of Laconia, if not an oppressed, were sometimes a disaffected and discontented class; though, in cases of strong excitement, or of general danger to the whole of Greece, they identified themselves with their conquerors. The very relation, indeed, which subsisted between them, was sufficient to produce in Sparta a jealousy of her subjects, with corresponding feelings on their part. Nor can we suppose that the Dorians would willingly permit the Periæci to acquire strength and opulence, or even to settle in large towns.¹² In fact, it is stated by Isocrates¹³ that the Dorians intentionally weakened the Achæians, by dispersing them over a great number of hamlets, which they called *πόλεις*, though they were less powerful than

the country parishes of Attica, and were situated in the most unproductive parts of Laconia, the best land of which was reserved for the Spartans. It is not, however, necessary to understand the orator as speaking of a uniform practice; and another of his statements, to the effect that the ephori could put any of the Periæci to death¹ without trial, is either a perversion of the truth, or arose from his confounding the Periæci with the Helots.

Still the grievances of the Periæci were not, after all, intolerable, nor do they seem to have been treated with wantonness or insolence. The distance at which many of them lived from Sparta must have rendered it impossible for them to share in the administration of the state, or to attend the public assemblies; a circumstance which must in some measure have blunted their sense of their political inferiority. Nor were they subjected to the restraints and severe discipline which the necessity of maintaining their political supremacy imposed upon the Spartans, making them more like an "army of occupation in a conquered country" or a "beleaguered garrison" than a society of men united for civil government and mutual advantage. By way of compensation, too, the Periæci enjoyed many advantages (though not considered as privileges) which the Spartans did not. The trade and manufactures of the country were exclusively in their hands, and carried on by them with the more facility and profit, as they occupied maritime towns. The cultivation of the arts, also, as well in the higher as in the lower departments, was confined to the Periæci, the Spartans considering it beneath themselves; and many distinguished artists, such as embossers and brass-founders, were found in the Laconian schools, all of whom were probably Periæci.² Nor is there wanting other evidence, though not altogether free from doubts, to show that the Spartan provincials were not in the least checked or shackled in the development of their intellectual powers.³ Moreover, it seems natural to suppose that they enjoyed civil rights in the communities to which they belonged, and which otherwise would scarcely have been called *πόλεις*; but whether or no these cities had the power of electing their own chief magistrate is a matter of conjecture. Ephorus, indeed,⁴ informs us that, on the conquest of the Peloponnesus by the Dorians, they divided the country of Laconia into six districts, four of which were left in the possession of the Achæians, and governed by magistrates sent from Sparta; but we do not know how long this practice lasted, nor can we draw any conclusions with respect to the government of Laconia in general from the example of Cythera, to which a Spartan officer was annually sent, under the peculiar title of *Κυθηροδίκης*, or the "Justice of Cythera."

The number of Laconian (as they are called) or subject cities is said to have formerly amounted to 100.⁵ Several of them lay on the coast, as Gythium, the port of Sparta; whence the whole coast of Laconia is called *ἡ περίοικος*.⁶ Many, however, lay more inland, as Thuria⁷ and Cardamyle, which seems to have belonged to the old Messenia. The inhabitants of the district of Sciros (*ἡ Σκίριτις*), on the confines of Arcadia, seem to have been distinct from the other *περίοικοι*,⁸ and in battle were posted by the cities on the left wing.⁹ An enumeration of the principal of these cities is given in Clinton.¹⁰ The Periæci also occupied the island of Cythera, at the port of which the Lacedæmonian merchants usually put in on their voyages home

from Egypt and Libya.¹ We have said that the Periæci living in these towns were the descendants of the old inhabitants of the country, but we must not suppose they were exclusively so. Some of them, on the contrary, were foreigners, who had either accompanied the Dorians on their invasion of Laconia, or been afterward invited by them to supply the place of the dispossessed Achæians. One of these cities, Boia, is even said to have been founded by a Heracleid chief,² and another, Geronthræ, was peopled by colonists sent from Sparta, after it was evacuated by the old inhabitants.³

The number of Periæci in the Persian war is thus determined by Clinton:⁴ "At the battle of Platæa, in B.C. 479, the Periæci supplied 10,000 men. If we assume this proportion to be the same as that which the Spartan force bore to the whole number on the same occasion, or five eighths of the whole number of citizens, this would give 16,000 for the males of full age, and the total population of this class of the inhabitants of Laconia would amount to about 66,000 persons."

In the later times of Spartan history, the Periæcian towns of the coast (*Laconicæ ora castella et nici*) were detached from Sparta by T. Quintius Flamininus, and placed under the protection of the Achæian league.⁵ Subsequently to this the Emperor Augustus released 24 towns from their subjection to Sparta, and formed them into separate communities, under laws of their own. They were consequently called Eleuthero-Lacones.⁶ But, even in the time of Pausanias, some of the Laconian towns were not *αὐτὸνόμοι*, but dependant upon Sparta *συντελοῦσαι ἐς Σπάρτην*).

A class of Periæci, and also of Helots, has been said by Müller to be the basis of the Dorian form of government: we may therefore expect to find Periæci among other Dorian communities as well as at Sparta, as, for instance, Elis and Argos, and the Boeotian Thebes: the dependant towns of which states formed separate communities, as Thespiæ under Thebes, the Triphylian cities in Elis, and Orneæ under Argos, though they could not be called *αὐτὸνόμοι*.⁷ From the last-mentioned town, which was long independent, but reduced about B.C. 580, all the Argive Periæci derived their name of Orneatæ. About the time of the Persian war, however, the inhabitants of the towns surrounding Argos were received into the city as *σύννομοι*, and admitted to the rights of citizenship: a change which was attended with a revolution in the constitution of Argos, and gave additional force to its democracy.⁸ The Dorian cities of Crete also had their Periæci,⁹ as well as the colonies of Cyrene and Thera.¹⁰

The Periæci of antiquity have been compared to other bodies, such as the plebs of Rome, and the communities of the Athenian demi or parishes. But the only resemblance they bore to the latter was in the similarity of their position relative to the chief city of their country, nor did the former body stand in the same relation to the patricians as the Laconian provincials did to the Spartan citizens. Modern history furnishes fitter objects of comparison in the Norman conquest of England and the city of Augsburg.¹¹ The burghers or free citizens of Augsburg lived in the city, while there grew up about them a distinct and large community living without the city, chiefly formed of the emancipated vassals of the dominant class, and called "Pfahlbürger," or citizens of the "pale," the sub-

urbs in which they lived being surrounded by pallsades. The Norman conquest of England presents a striking parallel to the Dorian conquest of Laconia, both in its achievement and consequences. The Saxons, like the old Achæians, were deprived of their lands, excluded from all offices of trust and dignity, and reduced, though personally free, to a state of political slavery. The Normans, on the contrary, of whatever rank in their own country, were all nobles and warriors compared with the conquered Saxons, and for a long time enjoyed exclusively the civil and ecclesiastical administration of the land.

For farther details, see Arnold, *Thucyd.*, lib. i., c. 101, and Appendix ii.—Thierry, *Histoire de la Conquête de l'Angleterre par les Normands*, livres iv.—vii.

PERIPLOI. (*Vid.* EPHEBUS, p. 406.)

PERISCELIS (*περισκελίς*). Much controversy has arisen with regard to the true meaning of this word. The etymology points out merely that it was something worn round the leg (*περὶ σκέλος*), but from the context of the passage in Horace where it is found, we must at once infer that it was a trinket. The scholiast explains it as "*ornamentum pedis circum crura*," and hence we can scarcely doubt that it denotes an anklet or bangle, especially since we know that these were commonly worn not only by the Orientals, the Egyptians, and the Greeks, but by the Roman ladies also.² This explanation perfectly accords with the expressions of Tertullian,³ where the *periscelium* is spoken of as decorating the leg in the same manner as the bracelet adorns the wrist and the necklace the throat. The anklet is frequently represented in the paintings of Greek figures on the walls of Pompeii, as in the following representation of a Nereid.⁴

It must be observed, however, that the Greek lexicographers Hesychius, Photius, and Suidas interpret *περισκελή* and *περισκέλια* by *βρακκία*, *φεινάλια*, and St. Jerome (*Epist. ad Fabiol.*) expressly states that the Greek *περισκελή* were the same with the Latin *feminalia*, that is, drawers reaching from the navel to the knees. In the Septuagint we find *περισκέλες* (*sc. ένδυμα*) in Exod., xxviii., 42, xxxix., 28, Levit., vi., 10, and *περισκέλιον* in Levit., xvi., 4, which our translators uniformly render, and apparently with accuracy, *linen breeches*.

*PERISTERA (*περιστερά*), a term often applied indiscriminately to the different species and varieties of the genus *Columba*, but more especially applicable to the *C. domestica*, or Domestic Pigeon.⁵

*PERISTEREON (*περιστερεών*), the *Verbena officinalis*, or Vervain.⁶

PERIZOMA. (*Vid.* SUBLIGACULUM.)

PERO (*ἀρόβλη*, dim. *ἀρόβλις*), a low boot of untanned hide (*crudus*¹), worn by ploughmen (*peronatus arator*²) and shepherds, as exemplified in the woodcuts at p. 132, 667, and by others employed in rural occupations.³ It had a strong sole,⁴ and was adapted to the foot with great exactness.⁵ It was also called *πλοπάτις* on account of its adaptation for walking through clay and mire. This convenient clothing for the foot was not confined to the laborious and the poor. Sigismer, a royal youth of Gaul, and his companions, had such boots, or high shoes, with the hair remaining upon them (*perone setoso*), bound about the ankles, the knees and calves of the legs being entirely bare.⁶ In the Greek mythology Perseus was represented wearing boots of this description, with wings attached to them.⁷ Diana wore them when accoutred for the chase.⁸

Vid. COTHURNUS.)

PERONE (περόνη). (*Vid.* FIBULA.)

PERPENDICULUM, the line and plummet, was used by bricklayers, masons, and plasterers, in ancient times, as it has been ever since.⁹ The etymology of the name is obvious, and explains the construction of the instrument. With the addition of a frame fixing two points equidistant from the apex, as it appears on the tomb represented at p. 252, it also served the purpose of a level. (*Vid.* LIBRA, PARES.)

PERPETUA ACTIO. (*Vid.* ACTIO, p. 18.)

*PERSÆA (περσαία), according to Prosper Alpinius, the tree which produces the Sebesten Plums. Linnaeus gives it the name of *Cordia myxa*.¹⁰

*PERSICA MALA (Περσικά μήλα), according to Matthioli and Nonnius, *Peaches*; but, as Adams remarks, there is a considerable degree of uncertainty on this head. Stackhouse sets down the *μηλέα Περσική* of Theophrastus as a variety of the *Citrus aurantium*, or Orange. "Seth," remarks Adams, "calls the *Persica* by the name of *Rhodacina* (ροδάκινα). He says that they are cooling, diluent, and laxative, but difficult to digest. If not the same as the modern Peach, the *Persica* was evidently a fruit nearly allied to it."¹¹

PERSONA (*larva*, πρόσωπον or προσωπίδον), a Mask. Masks were worn by Greek and Roman actors in nearly all dramatic representations. This custom arose undoubtedly from the practice of smearing the face with certain juices and colours, and of appearing in disguise at the festivals of Dionysus. (*Vid.* DIONYSIA.) Now, as the Greek drama arose out of these festivals, it is highly probable that some mode of disguising the face was as old as the drama itself. Chérilus of Samos, however, is said to have been the first who introduced regular masks.¹² Other writers attribute the invention of masks to Thespis or Æschylus,¹³ though the latter had probably only the merit of perfecting and completing the whole theatrical apparatus and costume. Phrynichus is said to have first introduced female masks.¹⁴ Aristotle¹⁵ was unable to discover who had first introduced the use of masks in comedy. Some masks covered, like the masks of modern times, only the face, but they appear more generally to have covered the whole head down to the shoulders, for we find always the hair belonging to a mask described as being a part of it; and this must have been the case in tragedy more especially,

as it was necessary to make the head correspond to the stature of an actor which was heightened by the cothurnus.

I. TRAGIC MASKS.—It may at first seem strange to us, that the ancients, with their refined taste in the perception of the beautiful in form and expression, should by the use of masks have deprived the spectators in their theatres of the possibility of observing the various expressions of which the human face is capable, and which, with us, contribute so much to theatrical illusion. But it must be remembered, that in the large theatres of the ancients it would have been impossible for the greater part of the audience to distinguish the natural features of an actor. The features of the masks were, for this same reason, very strong and marked. Again, the dramatic personæ of most of the ancient tragedies were heroes or gods, and their characters were so well known to the spectators that they were perfectly typical. Every one, therefore, knew immediately, on the appearance of such a character on the stage, who it was, and it would have been difficult to a Greek audience to imagine that a god or hero should have had a face like that of an ordinary actor. The use of the cothurnus also rendered a proportionate enlargement of the countenance absolutely necessary, or else the figure of an actor would have been ridiculously disproportionate. Lastly, the solemn character of ancient tragedy did not admit of such a variety of expressions of the countenance as modern tragedies, the object of which seems to be to exhibit the whole range of human passions in all their wild and self-devouring play. How widely different are the characters of ancient tragedy! It is, as Müller¹ justly remarks, perfectly possible to imagine, for example, the Orestes of Æschylus, the Ajax of Sophocles, or the Medea of Euripides, throughout the whole tragedy with the same countenance, though it would be difficult to assert the same of a character in any modern drama. But there is no necessity for supposing that the actors appeared throughout a whole piece with the same countenance; for, if circumstances required it, they might surely change masks during the intervals between the acts of a piece. Whether the open or half-open mouth of a tragic mask also contributed to raise the voice of the actor, as Gellius² thinks, cannot be decided here, though we know that all circumstances united to compel a tragic actor to acquire a loud and sonorous voice.

The masks used in ancient tragedies were thus, for the most part, typical of certain characters, and, consequently, differed according to the age, sex, rank, and other peculiarities of the beings who were represented. Pollux, from whom we derive most of our information on this subject, enumerates³ 25 typical or standing masks of tragedy, six for old men, seven for young men, ten for females, and three for slaves. The number of masks which were not typical, but represented certain individuals with their personal peculiarities, such as the blind Thamyras, the hundred-eyed Argus, &c., must have been much more numerous, for Pollux, by way of example, mentions thirty of such peculiar masks. The standing masks of tragedy are divided by Pollux into five classes.

1. *Tragic masks for old men*.—The mask for the oldest man on the stage was called *ἐμπύς ἀνὴρ*, from the circumstance of the beard being smoothly shaved. The hair, which was in most cases attached to the masks, was white, and hung down, with the exception of a part above the forehead, which rose in an acute angle or in a round shape, and left the temples uncovered. This rising part

1. (Hist. of the Lit. of Anc. Greece, i., p. 298.)—2. (v., 7.)—3. (iv., 133, &c.)

of the hair was called *ὄγκος*. The cheeks of this mask were flat, and hanging downward. A second mask for old men, called *λευκὸς ἀνὴρ*, had gray hair, floating around the head in locks, a full beard, and a prominent forehead, above which the hair formed a small *ὄγκος*. The countenance was probably pale, as the adjective *λευκός* seems to indicate. A third mask, called *σταρποτόλιος*, had black hair interspersed with gray, and was somewhat pale. It probably represented a hero of from 40 to 50 years of age, and in a suffering condition. The fourth mask, *μέλας ἀνὴρ*, represented a hero in his full vigour, with black and curly hair and beard, strong features, and a high *ὄγκος*. This was probably the mask for most of the tragic heroes who were not very much advanced in age. For a secondary class of heroes there were two other masks, the *ξανθός* and the *ξανθότερος ἀνὴρ*: the former represented a fair man with floating locks, a low *ὄγκος*, and a good colour in his countenance; the second, or fairer man, was pale, and of a sickly appearance.

2. *Tragic masks for young men*.—Among these are mentioned, 1. The *νεανίσκος πάγχρηστος*, a mask intended to represent a man who had just entered the age of manhood, and was yet unbearded, but of a blooming and brownish complexion, and with a rich head of hair. The name *πάγχρηστος* probably indicates that the masks might be used in a great variety of parts. 2. The *νεανίσκος οὐλός*, or *ξανθός*, or *ὑπέρογκος*, a fair youth of a haughty or impudent character; his hair was curly, and formed a high *ὄγκος*: his character was indicated by his raised eyebrows. 3. *Νεανίσκος πάρουλος* resembled the preceding mask, but was somewhat younger. The counterpart of these two was, 4. The *ἀπαλός*, a young man of a delicate and white complexion, with fair locks and a cheerful countenance, like that of a youthful god. 5. *Πινάρος*. There were two masks of this name, both representing young men of an irascible appearance, of yellow complexion and fair hair; the one, however, was taller and younger, and his hair was more curly than that of the other. 6. *Ὠχρός*, a mask quite pale, with hollow cheeks, and fair, floating hair. It was used to represent sick or wounded persons. 7. The *πάραυρος* might be used for the *πάγχρηστος* if this character was to be represented in a suffering or melancholy situation.

3. *Tragic masks for male slaves*.—Pollux mentions three, viz.: the *διωφρενίας*, which had no *ὄγκος*, and wore a band round the smooth white hair. The countenance was pale, the beard gray, the nose sharp, and the expression of the eyes melancholy. The *σφηνοπώγων*, or the pointed beard, represented a man in his best years, with a high and broad forehead, a high *ὄγκος*, hardened features, and a red face. The *ἀνάσιμος*, or the pug-nose, was an impudent face, with fair, rising hair of a red colour, and without beard.

4. *Tragic masks for female slaves*.—Of these five specimens are mentioned, viz.: the *πολιὰ κατάκομος*, in earlier times called *παράχρωμος*, represented an old woman with long white hair, with noble but pale features, to indicate a person who had seen better days; the *γραῖδιον ἐλεύθερον*, an old freed-woman; the *γραῖδιον οἰκετικόν*, the old domestic slave; the *οἰκετικὸν μεσόκουρον*, a domestic slave of a middle age; and, lastly, the *διωφρενίς*, a young female slave.

5. *Tragic masks for free women*.—The first of these, called *κατάκομος*, represented a pale lady, with long black hair, and a sad expression in her countenance. She generally shared the sufferings of the principal hero in a play. The second, called *μεσόκουρος ὠχρά*, resembled the former, with the exception that her hair was half shorn. She was a wom-

an of middle age, and was probably intended to represent the wife of the chief hero, if he was not too advanced in age. The third is the *μεσόκουρος πρόσφατος*, representing a newly-married woman in full bloom, with long and floating hair. The fourth is the *καίριμος πάρθενος*, a maiden of mature age, with short hair divided on the middle of the forehead, and lying smoothly around the head. The colour of her countenance was rather pale. There was another mask of the same name, but it differed from the former by the following circumstances: the hair was not divided on the forehead or curled, but wildly floating, to indicate that she had much suffering to go through. The last is the *κόρη*, or young girl. This mask represented the beauties of a maiden's face in their full bloom, such as the face of Danaë, or any other great beauty was conceived to have been.

The account which Pollux gives of the tragic masks comprehends a great number, but it is small in comparison with the great variety of masks which the Greeks must have used in their various tragedies, for every hero and every god who was known to the Greeks as a being of a particular character, must have been represented by a particular mask, so that the spectators were enabled to recognise him immediately on his appearance. For this very reason, the countenances of the gods, heroes, and heroines must, in point of beauty, have been as similar as possible to their representations in statues and paintings, to which the eyes of the Greeks were accustomed; and the distorted masks, with widely open mouths, which are seen in great numbers among the paintings of Herculaneum and Pompeii (see the annexed woodcut from *Museo Borbon*'), would give but a very inadequate notion of the masks used at Athens during the most flourishing period of the arts. All the representations of tragic masks belonging to this period do not show the slightest trace of exaggeration or distortion in the features of the countenance, and the mouth is not opened wider than would be necessary to enable a person to pronounce such sounds as *oh* or *ha*. In later times, however, distortions and exaggerations were carried to a very great extent, but more particularly in comic masks, so that they, in some degree, were more caricatures than representations of ideal or real countenances.²

The annexed woodcut represents some masks, one apparently comic and the other tragic, which are placed at the feet of the *choragus* in the celebrated mosaic found at Pompeii.³

II. *Comic masks*.—In the old Attic comedy, in which living and distinguished persons were so often brought upon the stage, it was necessary that the masks, though to some extent they may have been caricatures, should in the main points be faithful portraits of the individuals whom they were intended to represent, as otherwise the object of the comic poets could not have been attained. The chorus, on the other hand, as well as certain fantastic dramatis personæ, rendered sometimes a complete masquerade necessary; as in those cases when the choreutæ appeared with the heads of birds or

1. (vol. i., tab. 20.)—2. (Apollon., Vit. Apollon., v., 9, p. 195, ed. Olear.—Lucian, De Saltat., 27.—Anach., 23.—Nigria, 11.—Somm. s. Gall., 26.)—3. (Museo Borbon., vol. II., tab. 56.—Gell, Pomp., vol. i., pl. 45.)

of frogs, &c. We may remark here, by the way, that the chorus of tragedy appeared generally without masks, the Eumenides of Æschylus being probably only an exception to the general rule. The masks of the characters in the old Attic comedy were therefore, on the whole, faithful to life, and free from the burlesque exaggerations which we see in the masks of later times. A change was made in the comic masks when it was forbidden to represent in comedy the archon by imitating his person upon the stage,¹ and still more, shortly after, by the extension of this law to all Athenian citizens.² The consequence of such laws was, that the masks henceforth, instead of individuals, represented classes of men, *i. e.*, they were masks typical of men of certain professions or trades, of a particular age or station in life, and some were grotesque caricatures. A number of standing characters or masks was thus introduced in comedy. Pollux gives a list of such standing masks, which are divided, like those of tragedy, into five classes.

1. *Comic masks for old men.*—Nine masks of this class are mentioned. The mask representing the oldest man was called *πάππος πρῶτος*: his head was shaved to the skin, he had a mild expression about his eyebrows, his beard was thick, his cheeks hollow, and his eyes melancholy. His complexion was pale, and the whole expression of the countenance was mild. 2. The *πάππος ἕτερος* was of a more emaciated and more vehement appearance, sad and pale; he had hair on his head and a beard, but the hair was red and his ears broken. 3. The *ἡγεμὼν*, likewise an old man, with a thin crown of hair round his head, an aquiline nose, and a flat countenance. His right eyebrow was higher than the left. 4. The *πρεσβύτερος* had a long and floating beard, and likewise a crown of hair round his head; his eyebrows were raised, but his whole aspect was that of an idle man. 5. The *ἐρμύνειος* was bald-headed, but had a beard and raised eyebrows, and was of angry appearance. 6. The *πορνοβοσκός* resembled the mask called *λυκομήδεις*, but his lips were contorted, the eyebrows contracted, and the head without any hair. 7. The *ἐρμύνειος δεύτερος* had a pointed beard, but was otherwise without hair. 8. The *σφηνοπύγων*, or pointed beard, was likewise bald-headed, had extended eyebrows, and was looking ill-tempered. 9. The *λυκομήδεις* had a thick beard, was conspicuous on account of his long chin, and the form of his eyebrows expressed great curiosity.

The annexed comic mask, representing an old man, is taken from the *Museo Borbon.*³

2. *Comic masks for young men.*—Pollux enumerates ten masks of this kind: 1. The *πάγχρηστος* formed the transition from the old to the young men; he had but few wrinkles on his forehead, showed a muscular constitution (*γυμναστικός*), was rather red in the face, the upper part of his head was bald, his hair was red, and his eyebrows raised. 2. The *νεανίσκος μέλας* was younger than the preceding one, and with low eyebrows. He represented a young man of good education, and fond of gymnastic exercises. 3. The *νεανίσκος οὖλος*, or the thick-haired young man, was young and handsome, and of a blooming countenance, his eyebrows were extended, and there was only one wrinkle upon his forehead. 4. The *νεανίσκος ἀπαλός*, his hair was like that of the *πάγχρηστος*, but he was

the youngest of all, and represented a tender youth brought up in seclusion from the world. 5. The *ἀγροίκος*, or rustic young man, had a dark complexion, broad lips, a pug-nose, and a crown of hair round his head. 6. The *ἐπίσειστος στρατιώτης*, or the formidable soldier, with black hair hanging over his forehead. 7. The *ἐπίσειστος δεύτερος* was the same as the preceding, only younger and of a fair complexion. 8. The *κόλαξ*, or the flatterer; and, 9. The *παράσιτος*, or parasite, were dark,¹ and had aquiline noses. Both were apparently of a sympathizing nature; the parasite, however, had broken ears, was merry-looking, and had a wicked expression about his eyebrows. 10. The *εικονικός* represented a stranger in splendid attire, his beard was shaved, and his cheeks pierced through. The *σκελετικός* was another parasite.

3. *Comic masks for male slaves.*—Of this class seven masks are mentioned: 1. The mask representing a very old man was called *πάππος*, and had gray hair, to indicate that he had obtained his liberty. 2. The *ἡγεμὼν θεράπων* had his red hair platted, raised eyebrows, and a contracted forehead. He was among slaves the same character as the *πρεσβύτερος* among freemen. 3. The *κάτω τριχίας* or *κάτω περιχωμένος* was half bald-headed, had red hair and raised eyebrows. 4. The *οὖλος θεράπων*, or the thick-haired slave, had red hair and a red countenance; he was without eyebrows, and had a distorted countenance. 5. The *θεράπων μέσος* was bald-headed and had red hair. 6. The *θεράπων τέττις* was bald-headed and dark, but had two or three slips of hair on his head and on his chin, and his countenance was distorted. 7. The *ἐπίσειστος ἡγεμὼν*, or the fierce-looking slave, resembled the *ἡγεμὼν θεράπων*, with the exception of the hair.

4. *Comic masks for old women.*—Pollux mentions three, viz.: the *γραδίον ἰσχνόν* or *λυκαίνιον*, a tall woman with many but small wrinkles, and pale but with animated eyes; the *παχεία γραιή*, or the fat old woman with large wrinkles, and a band round her head keeping the hair together; and the *γραδίον οἰκονόρον*, or the domestic old woman. Her cheeks were hollow, and she had only two teeth on each side of her mouth.

5. *Comic masks for young women.*—Pollux mentions fourteen, viz.: 1. The *γυνή λεκτική*, or the talkative woman; her hair was smoothly combed down, the eyebrows rather raised, and the complexion white. 2. The *γυνή οὖλη* was only distinguished for her fine head of hair. 3. The *κόρη* had her hair combed smoothly, had high and black eyebrows, and a white complexion. 4. The *ψευδοκόρη* had a whiter complexion than the former, her hair was bound up above the forehead, and she was intended to represent a young woman who had not been married more than once. 5. Another mask of the same name was only distinguished from the former by the irregular manner in which the hair was represented. 6. The *σπαρτοπόλιος λεκτική*, an elderly woman who had once been a prostitute, and whose hair was partly gray. 7. The *παλλακή* resembled the former, but had a better head of hair. 8. The *τέλειον ἑταιρικόν* was more red in the face than the *ψευδοκόρη*, and had locks about her ears. 9. The *ἑταιρίδιον* was of a less good appearance, and wore a band round the head. 10. The *διάχρνος ἑταίρα* derived the name from the gold with which her hair was adorned. 11. The *διμήτρος ἑταίρα*, from the variegated band wound around her head. 12. The *λαμπάδιον*, from the circumstance of her hair being dressed in such a manner, that it stood upright upon the head in the form of a lampas. 13.

1. (Schol. ad Aristoph., Nub., 31.)—2. (Schol. ad Aristoph., Ach., 1149; A., 1297.—Suidas, s. v. Ἀντρίαχος.)—3. (vol. i., tab. A.)

1. (Compare Athen., vi., p. 237.)

The *ἀρά περικύβορος* represented a female slave newly bought, and wearing only a white chiton. 14. The *παρὰπρόσόν* was a slave distinguished by a pug-nose and her hair: she attended upon *hetærae*, and wore a crocus-coloured chiton.

Numerous as these masks are, the list cannot by any means be considered as complete, for we know that there were other standing masks for persons following particular kinds of trade, which are not mentioned in Pollux. Mæson of Megara, for example, is said to have invented a peculiar mask, called after his own name *μαῖσων*, another for a slave, and a third to represent a cook.¹ From this passage of Athenæus we also learn that Stephanus of Byzantium wrote a work *περὶ προσώπων*.

III. MASKS USED IN THE SATYRIC DRAMA.—The masks used in this species of the Greek drama were intended to represent Satyrs, Silenus, and similar companions of Dionysus, whence the expressions of the countenances and form of their heads may easily be imagined. Pollux only mentions the gray-headed Satyr, the unbarbed Satyr, Silenus, and the *πάππος*, and adds that the characters of all the other Satyric masks either resembled these, or were sufficiently expressed in their names, e. g., the Papposilenus was an old man with a very predominant animal character.² A grotesque mask of a Satyr, together with one of the finest specimens of a tragic mask, is contained in the Townly Gallery in the British Museum, and is represented below.

As regards the earliest representations of the regular drama among the Romans, it is expressly stated by Diomedes³ that masks were not used, but merely the *galerus* or wig, and that Roscius Gallus, about the year 100 B.C., was the first who introduced the use of masks. It should, however, be remembered, that masks had been used long before that time in the *Atellanæ*,⁴ so that the innovation of Roscius must have been confined to the regular drama, that is, to tragedy and comedy. As for the forms of Roman masks, it might be presumed that, being introduced from Greece at so late a period, they had the same defects as those used in Greece at the time when the arts were in their decline, and this supposition is confirmed by all works of art, and the paintings of *Herculaneum* and *Pompeii*, in which masks are represented; for the masks appear unnaturally distorted, and the mouth always wide open. The expressions of Roman writers also support this supposition.⁵ We may mention here that some of the oldest MSS. of Terence contain representations of Roman masks, and from these MSS. they have been copied in sev-

eral modern editions of that poet, as in the edition published at Urbino in 1726, fol., and in that of Dacier. The cut annexed contains representations of four of these masks prefixed to the *Andria*

When actors at Rome displeased their audience and were hissed, they were obliged to take off their masks; but those who acted in the *Atellanæ* were not obliged to do so.¹ The Roman mimes never wore masks. (*Vid. MIMUS*.)²

PERTICA, the pole used by the *ACRIMENSOIRES*, was also called *DECEMPEDA* because it was ten feet long. On account of its use in assigning lands to the members of a colony, it is sometimes represented on medals by the side of the augural plough.³

PES (*πούς*), a Foot. The Greeks and Romans, like most other nations, took their standards of length originally from the different parts of the human body, and the names which were thus given to the measures were retained after the measures themselves had been determined with greater nicety. The foot was the basis of their whole system of measures of length; and as the value of the Greek foot is easily obtained when that of the Roman is known, it will be convenient to notice the latter first.

1. *The Roman foot*.—There are five different ways of determining the length of the Roman foot. These are, 1. From ancient measures still in existence; 2. From measurements of known distances along roads; 3. From measurements of buildings; 4. From the contents of certain measures of capacity; and, 5. From measurements of a degree on the earth's surface.

1. It might appear, at first thoughts, that ancient measures in actual existence would at once give the required information. But these measures are found to differ among themselves. They are of two kinds, foot-measures cut upon gravestones, and brass or iron measures, intended, in all probability, to be used as measures. From the nature of the case, the latter would probably be more exact than the former, and, in fact, the measures on the gravestones are rudely cut, and their subdivisions are of unequal length, so that they have no pretensions to minute accuracy; but, on the other hand, it would be absurd to suppose that they would have been made very far wrong. We may safely conclude that they would have about as much accuracy as a measure hastily cut on stone by a mason from the foot-rule used by him in working. Four such measures are preserved in the Capitol at Rome. They are called the *Statilian*, *Cossutian*, *Æbutian*, and *Capponian* feet. They have been repeatedly measured, but, unfortunately, the different measurements gave different results. The brass and iron foot-rules, of which several exist, do not precisely agree in length. There was anciently a standard foot-measure kept in the Capitol, called the *pes monetalis*, which was probably lost at the burning of the Capitol under Vitellius or Titus.

2. The itinerary measurements are of two kinds, according as they are obtained by measuring the distance from one place to another, or the dis-

1 (Athen., xiv., p. 659.)—2. (Compare Eichstädt, *De Dramate Comico-Satyrico*, p. 81.)—3. (iii., p. 486, ed. Putsch.)—4. (Vest., s. v. *Personata*.)—5. (Gell., v., 7—Juv., iii., 175.)

1. (Festus, s. v. *Personata Fabula*—Macrob., Sat., ii., 7.)—2. (Compare Fr. De Ficoroni, *Dissertatio De larvis scenicis et figuris comicis ant. Rom.*, Rome, 1736 and 1750, 4to.—Fr. Stieve, *Dissertatio de rei scenicæ apud Romanos Origine*.)—3. (Propert IV., i., 30.)

tance from one milestone to another on a Roman road. Both methods have the advantage of the diminution of error which always results from determining a lesser magnitude from a greater, but both are subject to uncertainty from turnings in the road, and from the improbability of the milestones having been laid down with minute accuracy; and two other serious objections apply to the former mode, namely, the difficulty of determining the points where the measurement began and ended, and the changes which may have taken place in the direction of the road. Both methods, however, have been tried; the former by Cassini, who measured the distance from Nîmes to Narbonne, and by Riccioli and Grimaldi, who measured that between Modena and Bologna, and the latter by Cassini, between Aix and Arles.

3. The measurement of buildings is rather a verification of the value of the foot as obtained from other sources than an independent evidence. It very seldom happens that we know the number of ancient feet contained in the building measured. We have one such example in the Parthenon, which was called Hecatompedon (hundred-footed) from the width of its front; but even in this case we cannot tell exactly, till we know something of the length of the Greek foot, to what precise part of the front this measurement applies. Again, there is the obelisk in the Piazza del Popolo at Rome, and the Flaminian obelisk, the heights of which are given by Pliny.² But the actual heights of these obelisks, as compared with Pliny, would give a value for the foot altogether different from that obtained from other sources. Indeed, the numbers in Pliny are undoubtedly corrupt. An ingenious emendation by Stuart would remove the difficulty; but it is obvious that a passage which requires a conjectural emendation cannot be taken as an independent authority. There is another mode of deducing the value of the foot from buildings, of the dimensions of which we have no information. The building is measured, and the length thus obtained is divided by the supposed value of the ancient foot (as derived from other evidence); and if a remainder be left, this value of the foot is corrected so that there may be no remainder. It is assumed in this process that no fractions of feet were allowed in the dimensions of the building, and also that the plans were worked out with the most minute exactness, both of which assumptions are not very probable. In fact, these measurements have given different values for the foot. "Modern architects," says Mr. Hussey, "do not allow that such calculations could be depended on in modern buildings, for determining the true length of the measures by which they were planned. Nor are the dimensions of the parts of buildings of the Middle Ages in our own country, as Gothic churches and cathedrals, found to agree exactly, so as to give whole numbers of the standard measure." On the other hand, these measurements, like those on roads, have the advantage of involving, in all probability, very small errors, and of the diminution of the error by division.

4. Villalpando and Eisenschmidt have attempted to deduce the length of the Roman foot from the solid content of the congius of Vespasian. (Vid. CONGIUS.) Since the congius was the eighth of the amphora, and the content of the amphora was a cubic foot (vid. AMPHORA), the process is to multiply the content of the congius by 8, and extract the cube root of the product. But this process is very uncertain. First, there is a doubt about the content of the congius itself (vid. LIBRA); then it is hardly to be supposed that the content of the con-

gius was actually adapted with perfect accuracy to the length of the foot; and, lastly, there is a farther risk of error in reversing this process.

5. Some French geographers, and especially M. Gosselin, have supposed that the ancient astronomers were acquainted with the dimensions of a great circle of the earth, and that they founded their whole system of measures on the subdivisions of such a circle. The results of M. Gosselin's calculations agree well with those derived from other sources. But we need better evidence than this agreement to convince us that both the Greeks and Romans, at a very early period, formed a system of measures on such scientific principles; and it is incredible that, if such a system had really existed, there should be no allusion to it in any of the ancient geographers.

The average values of the Roman foot, obtained from these various sources, in terms of the English foot, are the following:

1. From ancient measures	·9718
2. From itinerary measurements	·97082
3. From measurements of buildings	·96994
4. From the congius	·9832
5. From the length of a degree	·9724

of which the first three are the most to be depended on; and of those three the average is ·9708, or 11·6496 inches, or $11\frac{1}{2}$ ·1496 inches, which we may take as the probable value of the Roman foot.

Cagnazzi, whose researches are said by Niebuhr to have placed the true value of the Roman foot beyond a doubt,¹ gives it a greater length than the above, namely, ·29624 of a metre = ·9722 of a foot: but this calculation is objected to by Böckh, as being derived by a process not perfectly true from the value of the pound, and as being confirmed only by one existing measure, and also as being at variance with the value of the Greek foot, obtained from independent sources.² Böckh's own calculation which agrees with that of Wurm, gives a value very little less than the above, namely, 131·15 Paris lines = 9704649 of the English foot = 11·6456 inches.

The Romans applied the uncial division (vid. AS) to the foot, which thus contained 12 *uncia*, whence our *inches*; and many of the words used to express certain numbers of *uncia* are applied to the parts of the foot.³ It was also divided into 16 *digiti* (finger-breadths): this mode of division was used especially by architects and land-surveyors, and is found on all the foot-measures that have come down to us. *Pollex* (the thumb), which is used in modern Latin for an *inch*, is not found in the ancient writers, but Pliny⁴ uses the adjective *pollicaris* (of a thumb's breadth or thickness). *Palmus* (a hand-breadth) was the fourth part of the foot, containing 4 *digiti* or 3 *uncia*. There seems also to have been a larger *palmus* of 12 *digiti* or 9 *uncia*.⁵

The following measures were longer than the foot. *Palmipes*, that is, *palmus et pes*, $1\frac{1}{2}$ feet, or 15 inches; *cubitus*, $1\frac{1}{2}$ feet, is seldom used in Latin except as a translation of the Greek *πῦγξ*. (Vid. CUBITUS.) *Ulna* (the arm) is used by later writers as equivalent to *cubitus*; but it was properly the translation of the Greek *ὀρῦν*: Pliny uses it for the whole length of the outstretched arms from finger to finger.⁶ From the analogy of the as we have also *dupondium* for 2 feet,⁷ and *pes sestertius* for $2\frac{1}{2}$ feet.⁸ *Passus* (a pace), 5 feet.⁹ *Mille passus*, 5000 feet, or a mile. (Vid. MILLIARIUM.) *Gradus*, = $\frac{1}{3}$ *passus*. *Leuga* or *Leuca* was a Gallic measure =

1. (Hist. of Rome, ii., p. 407.)—2. (Metrolog. Untersuch., p. 197.)—3. (Veget., De Re Milit., i., 5.—Plin., H. N., xxvii., 5, 11; xiii., 15.)—4. (H. N., xxvii., 9; xv., 24; xiii., 23.)—5. (Plin., H. N., xxi., 26.)—6. (H. N., xvi., 32, 40.—Compare Serv. ad Virg., Ecl., iii., 105.)—7. (Colum., iii., 15, &c.)—8. (Leg. xii. Tab., tab. viii.)—9. (Vitruv., x., 14.—Colum., v., 1.)

1. (Plutarch, Pericl., 13; Cato, 5.)—2. (H. N., xxvii., 9.)

1500 passus or $1\frac{1}{2}$ miles.¹ Stones are still found on the roads in France with distances marked on them in *Leuga*. *Decempeda*, a pole (*pertica*) 10 feet long, was used in measuring land.² *Actus*, 12 decempedæ, or 120 feet. (*Vid. Actus*.) The following tables exhibit the Roman measures of length, with their values in English feet and inches:

1. Ordinary Measures.

	Pedes.	Feet.	Inches.
Digitus	$\frac{1}{16}$.7281
Uncia	$\frac{1}{12}$.9708
Palmus	$\frac{1}{4}$		2.9124
Pes	1		11.6496
Palmipes	$1\frac{1}{4}$	1	2.5620
Cubitus	$1\frac{1}{2}$	1	5.4744

2. Land Measures.

	Pedes.	Yards.	Feet.	Inches.
Pes	1			11.6496
Gradus	$2\frac{1}{2}$	2		5.124
Passus	5	1		10.248
Decempeda	10	3		8.496
Actus	120	38	2	5.952
Mille Passus } or Milliarium }	5000	1618		

The square foot (*pes quadratus*) is called by Frontinus *constratus*, and by Boethius *contractus*. Frontinus applies the term *quadratus* to the cubic foot. The principal square measure was the *jugerum* of 240 feet by 120. (*Vid. Jugerum*.)

Some have concluded, from the measurements of buildings, that the foot was slightly reduced about the time of Domitian, which Warm accounts for by supposing that the *pes monetalis*, after being destroyed in the fire under Titus, was restored by Domitian in a careless manner. Both the fact and the explanation, however, appear to be very doubtful.

II. *The Greek foot*.—We have no ancient measures by which to determine the length of the Greek foot, but we have the general testimony of ancient writers that it was to the Roman in the ratio of 25 : 24. The Greek stadium, which contained 600 Greek feet, is said by Roman writers to contain 625 Roman feet; and also a Roman mile, or 5000 feet, was reckoned equal to 8 Greek stadia, or 4800 feet; both of these calculations give the above ratio of 25 : 24.³ If, therefore, the Roman foot was .9708 of the English, the Greek foot was equal to 1.01125 feet, or 12.135 inches.

This value is confirmed by the measurement of the Parthenon. "Stuart,"⁴ says Mr. Hussey, "measured the upper step of the basement of the Parthenon, which is the platform on which the pillars stand, and is exactly that part of the building where we should expect that the measure would have been taken if the name Hecatompedon was really given to it on account of the dimensions. He found the width of the front to be 101 feet 1.7 inches, the length of the side 227 feet 7.05 inches; and since these two quantities are very nearly in the ratio of 100 to 225, he inferred that the two sides really contained these two numbers of feet. From this he calculated the value of the foot, from the front 12.137 inches, from the side 12.138 inches: of which the greatest exceeds the value given above by only .003 of an inch." Other measurements of the Parthenon and of other buildings at Athens tend to the same result.

Strabo, however,⁵ quotes from Polybius a calculation which would make the Greek and Roman foot equal, but it is perfectly clear that there is a mistake in this statement. Plutarch again⁶ says expressly that the mile is *a little less than 8 stadia*,

which would give a rather smaller ratio than that of 24 : 25 for the ratio of the Roman to the Greek foot. It is on the authority of this passage that Böckh gives the value above mentioned for the Roman foot. If, according to the supposition already noticed, a slight diminution took place in the Roman foot, this would account for the difference. But perhaps we ought not to consider this solitary passage of sufficient weight to influence the calculation.

The Greeks used different standards at different places and at different times. The foot which generally prevailed over Greece was that by which the stadium at Olympia was measured (*vid. Stadium*), which was the one we have been speaking of, and which was therefore the same as that used at Athens in her best days. Hyginus¹ mentions this foot as being used in Cyrene under the name of *Ptole meus*.

The following table represents the parts and multiples of the Greek foot:

	Πόδες.	Yards.	Feet.	Inches.
δάκτυλος	$\frac{1}{16}$.7584
κόνδυλος	$\frac{1}{8}$			1.5168
παλαιστή . . .	$\frac{1}{4}$			3.0336
λίχας	$\frac{1}{2}$			6.0672
ὀρθόδαρον	$\frac{5}{8}$			7.584
σπιθαμή . . .	$\frac{3}{4}$			9.1008
πούς	1		1	0.135
πυγμή	$1\frac{1}{2}$		1	1.6512
πυγών	$1\frac{1}{4}$		1	3.168
πῆχυς	$1\frac{1}{2}$		1	6.2016
βῆμα	$2\frac{1}{2}$		2	6.336
ξύλον	$4\frac{1}{2}$		4	6.6048
ὀργυρία . . .	6		6	0.81
κάλαμος . . .	10		10	1.35
ἄμμα	60	20		8.1
πλέθρον . . .	100	33	2	1.5
στάδιον . . .	600	202		9
δίαυλον . . .	1200	404	1	6

The δάκτυλος (a finger-breadth) answers to the Roman *digitus*: the κόνδυλος (*knuckle*) was 2 finger-breadths: the παλαιστή, which was also called the παλαιστής, δάρον, δοχμή, or δακτυλοδόχη, was a hand-breadth. The ὀρθόδαρον was the length of the open hand. The λίχας was a span from the thumb to the fore-finger; the σπιθαμή a span from the thumb to the little finger. The πυγμή was the distance from the elbow to the knuckle-joints, the πυγών from the elbow to the first joint of the finger, the πῆχυς (cubit) from the elbow to the tips of the fingers. Of this measure there were two sizes, the μέτριος and the royal; the latter was 3 finger-breadths longer than the other, which would make it nearly 20½ inches.

The square measures of the Greeks were the πούς, or square foot, the ἀρουρα = 2500 square feet, and the πλέθρον = 4 arura = 10,000 square feet.

Certain peculiar foot-measures, differing from the ordinary ones, are mentioned by ancient writers. The Samian, which was the same as the Egyptian foot, is known, from the length of the Egyptian cubit as derived from the Nilometer (namely, 17.74278576 inches), to have contained 11.82352384 inches, or more than $11\frac{1}{4}$ inches. A larger foot than the common standard seems to have been used in Asia Minor. Heron² names the royal or Philæterian foot as being 16 finger-breadths, and the Italian as $13\frac{1}{2}$, and he also mentions a mile (*μίλιον*) of 5400 Italian or 4500 royal feet. Ideler supposes that the Italian foot means the common Roman, and the royal a Greek foot larger than the common standard, corresponding to the stadium of 7 to the mile, which had been introduced before Heron's

1. [Amman. Marc., xvi., 12.—Itin. Antonin.—2. (Cic., Pro Mil., c. 27.—Pallad., ii., tit. 12.)—3. (Plin., H. N., ii., 23, 108.—Colum., v., 1.—Polyb., iii., 39.—Strabo, p. 322.)—4. (Antiq. Ath., ii., p. 8.)—5. (p. 322.)—6. (C. Gracch., 7.)

time, namely, the tenth century. The *Pes Drusianus*, or foot of Drusus, contained $13\frac{1}{2}$ Roman inches = 13.1058 English inches. It was used beyond the boundaries of Italy for measuring land, and was the standard among the Tungri in Lower Germany.¹

PE'SSULUS. (*Vid.* JANUA, p. 526.)

PESOI (πεσσοί). (*Vid.* LATRUNCULI.)

PETALISMOS (πεταλισμός). (*Vid.* BANISHMENT, GREEK, p. 135.)

PE'TASUS. (*Vid.* PILEUS.)

PET'TOR. (*Vid.* ACTOR.)

PETAURISTÆ. (*Vid.* PETAURUM.)

PETAURUM (πέταυρον, πέτεινον) is said by the Greek grammarians to have been a pole or board on which fowls roosted.² We also find the name of *petaurum* in the Roman games, and considerable doubt has arisen respecting its meaning. It seems, however, to have been a board moving up and down, with a person at each end, and supported in the middle something like our seesaw; only it appears to have been much longer, and, consequently, went to a greater height than is common among us. Some writers describe it as a machine, from which those who exhibited were raised to a great height, and then seemed to fly to the ground; but this interpretation does not agree so well with the passages of ancient authors as the one previously mentioned.³ The persons who took part in this game were called *petauristæ* or *petauristarii*; but this name seems to have been also applied in rather a wider signification.⁴

PETORRITUM, a four-wheeled carriage, which, like the *Esseum*, was adopted by the Romans in imitation of the Gauls.⁵ It differed from the *Harmamaxa* in being uncovered. Its name is obviously compounded of *peter*, four, and *rit*, a wheel. Fes-⁶ in explaining this etymology, observes that *pe-* meant four in Oscan and in Æolic Greek. There is no reason to question the truth of this remark; but, since *peter* meant four in many other European languages, it is more probable that the Romans derived the name, together with the fashion of this vehicle, from the Gauls. Gellius⁷ expressly says that it is a Gallic word.

*PHAGRUS (φάγρος), called by Pliny the *Pagrus*, a species of fish, like *Sparus Pagrus*, L., called in English the Sea Bream or Braze.

*PHACOS (φακός), the *Cicer lens*, or Lentil. "Stackhouse," says Adams, "seems to stand alone in making it to be the *Ervum ervilia*. The *Lens palustris*, φακός ὁ ἐπὶ τῶν τεμάτων, Dioscor., seems to be generally admitted to be the *Lemna minor*, or Lesser Duck's-meat. The φακὸς Ἰνδικός of Theophrastus is the *Dolichos Catiang*, according to Sprengel."

*PHALÆNA (φαλαίνα), the Whale. (*Vid.* BALÆNA.)

*11. An insect referable to the genus *Phalæna*, or Moths. "De Pauw," says Adams, "makes the φαλίγξ of Phile to be the φαλαίνα. It appears, however, with more propriety, to be referable to the φαλίγγιον."

PHALANGA or PALANGA* (φάλαγξ), any long cylindrical piece of wood, but especially,

1. Trunks or branches of trees, or portions of them, cut as articles of merchandise. The Æthiopians presented to the King of Persia *διηκοσίας φάλαγγας ἐβένου*, "200 pieces of ebony."⁹

2. Truncheons, said to have been first used in battle by the Africans in fighting against the Egyptians.¹

3. Poles used to carry burdens in the manner represented in the woodcut, p. 57, or so as to combine the strength of two or more individuals. The carriers who used these poles were called *phalangarii*,² and also *hexaphori*, *tetraphori*, &c., according as they worked in parties of six, four, or two persons. The poles were marked at equal distances, and the straps which passed over the shoulders of the workmen were so fixed at the divisions, that each man sustained an equal share of the burden.³

4. Rollers placed under ships to move them on dry land, so as to draw them upon shore or into the water (*δουρατέοι κυλινδροί**). This was effected either by making use of the oars as levers, and, at the same time, fastening to the stern of the ship cables with a noose (*μηρίνθος*), against which the sailors pressed with their breasts, as we see in our canal navigation,⁴ or by the use of machines.⁵

The trunk of the wild olive (*κοτίνος*) served to make such rollers,⁷ and on the occasion here referred to, a phalanx made of this tree was erected upon a tomb instead of a stone column. Rollers were employed in the same manner to move military engines;⁸ and we need not hesitate to conclude that columns of marble and other enormous stones designed for building were transported from the quarry by the same process.

If from the earliest periods the Greeks were familiar with the use of rollers ranged in long succession and moving parallel to one another, it might be expected that the term *phalanx* would be used by them metaphorically. We, accordingly, not only find it applied to denote the bones of the hand and foot, which are placed beside one another like so many rollers, but in the *Iliad*⁹ the lines of soldiers ranged in close order, and following one another, are often called by the same expressive appellation, and hence arose the subsequent established use of the term in reference to the Greek army. (*Vid.* ARMV, GREEK.)

*PHALANG'ION (φαλάγγιον), "a class of venomous spiders," says Adams, "several species of which are described by Nicander. These Sprengel attempts to determine, but his conclusions are not very satisfactory. He does not refer any of them to the genus *Phalangium*, L. Stackhouse concludes that the φαλάγγιον of Theophrastus includes the *Aranea avicularia* and the *A. Tarantula*; the former, however, is an American species, and, consequently, inadmissible."

PHALARICA. (*Vid.* HASTA, p. 489.)

PHALERA (φάλαρον), a boss, disc, or crescent of metal, in many cases of gold,¹⁰ and beautifully wrought, so as to be highly prized.¹¹ Ornaments of this description, being used in pairs, are scarcely ever mentioned except in the plural number. The names for them are evidently formed from the term *phálos*, which is explained under *GALEA*, p. 466.¹² Besides the metallic ornaments of the helmet, similar decorations were sometimes, though very rarely, worn by warriors on other parts of their dress or armour, probably upon the breast.¹³ The negro slaves who were kept by opulent Romans wore them suspended round their necks.¹⁴ Also the tiara of the King of Persia was thus adorned.¹⁵ But we

(Æschyl., Pers., 668.)

most commonly read of phaleræ as ornaments attached to the harness of horses,¹ especially about the head (*ἀμπυκτῆρια φάλαρα**), and often worn as pendants (*pensilia**), so as to produce a terrific effect when shaken by the rapid motions of the horse (*turbantur phaleræ**). These ornaments were often bestowed upon horsemen by the Roman generals in the same manner as the ARMILLA, the TORQUES, the hasta pura (*vid. HASTA*, p. 490), and the crown of gold (*vid. CORONA*), in order to make a public and permanent acknowledgment of bravery and merit.⁵

PHARETRA (*φάρετρα*, *ap. Herod. φαρετρεών*), a Quiver. A quiver, full of arrows, was the usual accompaniment of the bow. (*vid. ARCUS*.) It was, consequently, part of the attire of every nation addicted to archery. Virgil applies to it the epithets *Cressa*, *Lycia*, *Threissa*;⁶ Ovid mentions the *pharetratus Geta*;⁷ Herodotus represents it as part of the ordinary armour of the Persians.⁸ Females also assumed the quiver, together with the bow, as in the case of the Amazons,⁹ and of those Spartan, Tyrian, and Thracian virgins who were fond of hunting, and wore boots (*vid. COTHURNUS, PERO*) and other appropriate articles of dress.¹⁰ On the same principle, the quiver is an attribute of certain divinities, viz., of Apollo,¹¹ Diana,¹² Hercules,¹³ and Cupid.¹⁴ The quiver, like the bow-case (*vid. CORYTOS*), was principally made of hide or leather,¹⁵ and was adorned with gold¹⁶ (*aurata*¹⁷), painting,¹⁸ and braiding (*πολύρραττον*¹⁹). It had a lid (*πῦμα*²⁰), and was suspended from the right shoulder by a belt (*vid. BALTEUS*), passing over the breast and behind the back.²¹ Its most common position was on the left hip, in the usual place of the sword (*vid. GLADIUS*), and consequently, as Pindar says, "under the elbow"²² or "under the arm" (*ὑπὸ ἀλένιοι*).²³ It was worn thus by the Scythians²⁴ and by the Egyptians,²⁵ and is so represented in the annexed figure of the Amazon Dinomache, copied from a Greek

(Wilkinson, *Man. and Cust.*, vol. i., p. 311, 391)

vase.¹ The left-hand figure in the same woodcut is from one of the *Ægina* marbles. It is the statue of an Asiatic archer, whose quiver (fractured in the original) is suspended equally low, but with the opening towards his right elbow, so that it would be necessary for him, in taking the arrows, to pass his hand behind his body instead of before it. To this fashion was opposed the Cretan method of carrying the quiver, which is exemplified in the woodcut, p. 245, and is uniformly seen in the ancient statues of Diana. There was an obvious necessity that the quiver should be so hung that the arrows might be taken from it with ease and rapidity, and this end would be obtained in any one of the three positions described. The warrior made the arrows rattle in his quiver as a method of inspiring fear.²

PHARMACEUTICA (*φαρμακευτική*), sometimes called *Φαρμακεία*,³ is defined by Galen⁴ to be that part of the science of medicine which cures diseases by means of drugs, *διὰ φαρμάκων*,⁵ and formed, according to Celsus,⁶ one of the three divisions of the whole science, or, more properly,⁷ of that called Therapeutica. (*vid. THERAPEUTICA*.)

With respect to the actual nature of the medicines used by the ancients, it is in most cases useless to inquire; the lapse of ages, loss of records, change of language, and ambiguity of description, have rendered great part of the learned researches on the subject unsatisfactory; and, indeed, we are in doubt with regard to many of the medicines employed even by Hippocrates and Galen. It is, however, clearly shown by the earliest records, that the ancients were in possession of many powerful remedies; thus Melampus of Argos, one of the most ancient Greek physicians with whom we are acquainted, is said to have cured Iphiclus, one of the Argonauts, of sterility by administering the rust (or *sesquioxide*) of iron in wine for ten days;⁸ and the same physician used the black hellebore as a purge on the daughters of King Proetus, who were afflicted with melancholy. Opium, or a preparation of the poppy, was certainly known in the earliest ages; it was probably opium that Helen mixed with wine, and gave to the guests of Menelaus, under the expressive name of *νήπενδες*,⁹ to drive away their cares, and increase their hilarity; and this conjecture (says Dr. Paris, in his "Pharmacologia") receives much support from the fact that the *νήπενδες* of Homer was obtained from the Egyptian Thebes, and the tincture of opium (or laudanum) has been called "*Thebaic tincture*." Gorræus, however, in his "*Definitiones Medicæ*,"¹⁰ thinks that the herb alluded to was the "*Enula Campana*," or Elecampane, which is also called "*Helenium*," with a traditional reference (as is supposed) to Helen's name. There is reason to believe that the pagan priesthood were under the influence of some powerful narcotic during the display of their oracular powers. Dr. Darwin thinks it might be the *Lactucerasus*, but the effects produced (says Dr. Paris) would seem to resemble rather those of opium, or perhaps of stramonium, than of the prussic (or hydrocyanic) acid. The sedative powers of the *Lactuca sativa*, or lettuce, were known also in the earliest times: among the fables of antiquity, we read that, after the death of Adonis, Venus threw herself on a bed of lettuce to lull her grief and repress her desires; and we are told that Galen, in the decline of life, suffered much from morbid vigi-

lance, until he had recourse to eating a lettuce every evening, which cured him.¹ The *Scilla maritima* (sea onion or squill) was administered in cases of dyspepsia by the Egyptians, under the mystic title of the *Eye of Typhon*. Two of the most celebrated medicines of antiquity were hemlock and hellebore. With respect to the former, it seems very doubtful whether the plant which we denominate *Conium*, *κώνιον*, or *Cicuta*, was really the poison usually administered at the Athenian executions; and Pliny informs us that the word *Cicuta* among the ancients was not indicative of any particular species of plant, but of vegetable poisons in general. Dr. Mead² thinks that the Athenian poison was a combination of active substances; perhaps that described by Theophrastus³ as the invention of Thrasyas, which was said to cause death without pain, and into which cicuta and poppy entered as ingredients. It was used as a poison by the people of Massilia also.⁴ Its poisonous effects were thought to arise from its extreme coldness, and therefore Pliny⁵ says that they can be prevented by drinking wine immediately after the hemlock has been taken. Lucretius,⁶ however, tells us that goats eat it with impunity, and get fat upon it.

Of hellebore there were two kinds, the white (*Veratrum album*) and the black (*Helleborus niger*); the former of which, as Galen tells us,⁷ is always meant by the word *Ἑλλέβορος*, when used alone without either of the above epithets. A description of both these medicines may be found in Theophrastus, *Hist. Plant.*, ix., 11. — Dioscorides, *Mat. Med.*, iv., 150, 151, 148, 149. — Plin., *H. N.*, xxv., 21, &c. The former acted as an emetic,⁸ the latter as a purgative.⁹ The plant was particularly celebrated for curing melancholy, insanity, &c., and Anticyra was recommended to all persons afflicted with these complaints, either because the black hellebore grew there in greater plenty than elsewhere, or because it could there be taken with greater safety. Hence the frequent allusions to this town among the ancient classical writers, and *naviget Anticyram* meant to say that the person was mad.¹⁰ Persons in good health also took the white hellebore to clear and sharpen their intellect, as Carneades is said¹¹ to have done when about to write a book against Zeno.¹² For many centuries it was held in the highest estimation, and is praised by Aretæus,¹³ Celsus,¹⁴ and several other writers; about the end of the fifth century, however, after Christ, it appears to have fallen completely into disuse, as Asclepiodotus is mentioned by Photius¹⁵ as having particularly distinguished himself by his success in reviving the employment of it.

Another celebrated medicine in ancient (and, indeed, in modern) times was the *Theriac*, of which a farther account is given under that name. Some of their medicines were most absurd; we have not room here to give specimens of them, but they may be found, not only in the works of Cato and Pliny, but also in those of Celsus, Alexander Trallianus, &c., and even Galen himself. Of these errors, however, we ought to be the more indulgent when we remember the ridiculous preparations that kept their places in our own pharmacopœias till comparatively a few years.

Many of the ancient physicians have written on the subject of drugs; the following list contains probably the titles of all the treatises that are extant: 1. *Περὶ Φαρμάκων*, "De Remediis Purgantibus;" 2. *Περὶ Ἑλλεβοριζμοῦ*, "De Veratri Usu" (these two works are found among the collection that goes under the name of Hippocrates, but are both spurious¹); 3. Dioscorides, *Περὶ Ὑγίης Ἱατρικῆς*, "De Materia Medica," in five books (one of the most valuable and celebrated medical treatises of antiquity); 4. *Id.*, *Περὶ Ἑμπορίστων*, "Ἀπλὸν τε καὶ Συνθέτων Φαρμάκων," "De Facile Parabilibus, tam Simplicibus quam Compositis, Medicamentis," in two books (perhaps spurious²); 5. Marcellus Sideita, *Ἱατρικὰ περὶ Ἰχθύων*, "De Remediis ex Piscibus;" 6. Galen, *Περὶ Κράσεως καὶ Δυνάμεως τῶν Ἀπλῶν Φαρμάκων*, "De Simplicium Medicamentorum Temperamentis et Facultatibus," in eleven books; 7. *Id.*, *Περὶ Συνθέσεως Φαρμάκων τῶν κατὰ Τόπους*, "De Compositione Medicamentorum secundum Locos," in ten books; 8. *Id.*, *Περὶ Συνθέσεως Φαρμάκων τῶν κατὰ Γένη*, "De Compositione Medicamentorum secundum Genera," in seven books; 9. *Id.*, *Περὶ τῆς τῶν Καθαρόντων Φαρμάκων Δυνάμεως*, "De Purgantium Medicamentorum Facultate" (perhaps spurious³); 10. Orisibus, *Συναγωγαὶ Ἱατρικαί*, "Collecta Medicinalia," a compilation which consisted originally of seventy books according to Photius,⁴ or, as Suidas says, of seventy-two: of these we possess at present rather more than one third, five of which (from the eleventh to the fifteenth) treat of *Materia Medica*; 11. *Id.*, *Ἑυπόριστα*, "Euporista ad Eucapium," or "De facile Parabilibus," in four books, of which the second contains an alphabetical list of drugs; 12. *Id.*, *Σύνοψις*, "Synopsis ad Eustathium," an abridgment of his larger work, in nine books, of which the second, third, and fourth are upon the subject of external and internal remedies; 13. Paulus Ægineta, *Ἐπιτομὴς Ἱατρικῆς Βιβλίου Ἑπτα*, "Compendii Medici Libri Septem," of which the last treats of medicines; 14. Joannes Actuarius, "De Medicamentorum Compositione," in two books (translated from the Greek, and only extant in Latin); 15. Nicolaus Myrepsus, "Antidotarium" (also extant only in a Latin translation); 16. Cato, "De Re Rustica," contains a good deal of matter on this subject in various parts; 17. Celsus, "De Medicina Libri Octo," of which the fifth treats of different sorts of medicines; 18. Twelve books of Pliny's "Historia Naturalis" (from the twentieth to the thirty-second) are devoted to *Materia Medica*; 19. Scribonius Largus, "Compositiones Medicamentorum;" 20. Apuleius Barbarus, "Herbarium, seu de Medicaminibus Herbarum;" 21. Sextus Placitus Papyriensis, "De Medicamentis ex Animalibus;" 22. Marcellus Empiricus, "De Medicamentis Empiricis, Physicis, ac Rationalibus." The works of the Arabic physicians on this subject (though their contributions to *Materia Medica* and Chemistry are among the most valuable part of their writings) it would be out of place here to enumerate.

ΦΑΡΜΑΚΩΝ or ΦΑΡΜΑΚΕΙΑΣ ΓΡΑΦΗ, an indictment against one who caused the death of another by poison, whether given with intent to kill or to obtain undue influence.⁵ It was tried by the court of Areopagus. That the malicious intent was a necessary ingredient in the crime, may be gathered from the expressions *ἐκ προνοίας*, *ἐξ ἐπιβουλῆς καὶ προβουλῆς*, in Antiphon.⁶ The punishment was death, but might (no doubt) be mitigated

by the court under palliating circumstances. We have examples of such *γραφάι* in the speech of Antiphon already cited, and that entitled *περὶ τοῦ χοιροπείρου*.¹ Among the Greeks, women appear to have been most addicted to this crime, as we learn from various passages in ancient authors. Such women are called *φαρμακίδες* and *φαρμακευτρίαι*. Poisonous drugs were frequently administered as love-potions, or for other purposes of a similar nature. Men whose minds were affected by them were said *φαρμακῶν*. Wills made by a man under the influence of drugs (*ὑπὸ φαρμάκων*) were void at Athens.²

PHAROS or PHARUS (*φάρος*), a Lighthouse. The most celebrated lighthouse of antiquity was that situated at the entrance to the port of Alexandria. It was built by Sostratus of Cnidus, on an island which bore the same name, by command of one of the Ptolemies, and at an expense of 800 talents.³ It was square, constructed of white stone, and with admirable art; exceedingly lofty, and in all respects of great dimensions.⁴ It contained many stories (*πολύροφον*), which diminished in width from below upward.⁵ The upper stories had windows looking seaward, and torches or fires were kept burning in them by night, in order to guide vessels into the harbour.⁷

Pliny⁸ mentions the lighthouses of Ostia and Ravenna, and says that there were similar towers at many other places. They are represented on the medals of Apamea and other maritime cities. The name of Pharos was given to them in allusion to that at Alexandria, which was the model for their construction.⁹ The pharos of Brundisium, for example, was, like that of Alexandria, an island with a lighthouse upon it.¹⁰ Suetonius¹¹ mentions another pharos at Capreae.

The annexed woodcut shows two phari remaining in Britain. The first is within the precincts of Dover Castle. It is about 40 feet high, octagonal externally, tapering from below upward, and built with narrow courses of brick and much wider courses of stone in alternate portions. The space within the tower is square, the sides of the octagon without and of the square within being equal, viz., each 15 Roman feet. The door is seen at the bottom.¹² A similar pharos formerly existed at Boulogne, and is supposed to have been built by Caligula.¹³ The round tower here introduced is on the summit of a hill on the coast of Flintshire.¹⁴

PHA'ROS (*φάρος*). (Vid. PALLIUM.)

PHASE'LUS (*φάσηλος*) was a vessel rather long and narrow, apparently so called from its resemblance to the shape of a phaselus or kidney bean. It was chiefly used by the Egyptians, and

was of various sizes, from a mere boat to a vessel adapted for long voyages.¹ Octavia sent ten triremes of this kind, which she had obtained from Antony, to assist her brother Octavianus; and Appian² describes them as a kind of medium between the ships of war and the common transport or merchant vessels.³ The phaselus was built for speed (*phaselus ille—navium celerrimus*), to which more attention seems to have been paid than to its strength; whence the epithet *fragilis* is given to it by Horace.⁴ These vessels were sometimes made of clay (*ficilibus phaselis*), to which the epithet of Horace may perhaps also refer.

*PHASE'LUS or PHASE'OLUS (*φάσηλος*, *φασίολος*), the *Phaseolus vulgaris*, or common Kidney Bean.⁵

*PHASG'ANON (*φάσγανον*). "Sprengel," says Adams, "hesitates between the *Iris fatidissima* and the *Gladiolus communis*, or common Sword Grass; Stackhouse between the latter and the *Iris Xiphium*. These doubts, however, are of older date."⁷

*PHASIA'NOS (*φασίανος* or *φασιανικός όρνις*), the Pheasant, or *Phasianus Colchicus*, L. According to the Greek legend, the Pheasant took its name, in that language, from the river Phasis in Colchis, and was exclusively confined to this latter country before the expedition of the Argonauts. These adventurers, it is said, on ascending the Phasis, beheld the birds in question spread along the banks of the river, and bringing some of them back to their native country, bestowed upon it, says Montbeillard, a gift more precious than the golden fleece. At the present day, according to the same authority, the pheasants of Colchis or Mingrelia are the finest and largest in the known world.⁸

*PHASI'OLUS. (Vid. PHASELUS.)

PHASIS (*φάσις*) was one of the various methods by which public offenders at Athens might be prosecuted; but the word is often used to denote any kind of information; as Pollux⁹ says, *κοινῶς φάσεις ἐκαλούντο πάσαι αἱ μνήσεις τῶν λαθανόντων ἀδικημάτων*. (Vid. Aristoph., *Eq.*, 300, and *Acharn.*, 823, 826, where the word *φανήνω* is used in the same sense as *φάσις*.) The word *συκοφαντής* is derived from the practice of laying information against those who exported figs. (Vid. SYCOPHANTES.)

Though it is certain that the *φάσις* was distinguished from other methods of prosecution,¹⁰ we are not informed in what its peculiarities consisted. According to Pollux,¹¹ it might be brought against those who committed offences against the mine laws, or the customs, or any other part of the revenue; against any persons who brought false accusations against others for such offences; and against guardians who injured their wards. The charge, as in the *γραφή*, was made in writing (*ἐν γραμματείῳ*), with the name of the prosecutor and the proposed penalty (*τίμημα*) affixed, and also the names of the *κλητήρες*. The same author says, *ἐφαίνοντο δὲ πρὸς τὸν ἄρχοντα*. Here we must either understand the word *ἄρχοντα* to be used in a more general sense, as denoting any magistrate to whom a jurisdiction belonged, or read, with Schömann,¹² *τοὺς ἄρχοντας*. For it is clear that the archon was not the only person before whom a *φάσις* might be preferred. In cases where corn had been carried to a foreign port, or money lent on a ship which did not bring a return cargo to Athens, and probably in all cases of offence

against the export and import laws, the information was laid before the *ἐπιμεληταὶ τοῦ ἑμπορίου*.¹ Where public money had been embezzled or illegally appropriated, for which a *φάσις* was maintainable, the *σύνδοκοι* were the presiding magistrates.² Offences relating to the mines came before the *thesmothetæ*.³ Injuries done by guardians to their wards or wards' estate, whether a public prosecution or a civil action was resorted to, belonged to the jurisdiction of the *archon*, whose duty it was to protect orphans.⁴ All *φάσεις* were *τιμητοὶ ἀγῶνες*, according to Pollux,⁵ and he says *τὸ τιμηθῆν ἐγγίγνετο τῶν ἀδικουμένων, εἰ καὶ ἄλλος ὑπὲρ αὐτῶν φήνειν*. By this we are to understand that the *τίμημα* went to the state if the prosecution was one of a purely public nature, that is, where the offence immediately affected the state; but where it was of a mixed nature, as where a private person was injured, and the state only indirectly, in such case compensation was awarded to the private person. This was the case in prosecutions against fraudulent guardians. On the same ground, wherever the prosecutor had an interest in the cause beyond that which he might feel as the vindicator of public justice, as where he, or some third person on whose behalf he interposed, was the party directly injured, and might reap advantage from the result, he was liable to the *ἐπωβελία*, and also to the payment of the *πρωτανεία*, just as he would be in a private action. Probably this liability attached upon informations for carrying corn to a foreign port, as the informer there got half the penalty if successful.⁶ Where the *φάσις* was of a purely public nature, the prosecutor would be subject only to the payment of the *παράστασις*, and to the thousand drachms if he failed to obtain a fifth part of the votes, according to the common practice in criminal causes.⁷ Whether, in those of a mixed nature, he was liable to these payments, as well as to the *πρωτανεία* and *ἐπωβελία*, is a question which has been much discussed, but cannot be settled. We have no speech left us by the orators on the subject of a *φάσις*, but only mention of a lost speech of Lysias *πρὸς τὴν φάσιν τοῦ θρῆνακοῦ οἴκου*.⁸

*PHASSA (φάσσα), the Ring-dove or Cushat, namely, the *Columba palumbus*, L. Sonini says the modern Greeks call the *Ramier* of the French *φάσσα*, and *le pigeon sauvage*, *τελίστρι*.⁹

*PHELLUS (φέλλος), the *Quercus suber*, or Cork-tree.¹⁰

PERNE (φερνή). (*Vid.* DOS, GREEK.)

PHIALA. (*Vid.* PATERA.)

*PHILLYR'EA (φίλλυρ'εα), the *Phillyrea latifolia*, or Broad-leaved tree *Phillyrea*. Sibthorp found it growing abundantly in Candia, the ancient Crete.¹¹

*PHILYRA (φίλυρα), the *Tilia Europæa*, the Lime or Linden tree. Of the inner bark were formed strings for garlands, mats, &c.¹²

*PHLEOS (φλέως), a species of Reed. Sprengel makes it the *Arundo ampelodesmos*; Stackhouse, the *Arundo calamagrostis*.¹³

*PHLOMOS (φλόμος) or PHLOMIS (φλόμις). "From the brief description," remarks Adams, "of the *φλόμοι* and *φλόμιδες* by Dioscorides and Galen, it is difficult to determine their several genera and species. Matthioli, Dodonæus, and Sprengel are

agreed that the *φλόμος ἀργία* is the *Phlomis frutesca*, or Broad-leaved Sage-tree. The female *λενκή φλόμος* is the *Verbascum undulatum*, Lam., according to Sibthorp, and the male *λενκή φλόμος*, the *Verbascum Thapsus*, or Great Mullein, according to the same; but Sprengel appears to show satisfactorily that the female is the *Thapsus*, and the male the *undulatum*. The *Verbascum nigrum*, or Black Mullein, is well known. The first-two species of the *φλόμις* are referred by Sprengel to the *Phlomis Samia*, L., and the *Phlomis lunariifolia*, Sibthorp. Clusius named the narrow-leaved Jerusalem Sage, *Phlomis lychnitis*.¹⁴

*PHLŌX (φλόξ), a plant which Sprengel calls the *Agrostemma coronarium*. "Schneider mentions that Anguillara held it to be the "*fiore del veluto*" of the Italians. All the plants included in the genus *Phlox* of modern botanists are natives of the New World."¹⁵

*PHOCA (φώκη), the Seal, or *Phoca vitulina*, called by Pliny "*Vitulus marinus*," or Sea Calf. It was ranked among the *κῆτη* by Homer.¹⁶

*PHOCÆNA (φώκαινα), the *Delphinus Phocæna*, L., or Porpoise. Julius Scaliger, Belon, Gesner, and Rondelet concur in referring the *Tursio* of Pliny to the Porpoise. Pliny and other writers of antiquity confound the *φώκη*, or Seal, with the *φώκαινα*, or Porpoise.*

*PHENICOPTERUS (φοινικόπτερος), the Flamingo, or *Phenicopterus ruber*, L. The Greek name, which means "crimson-winged," is an epithet especially suitable to individuals of two years old, whose wings alone are of a fine carmine, while the neck and body are still invested with white plumes. The ancients held the flesh of the Flamingo in high estimation, and the tongue was especially regarded as an exquisite morsel; but such of the moderns as have tasted it declare it to be oily, and of an unpleasant marshy flavour.*

*PHENICURUS (φοινικόουρος), a species of Bird, the *Sylvia Phenicurus*, Lath., or Redstart. "The Redstart so nearly resembles the Redbreast in general appearance, that it is not to be wondered at that Aristotle took it for a Redbreast in its summer plumage."¹⁶

*PHENIX (φοίνιξ), I. a fabulous Egyptian bird.

*II. The *Phoenix dactylifera*, Date-tree, or greater Palm. "Theophrastus describes six species or kinds of palms; his *χαμαίρησις* is the same as the *χαμαίηλος φοίνιξ* of Dioscorides, namely, the *Chamaerops humilis*, L. The Thebaic Palms of Dioscorides are named *Crucifera Thebaica* by De Lisle; but, according to Sprengel, they were mere varieties of the common Palm. The ancients were well aware of the distinction of sex which exists in this tribe of trees. The *φοίνις πᾶς* of Dioscorides is undoubtedly the *Lolium perenne*, Perennial Darnel, or Rye Grass.¹⁷

PHŌNOS (φόνος), Homicide, was either *ἐκούσιος* or *ἀκούσιος*, a distinction which corresponds in some measure, but not exactly, with our *murder* and *manslaughter*; for the *φόνος ἐκούσιος* might fall within the description of justifiable homicide, while *φόνος ἀκούσιος* might be excusable homicide. Accord-

ing to the different circumstances under which the homicide was committed, the tribunal to which the case was referred, and the modes of proceeding at Athens, varied. All cases of murder (with one exception, to be hereafter noticed) were tried by the court of Areopagus; other cases of homicide were (by the statutes of Draco) to be tried by the *ἐφέται*. All *φονικαὶ δίκαι* belonged to the jurisdiction of the *ἄρχων βασιλεὺς* as *ἡγεμὼν δικαστηρίου*. He was anciently the sole judge in cases of unintentional homicide; for such an act was considered, in a religious point of view, as being a pollution of the city; and it became his duty, as guardian of religion, to take care that the pollution (*ἄγος*) was duly expiated. Draco, however, established the *ἐφέται*, first, as a court of appeal from the *ἄρχων βασιλεὺς*; and soon after they began to perform the office of *δικασταί*, he being the presiding magistrate.¹ In discussing this subject, we have to consider the various courts established at Athens for the trial of homicide, the different species of crime therein respectively prosecuted, the manner of proceeding against the criminal, and the nature of the punishment to which he was liable. All these points are fully discussed by Matthiæ in his treatise *De Judiciis Athen.* in the *Miscellanea Philologica*, vol. i., to which more particular references are given in this article.

Solon, who seems to have remodelled the court of Areopagus, enacted that this court should try cases of murder and malicious wounding, besides arson and poisoning.² One would be deemed a murderer who instigated another to commit the deed, provided the purpose were accomplished.³ Besides the court of Areopagus, there were four other courts of which the *ἐφέται* were judges: τὸ ἐπὶ Παλλادίῳ, τὸ ἐπὶ Δελφινίῳ, τὸ ἐπὶ Πρωτανείῳ, and τὸ ἐν Φρεατοῖ.⁴ To the court ἐπὶ Παλλادίῳ belonged cases of accidental homicide, manslaughter, and attempts to commit murder (*βουλέρσεις*). Such a case as that mentioned by Demosthenes,⁵ of an unlawful blow followed by death, would be manslaughter. It seems, also, that this court had a concurrent jurisdiction with the Areopagus in charges of murderous conspiracy which was carried into effect. The law perhaps allowed the prosecutor to waive the heavier charge, and proceed against the offender for the conspiracy only.⁶ As to the supposed origin of this court, see Harpocration.⁷ To the court ἐπὶ Δελφινίῳ were referred cases where the party confessed the deed, but justified it: *ὅν τις ὁμολογῇ μὲν κτείνειν, ἐννόμως δὲ φηὶ δεδρακέναι*. Demosthenes calls it *ἀγιστάτων καὶ φοικυδοέστατον*.⁸ As to the origin of this court, see Matthiæ, 152. In the τὸ ἐπὶ Πρωτανείῳ, the objects of prosecution were inanimate things, as wood, stone, or iron, which had caused the death of a man by falling on him.⁹ Draco enacted that the cause of death should be cast out of the boundaries of the land (*πτερορίζεσθαι*), in which ceremony the *ἄρχων βασιλεὺς* was assisted by the *φυlobασίλεις*.¹⁰ This was a relic of very rude times, and may be not inaptly compared with our custom of giving deodands. Matthiæ¹¹ thinks there was an ulterior object in the investigation, viz., that by the production of the instrument by which death was inflicted, a clue might be found to the discovery of the real murderer, if any. The

court ἐν Φρεατοῖ was reserved for a peculiar case; where a man, after going into exile for an unintentional homicide, and before he had appeased the relatives of the deceased, was charged with having committed murder. He was brought in a ship to a place in the harbour called ἐν Φρεατοῖ, and there pleaded his cause on board ship, while the judges remained on land. If he was convicted, he suffered the punishment of murder; if acquitted, he suffered the remainder of his former punishment. The object of this contrivance was to avoid pollution (for the crime of the first act had not yet been expiated), and, at the same time, to bring the second offence to trial.¹

To one or other of these courts all *φονικαὶ δίκαι* were sent for trial, and it was the business of the *ἄρχων βασιλεὺς* to decide which. The task of prosecution devolved upon the nearest relatives of the deceased, and in case of a slave, upon the master. To neglect to prosecute, without good cause, was deemed an offence against religion; that is, in any relative not farther removed than a first cousin's son (*ἀνεψιανδρὸς*). Within that degree the law enjoined the relatives to prosecute, under penalty of an *ἀσέβειας γραφή* if they failed to do so.² They might, however (without incurring any censure), forbear to prosecute, where the murdered man had forgiven the murderer before he died;³ or, in cases of involuntary homicide, where the offender gave the satisfaction which the law required, unless the deceased had given a special injunction to avenge him.⁴

The first step taken by the prosecutor was, to give notice to the accused to keep away from all public places and sacrifices. This was called *πρόβησις*, and was given at the funeral of the deceased.⁵ After this he gave a public notice in the market place, warning the accused to appear and answer to the charge: here he was said *προειπεῖν* or *προαγορεύειν θόνον*.⁶ The next thing was to prefer the charge before the king archon. To such charge the term *ἐπισκοπτεσθαι* or *ἐπεξίνα* was peculiarly applied.⁷ The charge was delivered in writing; the prosecutor was said *ἀπογράφεσθαι δίκην θόνον*.⁸ The king archon having received it, after first warning the defendant *ἀπέχεσθαι τῶν μυστηρίων καὶ τὸν ἄλλον νομίμων*,⁹ proceeded in due form to the *ἀνέκρισις*. The main thing to be inquired into was the nature of the offence, and the court to which the cognizance appertained. The evidence and other matters were to be prepared in the usual way. Three months were allowed for this preliminary inquiry, and there were three special hearings, one in each month, called *διαδικασίαι*, or (according to Bekker's reading) *προδικασίαι*,¹⁰ after which, in the fourth month, the king archon *εἰσήγε τὴν δίκην*.¹¹ The defendant was allowed to put in a *παραγραφή* if he contended that the charge ought to be tried in one of the minor courts.¹²

All the *φονικὰ δικαστήρια* were held in the open air, in order that the judges might not be under the same roof with one suspected of impurity, nor the prosecutor with his adversary.¹³ The king archon presided, with his crown taken off.¹⁴ The parties were bound by the most solemn oaths; the one swearing that the charge was true, that he bore

such a relationship to the deceased, and that he would, in conducting his case, confine himself to the question at issue; the other declaring the charge to be false.¹ The witnesses on both sides were sworn in like manner,² and slaves were allowed to appear as witnesses.³ Either party was at liberty to make two speeches, the prosecutor beginning, as may be seen from the *τετραλογία* of Antiphon; but both were obliged to confine themselves to the point at issue.⁴ Advocates (*συνήγοροι*) were not admitted to speak for the parties anciently, but in later times they were.⁵ Two days were occupied in the trial. After the first day, the defendant, if fearful of the result, was at liberty to fly the country, except in the case of parricide. Such flight could not be prevented by the adversary, but the property of the exile was confiscated.⁶ On the third day the judges proceeded to give their votes, for which two boxes or urns were provided (*ὕδρια* or *ὠμφορεῖς*), one of brass, the other of wood; the former for the condemning ballots, the latter for those of acquittal. An equal number of votes was an acquittal; a point first established (according to the old tradition) upon the trial of Orestes.⁷

As the defence might consist either in a simple denial of the killing, or of the intention to kill, or in a justification of the act, it is necessary to inquire what circumstances amounted to a legal justification or excuse. We learn from Demosthenes⁸ that it was excusable to kill another unintentionally in a gymnastic combat, or to kill a friend in battle or ambuscade, mistaking him for an enemy; that it was justifiable to slay an adulterer if caught in *ipso delicto*, or a paramour caught in the same way with a sister or daughter, or even with a concubine, if her children would be free. (As to an adulterer, see Lysias.⁹) It was lawful to kill a robber at the time when he made his attack (*εὐθὺς ἀννόμενον*), but not after.¹⁰ By a special decree of the people, made after the expulsion of the Thirty Tyrants, it was lawful to kill any man who attempted to establish a tyranny, or put down the democracy, or committed treason against the state.¹¹ A physician was excused who caused the death of a patient by mistake or professional ignorance.¹² This distinction, however, must be observed. Justifiable homicide left the perpetrator entirely free from pollution (*καθάρων*). That which, though unintentional, was not perfectly free from blame, required to be expiated. See the remarks of Antiphon in the *Τετραλογία*, b. 123.

It remains to speak of the punishment.

The courts were not invested with a discretionary power in awarding punishment; the law determined this according to the nature of the crime.¹³ Wilful murder was punished with death.¹⁴ It was the duty of the thesmothetæ to see that the sentence was executed, and of the Eleven to execute it.¹⁵ We have seen that the criminal might avoid it by flying before the sentence was passed. Malicious wounding was punished with banishment and confiscation of goods.¹⁶ So were attempts to murder (*βουλεύσεις*). But where the design was followed by the death of him whose life was plotted against, and the crime was treated as a murder, it

might be punished with death, at least if it was tried in the Areopagus; for it is doubtful whether the minor courts (except that *ἐν φρεστροῖς*) had the power of inflicting capital punishment.¹ If the criminal who was banished, or who avoided his sentence by voluntary exile, returned to the country, an *ἐνδείξις* might forthwith be laid against him, or he might be arrested and taken before the thesmothetæ, or even slain on the spot.² The proceeding by *ἀπαγωγή* (arrest) might perhaps be taken against a murderer in the first instance, if the murder was attended with robbery, in which case the prosecutor was liable to the penalty of a thousand drachms if he failed to get a fifth of the votes.³ But no murderer, even after conviction, could lawfully be killed, or even arrested, in a foreign country.⁴ The humanity of the Greeks forbade such a practice. It was a principle of international law, that the exile had a safe asylum in a foreign land. If an Athenian was killed by a foreigner abroad, the only method by which his relatives could obtain redress was to seize natives of the murderer's country (not more than three), and keep them until the murderer was given up for judgment.⁵

Those who were convicted of unintentional homicide, not perfectly excusable, were condemned to leave the country for a year. They were obliged to go out (*ἐξέρχασθαι*) by a certain time, and by a certain route (*τακτὴν ὁδόν*), and to expiate their offence by certain rites. Their term of absence was called *ἀπεναντισμός*. It was their duty, also, to appease (*αἰδεῖσθαι*) the relatives of the deceased, or, if he had none within a certain degree, the members of his clan, either by presents or by humble entreaty and submission. If the convict could prevail on them, he might even return before the year had expired. The word *αἰδεῖσθαι* is used not only of the criminal humbling himself to the relatives, but also of their forgiving him.⁶ The property of such a criminal was not forfeited, and it was unlawful to do any injury to him, either on his leaving the country or during his absence.⁷

Such was the constitution of the courts and the state of the law as established by Solon, and mostly, indeed, by Draco; for Solon retained most of Draco's *φονικὰ νόμοι*.⁸ But it appears that the jurisdiction of the *ἐφέται* at later times, if not soon after the legislation of Solon, was greatly abridged, and that most of the *φονικαὶ δίκαι* were tried by a common jury. It is probable that the people preferred the ordinary method of trial, to which they were accustomed in other causes, criminal as well as civil, to the more aristocratical constitution of the court of *ἐφέται*. Their jurisdiction in the courts *ἐν φρεστροῖς* and *ἐπὶ Πρωτανείῳ* was, no doubt, still retained; and there seem to have been other peculiar cases reserved for their cognizance.⁹ Whether the powers of the Areopagus, as a criminal court, were curtailed by the proceedings of Pericles and Ephialtes, or only their administrative and censorial authority as a *council*, is a question which has been much discussed. The strong language of Demosthenes¹⁰ inclines one to the latter opinion. See also Dinarchus,¹¹ from which it appears there was no appeal from the decision of that court.¹²

No extraordinary punishment was imposed by the Athenian legislator on parricide. Suicide was not considered a crime in point of law, though it seems to have been deemed an offence against religion; for, by the custom of the country, the hand of the suicide was buried apart from his body.¹

ΦΟΝΟΥ ΔΙΚΗ. (*vid. Phōnos.*)

ΦΟΡΑΣ ΑΦΑΝΟΥΣ, ΜΕΘΗΜΕΡΙΝΗΣ ΔΙΚΗ (*φορὰς ἀφανούς, μεθήμερινῆς δικῆς*) is enumerated by Pollux² among the Athenian *δικαίαι*, but we have no satisfactory explanation of the meaning. Kühn (*vid. note to Dindorff's* edition) explains it thus: "*Actio in servos operarios, qui non præstabant domino φορὰν ἀφανούς, penstionem, mercedes de operis quæ erant ἀφανή, i. e., non incurrebant in oculos, uti facultates et opes manifestæ. Erat et φορὰ μεθήμερινῆς, mercedes diurnæ. Φορὰν illam Gl. appellant, quia offerebatur domino a servis, vel conductor ferebat conductis operariis. Dicitur et ἀποφορά.*" This can hardly be correct, as we have no authority for supposing that an action could be brought by a master against his servant. It might, with greater probability, be conjectured to be an action by the owner of slaves employed in manufactures against the person to whom they were let out, to recover the reserved rent, which might be a certain portion of the profits accruing from day to day, and would be ἀφανής to the owner until he got an account from the other party. As to the practice of lending slaves, *vid. Demosth., c. Aphob., 819, 839.* Meier³ conjectures that the true reading might be *φορὰς, theft, or φόρας, search*; in which case the action would be one for unlawfully searching a person's house, either secretly (*ἀφανούς*), or openly in the daytime (*μεθήμερινῆς*). The first conjecture, at least, is highly improbable, as there was a *δίκη κλοπῆς*.

PHORBEIA (*φορβεία*) was a strap fastened at the back of the head, with a hole in front fitting to the mouthpiece; it was used by pipers and trumpeters to compress their mouths and cheeks, and thus to aid them in blowing. See the references under *CAPISTRUM*, and a woodcut on p. 240, which represents a woman with the *φορβεία*.

PHORMINX (*φόρμυξ*). (*vid. LYRA.*)

*PHOU (*φού*), the *Valeriana officinalis*, or great Wild Valerian.⁴

*PHOXINUS (*φοξίνος*), the *Cyprinus Phoxinus*, L., or the Minnow. Gesner, however, questions this opinion.⁵

PHRATRIA (*φρατρία*). (*vid. CIVITAS, GREEK.*)

PHYRGIO. (*vid. PALLIUM*, p. 718.)

*PHRYGIUS LAPIS (*φρύγιος λίθος*), the Phrygian stone of the ancients, according to Adams and other authorities, would appear to have been a pumice, with an admixture of alum and other ingredients.⁶

*PHRYNOS (*φρύνος*), a species of Toad, the *Rubeta* of the Latins. "Commentators are greatly puzzled," remarks Adams, "to determine what it was. After comparing the ancient accounts of it with the characters of the *Bufo cornutus*, as given in the *Encyclopédie Methodique*, I was forcibly struck with their coincidence, and it affords me pleasure to find that Schneider also identifies the *Phrynos* or *Rubeta* with the *Bufo cornutus*. Agricola confirms the ancient statements of its being venomous, but few modern naturalists agree with him. The *φρύνος κύφος* (called *καλαμίτη* by the scholiast on Nicander) would seem to have been the *Bufo calamita*. Russel supposed it venomous. Agricola calls it a small green animal, and denies that it is mute."⁷

*PHTHEIR (*φθεῖρ*), the *Pediculus communis*, or

common Louse. Aristotle notices the lice which form on fishes. Donnegan, in speaking of these, calls them "a kind of small shellfish, that fixes upon and derives its food from the bodies of other fishes, familiar examples of which may be noticed in the common prawn (on the corslet of which a protuberance may often be observed, the parasite being covered by a coating of the shell), as also in the mussel."⁸

*II. The fruit of a species of Pine, the *Pinus Pinaster*. Consult the remarks of Ritter, in his *Vorhalle Europ. Volkergesch.*, p. 154, in relation to the *φθειροφάγοι* of antiquity.

ΦΘΟΡΑ ΤΩΝ ΕΛΕΥΘΕΡΩΝ (*φθορά τῶν ἐλευθέρων*) was one of the offences that might be criminally prosecuted at Athens. The word *φθορά* may signify any sort of corruption, bodily or mental; but the expression *φθ. τ. ε.* comprehends, if it is not limited to, a crime too common among the Greeks, as appears from a law cited by Æschines.⁹ On this subject, *vid. PROAGOGIA*, and Schömann, *Ant. Jur. Pub. Gr.*, p. 335, 338.

*PHYCIS (*φυκίς*), the *Blennius Phycis*, or Hake, called in Italian the *Fico*.³

*PHYCUS (*φύκος*). (*vid. FUCUS.*)

PHYGE (*φύγη*). (*vid. BANISHMENT, GREEK.*)

PHYLARCHI (*φύλαρχοι*), generally the prefects of the tribes in any state, as at Epidamnus, where the government was formerly vested in the *φύλαρχοι*, but afterward in a senate.⁴ At Athens, the officers so called were (after the age of Cleisthenes) ten in number, one for each of the tribes, and were specially charged with the command and superintendence of the cavalry.⁵ There can be but little doubt that each of the phylarchs commanded the cavalry of his own tribe, and they were themselves, collectively and individually, under the control of the two hipparchs, just as the taxiarchs were subject to the two strategi. According to Pollux,⁶ they were elected, one from each tribe, by the archons collectively; but his authority can hardly be considered as conclusive on this point. Herodotus⁷ informs us that, when Cleisthenes increased the number of the tribes from four to ten, he also made⁸ ten phylarchs instead of four. It has been thought, however,⁹ that the historian should have said ten phylarchs in the place of the old *φυλοδοσσιλεῖς*, who were four in number, one for each of the old tribes.⁹

*PHYLLITIS (*φύλλιτις*). "It appears probable," remarks Adams, "that the *φύλλον* alluded to by Dioscorides and Theophrastus was the *Mercurialis annua*. The *φύλλον* of Galen and of Paulus Ægineta is a very different substance, namely, the leaf of the *μαλάχωθρον*. Apicius uniformly calls the *Malabathrum*, or Cassia leaf, by the name of *Folium*."¹⁰

PHYLOBASILEIS (*φυλοδοσσιλεῖς*). The origin and duties of the Athenian magistrates so called are involved in much obscurity, and the little knowledge we possess on the subject is derived almost entirely from the grammarians. In the earliest times they were four in number, representing each one of the four tribes, and probably elected (but not for life) from and by them.¹¹ They were nominated from the Eupatridæ, and during the continuance of royalty at Athens these "kings of the tribes" were the constant assessors of the sovereign, and rather as his colleagues than counselors.¹² From an expression in one of the laws of

Soloa,¹ it appears that before his time the kings of the tribes exercised a criminal jurisdiction in cases of murder or high treason; in which respect, and as connected with the four tribes of the city, they may be compared with the "*δυσμύρι περδύλλιον*," at Rome, who appeared to have represented the two ancient tribes of the Ramnes and Tities.² They were also intrusted (but perhaps in later times) with the performance of certain religious rites; and as they sat in the *βασίλειον*,³ they probably acted as assessors of the *ἄρχων βασιλεύς*, or "*rex sacrificulus*," as they had formerly done of the king. Though they were originally connected with the four ancient tribes, still they were not abolished by Cleisthenes when he increased the number of tribes and otherwise altered the constitution of Athens, probably because their duties were mainly of a religious character.⁴ They appear to have existed even after his time, and acted as judges, but in unimportant or merely formal matters. They presided, we are told,⁵ over the court of the Ephe-tæ, held at the Prytaneum, in the mock trials over instruments of homicide (*αἱ τῶν ἀνύχων δίκαι*), and it was part of their duty to remove these instruments below the limits of their country (*τὸ ἐμπροσθεν ἀνύχων ὑπερῳρίσαι*). We may reasonably conclude that this jurisdiction was a relic of more important functions, such as those described by Plutarch,⁶ from which, and their connexion with the Prytaneum, it has been conjectured that they were identical with the old Prytanes.⁷ Plutarch⁸ speaks of them both as *βασίλεις* and *πρυτανεῖς*. In a *ψήφισμα*, quoted by Andocides,⁹ the title of *βασίλεις* seems to be applied to them.

*PHYS'ALUS (*φύσας*) and PHYSE'TER (*φυσήτης*). "Aristotle applies the term *φυσήτης* to the spiracle or airhole of the whale. It is afterward applied by Strabo to the fish itself. Artedi accordingly refers it, with the *φύσας* of Ælian, to the *βαλσα physalus*, or Fin-fish."¹⁰

PHYSIOLOGIA (*Φυσιολογική*), one of the five divisions into which, according to some of the ancient writers, the whole science of medicine was divided. (*Vid. MEDICINA*.) It treats, as its name implies (*φύσις*, nature, and *λόγος*, a discourse), of the nature and functions of the human body, which agrees with the definitions found among Galen's works;¹¹ and as a knowledge of the *parts* of the human body (or *anatomy*) is a necessary step to a knowledge of its *functions*, it will be included here under the same head.

The first beginnings of anatomical knowledge would arise from the inspection of the victims offered in sacrifices, and from the dressing of wounds and other bodily injuries; the progress, however, that was thus made would naturally be very slow and imperfect, and it was soon found that anatomy could only be learned by a careful inspection of the internal parts of the animal frame, or, in other words, by systematic dissection. The Pythagorean philosopher, Alcmaeon, is said by Chalcidius¹² to have been the first person who dissected animals (about B.C. 540); this was an important step, and with this anatomists remained content for more than two hundred years. Alcmaeon appears to have made considerable advances on the knowledge of his predecessors. The most important of his discoveries was that of the Eustachian tube, or canal leading from the anterior and inner part of the tympanum to the fauces; and his mistake in saying

that goats breathe through the ear (which is corrected by Aristotle¹³) may be easily explained by supposing that in the animal that he dissected the *membrana tympani* had been accidentally destroyed. Pliny notices this opinion of Alcmaeon (though without correcting it), but attributes it to Archelaus.¹⁴ Empedocles of Agrigentum (in the fifth century B.C.) was the first who noticed the *cochlea* of the ear (*κοχλῳδης χόνδρος*), which he thought was the immediate organ of hearing,¹⁵ and also first gave the name *amnios* (*ἄμνιον* or *ἄμνιον*) to the innermost of the membranes surrounding the fetus.¹⁶ His contemporary Anaxagoras was perhaps the first person who tried to explain the difference of the sexes by the place occupied by the fetus in the uterus; the male, said he,¹⁷ is on the right side, the female on the left; and this opinion (though without the least foundation in fact) one is surprised to find received and repeated by Hippocrates,¹⁸ Aristotle¹⁹ (who, however, adds²⁰ that this is not certain, as sometimes the contrary takes place), and Galen.²¹ The anecdote of the way in which Anaxagoras, by his knowledge of comparative anatomy, quieted a tumult occasioned at Athens by the sight of a goat with only one horn may be seen in Plutarch.²² Democritus of Abdera (B.C. 460-357) was particularly celebrated for his knowledge of anatomy, and in the graphic description of his appearance and way of living when visited by Hippocrates, the earth around where he was sitting is noticed as being covered with the carcasses of animals that he had dissected;²³ however, none of his opinions require to be particularly specified here.

The next great physiologist of antiquity, and the first whose writings are still extant, is Hippocrates (B.C. 460-357); though, in fact, it is not certain that any of the anatomical works that go under his name were really written by him.²⁴

It would be impossible here to give anything like a complete analysis of the physiology of Hippocrates (and the same apology applies also to the other writers hereafter to be mentioned, particularly Aristotle and Galen); the reader must be content to find here a very brief account of some few facts and opinions, and to be referred for farther particulars to the different histories of medicine. Hippocrates called both arteries and veins indiscriminately by the name of *φλέψ*, the word *ἀρτηρία* in his writings being used to designate the *trachea*. (*Vid. ARTERIA*.) His knowledge of the bones appears to have been greater than that of the muscles, nerves, or viscera. Tendons and nerves he called *ῥόνοι* or *νεύρα*, without knowing that the latter convey sensation, and arise from the brain; motion, he thought, was caused by all the tendinous white cords throughout the body without distinction. His theory of generation is (as may be inferred from the specimen alluded to above) very fanciful and imperfect; and his ignorance of human anatomy appears in his speaking of the *cotyledons* of the uterus,²⁵ the existence of which in woman was for a long time taken for granted, on account of their being found in the inferior animals. He says that the Scythians became impotent from being bled behind the ears,²⁶ a theory which may be explained and illustrated by the supposed course of the spermatic vessels.²⁷

Upon the whole, though the anatomical and physiological knowledge of Hippocrates has been highly extolled by those who overrate the ancient physicians as much as others ignorantly depreciate them, this must be allowed to be one of the most imperfect and unsatisfactory parts of his writings.

Plato has inserted a good deal of physiological matter in his "Timæus," which, with the first book of Xenophon's "Memorabilia," may be considered as the earliest specimens of what would be now called "Natural Theology." One of the most celebrated of Plato's anatomical opinions was, that part of the fluids that are drunk enters the trachea,¹ an assertion which for a long time occasioned great disputes among the anatomists of antiquity.² The word *νεῦρον* in his writings means a *ligament*;³ both arteries and veins are called *φλέβες*;⁴ and the word *ἀρτηρία* is applied to the *trachea*.⁵ He says the heart is the origin of the veins and the fountain of the blood.⁶ It may be added, that Cicero's fragment "De Universitate" is a translation of part of this dialogue; that Galen wrote a work "*De iis quæ Medicæ Scripta sunt in Platonis Timæo*," of which a Latin translation still exists,⁷ and that there is also a Latin translation and commentary by Chalcidius. Vid. J. K. Lichtenstädt, "*Platon's Lehren auf dem Gebiete der Naturforschung und der Heilkunde. Nach den Quellen bearbeitet*," Leipzig, 1826, 8vo.

Aristotle's knowledge of human anatomy was much superior to that of any of his predecessors: whether he acquired it by the dissection of animals only, it is now impossible to decide. Aristotle is the first author who gives the name *ἀορτή* to the principal artery in the human body;⁸ however, he calls it *φλέψ*, and never seems to suppose the veins and arteries to be distinct and different from each other: and the word *ἀρτηρία*, in all his genuine writings, means the *trachea*.⁹ He says the brain is entirely unsupplied with blood,¹⁰ that the trachea receives neither fluid nor solid, but only air;¹¹ that man's brain is larger than that of any other animal;¹² that the heart contains three ventricles,¹³ though in another place he seems to say that there are only two;¹⁴ and that there are on each side eight ribs.¹⁵

Praxagoras, who was the preceptor of Herophilus, contributed much to the science of Physiology; but the honour of discovering that the arteries and veins are distinct, and of being the first who applied the word *ἀρτηρία* to the bloodvessels which now bear that name, is disputed by Kühn, "*Commentatio De Praxagora Coo*," *Opusc. Acad. Med. et Philolog.*, tom. ii., p. 128, sq.

Inferior to Hippocrates in medical skill, enjoying far less posthumous influence and renown, but much above him as anatomists, were Herophilus and Erasistratus, who were contemporaries, and lived in the third century before Christ. The former is said expressly by Galen¹⁶ to have dissected human bodies, and the latter, in a fragment preserved by Galen,¹⁷ speaks of himself as having dissected a human brain. They were probably the first persons who ventured to do this, and their example was followed by very few (if any) of their successors. The writer is not aware of any passage even in Galen's writings which proves that he dissected human bodies; while the numerous passages, both in Galen's works and in those of other anatomists, recommending the dissection of apes, bears, goats,

and other animals, would seem indirectly to prove that human bodies were seldom or never used for that purpose.¹ Herophilus and Erasistratus are said also to have dissected criminals alive;² but whether this was really the case, or whether the story arose from their having been among the first who dissected human bodies, it is not easy to determine. They were the first persons who considered the nerves to be the organs of sensation,³ though, like Aristotle, Herophilus continued to call them *canals*, *πόροι*.⁴ However, he so far agreed with the ancient opinion on the subject as to say that some of the nerves arise from bones and connect the articulations,⁵ thus confounding the nerves with the ligaments. He gave the name *λυνός* to the common point to which the sinuses of the dura mater converge,⁶ which is still called, after him, the *torcular Herophili*. He was also the author of the name *calamus scriptorius*, which is still applied to the angular indentation in the posterior part of the medulla oblongata.⁷ That part of the intestines which is called the *duodenum* (*δωδεκαδάκτυλος*) derived its name from him.⁸ For further information respecting Herophilus, see a memoir by K. F. H. Marx, entitled "Herophilus; ein Beitrag zur Geschichte der Medicin," Carlsr., 8vo, 1838. Erasistratus was not less celebrated as an anatomist than Herophilus, though his name is connected with fewer discoveries. The *tricuspid valves* (*τριγλώχινες*), placed to guard the communication between the right auricle and ventricle, received their name from him.⁹ The bile and the spleen he considered altogether useless.¹⁰ The *trachea* derives its name from him, as he was the first person who added to the word *ἀρτηρία*, which had hitherto designated the windpipe, the epithet *τραχεία*, to distinguish it from the arteries, and he also corrected the opinion of Plato mentioned above.¹¹

Eudemus, a contemporary of Herophilus, is mentioned together with him by Galen,¹² as having discovered the *pancreas*, though he does not give it any name.

Celsus (who is supposed to have lived in the first century after Christ), in his work "De Medicina," defends the necessity of the study of anatomy,¹³ and seems to recommend the dissection of human bodies. He has inserted some anatomical matter in different parts of his work, but his language is not always technically correct, as the *trachea* he calls *arteria*,¹⁴ though in other places that word means an *artery*;¹⁵ *vena* sometimes means an *artery*;¹⁶ *uterus* sometimes means the *abdomen*;¹⁷ *nervus* sometimes means a *tendon*,¹⁸ and sometimes even a *muscle*.¹⁹ There is no anatomical discovery attached to his name.

Marinus, in the second century after Christ, is called by Galen²⁰ one of the restorers of anatomy, which appears to have fallen into neglect. He describes particularly the mesenteric glands,²¹ fixed the number of the pairs of the cerebral nerves at seven, and first noticed the palatine nerves, which

Decr., v., 3, p. 602, 646, tom. v.)

he considered as the fourth pair;¹ the auditory and facial nerves he reckoned as the fifth pair,² the lingual as the sixth.³

About the same time lived Rufus Ephesius, the author of a useful work entitled *Περὶ Ὄνομασις τῶν τοῦ Ἀνθρώπου Μορίων*, "De Apellationibus Partium Corporis Humani." This, as its name implies, is not so much a treatise on Anatomy as on anatomical terms; and it may be mentioned that the second book of the *Ὄνομαστικόν*, "Onomasticon," of Julius Pollux contains also a list of the words used in medicine. Soranus, although belonging to the sect of the Methodici, who neglected Anatomy, has, in the fourth and fifth chapters of his work *Περὶ Γυναικείων Παθῶν*, "De Arte Obstetricia Morbisque Mulierum," given one of the most accurate descriptions of the uterus that remain from antiquity, and appears to have derived his knowledge from the dissection, not of animals, but of the human body.⁴ The description of the uterus given by Moschion, his contemporary, in the early chapters of his work *Περὶ τῶν Γυναικείων Παθῶν*, "De Mulierum Passionibus," does not much differ from that by Soranus.

The next writer that we come to is Galen (A.D. 131–201), the most celebrated, and, at the same time, the most accurate and voluminous anatomist and physiologist of antiquity. Anatomy and Physiology seem to have been always Galen's favourite study, and his writings on these subjects continued to be the standard works of reference for many centuries. A very brief sketch of some of his opinions and discoveries is all that can be given; but it may be mentioned that there is "A Cursory Analysis of the Works of Galen, so far as they relate to Anatomy and Physiology," by Dr. Kidd, in the sixth volume of the "Transactions of the Provincial Medical and Surgical Association," from which most of the following remarks are taken. He considered the *vena cava hepatica* of modern anatomy as the commencement or root of the venous system of the body at large.⁵ He gives a clear description of the form and position of the *tricuspid* and *mitral valves*, and also of the *sigmoid valves* of the aorta and pulmonary artery.⁶ He admitted that the arteries contain air,⁷ but asserted, at the same time, that they naturally contain blood also;⁸ and he remarked that it may be known when an artery is wounded, not only by the lighter colour of the blood which flows from it, but also by the pulsative manner in which the blood is projected from it.⁹ He supposed that in all parts of the body there is a free anastomosis between the minute pores or channels which connect the arteries with the veins,¹⁰ but he confesses that he is totally unable to explain why Nature, which does nothing uselessly or without design, should have made different vessels (*viz.*, *arteries* and *veins*) to contain the same fluid.¹¹ In myology, says Sprengel, Galen made some important discoveries, and boasts that he has given a description of eight muscles that were unknown before his time.¹² He first discovered certain branches of the eighth pair of nerves (called by him the *sixth*), to which, from the peculiarity of their course, he gave the name *παλινδρομούντες*, or "recurrent," a name which they still bear.

The twenty-fourth and twenty-fifth books of the *Συναγωγαὶ Ἱατρικαὶ*, "Collecta Medicinalia," of Oribasius, contain a system of Anatomy compiled from Rufus Ephesius, Galen, and Soranus; there

is in them (as far as the writer is aware) nothing new, but in another place he mentions having himself dissected apes.

About the same time (the end of the fourth century after Christ) lived Nemesius, the author of a work *Περὶ Φύσεως Ἀνθρώπου*, *De Natura Hominis*. This is a very interesting little treatise, but it has enjoyed more celebrity than perhaps it deserves, on account of two curious passages; in one of which¹ he is supposed by some of the most zealous admirers of the ancients to have discovered the circulation of the blood, and in the other² the use of the bile. He plainly distinguishes the nerves from the tendons, saying that the former possess sensibility, which the latter do not.⁴ An anonymous work, entitled *Εἰσαγωγή Ἀνατομική*, "Isagogæ (or Introductio) Anatomica," is supposed to belong to the same age; it is chiefly taken from Aristotle's works, and does not require more particular notice.

The next work we come to is by Theophilus Protopatharius, who is generally supposed to have lived in the seventh century, but who probably belongs to a later date. It is entitled *Περὶ τῆς τοῦ Ἀνθρώπου Κατασκευῆς*, "De Corporis Humani Fabrica," and is in five books. It is, for the most part, taken word for word from Galen, "De Usu Partium Corporis Humani," and Hippocrates, "De Genitura" and "De Natura Pueri," from whom, however, he sometimes differs. The work of Meletius (a monk who lived probably in the eighth or ninth century), *Περὶ τῆς τοῦ Ἀνθρώπου Κατασκευῆς*, "De Hominis Fabrica," does not require any particular notice; nor that by Constantinus Afer (who lived in the eleventh century), "De Membris Principalibus Corporis Humani."

Besides these works, which may be considered as more especially anatomical and physiological, several of the early Christian fathers have left treatises on Natural Theology, pointing out "the wisdom, and power, and goodness of God," as displayed in the structure of the human frame. Such are St. Ambrose, *De Noe et Arca* (c. 6–9); Id., *Hexæmeron* (vi., 9); St. Basil, *Περὶ τῆς τοῦ Ἀνθρώπου Κατασκευῆς*, "De Structura Hominis Orationes Tres" (which, however, is probably not genuine); St. Chrysostom, "Homil. XI. ad Antiochenos;" St. Gregory of Nyssa, *De verbis "Faciamus Hominem,"* &c., *Orationes Duæ*; Id., *Περὶ Κατασκευῆς Ἀνθρώπου*, "De Hominis Opificio" (written as a supplement to his brother St. Basil's unfinished work, entitled *Ἑξαήμερον*, *Hexæmeron*); Theodoret, *Περὶ Πρόνοιαν*, "De Providentia;" Orat. iii., iv.; and Lactantius, "De Opificio Dei." Some of these works are well worth reading for their scientific correctness as well as their piety; but some parts, it must be confessed, are very strange and fanciful. However, they add nothing to the amount of anatomical knowledge already in the world, as probably every statement in their writings that is not erroneous (and many of those that are) may be found in the works of Galen. The same may be said of the Arabian writers, of whom several (*e.g.*, Alzaharavius, Avicenna, Haly Abbas, Razès, &c.), have prefixed to their medical works a physiological introduction, which it would be out of place to notice here more particularly.

gave name (*Picentini*) to the new community. (*Vid. DRYOCOLAPTES*)

PIGNORAT'ICIA ACTIO. (*Vid. PIGNUS*.)

PIGNORIS CAPIO. (*Vid. PER PIGNORIS CAPIONEM*.)

PIGNUS, a pledge or security for a debt or demand, is derived, says Gaius,¹ from *pignus*, "*quia quæ pignori dantur, manu traduntur.*" This is one of several instances of the failure of the Roman jurists when they attempted etymological explanation of words. (*Vid. MUTUUM*.) The element of *pignus* (*pig*) is contained in the word *pa(n)g-o* and its cognate forms.

A thing is said to be pledged to a man when it is made a security to him for some debt or demand. It is called *pignus* when the possession of the thing is given to him to whom it is made a security, and *hypotheca* when it is made a security without being put in his possession.² The law relating to *pignus* and *hypotheca* was in all essentials the same. The object of the pledging is that the pledgee shall, in case of necessity, sell the pledge and pay himself his demand out of the proceeds.

A pledge may be given (*res hypotheca dari potest*) for any obligation, whether money borrowed (*mutua pecunia*), dos, in a case of buying and selling, letting and hiring, or *mandatum*; whether the obligatio is conditional or unconditional; for part of a sum of money as well as for the whole.³ Anything could be the object of pledge which could be an object of sale:⁴ it might be a thing corporeal or incorporeal, a single thing or a university of things. If a single thing was pledged, the thing with all its increase was the security, as in the case of a piece of land which was increased by alluvio. If a shop (*taverna*) was pledged, all the goods in it were pledged; and if some of them were sold and others brought in, and the pledger died, the pledgee's security was the shop and all that it contained at the time of the pledger's death.⁵ If all a man's property was pledged, the pledge comprehended also his future property, unless such property was clearly excepted.

The act of pledging required no particular form, in which respect it resembled contracts made by consensus. Nothing more was requisite to establish the validity of a pledge than proof of the agreement of the parties to it. It was called *contractus pignoratitius* when it was a case of *pignus*, and *pactum hypothecæ* when it was a case of *hypotheca*: in the former case, tradition was necessary. A man might also, by his testament, make a *pignus*. The intention of a man to pledge could in any case be deduced either from his words or from any acts which admitted of no other interpretation than an intention to pledge.

A man could only pledge a thing when he was the owner and had full power of disposing of it; but a part owner of a thing could pledge his share. A man could pledge another man's property if the other consented to the pledge at the time or afterward, but in either case this must properly be considered the pledge of the owner for the debt of another. If a man pledged a thing which was not his, and afterward became the owner of it, the pledge was valid.⁶

The amount for which a pledge was security depended on the agreement: it might be for principal and interest, or for either; or it might comprehend principal and interest, and all costs and expenses which the pledgee might be put to on account of the thing pledged. For instance, a creditor would be

entitled to his necessary expenses concerning a slave or an estate which had been pignegrated.

Pignus might be created by a judicial sentence, as, for instance, by the decree of the prætor giving to a creditor power to take possession of his debtor's property (*missio creditoris in bona debitoris*), either a single thing, or all his property, as the case might be. But the permission or command of the magistratus did not effect a pledge, unless the person actually took possession of the thing. The following are instances: the *immissio damni infecti causa* (*vid. DAMNUM INFECTUM*): *legatorum servandorum causa*, which had for its object the securing of a legacy which had been left *sub conditione* or *die*:¹ *missio ventris* in *possessionem*, when the pregnant widow was allowed to take possession of the inheritance for the protection of a posthumus. and the *missio rei servandæ causa*. The right which a person obtained by such *immissio* was called *pignus prætorium*. It was called *pignoris capio* when the prætor allowed the goods of a person to be taken who was behaving in contempt of the court, or allowed his person to be seized after a judgment given against him (*ex causa judicati*).

There was also among the Romans a *tacita hypotheca*, which existed not by consent of the parties, but by rule of law (*ipso jure*), as a consequence of certain acts or agreements, which were not acts or agreements pertaining to pledging² (*in quibus causis pignus vel hypotheca tacite contrahitur*). These *hypothecæ* were general or special. The following are instances of what were general *hypothecæ*. The *fiscus* had a general *hypotheca* in respect of its claims on the property of the subject, and on the property of its agents or officers: the husband on the property of him who promised a dos; and legatees and *fideicommissarii* in respect of their legacies or *fideicommissa*, on that portion of the hereditas of him who had to pay the legacies or *fideicommissa*. There were other cases of general *hypothecæ*.

The following are instances of special *hypothecæ*: The lessor of a *prædium urbanum* had an *hypotheca* in respect of his claims arising out of the contract of hiring on everything which the lessee brought upon the premises for constant use (*innecta et illata*). The lessor of a *prædium rusticum* had an *hypotheca* on the fruits of the farm as soon as they were collected.³ A person who lent money to repair a house had an *hypotheca* on the house and the ground on which it stood, provided the money were laid out on it. Pupilli and minores had an *hypotheca* on things which were bought with their money.

The person who had given a pledge was still the owner of the thing that was pledged. He could therefore use the thing and enjoy its fruits. But the agreement might be that the creditor should have the use or profit of the thing instead of interest, which kind of contract was called *antichresis*, or *mutual use*: and if there was no agreement as to use, the creditor could not use the thing. The pledger could also sell the thing pledged, unless there were some agreement to the contrary, but such sale did not affect the right of the pledgee. If the pledger sold a movable thing that was pignegrated without the knowledge and consent of the creditor, he was guilty of *furtum*. If the pledger, at the time of a *pignus* being given, was not the owner of the thing, but had the possession of it, he could still acquire the property of the thing by *usucapion*. (*Vid. Possessio*.)

The creditor could keep possession of a pignegrated thing till his demand was fully satisfied, and he

1. (Dig. 50, tit. 16, s. 238.)—2. (Dig. 13, tit. 7, s. 9.—*Isid.*, Orig., v., 25.—See also Cic. ad Fam., xiii., 56.)—3. (Dig. 20, tit. 1, s. 5.)—4. (Dig. 20, tit. 1, s. 9.)—5. (Dig. 20, tit. 1, s. 34.)—6. (Dig. 13, tit. 7, s. 20.—Dig. 20, tit. 2, s. 5.)

1. (Dig. 36, tit. 4.)—2. (Dig. 20, tit. 2.)—3. (Dig. 20, tit. 2, s. 7.—Dig. 19, tit. 2, s. 24.)

could maintain his right to the possession against any other person who obtained possession of the thing. He could also pledge the thing that was pledged to him. He had also the right, in case his demand was not satisfied at the time agreed on, to sell the thing and satisfy his demands out of the proceeds (*jus distrahendi sive vendendi pignus*). Gaius¹ illustrates the maxim that he who was not the owner of a thing could in some cases sell it, by the example of the pledgee selling a thing pledged; but he properly refers the act of sale to the will of the debtor, as expressed in the agreement of pledging; and thus, in legal effect, it is the debtor who sells by means of his agent, the creditor. An agreement that a pledge should be forfeited in case the demand was not paid at the time agreed on, was originally very common, but it was declared by Constantine to be illegal. (*Vid. COMMISSORIA LEX*.) In case of a sale, the creditor, according to the later law, must give the debtor notice of his intention to sell, and after such notice he must wait two years before he could legally make a sale. If anything remained over after satisfying the creditor, it was his duty to give it to the debtor; and if the price was insufficient to satisfy the creditor's demand, his debtor was still his debtor for the remainder. If no purchaser at a reasonable price could be found, the creditor might become the purchaser, but still the debtor had a right to redeem the thing within two years on condition of fully satisfying the creditor.²

If there were several creditors to whom a thing was pledged which was insufficient to satisfy them all, he whose pledge was prior in time had a preference over the rest (*potior est in pignore qui prius credidit pecuniam. et accepit hypothecam*³). There were some exceptions to this rule; for instance, when a subsequent pledgee had lent his money to save the pledged thing from destruction, he had a preference over a prior pledgee.⁴ This rule has been adopted in the English law as to money lent on ships and secured by bottomry bonds.

Certain hypothecæ, both tacitæ and founded on contract, had a preference or priority (*privilegium*) over all other claims. The fiscus had a preference in respect of its claims; the wife in respect of her dos; the lender of money for the repair or restoration of a building; a pupillus with whose money a thing had been bought. Of those hypothecæ which were founded on contract, the following were privileged: the hypothecæ of those who had lent money for the purchase of an immovable thing, or of a shop, or for the building, maintaining, or improving of a house, &c., and had contracted for an hypotheca on the thing; there was also the hypotheca which the seller of an immovable thing reserved by contract until he was paid the purchase-money. Of these claimants, the fiscus came first; then the wife in respect of her dos; and then the other privileged creditors, according to their priority in point of time.

In the case of unprivileged creditors, the general rule, as already observed, was, that priority in time gave priority of right. But an hypotheca which could be proved by a writing executed in a certain public form (*instrumentum publice confectum*), or which was proved by the signatures of three reputable persons (*instrumentum quasi publice confectum*), had a priority over all those which could not be so proved. If several hypothecæ of the same kind were of the same date, he who was in possession of the thing had a priority.

The creditor who had for any reason the priority over the rest, was entitled to be satisfied to the full

amount of his claim out of the proceeds of the thing pledged. A subsequent creditor could obtain the rights of a prior creditor in several ways. If he furnished the debtor with money to pay off the debt, on the condition of standing in his place, and the money was actually paid to the prior creditor, the subsequent creditor stepped into the place of the prior creditor. Also, if he purchased the thing on the condition that the purchase-money should go to satisfy a prior creditor, he thereby stepped into his place. A subsequent creditor could also, without the consent either of a prior creditor or of the debtor, pay off a prior creditor, and stand in his place to the amount of the sum so paid. This arrangement, however, did not affect the rights of an intermediate pledgee.¹

The creditor had an *actio hypothecaria* in respect of the pledge against every person who was in possession of it, and had not a better right than himself. This right of action existed indifferently in the case of *pignus* and *hypotheca*. A lessor had this action for the recovery of the possession of a *prædium*, when the rent was not paid according to agreement. A creditor who had a *pignus* had also a right to the *interdictum retinendæ et recuperandæ possessionis*, if he was disturbed in his possession.

The pledgee was bound to restore a *pignus* on payment of the debt for which it had been given, and up to that time he was bound to take proper care of it. On payment of the debt he might be sued in an *actio pignoratitia* by the pledger for the restoration of the thing, and for any damage that it had sustained through his neglect. The remedy of the pledgee against the pledger for his proper costs and charges in respect of the pledge, and for any *dolus* or *culpa* on the part of the pledger relating thereto, was by an *actio pignoratitia contraria*.

The law of pledges at Rome was principally founded on the *Edict*. Originally the only mode of giving security was by a transfer of the *quiritarian* ownership of the thing by *mancipatio* or in *jure cessio* if it was a *res mancipi*, on the condition of its being reconveyed when the debt was paid (*sub lege remanicipationis* or *sub fiducia*). (*Vid. FIDUCIA*.) But in this case the debtor had no security against the loss of his property. Afterward it seems that a thing was merely given to the creditor with the condition that he might sell it in case his demand was not satisfied. But, so long as the creditor could not protect his possession by legal means, this was a very insufficient security. Ultimately the prætor gave a creditor a right of action (*actio in rem*), under the name *Serviana actio*, for the recovery of the property of a *colonus* which was his security for his rent (*pro mercedibus fundi*); and this right of action was extended, under the name of *quasi Serviana* or *hypothecaria*, generally to creditors who had things *pignerated* or *hypothecated* to them.² As to the *interdictum Salvianum*, see *INTERDICTUM*.

The Roman law of pledge was gradually developed, and it would be rather difficult to show in any satisfactory way the various stages of its growth. Some of the rules of law as to pledges mentioned in this article belong to a later period.

The Roman law of pledge has many points of resemblance to the English law, but more is comprehended under the Roman law of pledge than the English law of pledge, including in that term mortgage. Many of the things comprehended in the Roman law of pledge belong to the English law of lien, and to other divisions of English law which are not included under pledge or mortgage.³

There is an English treatise entitled "The Law

1. (i., 64.)—2. (Cod., viii., tit. 34, s. 3.)—3. (Dig. 20, tit. 4, s. 11.)—4. (Dig. 20, tit. 4, s. 5, 6.)

1. (Dig. 20, tit. 4, s. 16.)—2. (Inst., tit. 6, s. 7.)—3. (Dig. 20, tit. 1, 2, 3, &c.—Cod., viii., tit. 14, 15, &c.)

of Pledges or Pawns, as it was in use among the Romans, &c., by John Ayliffe, London, 1732," which appears to contain all that can be said, but the author's method of treating the subject is not perspicuous.

PILA (*σφαῖρα*), a Ball. The game at ball (*σφαίριστική*) was one of the most favourite gymnastic exercises of the Greeks and Romans from the earliest times to the fall of the Roman Empire. As the ancients were fond of attributing the invention of all games to particular persons or occasions, we find the same to be the case with respect to the origin of this game;¹ but such statements do not deserve attention. What is more to the purpose in reference to its antiquity is, that we find it mentioned in the *Odyssey*,² where it is played by the Phæacian damsels to the sound of music, and also by two celebrated performers at the court of Alcinoüs in a most artistic manner, accompanied with dancing.

The various movements of the body required in the game of ball gave elasticity and grace to the figure, whence it was highly esteemed by the Greeks. The Athenians set so high a value on it, that they conferred upon Aristoniceus of Carystus the right of citizenship, and erected a statue to his honour, on account of his skill in this game.³ It was equally esteemed by the other states of Greece; the young Spartans, when they were leaving the condition of ephēbi, were called *σφαίρις*,⁴ probably because their chief exercise was the game at ball. Every complete gymnasium had a room (*σφαίριστήριον*, *σφαίριςτρα*) devoted to this exercise (*vid. GYMNASIUM*), where a special teacher (*σφαίριστικός*) gave instruction in the art; for it required no small skill and practice to play it well and gracefully.

The game at ball was as great a favourite with the Romans as the Greeks, and was played at Rome by persons of all ages. Augustus used to play at ball.⁵ Pliny⁶ relates how much his aged friend Spurinna exercised himself in this game for the purpose of warding off old age; and under the Empire it was generally played at by persons before taking the bath, in a room (*spharisterium*) attached to the baths for the purpose; in which we read of the *pilicæpus*, or player at tennis.⁷

The game at ball was played at in various ways: the later Greek writers mention five different modes, *οὐρανία*, *ἐπίσκυρος*, *φαινίδια*, *ἀρπαστόν*, *ἀπόρραξις*, and there were probably many other varieties. 1. *Οὐρανία* was a game in which the ball was thrown up into the air, and each of the persons who played strove to catch it before it fell to the ground.⁸ 2. *Ἐπίσκυρος*, also called *ἐξηδική* and *ἐπικονος*, was the game at football, played in much the same way as with us, by a great number of persons divided into two parties opposed to one another.⁹ This was a favourite game at Sparta, where it was played with great emulation.¹⁰ 3. *Φαινίδια*, called *ἐφερνία* by Hesychius,¹¹ was played by a number of persons, who threw the ball from one to another; but its peculiarity consisted in the person who had the ball pretending to throw it to a certain individual, and while the latter was expecting it, suddenly turning and throwing it to another. Various etymologies of this word are given by the grammarians.¹² 4. *Ἀρπαστόν*, which was also played at by the Romans, is spoken of under *HARPASTUM*. 5. *Ἀπόρραξις* was a game in which the player threw the ball to the ground with such force as

to cause it to rebound, when he struck it down again with the palm of his hand, and so went on doing many times: the number of times was counted.¹ We learn from Plato,² that in one game of ball, played at by boys, though we do not know what kind it was, the boy who was conquered was called ass (*ὄνος*), and the one who conquered was named king (*βασιλεύς*).

Among the Romans, the game at ball was also played at in various ways. Pila was used in a general sense for any kind of ball; but the balls among the Romans seem to have been of three kinds: the *pila* in its narrower sense, a small ball; the *foliis*, a great ball filled with air (*vid. FOLLIS*); and the *pagania*, of which we know scarcely anything, as it is only mentioned in two passages by Martial,³ but from the latter of which we may conclude that it was smaller than the *foliis* and larger than the *pila*. Most of the games at ball among the Romans seem to have been played at with the *pila* or small ball. One of the simplest modes of playing the ball, where two persons standing opposite to one another threw the ball from one to the other, was called *datatim ludere*.⁴ But the most favourite game at ball seems to have been the *trigon*, or *pila trigonalis*, which was played at by three persons, who stood in the form of a triangle, *ἐν τριγώνῳ*. We have no particulars respecting it, but we are told that skilful players prided themselves upon catching and throwing the ball with their left hand.⁵

The ancient physicians prescribed the game at ball, as well as other kinds of exercise, to their patients; Antyllus⁶ gives some interesting information on this subject.

The persons playing with the *pila* or small ball in the baths of Titus,⁷ but it is difficult to say what particular kind of game they are playing at. Three of the players have two balls each.⁸

PILA. (*vid. MORTARIUM*.)

PILA'NI. (*vid. ARMY, ROMAN*, p. 103.)

PILENTUM, a splendid four-wheeled carriage, furnished with soft cushions, which conveyed the Roman matrons in sacred processions, and in going to the Circensian and other games.⁹ This distinction was granted to them by the senate on account of their generosity in giving their gold and jewels on a particular occasion for the service of the state.¹⁰ The vestal virgins were conveyed in the same manner.¹¹ The *pilentum* was probably very like the *HARMAMAXA* and *CARPENTUM*, but open at the sides, so that those who sat in it might both see and be seen.

PILEUS or PILEUM,¹² *pilea virorum sunt*,¹²

dim. PILE'OLUS or PILE'OLUM¹ (πίλος, dim. πίλιον, secund dim. πιλιδιον; πίλημα, πιλωτόν); any piece of felt; more especially, a scullcap of felt, a hat.

There seems no reason to doubt that felting (ἡ πηλτική²) is a more ancient invention than weaving (vid. TELA), nor that both of these arts came into Europe from Asia.

From the Greeks, who were acquainted with this article as early as the age of Homer³ and Hesiod,⁴ the use of felt passed, together with its name, to the Romans. Among them the employment of it was always far less extended than among the Greeks. Nevertheless, Pliny, in one sentence, "*Lana et per se coacta vestem faciunt*," gives a very exact account of the process of felting.⁵ A Latin sepulchral inscription⁶ mentions "a manufacturer of woollen felt" (*lanarius coactiliarius*), at the same time indicating that he was not a native of Italy (*Lariseus*).

The principal use of felt among the Greeks and Romans was to make coverings of the head for the male sex, and the most common kind was a simple scullcap. It was often more elevated, though still round at the top. In this shape it appears on coins, especially on those of Sparta, or such as exhibit the symbols of the Dioscuri; and it is thus represented, with that addition on its summit which distinguished the Roman flamines and Salii, in three figures of the woodcut to the article APEx. But the apex, according to Dionysius of Halicarnassus, was sometimes conical; and conical or pointed caps were certainly very common. One use of this form probably was to discharge the rain and wet, as when they were worn by fishermen⁷ and by mariners. In the case of agricultural labourers,⁸ the advantages of this particular shape are less obvious, and, accordingly, the bonnet worn by the ploughman in the woodcut, page 225, is very different from that of the reaper at page 429. A remarkable specimen of the pointed cap is that worn by the Desultor at page 350. Private persons also among the Romans, and still more frequently among the Greeks, availed themselves of the comforts of the felt cap on a journey, in sickness, or in case of unusual exposure.⁹ On returning home

from a party, a person sometimes carried his cap and slippers under his arm.¹

In the Greek and Roman mythology, caps were symbolically assigned in reference to the customs above related. The painter Nicomachus first represented Ulysses in a cap, no doubt to indicate his seafaring life.² The preceding woodcut shows him clothed in the Exomis, and in the act of offering wine to the Cyclops.³ He here wears the round cap, but more commonly both he and the boatman Charon (see woodcut, p. 426) have it pointed. Vulcan (see woodcut, p. 610) and Dædalus wear the caps of common artificers.

A cap of very frequent occurrence in the works of ancient art is that now generally known by the name of "the Phrygian bonnet." The Mysian pileus, mentioned by Aristophanes,⁴ must have been one of this kind. For we find it continually introduced as the characteristic symbol of Asiatic life in paintings and sculptures of Priam (see woodcut, p. 750) and Mithras (woodcut, p. 15), and, in short, in all the representations, not only of Trojans and Phrygians, but of Amazons (woodcut, p. 765), and of all the inhabitants of Asia Minor, and even of nations dwelling still farther east. The representations of this Phrygian or Mysian cap in sculptured marble show that it was made of a strong and stiff material, and of a conical form, though bent forward and downward. By some Asiatic nations it was worn erect, as by the Sacæ, whose stiff peaked caps Herodotus describes under the name of *κρυβάτια*. The form of those worn by the Armenians (*πιλοφόροι Ἀρμενιοί*)⁵ is shown on various coins, which were struck in the reign of Verus on occasion of the successes of the Roman army in Armenia, A.D. 161. It is sometimes erect, but sometimes bent downward or truncated. The same variety may be observed in the Dacian caps as exhibited on the coins of Trajan, struck A.D. 103. (Compare the woodcut, p. 378.) The truncated conical hat is most distinctly seen on two of the Sarmatians in the group at page 171. Strabo observes that caps of felt were necessary in Media on account of the cold.⁶ He calls the Persian cap *πίλημα πυργωτόν*, i. e., "felt shaped like a tower."⁷

Another singular variety of the Asiatic pileus was that of the Lycians, which was surrounded with feathers,⁸ and must have resembled the head-dresses of some of the North American Indians.

Among the Romans the cap of felt was the emblem of liberty. When a slave obtained his freedom, he had his head shaven, and wore instead of his hair an undyed pileus (*pileum leucόν*).⁹ This change of attire took place in the Temple of Feronia, who was the goddess of freedmen.¹⁰ The figure of Liberty on some of the coins of Antoninus Pius, struck A.D. 145, holds this cap in the right hand.

In contradistinction to the various forms of the felt cap now described, we have to consider others more nearly corresponding with the hats worn by Europeans in modern times. The Greek word *πέτασος*, dim. *πετάσιον*, derived from *πετάσσειν*, "to expand," and adopted by the Latins in the form *petasus*, dim. *petasunculus*, well expressed the distinctive shape of these hats. What was taken from their height was added to their width. Those already described had no brim: the petasus of every variety had a brim, which was either exactly or nearly circular, and which varied greatly in its

(xi., p. 563, ed. Sieb.)—7. (xv., p. 231.)—8. (Herod., ii., 92.)—9. (Diod. Sic., Exc. Leg., xxii., p. 625, ed. Wess.—Plant., Amphit., I., i., 306.—Persins, v., 82.)—10. (Servius in Virg., Æn., viii., 564.)

width. In some cases it is a circular disk without any crown at all, and often there is only a depression or slight concavity in this disk fitted to the top of the head. Of this a beautiful example is presented in a recumbent statue of Eodymion, habited as a hunter, and sleeping on his scarf. It is to be added that this statue belongs to the Townley Collection in the British Museum, and shows the mode of wearing the petasus tied under the chin. In other instances it is tied behind the neck instead of being tied before it. (See the next woodcut.) Very frequently we observe a boss on the top of the petasus, in the situation in which it appears in the woodcuts, pages 62, 227, 332. In these woodcuts, and in that here introduced, the brim of the petasus is surmounted by a crown. Frequently the crown is in the form of a scullcap; we also find it surrounded by a very narrow brim. The Greek petasus, in its most common form, agreed with the cheapest hats of undyed felt now made in England. On the heads of rustics and artificers in our streets and lanes, we often see forms the exact counterpart of those which we most admire in the works of ancient art. The petasus is still also commonly worn by agricultural labourers in Greece and Asia Minor. In ancient times it was preferred to the scullcap as a protection from the sun,¹ and on this account Caligula permitted the Roman senators to wear it at the theatres.² It was used by shepherds,³ hunters, and travellers.⁴ The annexed woodcut is from a fictile vase belonging to Mr.

Hope,⁵ and it represents a Greek soldier in his hat and blanket. (Vid. PALLIUM.) The ordinary dress of the Athenian ephebi, well exhibited in the Panathenaic frieze of the Parthenon, now preserved in the British Museum, was the hat and scarf.⁶ (Vid. CHLAMY.) Among imaginary beings, the same costume was commonly attributed to Mercury,⁷ and sometimes to the Dioscuri.

Ancient authors mention three varieties of the petasus, the Thessalian,⁸ Arcadian,⁹ and the Lacedaemonian,¹⁰ but they do not say in what the difference consisted. In like manner, it is by no means clear in what respects the CAUSIA differed from the petasus,

although they are distinctly opposed to one another by a writer in Athenaeus.¹ Moreover, in the later Greek authors we find *πίλος* used to denote a hat of other materials besides felt.²

On the use of felt in covering the feet, see *Udo*.

Felt was likewise used for the lining of helmets (Vid. GALEA.) Being generally thicker than common cloth, it presented a more effectual obstacle to missile weapons. Hence, when the soldiers under Julius Caesar were much annoyed by Pompey's archers, they made shirts or other coverings of felt, and put them on for their defence.³ Thucydides refers to the use of similar means to protect the body from arrows;⁴ and even in besieging and defending cities, felt was used, together with hides and sackcloth, to cover the wooden towers and military engines.⁵

PILI-CREPUS. (Vid. PILA.)

*PILOS (*πίλος*), most probably, according to Adams, the Gall of the Oak, or *Cynophis nidus Gallia dir-tus* of the Edinburgh Dispensatory.⁶

PILUM. (Vid. HASTA, p. 489.)

PINACOTHECA (*πίναξ,θήκη*), a Picture-gallery. Marcellus, after the capture of Syracuse, first displayed the works of Greek painters and sculptors to his countrymen, whose taste for the fine arts was gradually matured by the conquests of L. Scipio, Flamininus, and L. Paullus, and grew into a passion after the spoils of Achaia had been transported by Mummius to Rome. Objects of this description were at first employed exclusively for the decoration of temples and places of public resort, but private collections were soon formed; and, towards the close of the Republic, we find that in the houses of the more opulent a room was devoted to the reception of paintings and statues.⁷ In the time of Augustus, Vitruvius includes the pinacotheca among the ordinary apartments of a complete mansion, and gives directions that it should be of ample size and facing the north, in order that the light might be equable and not too strong.⁸

*PINNA (*πίννα*), a species of bivalved shellfish, of the muscle kind, the same with our pearl muscle. It is referable to the genus *Pinna*, L. The ancient stories respecting the *Pinna*, and its companion the small crab, are purely imaginary.⁹ (Vid. PINNOPHYLAX.)

*PINNOPHYLAX (*πιννοφύλαξ* or *πιννοτήρης*), a minute species of Crab, the *Cancer Pinnolotes*, L., found in the shell of the *πίννα*, and supposed by the ancients to act as a watch or guard for the latter. Hence its Greek name of *πιννοφύλαξ*, from *πίννα* and *φύλαξ*, "a guard," and its other Greek appellation of *πιννοτήρης*, from *πίννα* and *τηρέω*, "to preserve" or "keep." The ancients believed that the Pinnophylax kept guard by the mouth of the *Pinna* as it lay open, and, when any small fish came near, it slightly bit, as a signal, the inner parts of the *Pinna*, passing within at the same time; the *Pinna* thereupon immediately closed its mouth, and banqueted along with the Pinnophylax upon the captive. Cuvier regards the whole story as fabulous. Pennant calls the *Pinnophylax* the Pea-crab, *Cancer pisum*.¹⁰

*PINUS (*πέικη*), the Pine-tree. "The species of *Pines* are so indistinctly marked in the ancient works that they cannot now be recognised. Sprengel, after changing his mind several times on the subject, comes at last to the conclusion that the

(Guerin, Dict. d'Hist. Nat., s. v. Pinnothère, vol. xiii., p. 606.)—10. (Id. ib.)

πέυκη is the *Pinus cembra*, or Siberian Stone Pine. Stackhouse hesitates between it and the *P. pinea*, or Stone Pine. Its fruit is called *σπρόβιλοι*.¹ Sibthorp speaks as fellows of the *Pinus maritima*, to which he gives the modern Greek name of *πέυκος*: "This is one of the most useful trees in Greece. It furnishes a resin (*ῥητίνη*), tar, and pitch (*πίσσα*), all of considerable importance for economical purposes. Throughout Attica, the wine is preserved from becoming acid by means of the resin, which is employed in the proportion of an oke and a half to 20 okes of wine. The tar and pitch for ship-building are taken from this tree and the *πίτυς*, or *Pinus pinea*. The resinous parts of the wood of the *πέυκος* are cut into small pieces, and serve for candles, called in modern Greek *δάδια* (a corruption of the ancient *δάδες*). The cones (*κόννοι*) are sometimes put into the wine barrels." A practice very general throughout Greece, but which is particularly prevalent at Athens, may perhaps, in some degree, account for the connexion of the fir-cone (surmounting the thyrsus) with the worship of Bacchus. Incisions are made into the fir-trees for the purpose of obtaining the turpentine, which distils copiously from the wound. This juice is mixed with the new wine in large quantities; the Greeks supposing that it would be impossible to keep it any length of time without this mixture. The wine has, in consequence, a very peculiar taste, but is by no means unpleasant after a little use. This, as we learn from Plutarch, was an ancient custom also: the Athenians, therefore, might naturally enough have placed the fir-cone in the hands of Bacchus.¹ (Vid. PITYS.)

*PIPER. (Vid. PEPERI.)

PISCATORII LUDI. (Vid. LUDI PISCATORII.)

PISCINA. (Vid. BATHS, p. 148.)

*PISSASPHALTOS (*πισσάσφαλτος*), probably the *Maltha*, or Mineral Pitch of modern mineralogists. Cleaveland says of it: "The ancients are reported to have employed it as a cement in the construction of walls and buildings."²

*PISTAC'IA (*πιστάκια*), the Pistachio-nut-tree, or *Pistachia vera*.³ "The Pistachio nut is very celebrated," says Adams, "in the East and in Sicily. Galen says that it possesses a certain degree of bitterness and astringency, and that it proves useful in obstructions of the liver, but that it affords little nourishment. He adds that it is neither beneficial nor injurious to the stomach. Simeon Seth remarks that the moderns looked upon Pistacia as stomachic. Averrhoes speaks highly of them. Rhases says they are of a hotter nature than almonds. Theophrastus describes the Pistachio-tree as a species of turpentine, and it is now acknowledged as such."

PISTILLUM. (Vid. MORTARIUM.)

PISTOR (*ἄρτοποιός*), a Baker, from *pinsere*, to pound, since corn was pounded in mortars before the invention of mills. (Vid. MOLA.) At Rome bread was originally made at home by the women of the house; and there were no persons at Rome who made baking a trade, or any slaves specially kept for this purpose in private houses, till B.C. 173.⁴ In Varro's time, however, good bakers were highly prized, and great sums were paid for slaves who excelled in this art.⁵ The name was not confined to those who made bread only, but was also given to pastry-cooks and confectioners, in which case, however, they were usually called *pistores dulciarii* or *candidarii*.⁶ The bakers at Rome, like most other tradespeople, formed a collegium.⁷

Bread was often baked in moulds called *artopie*, and the leaves thus baked were termed *artopitici*. In one of the bakehouses discovered at Pompeii, several leaves have been found apparently baked in moulds, which may therefore be regarded as *artopitici*; they are represented below. They are flat, and about eight inches in diameter.

Bread was not generally made at home at Athens, but was sold in the market-place chiefly by women called *ἄρτοπώλιδες*.² These women seem to have been what the fish-women of London are at present; they excelled in abuse, whence Aristophanes³ says, *λοιδορεῖσθαι ὥσπερ ἄρτοπώλιδας*.⁴

PISTRINUM. (Vid. MOLA, MORTARIUM.)

*PITHE'CUS. (Vid. SIMIA.)

*PITYOCAMPE (*πιτυοκάμπη*), the Caterpillar of the pine-tree. "Sprengel remarks that there are several species of caterpillars which infest pines, such as the *Liparis monacha*, *Lasiocampi pini*, &c. They are treated of as being deadly poisons by Dioscorides and the other writers on Toxicology."⁵

*PITYS (*πίτυς*), the *Pinus pinea*, or Stone Pine. "Stackhouse," says Adams, "complains of the difficulty of distinguishing the *πέυκη* from the *πίτυς* of Theophrastus. Both Sprengel and Stackhouse think they see traces of the Larch, or *Pinus larix*, in the *πίτυς* φθειροφόρος, but I agree with Schneider that there are no certain grounds for this opinion. Sprengel sets down the *πίτυς* of Dioscorides as being the *Pinus pinea*, or Stone Pine." According to Cérar, the *πίτυς* is called in modern Greek *κοκκωνάρια*, from the fruit *κοκκωνάριον*, anciently called *σπρόβιλος*. *Κοκκωνή* also was an ancient name. The kernels of the Stone Pine are brought to table in Turkey. According to Russell, they are very common in the kitchens of Aleppo. The seeds of the Stone Pine are still collected with great industry in Elis, and form an object of exportation to Zante and Cephallonia, as well as other places. Both the *πίτυς* and *πέυκη* are much used for ship-building. Their timber is said to be much harder and tougher than that of our northern firs, and, consequently, more lasting.⁶

PLETORIA LEX. (Vid. CURATOR.)

PLAGA. (Vid. RETE.)

PLAGIARIUS. (Vid. PLAGIUM.)

PLAGIUM. This offence was the subject of a *Fabia lex*, which is mentioned by Cicero,⁷ and is assigned to the consulship of Quintus Fabius and M. Claudius Marcellus, B.C. 183. The chief provisions of the *lex* are collected from the Digest:⁸ "If a free-man concealed, kept confined, or knowingly, with *dolus malus*, purchased an ingenuus or libertinus against his will, or participated in any such acts; or if he persuaded another man's male or female slave to run away from a master or mistress, or without the consent or knowledge of the master

1 (Theophr., H. P., i., 3.—Dioscor., i., 86.—Adams, Append., s. v.—Walpole's Memoirs, vol. i., 235, 239.)—2 (Dioscor., i., 100.—Adams, Append., s. v.)—3 (Nicand., Phæric., 891.—Adams, Comment. in Paul. Ægin., 107.)—4 (Plin., H. N., xviii., 11, s. 28.)—5 (Gell., xv., 19.)—6 (Mart., xvi., 222.—Orelli, Inser., n. 4263.)—7 (Dig. 3, tit. 4, s. 1.—Dig. 27, tit. 1, s. 46.)

1 (Plin., H. N., xviii., 11, s. 27, 28.—Plaut., Aulul., ii., 9, 4.)—2 (Compare Aristoph., Vesp., 1389, &c.)—3 (Id., Ran., 656.)—4 (Geckler, Charickia, vol. i., p. 264.)—5 (Adams, Append., s. v.)—6 (Theophr., H. P., iii., 7.—Id., c. Pl., i., 9.—Dioscor., i., 86.—Adams, Append., s. v.)—7 (Pro Rabirio, c. 3.)—8 (48, tit. 14, s. 6.)

or mistress concealed, kept confined, or purchased knowingly, with *dolus malus*, such male or female slave, or participated in any such acts, he was liable to the penalties of the *lex Fabia*.¹ The penalty of the *lex* was pecuniary; but this fell into disuse, and persons who offended against the *lex* were punished according to the nature of their offence, and were generally condemned to the mines. A *senatus consultum ad legem Fabiam* did not allow a master to give or sell a runaway slave, which was technically called "*fugam vendere*;" but the provision did not apply to a slave who was merely absent, nor to the case of a runaway slave when the master had commissioned any one to go after him and sell him: it was the object of the provision to encourage the recovery of runaway slaves. The name of the *senatus consultum* by which the *lex Fabia* was amended does not appear. The word *plagium* is said to come from the Greek *πλάγιος*, oblique, indirect, *dolosus*. He who committed *plagium* was *plagiarius*, a word which Martial² applies to a person who falsely gave himself out as the author of a book; and in this sense the word has come into common use in our language.³

**PLAT'ANUS* (*πλάτανος*), the Plane-tree. "There can be no doubt," remarks Adams, "that the *πλάτανος* of Theophrastus, Dioscorides, and others, is the *Platanus Orientalis*, or Eastern Plane-tree. Its fruit forms into spherical balls, which were called *σφαίρια* by the Greeks, and *pilulæ* by the Latins." Another name for this tree was *πλατάνιστος*. Both appellations are derived from *πλατῆς*, "*broad*," as referring to the spreading branches and broad leaves of the Plane-tree.⁴

PLAUSTRUM or *PLOSTRUM*, *dim.* *PLOSTEL-LUM* (*ῥάμαξα*, *dim.* *ῥάμαξίς*), a Cart or Wagon. This vehicle had commonly two wheels, but sometimes four, and it was then called the *plaustrum majus*. The invention of four-wheeled wagons is attributed to the Phrygians.⁵

Besides the wheels and axle, the *plaustrum* consisted of a strong pole (*temo*), to the hinder part of which was fastened a table of wooden planks. The blocks of stone, or other things to be carried, were either laid upon this table without any other support, or an additional security was obtained by the use either of boards at the sides (*ὑπερπρία*), or of a large wicker basket tied upon the cart (*περίβυσ*).⁶ The annexed woodcut, taken from a bas-relief at Rome, exhibits a cart, the body of which is supplied by a basket. Similar vehicles are still used in many parts of Europe, being employed more especially to carry charcoal.

In many cases, though not universally, the wheels were fastened to the axle, which moved, as in our children's carts, within wooden rings adapted for its reception, and fastened to the body. These rings were called in Greek *ῥάμαξοπodes*, in Latin *arbusculæ*. The parts of the axis which revolved within them were sometimes cased with iron.⁷

The commonest kind of cart-wheel was that called *tympanum*, "the drum," from its resemblance to the musical instrument of the same name.¹ It was nearly a foot in thickness, and was made either by sawing the trunk of a tree across in a horizontal direction, or by nailing together boards of the requisite shape and size. It is exemplified in the preceding woodcut, and in the sculptures on the arch of Septimius Severus at Rome. Although these wheels were excellent for keeping the roads in repair, and did not cut up the fields, yet they rendered it necessary to take a long circuit in turning. They advanced slowly.² They also made a loud creaking, which was heard to a great distance (*stridentia plaustra*,³ *gementia*).⁴ Their rude construction made them liable to be overturned with their load of stone, timber, manure, or skins of wine,⁵ whence the Emperor Hadrian prohibited heavily-loaded wagons from entering the city of Rome.⁶ The wagoner was sometimes required to aid the team with his shoulder. Accidents of this kind gave origin to the proverb "*Plaustrum perculi*," meaning, "I have had a misfortune."⁷ Carts of this description, having solid wheels without spokes, are still used in Greece⁸ and in some parts of Asia.⁹

PLEBEII *LUDI*. (*Vid. LUDI PLEBEII*.)

PLEBES or *PLEBS*, *PLEBEII*. This word contains the same root as *im-pleo*, *com-pleo*, &c., and is, therefore, etymologically connected with *πληθος*, a term which was applied to the plebeians by the more correct Greek writers on Roman history, while others wrongly called them *ἄσμος* or *οὐ δημοτικοί*.

The plebeians were the body of commons or the commonalty of Rome, and thus constituted one of the two great elements of which the Roman nation consisted, and which has given to the earlier periods of Roman history its peculiar character and interest. Before the time of Niebuhr, the most inconsistent notions were entertained by scholars with regard to the plebeians and their relations to the patricians; and it is one of his peculiar merits to have pointed out the real position which they occupied in the history of Rome.

The ancients themselves do not agree respecting the time when the plebeians began to form a part of the Roman population. Dionysius and Livy represent them as having formed a part of the Romans as early as the time of Romulus, and seem to consider them as the low multitude of outcasts who flocked to Rome at the time when Romulus opened the asylum.¹⁰ If there is any truth at all in these accounts of the plebeians, we can only conceive them to have been the original inhabitants of the districts occupied by the new settlers (Romans), who, after their territory was conquered, were kept in that state of submission in which conquered nations were so frequently held in early times. There are also some other statements referring to such an early existence of the plebeians; for the clients, in the time of Romulus, are said to have been formed out of the plebeians.¹¹ In the early times of Rome, the position of a client was in many respects undoubtedly far more favourable than that of a plebeian, and it is not improbable that some of the plebeians may for this reason have entered into the relation of clientela to some patricians, and have given up the rights which they had as free plebeians; and occurrences of this kind may have given

rise to the story mentioned by the writers just referred to.

Whatever may be thought of the existence of plebeians at Rome in the earliest times, their number, at all events, cannot have been very great. The time when they first appear as a distinct class of Roman citizens, in contradistinction to the patricians, is in the reign of Tullus Hostilius. Alba, the head of the Latin confederacy, was in his reign taken by the Romans and razed to the ground. The most distinguished of its inhabitants were transplanted to Rome and received among the patricians; but the great bulk of Alban citizens, who were likewise transferred to Rome, received settlements on the Cælian Hill, and were kept in a state of submission to the *populus Romanus*, or the patricians. This new population of Rome, which in number is said to have been equal to the old inhabitants of the city, or the patricians, were the plebeians. They were Latins, and, consequently, of the same blood as the Ramnes, the noblest of the three patrician tribes.¹ After the conquest of Alba, Rome, in the reign of Ancus Marcius, acquired possession of a considerable extent of country, containing a number of dependant Latin towns, as Medullia, Fidene, Politorium, Tellenæ, and Ficana. Great numbers of the inhabitants of these towns were again transplanted to Rome, and incorporated with the plebeians already settled there, and the Aventine was assigned to them as their habitation.² Some portions of the land which these new citizens had possessed were given back to them by the Romans, so that they remained free land-owners as much as the conquerors themselves, and thus were distinct from the clients.

The order of plebeians, or the commonalty, which had thus been formed, and which far exceeded the *populus* in number, lived partly in Rome itself in the districts above mentioned, and partly on their former estates in the country subject to Rome, in towns, villages, or scattered farms. The plebeians were citizens, but not *optimo jure*; they were perfectly free from the patricians, and were neither contained in the three tribes, nor in the *curiæ*, nor in the patrician *gentes*. They were, consequently, excluded from the *comitia*, the senate, and all civil and priestly offices of the state. Dionysius is greatly mistaken in stating that all the new citizens were distributed among the patrician *curiæ*, and under this error he labours throughout his history, for he conceives the patricians and plebeians as having been united in the *comitia curiata*.³ That the plebeians were not contained in the *curiæ* is evident from the following facts: Dionysius himself⁴ calls the *curiæ* a patrician assembly; Livy⁵ speaks of a *lex curiata*, which was made without any co-operation on the part of the plebeians; and those who confirm the election of kings or magistrates and confer the *imperium*, are in some passages called patricians, and in others *curiæ*,⁶ which shows that both were synonyms. That the plebeians did not belong to the patrician *gentes*, is expressly stated by Livy.⁷ The only point of contact between the two estates was the army; for, after the inhabitants of Alba had been transplanted to Rome, Tullus Hostilius doubled the number of legions of the Roman army.⁸ Livy also states that Tullus Hostilius formed ten new *turmæ* of equites; but whether these new *turmæ* consisted of Albans, as Livy says, or whether they were taken from the three old tribes, as Götting⁹ thinks, is only matter

of speculation. The plebeians were thus obliged to fight and shed their blood in the defence and support of their new fellow-citizens, without being allowed to share any of their rights or privileges, and without even the right of intermarriage (*connubium*). In all judicial matters they were entirely at the mercy of the patricians, and had no right of appeal against any unjust sentence, though they were not, like the clients, bound to have a patronus. They continued to have their own *sacra* which they had before the conquest, but they were regulated by the patrician pontiffs.¹ Lastly, they were free land-owners, and had their own *gentes*. That a plebeian, when married to a plebeian woman, had the *patria potestas* over his children, and that, if he belonged to a plebeian gens, he shared in the *jura* and *sacra gentilitia* of that gens, are points which appear to be self-evident.

The population of the Roman state thus consisted of two opposite elements; a ruling class or an aristocracy, and the commonalty, which, though of the same stock as the noblest among the rulers, and exceeding them in numbers, yet enjoyed none of the rights which might enable them to take a part in the management of public affairs, religious or civil. Their citizenship resembled the relation of aliens to a state, in which they are merely tolerated on condition of performing certain services, and they are, in fact, sometimes called *peregrini*. While the order of the patricians was perfectly organized by its division into *curiæ*, *decuriæ*, and *gentes*, the commonalty had no such organization, except its division into *gentes*; its relations to the patricians were in no way defined, and it consequently had no means of protecting itself against any arbitrary proceedings of the rulers. That such a state of things could not last, is a truth which must have been felt by every one who was not blinded by his own selfishness and love of dominion. Tarquinius Priscus was the first who conceived the idea of placing the plebeians on a footing of equality with the old burghers, by dividing them into tribes, which he intended to call after his own name and those of his friends.² But this noble plan was frustrated by the opposition of the augur Attus Navius, who probably acted the part of a representative of the patricians. All that Tarquinius could do was to effect the admission of the noblest plebeian families into the three old tribes, who were distinguished from the old patrician families by the names of Ramnes, Tities, and Luceres *secundi*, and their *gentes* are sometimes distinguished by the epithet *minores*, as they entered into the same relation in which the Luceres had been to the first two tribes before the time of Tarquinius.³ This measure, although an advantage to the most distinguished plebeian families, did not benefit the plebeians as an order, for the new patricians must have become alienated from the commonalty, while the patricians, as a body, were considerably strengthened by the accession of the new families.

It was reserved to his successor, Servius Tullius, to give to the commonalty a regular internal organization, and to determine their relations to the patricians. The intention of this king was not to upset the old constitution, but only to enlarge it, so as to render it capable of receiving within itself the new elements of the state. He first divided the city into four, and then the subject country around, which was inhabited by plebeians, into twenty-six regions or local tribes,⁴ and in these regions he assigned lots of land to those plebeians who

were yet without landed property. Niebuhr¹ thinks that these allotments consisted of seven jugera each, an opinion which is controverted by Götting.² As regards the four city tribes, it should be observed that the Aventine and the Capitol were not contained in them; the former forming a part of the country tribes, and the latter being, as it were, the city of the gods.³ The twenty-six country tribes are not mentioned by Livy in his account of the Servian constitution, and where he first speaks of the whole number of tribes,⁴ he only mentions twenty-one instead of thirty. Niebuhr⁵ is undoubtedly right in reconciling this number with the thirty tribes of Servius, by the supposition that in the war with Porsenna Rome lost one third of her territory, i. e., ten tribes, so that there were only twenty left. As, therefore, after the immigration of the Claudii and their clients, a new tribe was formed,⁶ Livy is right in only mentioning twenty-one tribes. These thirty Servian tribes did not, at least originally, contain any patricians; and even after the Claudii had come to Rome, it is not necessary to suppose that the gens Claudia, which was raised to the rank of patrician, was contained in the new tribe, but the new tribe probably consisted of their clients, to whom lands were assigned beyond the Anio.⁷ (Compare TRIBUS.) Some of the clients of the patricians, however, were probably contained in the Servian tribes.⁸ Each tribe had its præfect, called tribunus.⁹ (Vid. TRIBUNUS.) The tribes had also their own sacra, festivals, and meetings (*comitia tributa*), which were convoked by their tribunes.

This division into tribes, with tribunes at their heads, was no more than an internal organization of the plebeians, analogous to the division of the patricians into thirty curiæ, without conferring upon them the right to interfere in any way in the management of public affairs, or in the elections, which were left entirely to the senate and the curiæ. These rights, however, they obtained by another regulation of Servius Tullius, which was made wholly independent of the thirty tribes. For this purpose he instituted a census, and divided the whole body of Roman citizens, plebeians as well as patricians, into five classes, according to the amount of their property. Taxation and the military duties were arranged according to these classes in such a manner that the heavier burdens fell upon the wealthier classes. The whole body of citizens thus divided was formed into a great national assembly called *comitatus maximus* or *comitia centuriata*. (Vid. COMITIA, p. 295, &c.) In this assembly the plebeians now met the patricians apparently on a footing of equality, but the votes were distributed in such a way that it was always in the power of the wealthiest classes, to which the patricians naturally belonged, to decide a question before it was put to the vote of the poorer classes. A great number of such noble plebeian families as, after the subjugation of the Latin towns, had not been admitted into the curiæ by Tarquinius Priscus, were now constituted by Servius into a number of equites, with twelve suffragia in the *comitia centuriata*. (Vid. EQUITES, p. 414, &c.) Lastly, Servius Tullius is said to have regulated the commercium between the two orders by about fifty laws¹⁰ (*Νόμους τοὺς μὲν συναλλακτικούς καὶ τοὺς περὶ τῶν ἀδικημάτων*).

In this constitution, the plebeians, as such, did not obtain admission to the senate, nor to the highest magistracy, nor to any of the priestly offices. To all these offices the patricians alone thought

themselves entitled by divine right. The plebeians also continued to be excluded from occupying any portion of the public land, which as yet was only possessed by the patricians, and were only allowed to keep their cattle upon the common pasture, for which they had to pay to the state a certain sum. It is true that by the acquisition of wealth plebeians might become members of the first property class, and that thus their votes in the *comitia* might become of the same weight as that of the patricians, but the possibility of acquiring such wealth was diminished by their being excluded from the use of the *ager publicus*. Niebuhr¹ infers from the nature of the Servian constitution that it must have granted to the plebeians greater advantages than those mentioned by our historians: he conceives that it gave to them the right of appeal to their own assembly, and to pass sentence upon such as grossly infringed their liberties; in short, that the Servian constitution placed them on the same footing in regard to the patricians as was afterward permanently effected by the laws of C. Licinius and L. Sextius. There is no doubt that such might and should have been the case, but the arguments which he brings forward in support of his hypothesis do not appear to be convincing, as has been pointed out by Götting.² All that we know for certain is, that Servius gave to the body of the plebeians an internal organization by the establishment of the thirty plebeian tribes, and that in the *comitia centuriata* he placed them, at least apparently, on a footing of equality with the *populus*. Whether he intended to do more, or would have done more if it had been in his power, is a different question. But facts like those stated above were sufficient, at a later period, when the benefits actually conferred upon the plebeians were taken away from them, to make the grateful commonalty look upon that king as its great patron, and even regard him as having granted all those rights which subsequently they acquired after many years of hard struggle. Thus what he actually had done was exaggerated to what he possibly might have done or would have wished to do. In this light we have to regard the story that he intended to lay down his royal dignity, and to establish the government of two consuls, one of whom was to have been a plebeian.

During the reign of the last king, the plebeians not only lost all they had gained by the legislation of his predecessor,³ but the tyrant also compelled them to work like slaves in his great architectural works, such as the *cloacæ* and the *circus*.

On the establishment of the Republic, the *comitia centuriata*, and perhaps the whole constitution, such as it had been before the reign of the last Tarquinius, were restored, so that the patricians alone continued to be eligible to all the public offices.⁴ That the *comitia centuriata* were restored immediately after the banishment of the Tarquins, may be inferred from the words of Livy,⁵ who says that the first consuls were elected *ex commentariis Servii Tullii*, for these words probably refer to the *comitia centuriata*, in which, according to the regulations of King Servius, the elections were to be held. There was still no connubium between the two orders, and the *populus* was still, in every respect, distinct from the plebs. Considering the fact that the patricians reserved for themselves all the powers which had formerly been concentrated in the king, and that these powers were now given to a number of patrician officers, we must admit that the plebeians, at the commencement of the Republic, were worse off than if the kingly rule had contin-

aed under the institutions introduced by Servius. They, however, soon gained some advantages. The vacancies which had occurred in the senate during the reign of the last king were filled up with the most distinguished among the plebeian equites (*patres conscripti*)¹ (*vid. SENATUS*), and Valerius Publicola carried a number of *leges* by which the relations between patricians and plebeians were more accurately defined than they had hitherto been, and which also afforded some protection to the plebeians. (*vid. VALERIE LEGES*.) Both orders acted in common only in the army and the *comitia centuriata*, in which, however, the patricians exercised an overwhelming influence, through the number of their clients who voted in them; and, in addition to this, all decrees of the centuries still required the sanction of the *curiæ*. Notwithstanding these disadvantages, the plebeians occupied a position which might soon have enabled them to rise to a perfect equality with the patricians, had not a great calamity thrown them back, and put an end to their political progress. This was the unfortunate war with Porsenna, in which a great number (a third) of the plebeians lost their estates, became impoverished, and perhaps, for a time, subject to the Etruscans.

In the mean while, the patricians, not satisfied with the exercise of all the authority in the state, appear not seldom to have encroached upon the rights granted to the plebeians by the Valerian laws.² Such proceedings, and the merciless harshness and oppression on the part of the rulers, could not fail to rouse the indignation and call forth the resistance of the plebeians, who gradually became convinced that it was impossible to retain what they possessed without acquiring more. The struggle which thus originated between the two parties is, as far as the commonality is concerned, one of the noblest that has ever been carried on between oppressors and oppressed. On the one hand we see a haughty and faithless oligarchy applying all means that the love of dominion and selfishness can devise; on the other hand, a commonality forbearing to the last in its opposition and resistance, ever keeping within the bounds of the existing laws, and striving after power, not for the mere gratification of ambition, but in order to obtain the means of protecting itself against fraud and tyranny. The details of this struggle belong to a history of Rome, and cannot be given here; we can only point out in what manner the plebeians gradually gained access to all the civil and religious offices, until at last the two hostile elements became united into one great body of Roman citizens with equal rights, and a state of things arose totally different from what had existed before.

After the first secession in B.C. 494, the plebeians gained several great advantages. First, a law was passed to prevent the patricians from taking usurious interest of money which they frequently lent to impoverished plebeians;³ secondly, tribunes were appointed for the protection of the plebeians (*vid. TRIBUNI*); and, lastly, plebeian *ædiles* were appointed. (*vid. ÆNILES*.) Shortly after, they gained the right to summon before their own *comitia tributa* any one who had violated the rights of their order,⁴ and to make decrees (*plebiscito*), which, however, did not become binding upon the whole nation until the year B.C. 449. (*vid. PLEBISCITUM*.) A few years after this (445 B.C.), the tribune Canuleius established, by his rogations, the *connubium* between patricians and plebeians.⁵ He also

attempted to divide the consulship between the two orders, but the patricians frustrated the realization of this plan by the appointment of six military tribunes, who were to be elected from both orders. (*vid. TRIBUNI*.) But that the plebeians might have no share in the censorial power with which the consuls had been invested, the military tribunes did not obtain that power, and a new curule dignity, the censorship, was established, with which patricians alone were to be invested. (*vid. CENSOR*.) Shortly after the taking of Rome by the Gauls, we find the plebeians again in a state little better than that in which they had been before their first secession to the Mons Sacer. In B.C. 421, however, they were admitted to the *quæstorship*, which opened to them the way into the senate, where henceforth their number continued to increase. (*vid. QUÆSTOR, SENATUS*.) In B.C. 367, the tribunes L. Licinius Stolo and L. Sextius placed themselves at the head of the commonality, and resumed the contest against the patricians. After a fierce struggle, which lasted for several years, they at length carried a rogation, according to which *decemvirs* were to be appointed for keeping the *Sibylline books* instead of *duumvirs*, of whom half were to be plebeians.¹ The next great step was the restoration of the consulship, on condition that one consul should always be a plebeian. A third rogation of Licinius, which was only intended to afford momentary relief to the poor plebeians, regulated the rate of interest. From this time forward the plebeians also appear in the possession of the right to occupy parts of the *Ager Publicus*.² In B.C. 366, L. Sextius Lateranus was the first plebeian consul. The patricians, however, who always contrived to yield no more than what it was absolutely impossible for them to retain, stripped the consulship of a considerable part of its power, and transferred it to two new curule offices, viz., that of *prætor* and of *curule ædile*. (*vid. ÆDILES, PRÆTOR*.) But, after such great advantages had been once gained by the plebeians, it was impossible to stop them in their progress towards a perfect equality of political rights with the patricians. In B.C. 365, C. Marcius Rutilus was the first plebeian dictator; in B.C. 351, the censorship was thrown open to the plebeians, and in B.C. 336, the *prætorship*. The *Ogulnian law*, in B.C. 300, also opened to them the offices of *pontifex* and *augur*. These advantages were, as might be supposed, not gained without the fiercest opposition of the patricians; and even after they were gained and sanctioned by law, the patricians exerted every means to obstruct the operation of the law. Such fraudulent attempts led, in B.C. 286, to the last secession of the plebeians, after which, however, the dictator Q. Hortensius successfully and permanently reconciled the two orders, secured to the plebeians all the rights they had acquired until then, and procured for their *plebiscita* the full power of *leges* binding upon the whole nation.

In a political point of view, the distinction between patricians and plebeians now ceased, and Rome, internally strengthened and united, entered upon the happiest period of her history. How completely the old distinction was now forgotten, is evident from the fact that henceforth both consuls were frequently plebeians. The government of Rome had thus gradually changed from an oppressive oligarchy into a moderate democracy, in which each party had its proper influence, and the power of checking the other, if it should venture to assume more than it could legally claim. It was this constitution, the work of many generations,

1. (Liv., ii., 1.—Dionys., v., 13.—Fest., s. v. *Qui patres*.—Plut., Public., 11.)—2. (Liv., ii., 27.)—3. (Dionys., vi., 83.)—4. (Fest., s. v. *Sacer Mons*.—Götting, p. 300, &c.)—5. (Liv., iv., 44; v., 11, 12.—Dionys., x., 60; xi., 28.—Cic., *De Republ.*, ii., 37.)

1. (Liv., vi., 37, 42.)—2. (Liv., vii., 16.—Niebuhr, iii., p. 1, &c.)

that excited the admiration of the great statesman Polybius.

We stated above that the plebeians, during their struggle with the patricians, did not seek power for the mere gratification of their ambition, but as a necessary means to protect themselves from oppression. The abuse which they, or, rather, their tribunes, made of their power, belongs to a much later time, and no traces of it appear until more than half a century after the Hortensian law; and even then this power was only abused by individuals, and not on behalf of the real plebeians, but of a degenerating democratical party, which is unfortunately designated by later writers by the name of plebeians, and thus has become identified with them. Those who knew the immense influence which religion and its public ministers had upon the whole management of the state, will not wonder that the plebeians, in their contest with the aristocracy, exerted themselves as much to gain access to the priestly offices as to those of a purely political character, as the latter, in reality, would have been of little avail without the former. The office of *curio maximus*, which the plebeians sought and obtained nearly a century after the Ogulnian law,¹ seems, indeed, to afford ground for supposing that in this instance the plebeians sought a distinction merely for the purpose of extending their privileges; but Ambrosch² has rendered it more than probable that the office of *curio maximus* was at that time of greater political importance than is generally believed. It is also well known, that such priestly offices as had little or no connexion with the management of public affairs, such as that of the *rex sacrorum*, the *flamines*, *Salii*, and others, were never coveted by the plebeians, and continued to be held by the patricians down to the latest times.³

After the passing of the Hortensian law, the political distinction between patricians and plebeians ceased, and, with a few unimportant exceptions, both orders were placed on a footing of perfect equality. Henceforth the name *populus* is sometimes applied to the plebeians alone, and sometimes to the whole body of Roman citizens, as assembled in the *comitia centuriata* or *tributa*.⁴ The term *plebs* or *plebecula*, on the other hand, was applied, in a loose manner of speaking, to the multitude or populace, in opposition to the *nobiles* or the senatorial party.⁵

A person who was born a plebeian could only be raised to the rank of a patrician by a *lex curiata*, as was sometimes done during the kingly period and in the early times of the Republic. Caesar was the first who ventured in his own name to raise plebeians to the rank of patricians, and his example was followed by the emperors. (*Vid. PATRICII*.)

It frequently occurs in the history of Rome that one and the same gens contains plebeian as well as patrician families. In the gens *Cornelia*, for instance, we find the plebeian families of the *Balbi*, *Mamulæ*, *Merulæ*, &c., along with the patrician *Scipiones*, *Sullæ*, *Lentuli*, &c. The occurrence of this phenomenon may be accounted for in different ways. It may have been that one branch of a plebeian family was made patrician, while the others remained plebeians.⁶ It may also have happened that two families had the same *nomen gentilicium* without being actual members of the same gens.⁷ Again, a patrician family might go over to the plebeians; and, as such a family continued to bear the

name of its patrician gens, this gens apparently contained a plebeian family.¹ At the time when no *connubium* existed between the two orders, a marriage between a patrician and a plebeian had the consequence, that the same *nomen gentilicium* belonged to persons of the two orders.² When a peregrinus obtained the *civitas* through the influence of a patrician, or when a slave was emancipated by his patrician master, they generally adopted the *nomen gentilicium* of their benefactor,³ and thus appear to belong to the same gens with him.

PLEBISCITUM, a name properly applied to a law passed at the *comitia tributa* on the rogation of a tribune. According to *Lælius*,⁴ he who had authority to convene, not the *universus populus*, but only a part, could hold a *concilium*, but not *comitia*; and as the tribunes could not summon the patricii, nor refer any matter to them, what was voted upon the proposal of the tribunes was not a *lex*, but a *scitum*. But in course of time *plebiscita* obtained the force of *leges* properly so called, and, accordingly, they are sometimes included in the term *leges*. (*Vid. LEX*, p. 579.)

Originally a *plebiscitum* required confirmation. The progress of change as to this matter appears from the following passages. A *lex Valeria*, passed in the *comitia centuriata* B.C. 449,⁵ enacted that the *populus* should be bound (*teneretur*) by that which the *plebs* voted (*tributum*); and the same thing is expressed in other words thus: "*Scita plebis in-juncta patribus*." This *lex* was passed to settle the disputed question whether the *patres* were bound by *plebiscita*. A *lex Publilia*, 339 B.C.,⁶ was passed, to the effect that *plebiscita* should bind all the *Quirites*; and a *lex Hortensia*, B.C. 286, to the effect that *plebiscita* should bind all the *populus* (*uni-versus populus*), as *Gaius*⁷ expresses it; or, "*ut e-jure, quod plebes statuisset, omnes Quirites teneren-tur*," according to *Lælius Felix*, as quoted by *Gellius*; and this latter is also the expression of *Pliny*.⁸ The *lex Hortensia* is always referred to as the *lex* which put *plebiscita*, as to their binding force, exactly on the same footing as *leges*.

If we might judge of the effect of the two preceding *leges* by the terms in which they are expressed, as above quoted, they were the same as the Hortensian *lex*. From the terms in which *Livy* speaks of the *lex Valeria*, it is clear that in that passage *populus* and *patres* are the same, and the only question in dispute was whether the *plebiscita* bound the rest of the state besides the *plebs*. Consistently with this, we read of the rogation of an agrarian *plebiscitum* shortly after, the carrying of which was only prevented by the senate prevailing on part of the tribunes to put their veto on the measure.⁹ No allusion is made to any power of the senate to prevent the carrying of such a measure; but the want of such power must be supposed, in order that the narrative may be intelligible. In the case of the *lex Canuleia*,¹⁰ it is said that the *patres* were at last prevailed upon to give their consent to the rogatio on the *connubium* of the *patres* and the *plebs* being proposed. In this case the consent of the *patres* was considered necessary; but as this was a *plebiscitum*, which diminished, as they supposed, their rights, it is not inconsistent to say the *lex Valeria* made the *plebiscita* binding on the *populus*, and yet that a *plebiscitum* could not alter the privileges of the *populus*. A *plebiscitum* might appertain to a matter which indifferently concerned all, and such a *plebiscitum* would, consistently with *Livy's* expression, be a *lex*. It is, however, stated

by several modern writers that the effect of the Valeria lex was to put plebiscita on the footing of leges centuriatæ, when they had been first approved by the senate, or were subsequently approved by the senate and confirmed by the curiæ. It is Niebuhr's opinion, that the effect of the lex Publilia was to render a senatus consultum a sufficient confirmation of a plebiscitum, and to make the confirmation of the curiæ unnecessary; and that the effect of the lex Hortensia was to render unnecessary even the confirmation of the senate, and to give to the tributa comitia complete legislative force. Thus, by the lex Publilia, the senate succeeded to the place of the curiæ; and the tribes to that of the old burghers.¹ According to this view, the lex Publilia was not a mere repetition of the lex Valeria, as it would seem to be from the terms of Livy. Numerous passages of Livy are cited by modern writers in confirmation of their views as to the first two of these leges, but, on the whole, it is not easy to come to any certain conclusions for them. It would be no improbable hypothesis that our accounts of all early Roman legislation should be exceedingly confused, and that they are so is apparent enough. It would also be no improbable hypothesis to suppose that much of early Roman legislation was irregularly conducted, of which fact, also, there is evidence. It farther appears to be clear enough, that without farther information we must remain ignorant of the precise effect of the two leges herebefore mentioned, which preceded the lex Hortensia. It cannot be a matter of doubt that the objects which a plebiscitum might embrace must have been as important to determine as the forms which should give it validity; and that these objects which could be comprised in a plebiscitum were more limited in number and extent before the passing of the lex Hortensia than after, is easily shown.

The principal plebiscita are mentioned under the article Lex.

PLECTRUM. (Vid. LYRA, p. 605.)

PLEMO'CHOAI (πλημοχόαι). (Vid. ELEUSINIA, p. 396.)

PLE'THRON (πλήθρον). (Vid. PES, p. 763.)

PLINTHOS (πλίνθος). (Vid. LATER.)

*PLOC'IMOS (πλόκιμος), a sort of Reed. According to Sprengel, the *Arundo ampelodesmos*.²

PLUMA'RII, a class of persons mentioned by Vitruvius,³ Varro,⁴ and in inscriptions. It cannot be decided with certainty what their exact occupation was: their name would lead us to suppose that it had something to do with feathers (*plumæ*). Salmasius⁵ supposes that they were persons who wove in garments golden or purple figures made like feathers. The word, however, probably signifies all those who work in feathers, as *lanarii* those who work in wool, and *argentarii* those who work in silver. Seneca⁶ speaks of dresses made of the feathers of birds.⁷

*PLUMBA'GO (μολύβδαίνα), a term which was sometimes applied to *Plumbago* or *Graphite*, and sometimes to *Molybdate of Lead*. "What the Latins call *Plumbago*," says Agricola, "the Greeks term *μολύβδαίνα*. It appears to be an oxyde of lead." Sprengel says it is found in the mountains of Austria, consisting of oxyde of lead with molybdic acid, silica, and carbonate of lime. He alludes, as Adams supposes, to the molybdate of lead, or the *Plombe jaune* of Brochant, the yellow lead spar of Jameson.⁸

*PLUMBUM (μολύβδος), Lead. "The ancients," says Fallopius, "distinguished lead into two kinds,

the black and the white, the latter of which the Greeks called *κασίτερος*." The former of these, namely, the *Plumbum nigrum*, was, according to Adams, the same as our lead, and comprehended several of the native varieties of it. The *κασίτερος*, or *Plumbum album*, was the "Pyramidal Tin Ore" of Jameson, or oxyde of tin. (Vid. STANNUM.)

PLYNTE'RIA (from πλύνειν, to wash) was a festival celebrated at Athens every year on the 25th of Thargelion, in honour of Athena, surnamed Aglauros,² whose temple stood on the Acropolis.³ The day of this festival was at Athens among the *ἀποφράδες*, or *dies nefasti*; for the temple of the goddess was surrounded by a rope, to preclude all communication with it;⁴ her statue was stripped of its garments and ornaments for the purpose of cleaning them, and was in the mean while covered over to conceal it from the sight of man.⁵ The persons who performed this service were called *πρᾶξιεργῆσαι*.⁶ The city was therefore, so to speak, on this day without its protecting divinity, and any undertaking commenced on it was believed to be necessarily unsuccessful. A procession was also held on the day of the Plynteria, in which a quantity of dried figs, called *ἡγυρτορία*, were carried about.⁷ Other particulars are not known.

PLUTEUS was applied in military affairs to two different objects: 1. A kind of shed, made of hurdles and covered with raw hides, which could be moved forward by small wheels attached to it, and under which the besiegers of a town made their approaches.⁸ 2. Boards or planks placed on the valium of a camp, on movable towers or other military engines, as a kind of roof or covering for the protection of the soldiers.⁹

The word *pluteus* was also applied to any board used for the purpose of protection or enclosure, as, for instance, to the board at the head of a bed.¹⁰

PNEUMAT'ICI (Πνευματικοί), a medical sect, founded at Rome by Athenæus of Cilicia in the time of Nero and Vespasian, about A.D. 69.¹¹ This was at the time when the Methodici enjoyed their greatest reputation, from whom the Pneumatici differed principally in that, instead of the mixture of primitive atoms (*ὄγκοι*), they admitted an active principle of immaterial nature, to which they gave the name of *πνεῦμα*, spirit. This principle was the cause of health or disease, and from this word they derived their name. It is from Galen alone that we learn the doctrines of the founder of the Pneumatici, for of his numerous writings only a few fragments remain preserved by Oribasius. The theory of Plato had already laid the foundations of the doctrine of this ethereal substance, of which Aristotle was the first who gave a clear idea, in describing the ways by which the *πνεῦμα* is introduced into the body and the sanguineous system. The Stoics developed it still more, and applied it to the explanation of the functions of the body; and Erasistratus and his successors had made the *πνεῦμα* act a great part in the animal economy, whether in health or disease. This doctrine, therefore, of the Pneumatici could not be regarded as new. Galen, who gives the above history of it, asserts¹² that the Stoics followed the steps of Aristotle with respect to Physiology. The foundation, however, of the sect of the Methodici appears to have done away with much of the consideration

which the theory of the *πνεῦμα* had formerly enjoyed. Those physicians who would not follow the sect of the Methodici chose that which revived the *πνεῦμα*, in order to oppose to the former sect a firmly-established principle, and agreed in that, as upon various other points, with the Stoics.¹ They thought especially that logic was indispensable to the perfection of science; for in many cases they disputed simply about names, and Galen tells us² that the Pneumatici would rather have betrayed their country than abjured their opinions. Like the greater part of the Stoics of his time, Athenæus had adopted all the doctrines of the Peripatetics.³ What undeniably proves it is, that, besides the doctrine of the *pneuma*, he developed the theory of the elements, much more, at least, than the Methodici were in the habit of doing. He recognised in the four known elements the positive qualities (*ποιότητες*) of the animal body; but he often regarded them as real substances, and gave to the whole of them the name of *Nature of Man*.⁴ Although the followers of this doctrine attributed, in general, the greater number of diseases to the *pneuma*,⁵ nevertheless they paid at the same time great attention to the mixture of the elements. The union of heat and moisture is the most suitable for the preservation of health. Heat and dryness give rise to acute diseases, cold and moisture produce phlegmatic affections, cold and dryness give rise to melancholy. Everything dries up and becomes cold at the approach of death.⁶ It cannot be denied, says Sprengel,⁷ that the Pneumatici rendered great services to pathology, and discovered several new diseases. It is only to be regretted that they carried their subtleties too far. Thus, for instance, they established many more kinds of fever than there really exist in nature.⁸ But their taste for subtleties shows itself nowhere more than in their doctrine of the pulse, which was more complex than that of any other sect. They commonly defined it to be an alternate contraction and dilatation of the arteries, and attributed this latter motion to the attraction and separation of the *pneuma* or spirit, which, according to the opinion of Aristotle, passes from the heart into the great arteries.⁹ The *diastole* or *dilatation* pushes forward the spirit, and the *systole* or contraction draws it back, in the same way as the respiratory organs contract in drawing in the breath and dilate in letting it out.¹⁰ The Pneumatici did not occupy themselves at all with the causes which produced the changes in the pulse, but confined themselves to collecting observations to serve as a basis for their prognostic.¹¹

The following is a list of the physicians that belonged to the sect of the Pneumatici: Archigenes,¹² Herodotus,¹³ Ægthinus,¹⁴ Magnus,¹⁵ Theodorus.¹⁶ To these the name of Aretæus has been added by Le Clerc,¹⁷ Wigan,¹⁸ Barhusen,¹⁹ Schulze,²⁰ and Haller;²¹ but the passages brought forward in support of this opinion (for it rests only on internal evidence) are considered to be insufficient to prove the point by Petit,²² Osterhausen,²³ and Ackermann.²⁴ Sprengel²⁵

thinks that he was brought up in the principles of the Pneumatici, and afterward embraced those of the Electici, as it is impossible to overlook the traces of the doctrines of the former sect that exist in his works. For farther information respecting this sect, the reader is referred to Wigan, Ackermann Le Clerc, and Sprengel (from whom the above account is principally abridged), and especially Osterhausen, *loc. cit.*

*PNIGITIS (*πνιγίτις γῆ*), Pnigitic Earth, so called from a village named Pnigeus, on the coast of Egypt, near which it was obtained. It consisted principally of alumine. "Dioscorides describes the Pnigitic earth as resembling the Eretrian, that is, as being of a pale gray, cold to the touch, and adhering so firmly to the tongue as to hang to it suspended. Pliny confirms this account. Galen, Paulus Ægineta, and a number of later writers, affirm, on the contrary, that it is black, and a tough, stiff, and viscid clay. Agricola describes it as black, dense, soft, and partly astringent, partly acrid." Sir John Hill, from whom these remarks are taken, thinks that there were two kinds of Pnigitic earth. That the earlier one of these, the true Pnigitis of the ancients, was a kind of gray marl; and that afterward a medicinal earth of another colour and texture, a black, tough, and viscous clay, was found in the same vicinity with the former, and called by the same name. This latter he makes the Pnigitis of Galen and subsequent writers.¹

PNYX. (*Vid. ECCLESIA*, p. 384.)

POCULUM was any kind of drinking-cup. It must be distinguished from the *crater* or vessel in which the wine was mixed (*vid. CRATER*), and from the *cyathus*, a kind of ladle or small cup, which was used to convey the wine from the crater to the poculum or drinking-cup. (*Vid. CYATHUS*.) Thus Horace:²

"Tribus aut novem
Miscentor cyathis pocula commodis."

PODIIUM. (*Vid. AMPHITHEATRUM*, p. 52.)

*POE (*πόη*). "Theophrastus would seem to restrict this term sometimes to a particular genus of grasses, like modern botanists. But Homer, Hesiod, and the Greek writers in general, apply it to all sorts of herbage."³

*POE'CILIS (*ποικιλίς*), the name of a bird mentioned by Aristotle. The scholiast on Theocritus makes it the same as the *ἀκανθίς*, or Siskin.⁴

*POE'CILUS (*ποικίλος*), the name of a fish mentioned by Oppian, and which Pennant suggests may be the *Squalus canicula*.⁵

PCENA (Greek *ποινή*). The Roman sense of this word is explained by Ulpian⁶ at the same time that he explains *fraus* and *multa*. *Fraus* is generally an offence, *noxæ*, and *pœna* is the punishment of an offence, *noxæ vindicta*. *Pœna* is a general name for any punishment of any offence; *multa* is the penalty of a particular offence, which is now (in Ulpian's time) pecuniary. Ulpian says in his time, because by the law of the Twelve Tables the *multa* was pecuniary, or a certain number of oxen and sheep.⁷ (*Vid. LEX ATERNA TARPEIA*, p. 581.) Ulpian proceeds to say that *pœna* may affect a person's caput and existimatio, that is, *pœna* may be loss of citizenship and infamia. A *multa* was imposed according to circumstances, and its amount was determined by the pleasure of him who imposed it. A *pœna* was only inflicted when it was imposed by some *lex* or some other legal authority (*quo alio jure*). When no *pœna* was imposed, then

a multa or penalty might be inflicted. Every person who had *iurisdictio* (this seems to be the right reading instead of *iudicatio*) could impose a multa, and these were *magistratus* and *praesides provinciarum*. A *pœna* might be inflicted by any one who was intrusted with the judicial prosecution of the offence to which it was affixed. The legal distinction between *pœna* and multa is not always observed by the Roman writers.

POLEMAR'CHUS (πολέμαρχος). An account of the functions of the Athenian magistrate of this name is given under *ARCHON*. Athens, however, was not the only state of Greece which had officers so called. We read of them at Sparta and in various cities of Bœotia. As their name denotes, they were originally and properly connected with military affairs, being intrusted either with the command of armies abroad, or the superintendence of the war department at home: sometimes with both. The polemarchs of Sparta appear to have ranked next to the king when on actual service abroad, and were generally of the royal kindred or house (γένος).¹ They commanded single moræ,² so that they would appear to have been six in number,³ and sometimes whole armies.⁴ They also formed part of the king's council in war, and of the royal escort called *δαμοσία*,⁵ and were supported or represented by the officers called *συμφορεῖς*.⁶ The polemarchs of Sparta had also the superintendence of the public tables: a circumstance which admits of explanation from the fact that *Lycurgus* is said to have instituted the *syssitia* for the purposes of war, and, therefore, as military divisions, so that the Lacedæmonians would eat and fight in the same company.⁷ But, in addition to their military functions and the duties connected therewith, the polemarchs of Sparta had a civil as well as a certain extent of judicial power,⁸ in which respect they resembled the *ἄρχων πολέμαρχος* at Athens. In Bœotia, also, there were magistrates of this name. At Thebes, for instance, there appears to have been two, perhaps elected annually, and, from what happened when *Phœbidas*, the Lacedæmonian commander, seized the *Cadmeia* or citadel of Thebes (B.C. 382), we may infer that in times of peace they were invested with the chief executive power of the state and the command of the city, baving its military force under their orders.⁹ They are not, however, to be confounded with the Bœotarchs. At *Thespiæ*, also,¹⁰ there were officers of this name, and likewise in *Ætolia*¹¹ and *Arcadia*. At *Cynætha*, in the latter country, the gates of the city were intrusted to the special care of the polemarchs: they had to keep guard by them in the daytime, and to close them at night, and the keys were always kept in their custody.¹²

***POLEMO'NIUM** (πολεμώνιον), a species of plant; most probably, as *Adams* thinks, the *Polemonium ceruleum*. The same authority makes the popular name to be Greek *Valerian*.¹³

POLE'TAI (πωληταί), a board of ten officers or magistrates (for they are called *ἄρχη* by *Harpocration*), whose duty it was to grant leases of the public lands and mines, and also to let the revenues arising from the customs, taxes, confiscations, and forfeitures. Of such letting the word *πωλεῖν* (not *μισθῶν*) was generally used, and also the correlative words *ὑνεῖσθαι* and *πρίσασθαι*. Their official place of business was called *πωλητήριον*. One was chosen from each tribe. A chairman presided at their meetings (*ἐμπρὸς τάνευε*). In the letting of the

revenue they were assisted by the managers of the theoric fund (τὸ θεωρικόν), and they acted under the authority of the senate of Five Hundred, who exercised a general control over the financial department of the administration. Resident aliens, who did not pay their residence tax (*μετοίκιον*), were summoned before them, and, if found to have committed default, were sold in a room called *πωλητήριον τοῦ μετοίκιον*.¹ Other persons who had forfeited their freedom to the state were also sold by the *πωληταί*, as foreigners who had been convicted of usurping the rights of citizenship.²

***POL'ION** (πόλιον), a plant, which has been generally considered to be the *Teucrium Polium*, a species of *Germander*. "Sprengel and *Stackhouse*, however," remarks *Adams*, "agree in preferring the *Teucrium Creticum*. *Schneider* is, notwithstanding, disposed to agree with *Columna* in referring it to the *Santolina chamaecyparissus*, or Cypress-leaved Lavender Cotton. This last we are rather disposed to hold as one of the species of *ἀρόστονον* described by *Dioscorides*."³

POLITEIA, **POLITES** (πολιτεία, πολίτης). (*Vid. CIVITAS*, GREEK.)

POLLICAR'IS. (*Vid. PES*, p. 762.)

POLLICITATIO. (*Vid. OBLIGATIONES*, p. 676.)

POLLINCTO'RES. (*Vid. FUNUS*, p. 459.)

POL'OS (πόλος). (*Vid. HOROLOGIUM*.)

***POLYCARPUM** (πολύκαρπον), a plant, the *Polygonum Persicaria*.⁴

***POLYG'ALON** (πολύγαλον), the *Polygala amara*, or Butterwort. Such, at least, is the opinion of *Tragus*, who is followed by *Sprengel*.⁵

***POLYGON'ATON** (πολύγονατον), a species of plant, the common name of which, according to *Stephens* and *Bauhin*, is *Solomon's Seal*. *Sprengel* also agrees in referring it to the *Convallaria maj. fl.*⁶

***POLYG'ONUM** (πολύγονον), a plant. "The *πολύγονον ἄρβεν* of *Dioscorides* is generally acknowledged to be the *Polygonum aviculare*, or Knot Grass. The π. θήλυ is referred by *Sprengel* to the *Polygonum maritimum*. It is deserving of remark, however, that nearly all the older authorities, as, for example, *Matthioli*, *Dodonæus*, and *Bauhin*, make the latter to have been the *Hippuris vulgaris*, or *Mare's Tail*. The *πολύγονον* is the *Sanguinaria* of *Pliny*."⁷

POLYMITA. (*Vid. TELA*.)

***POLYPUS** (πολύπους or πόλνπος), the *Polypus*. Several species of the *Polypus* are described by *Aristotle*, most of which are to be referred to the genus *Hydra* of *Linnæus*. The *H. viridis* is its most remarkable species. The ancient writers use the general term *polypus* in speaking of these animals, but modern naturalists employ the appellation *octopus*, as specifying more distinctly a particular class, and the name *polypus* is now exclusively assigned to a tribe of the *radiata*. "Aristotle, *Pliny*, and, in fact, all the ancient writers, affirm that this animal issues from the water, and that it sometimes visits the land; avoiding, however, all the smooth places. *Ælian* and *Athenæus* add that it can also mount on trees! It appears that the octopi make their principal food of crustacea, as *Aristotle* observed long ago. They also feed on conchyliferous mollusca; and *Pliny* relates concerning them the trick, which has also been attributed to apes, of placing a little stone between the two valves of oysters, of

which they are extremely fond, so as to prevent them from closing, and that then they extract the flesh. But how could an octopus take up a little stone and place it so adroitly, even supposing that the semi-hiatus of the oyster, continually filled by the tentacular cirrhi of the edges of its mantle, would permit it? It has been asserted, absurdly enough, that the octopus, when pushed by hunger, will gnaw its own arms, which possess the singular property of shooting forth again. But Aristotle and Pliny more justly attribute the fact of octopi being often found which have some fewer appendages than usual, to their having been eaten off by the conger eels. We are ignorant respecting the full size to which the octopi may attain. We find in the recitals of certain travellers, and even of some naturalists, that a species exists to which the name of *Kraken* has been given, which arrives at an immeasurable bulk, so as to resemble an island when it approaches the surface of the water, and to over-set the largest vessel under full sail when it becomes entangled in their cordage. But we may be assured, without any fear of deceiving ourselves, that this is but an exaggeration of what has been said by the ancients, especially Pliny, concerning an octopus, which, according to Trebius, had a head of the size of a barrel containing fifteen amphoræ, and whose tentacular appendages, which, as well as the head, were presented to Lucullus, were thirty feet in length, knotted like clubs, and so thick that a man could scarcely embrace them round: the suckers resembled basins, and the teeth were in proportion. All that was preserved of the body weighed seven hundred pounds. There are other traits still more curious in the history of this most marvellous octopus. It was observed at Castera, in Bætica, in Spain, and was accustomed to come forth from the sea into the dépôts for salted fish, &c., and to devour those provisions. The pertinacity of its robberies at length roused the indignation of the keepers; they built very lofty palisades, but all in vain; this persevering polypus succeeded in getting over them by taking advantage of a neighbouring tree, so that it could not be taken but by the sagacity of the dogs, which, having marked it one night as it was returning to the sea, intimated the affair to the keepers, who were struck with terror and astonishment at the novelty of this tremendous spectacle. In truth, the animal was of an immeasurable bulk; its colour was changed by the action of the brine, and it exhaled a most intolerable odour. Nevertheless, after a desperate combat with the dogs, which Pliny depicts with all the vigour of his poetical style, and by the efforts of men armed with tridents, it was at last killed, and the head was brought to Lucullus. Ælian also tells us that, in the course of time, these animals arrive at a most extraordinary bulk, so as to equal in size the largest cetacea. On this subject he favours us with a story pretty nearly similar to that of Trebius, of a polypus which, having devastated the magazines of the Iberian merchants, was besieged by a great number of persons, and cut in pieces with hatchets, just in the same style that woodmen cut down the thick branches of trees. Aristotle, indeed, tells us there are polypi whose arms are as much as five cubits in length, which would make above seven feet. But this is a long way behind the narrations of Trebius and Ælian, and falls still shorter of the wonders of the Northern romances concerning their *kraken*. The ancients tell us that the octopi are the enemies of the lobsters, which dread them, while they are themselves pursued by the *muræna*, which devour their arms. They likewise inform us that their bite is stronger than that of the sepia, but not so venomous. Ælian adds, that it is said by fisher-

men that the octopi are attracted to the land by the fruit of the olive-tree.¹

**POMATIAS* (*παματίας*), a species of esculent Snail, mentioned by Dioscorides. It is the *Helix Pomatia*.²

POMERIUM. This word is compounded of *post* and *marium* (*murus*), in the same manner as *pomeridicem* of *post* and *meridicem*, and thus signifies a line running by the walls of a town (*pone* or *post muros*). But the walls of a town here spoken of are not its actual walls or fortifications, but symbolical walls, and the course of the pomerium itself was marked by stone pillars (*cippi pomarii*) erected at certain intervals. The custom of making a pomerium was common to the Latins and Etruscans, and the manner in which it was done in the earliest times, when a town was to be founded, was as follows: A bullock and a heifer were yoked to a plough, and a furrow was drawn around the place which was to be occupied by the new town in such a manner that all the clods fell inward. The little mound thus formed was the symbolical wall, and along it ran the pomerium, within the compass of which alone the city-auspices (*auspicia urbana*) could be taken.³ That the actual walls or fortifications of a town ran near it may naturally be supposed, though the pomerium might either be within or without them. This custom was also followed in the building of Rome, and the Romans afterward observed it in the establishment of their colonies. The sacred line of the Roman pomerium did not prevent the inhabitants from building upon or taking into use any place beyond it, but it was necessary to leave a certain space on each side of it unoccupied, so as not to unhallow it by profane use.⁴ Thus we find that the Aventine, although inhabited from early times, was for many centuries not included within the pomerium.⁵ The whole space included in it was called *ager effatus* or *fines effati*. The pomerium of Rome was not the same at all times; as the city increased the pomerium also was extended, but this extension could, according to ancient usage, only be made by such men as had by their victories over foreign nations increased the boundaries of the Empire,⁶ and neither could a pomerium be formed nor altered without the augurs previously consulting the will of the gods by augury, whence the *jus pomarii* of the augurs.⁷ The formula of the prayer which the augurs performed on such occasions, and which was repeated after them by the people who attended, is preserved in Festus.⁸

The original pomerium of Romulus ran, according to Gellius,⁹ around the foot of the Palatine, but the one which Tacitus¹¹ describes as the pomerium of Romulus comprised a much wider space, and was, as Niebuhr thinks,¹² an enlargement of the original compass, taking in a suburb or borough. Niebuhr also believes that pomerium properly denotes a suburb taken into the city. The Romanian pomerium, according to Tacitus, ran from the Forum Boarium (the arch of Septimius Severus) through the valley of the Circus so as to include the *ara maxima* Herculis; then along the foot of the Palatine to the *ara Consi*, and thence from the Septizonium to the *curiæ veteres* (a little below the baths of Trajan), along the top of the *Velia* to the *Sacellum Larium*, and lastly by the *Via Sacra* to the Forum. From the eastern side of the Forum to

the Velabrum there was a swamp, so that Tacitus does not mention the line of the pomerium here. Servius Tullius again extended the pomerium,¹ but the Aventine was not included, either because the auspices here taken by Remus had been unfavourable, or, which is more probable, because there stood on this hill the temple of Diana, the common sanctuary of the Latins and Romans.² The Aventine did not become included within the pomerium until the time of the Emperor Claudius.³ Dionysius⁴ states that, down to his time, nobody had extended the pomerium since the time of King Servius, although we know from authentic sources that at least Augustus enlarged the pomerium,⁵ and the same is said of Sulla and J. Cæsar.⁶ The last who extended the pomerium of Rome was the Emperor Aurelian, after he had enlarged the walls of the city.⁷

POMPA (πομπή), a solemn procession, as on the occasion of a funeral, triumph, &c.⁸ It is, however, more particularly applied to the grand procession with which the games of the circus commenced (*Pompa Circensis*). (Vid. CIRCUS, p. 255.)

POMPELE LEGES. (Vid. LEX, p. 584, 585.)

*POMPHOLYX (πομφόλυξ). "Pompholyx," says Charrias, "is a white, light powder, that sticks upon the tops of furnaces where they melt and refine copper, like flour of meal, and sometimes little poules or blisters. They call it *Nil* or *Nihili*. Tutia comes from the same copper and at the same time as the pompholyx, but the weight of it causes it to stick about the lower part of the furnaces. The Greeks call Tutia by the name of *Spodium*." Hardouin, as Adams remarks, gives it the French name of "*La fleur de la Calamine*." Blancard gives it the English name of "The White Tutty," but it is generally called "Brown Ashes" or "White Calamy" in English.⁹

*POMPIIUS (πομπίλος), a species of fish, supposed to be the *Coryphæna Pompius*. It is of a rare kind, and, according to Rondelet, is sometimes sold for Spanish mackerel. Athenæus calls it the *τερός ἰχθύς*. Oppian makes it the *κάλλυχθυς*.¹⁰

PONS. (Vid. BRIDGE.)

PONTIFEX. The origin of this word is explained in various ways. Q. Scævola, who was himself pontifex maximus, derived it from *posse* and *facere*, and Varro from *pons*, because the pontiffs, he says, had built the Pons Sublicius, and afterward frequently restored it, that it might be possible to perform sacrifices on each side of the Tiber.¹¹ This statement is, however, contradicted by the tradition which ascribes the building of the Pons Sublicius to Ancus Marcius,¹² at a time when the pontiffs had long existed and borne this name. Götting¹³ thinks that *pontifex* is only another form for *pompifex*, which would characterize the pontiffs only as the managers and conductors of public processions and solemnities. But it seems far more probable that the word is formed from *pons* and *facere* (in the signification of the Greek *πέποι*, to perform a sacrifice), and that, consequently, it signifies the priests who offered sacrifices upon the bridge. The ancient sacrifice to which the name thus alludes is that of the Argeans on the sacred or Sublician bridge, which is described by Dionys-

ius.¹ (Compare ARGÆI.) Greek writers sometimes translate the word, and call the pontiffs *γεφυροποιοί*.

The Roman pontiffs formed the most illustrious among the great colleges of priests. Their institution, like that of all important matters of religion, was ascribed to Numa.² The number of pontiffs appointed by this king was four,³ and at their head was the pontifex maximus, who is generally not included when the number of pontiffs is mentioned. Cicero,⁴ however, includes the pontifex maximus when he says that Numa appointed five pontiffs. Niebuhr⁵ supposes, with great probability, that the original number of four pontiffs (not including the pontifex maximus) had reference to the two earliest tribes of the Romans, the Ramnes and Tities, so that each tribe was represented by two pontiffs. In the year B.C. 300, the Ogulnian law raised the number of pontiffs to eight, or, including the pontifex maximus, to nine, and four of them were to be plebeians.⁶ The pontifex maximus, however, continued to be a patrician down to the year B.C. 254, when Tib. Coruncanius was the first plebeian who was invested with this dignity.⁷ This number of pontiffs remained for a long time unaltered, until, in 81 B.C., the dictator Sulla increased it to fifteen,⁸ and J. Cæsar to sixteen.⁹ In both these changes the pontifex maximus is included in the number. During the Empire the number varied, though, on the whole, fifteen appears to have been the regular number.

The mode of appointing the pontiffs was also different at different times. It appears that after their institution by Numa, the college had the right of co-optation, that is, if a member of the college died (for all the pontiffs held their office for life), the members met and elected a successor, who, after his election, was inaugurated by the augurs.¹⁰ This election was sometimes called *capitio*.¹¹ In the year 212 B.C., Livy¹² speaks of the election of a pontifex maximus in the comitia (probably the comitia tributa) as the ordinary mode of appointing this high-priest. But, in relating the events of the year 181 B.C., he again states that the appointment of the chief pontiff took place by the co-optation of the college.¹³ How these anomalies arose (unless Livy expresses himself carelessly) is uncertain.¹⁴ For, as far as we know, the first attempt to deprive the college of its right of co-optation, and to transfer the power of election to the people, was not made until the year B.C. 145, by the tribune C. Licinius Crassus; but it was frustrated by the prætor C. Lælius.¹⁵ In 104 B.C. the attempt was successfully repeated by the tribune Cn. Domitius Ahenobarbus; and a law (*lex Domitia*) was then passed, which transferred the right of electing the members of the great colleges of priests to the people (probably in the comitia tributa); that is, the people elected a candidate, who was then made a member of the college by the co-optatio of the priests themselves, so that the co-optatio, although still necessary, became a mere matter of form.¹⁶ The *lex Domitia* was repealed by Sulla in a *lex Cornelia de Sacerdotiis* (81 B.C.), which restored to the great priestly colleges their full right of co-optatio.¹⁷ In the year 63 B.C. the law of Sulla was abolished, and the Domitian law was restored, but not in its full extent; for it was now determined that, in case of a vacancy, the college itself should

nominate two candidates, and the people elect one of them. This mode of proceeding is expressly mentioned in regard to the appointment of augurs, and was consequently the same in that of the pontiffs.¹ Julius Cæsar did not alter this modified *lex Domitia*, but M. Antoninus again restored the right of co-optation to the college.²

The college of pontiffs had the supreme superintendence of all matters of religion, and of things and persons connected with public as well as private worship. A general outline of their rights and functions is given by Livy³ and Dionysius.⁴ This power is said to have been given to them by Numa; and he also intrusted to their keeping the books containing the ritual ordinances, together with the obligation to give information to any one who might consult them on matters of religion. They had to guard against any irregularity in the observance of religious rites that might arise from a neglect of the ancient customs, or from the introduction of foreign rites. They had not only to determine in what manner the heavenly gods should be worshipped, but also the proper form of burials, and how the souls of the departed (*manes*) were to be appeased; in like manner, what signs either in lightning or other phenomena were to be received and attended to. They had the judicial decision in all matters of religion, whether private persons, magistrates, or priests were concerned; and in cases where the existing laws or customs were found defective or insufficient, they made new laws and regulations (*decreta pontificum*), in which they always followed their own judgment as to what was consistent with the existing customs and usages.⁵ They watched over the conduct of all persons who had anything to do with the sacrifices or the worship of the gods, that is, over all the priests and their servants. The forms of worship and of sacrificing were determined by the pontiffs, and whoever refused to obey their injunctions was punished by them, for they were "*rerum quæ ad sacra et religiones pertinent, iudices et vindices*."⁶ The pontiffs themselves were not subject to any court of law or punishment, and were not responsible either to the senate or to the people. The details of these duties and functions were contained in books called *libri pontificii* or *pontificales*, *commentarii sacrorum* or *sacrorum pontificalium*,⁷ which they were said to have received from Numa, and which were sanctioned by Ancus Marcius. This king is said to have made public that part of these regulations which had reference to the *sacra publica*;⁸ and when, at the commencement of the Republic, the wooden tables on which these published regulations were written had fallen into decay, they were restored by the pontifex maximus C. Papirius.⁹ One part of these *libri pontificales* was called *indigitamenta*, and contained the names of the gods, as well as the manner in which these names were to be used in public worship.¹⁰ A second part must have contained the formulas of the *jus pontificum*.¹¹ The original laws and regulations contained in these books were in the course of time increased and more accurately defined by the decrees of the pontiffs, whence perhaps their name *commentarii*.¹² Another tradition concerning these books stated that Numa communicated to the pontiffs their duties and rights merely by word of mouth, and that he had buried the books in a stone chest on the *Janiculum*.¹³ These books

were found in 181 B.C., and one half of them contained ritual regulations and the *jus pontificum*, and the other half philosophical inquiries on these same subjects, and were written in the Greek language. The books were brought to the prætor urbanus Q. Petilius, and the senate ordered the latter half to be burned, while the former was carefully preserved. Respecting the nature and authenticity of this story, see Hartung, *Die Relig. d. Röm.*, i., p. 214, &c. Concerning the *Annales maximi* which were kept by the pontifex maximus, and to which Livy¹ applies the name *commentarii pontificum*, see *ANNALES*.

As to the rights and duties of the pontiffs, it must first of all be borne in mind that the pontiffs were not priests of any particular divinity, but a college which stood above all other priests, and superintended the whole external worship of the gods.² One of their principal duties was the regulation of the *sacra*, both *publica* and *privata*, and to watch that they were observed at the proper times (for which purpose the pontiffs had the whole regulation of the calendar: *vid. CALENDAR*, p. 195, &c.) and in their proper form. In the management of the *sacra publica* they were in later times assisted in certain performances by the *triumviri epulonæ* (*vid. EPULONES*), and had in their keeping the funds from which the expenses of the *sacra publica* were defrayed. (*VID. SACRA*.)

The pontiffs convoked the assembly of the *curies* (*comitia calata* or *curiata*) in cases where priests were to be appointed, and *flamines* or *rex sacrorum* were to be inaugurated; also when wills were to be received, and when a *destatatio sacrorum* and adoption by *adrogatio* took place.³ (*VID. ADOPTIO*.) Whether the presence of the pontiffs, together with that of the augurs and two *flamines*, was necessary in the *comitia curiata*, also, in cases when other matters were transacted, as Niebuhr thinks,⁴ does not appear to be quite certain. The curious circumstance that on one occasion the pontifex maximus was commanded by the senate to preside at the election of tribunes of the people, is explained by Niebuhr.⁵

As regards the jurisdiction of the pontiffs, magistrates and priests, as well as private individuals, were bound to submit to their sentence, provided it had the sanction of three members of the college.⁶ In most cases the sentence of the pontiffs only inflicted a fine upon the offenders,⁷ but the person fined had a right to appeal to the people, who might release him from the fine. In regard to the vestal virgins and the persons who committed incest with them, the pontiffs had criminal jurisdiction, and might pronounce the sentence of death.⁸ A man who had violated a vestal virgin was, according to an ancient law, scourged to death by the pontifex maximus in the *comitum*, and it appears that originally neither the vestal virgins nor the male offenders in such a case had any right of appeal. Götting⁹ considers that they had the right of appeal, but the passage of Cicero¹⁰ to which he refers does not support his opinion. Incest in general belonged to the jurisdiction of the pontiffs, and might be punished with death.¹¹ In later times we find that, even in the case of the pontiffs having passed sentence upon vestal virgins, a tribune interfered, and induced the people to appoint a *quæstor* for the purpose of making a fresh inquiry into the case; and it sometimes happened that after

1. (Cic., Philipp., ii., 2.)—2. (Dion Cass., xlv., 53.)—3. (i., 20.)—4. (ii., 73.)—5. (Gell., ii., 28; x., 15.)—6. (Fest., s. v. Maximus pontifex.—Compare Cic., De Legg., ii., 8, 12.)—7. 1. (vi., i.)—2. (Cic., De Legg., ii., 8.)—3. (Gell., v., 19; xv., 27.)—4. (i., p. 342; ii., p. 223.)—5. (ii., p. 359, &c.)—6. (Cic., De Harusp. Resp., 6.)—7. (Cic., Philipp., xi., 8.—Liv., xxxvii., 51.—Id., xl., 42.)—8. (Dionys., ix., 40.—Liv., xxii., 57.—Fest., s. v. Probum.)—9. (p. 185.)—10. (De Republ., ii., 31.)—11. (Cic., De Legg., ii., 19.)

this new trial the sentence of the pontiffs was modified or annulled. Such cases, however, seem to have been mere irregularities, founded upon an abuse of the tribunitian power. In the early times the pontiffs, as a portion of the patricians, were in the possession of the civil as well as religious law, until the former was made public by C. Flavius. (*Vid. Actio*, p. 17.) The regulations which served as a guide to the pontiffs in their judicial proceedings formed a large collection of laws, which was called the *jns pontificum*, and formed part of the *libri pontificii* (Compare *Jus*, p. 560, &c.) The new decrees which the pontiffs made, either on the proposal of the senate, or in cases belonging to the *sacra privata*, or that of private individuals, were, as Livy³ says, innumerable.⁴

The meetings of the college of pontiffs, to which, in some instances, the flamines and the *rex sacrorum* were summoned,⁵ were held in the *curia regia* on the *Via Sacra*, to which was attached the residence of the pontifex maximus and of the *rex sacrorum*.⁶ As the chief pontiff was obliged to live in a *domus publica*, Augustus, when he assumed this dignity, changed part of his own house into a *domus publica*.⁷ All the pontiffs were in their appearance distinguished by the conic cap called *tutulus* or *galerus*, with an apex upon it, and the toga *prætexta*.

The pontifex maximus was the president of the college, and acted in its name, whence he alone is frequently mentioned in cases in which he must be considered only as the organ of the college. He was generally chosen from among the most distinguished persons, and such as had held a curule magistracy, or were already members of the college.⁸ Two of his especial duties were to appoint (*capere*) the vestal virgins and the flamines (*vid. VESTALES, FLAMEN*), and to be present at every marriage by confœreatio. When festive games were vowed or a dedication made, the chief pontiff had to repeat over, before the persons who made the vow or the dedication, the formula in which it was to be performed (*præire verba*).⁹ During the period of the Republic, when the people exercised sovereign power in every respect, we find that if the pontiff, on constitutional or religious grounds, refused to perform this solemnity, he might be compelled by the people.

A pontifex might, like all the members of the great priestly colleges, hold any other military, civil, or priestly office, provided the different offices did not interfere with one another. Thus we find one and the same person being pontiff, angur, and decemvir sacrorum;¹⁰ instances of a pontifex maximus being at the same time consul are very numerous.¹¹ But, whatever might be the civil or military office which a pontifex maximus held besides his pontificate, he was not allowed to leave Italy. The first who violated this law was Licinius Crassus, in B.C. 131;¹² but after this precedent pontiffs seem to have frequently transgressed the law, and Cæsar, though pontifex maximus, went to his province of Gaul.

The college of pontiffs continued to exist until the overthrow of paganism;¹³ but its power and influence were considerably weakened, as the emperors, according to the example of J. Cæsar, had the

right to appoint as many members of the great colleges of priests as they pleased.¹ In addition to this, the emperors themselves were always chief pontiffs, and, as such, the presidents of the college; hence the title of pontifex maximus (P. M. or PON. M.) appears on several coins of the emperors. If there were several emperors at a time, only one bore the title of pontifex maximus; but in the year A.D. 238, we find that each of the two emperors Maximus and Balbinus assumed this dignity.² The last traces of emperors being at the same time chief pontiffs are found in inscriptions of Valentinian, Valens, and Gratianus.³ From the time of Theodosius the emperors no longer appear in the dignity of pontiff; but at last the title was assumed by the Christian bishop of Rome.

There were other pontiffs at Rome, who were distinguished by the epithet *minores*. Various opinions have been entertained as to what these pontifices *minores* were. Niebuhr⁴ thinks that they were originally the pontiffs of the *Luceres*; that they stood in the same relation to the other pontiffs as the *patres minorum gentium* to the *patres majorum gentium*; and that subsequently, when the meaning of the name was forgotten, it was applied to the secretaries of the great college of pontiffs. In another passage⁵ Niebuhr himself demonstrates that the *Luceres* were never represented in the college of pontiffs, and his earlier supposition is contradicted by all the statements of ancient writers who mention the pontifices *minores*. Livy,⁶ in speaking of the secretaries of the college of pontiffs, adds, "*quos nunc minores pontifices appellant*;" from which it is evident that the name pontifices *minores* was of later introduction, and that it was given to persons who originally had no claims to it, that is, to the secretaries of the pontiffs. The only natural solution of the question seems to be this. At the time when the real pontiffs began to neglect their duties, and to leave the principal business to be done by their secretaries, it became customary to designate these scribes by the name of pontifices *minores*. Macrobius,⁷ in speaking of minor pontiffs previous to the time of Cn. Flavius, makes an anachronism, as he transfers a name customary in his own days to a time when it could not possibly exist. The number of these secretaries is uncertain: Cicero⁸ mentions the names of three minor pontiffs. The name cannot have been used long before the end of the Republic, when even chief pontiffs began to show a disregard for their sacred duties, as in the case of P. Licinius Crassus and Julius Cæsar. Another proof of their falling off, in comparison with former days, is, that about the same time the good and luxurious living of the pontiffs became proverbial at Rome.⁹

PONTIFICIUM JUS. (*Vid. Jus*, p. 560.)

PONTIFICALES LUDI. (*Vid. Ludi Pontificales*.)

PONTO, a Pontoon, was a vessel used for transporting troops across rivers. We are told that it was a kind of Gallic vessel, but we have no farther particulars respecting it.¹⁰

POPA. (*Vid. SACRIFICIUM*.)

POPINA. (*Vid. CAUPONA*, p. 226.)

POPULARIA. (*Vid. AMPHITHEATRUM*, p. 53.)

POPULUS. (*Vid. PATRICII*.)

POPULIFUGIA or POPULIFUGIA, the day of the people's flight, was celebrated on the nones of July, according to an ancient tradition preserved by

Varro,¹ in commemoration of the flight of the people, when the inhabitants of Ficulea, Fidenæ, and other places round about, appeared in arms against Rome shortly after the departure of the Gauls, and produced such a panic that the Romans suddenly fled before them. Macrobius,² however, says that the populifugia was celebrated in commemoration of the flight of the people before the Tuscans, while Dionysius³ refers its origin to the flight of the people on the death of Romulus. Niebuhr⁴ seems disposed to accept the tradition preserved by Varro; but the different accounts of its origin given by Macrobius and Dionysius render the story uncertain.⁵

PORISTAI (πορισταί) were magistrates at Athens, who probably levied the extraordinary supplies (Πορισταί εἰσιν ἀρχὴ τις Ἀθήνησιν, ἥτις πόρους ἐξήτει). Antiphon⁶ classes them with the πολεῖται and πρακτορες; and Demosthenes⁷ joins τῶν χρημάτων ταμίαι καὶ πορισταί, from which it would appear that they were public officers in his time, although the words do not necessarily prove this.⁸

*POROS (πόρος). "Theophrastus," says Adams, "describes a species of marble under this name. He says it resembles the Parian in hardness and colour, and the Tophus (τῶπος) in lightness. The Tophus would seem to have been the Potstone of modern mineralogists. The medical authors likewise applied the term to the chalk-stones which form in the joints of persons who have long laboured under the gout."⁹

PORPE (πόρπη). (Vid. FIBULA.)

PORTA (πύλη, dim. πυλίς), the gate of a city, citadel, or other open space enclosed by a wall, in contradistinction to JANUA, which was the door of a house or any covered edifice. The terms *porta* and *πύλη* are often found in the plural, even when applied to a single gate, because it consisted of two leaves.¹⁰

The gates of a city were, of course, various in their number and position. The ancient walls of Pæstum, Sepianum, and Aosta still remain, and enclose a square: the centre of each of the four walls was a gate. If, instead of being situated on a plain, a city was built on the summit of a precipitous hill, there was a gate on the sloping declivity which afforded the easiest access. If, in consequence of the unevenness of the ground, the form of the walls was irregular, the number and situation of the gates varied according to the circumstances. Thus Megara had 5 gates;¹¹ Thebes, in Boeotia, had 7; Athens had 8;¹² and Rome 20, or perhaps even more.

The jambs of the gate were surmounted, 1. by a lintel, which was large and strong in proportion to the width of the gate. The lintel of the centre gate leading into the Athenian acropolis is 17 feet long. 2. By an arch, as we see exemplified at Pompeii, Pæstum, Sepianum, Volterra, Autun, Bezançon, and Treves. 3. At Arpinum, one of the gates now remaining is arched, while another is constructed with the stones projecting one beyond another, after the manner represented in the woodcut at p. 85.¹³

At Como, Verona, and other ancient cities of Lombardy, the gate contains two passages close together, the one designed for carriages entering, and the other for carriages leaving the city. The same provision is observed in the magnificent ruin of a gate at Treves. (See the following woodcut, showing a view of it, together with its plan.) In other instances we find only one gate for carriages,

but a smaller one on each side of it (παρὰ πύλιν) for foot-passengers. (See the plan of the gate of Pompeii, p. 224.) Each of the fine gates which remain at Autun has not only two carriage-ways, but, exterior to them, two sideways for pedestrians.² When there were no sideways, one of the valves of the large gate sometimes contained a wicket (portula, πύλις: ῥινοπύλη) large enough to admit a single person. The porter opened it when any one wished to go in or out by night.³

The contrivances for fastening gates were in general the same as those used for doors (vid. JANUA), but larger in proportion. The wooden bar placed across them in the inside (μοχλός) was kept in its position by the following method. A hole, passing through it perpendicularly (βαλανοδόκη), admitted a cylindrical piece of iron, called βάλανος, which also entered a hole in the gate, so that, until it was taken out, the bar could not be removed either to the one side or the other.⁶ Another piece of iron, fitted to the βάλανος, and called βαλανάγρα, was used to extract it.⁶ When the besiegers, for want of this key, the βαλανάγρα, were unable to remove the bar, they cut it through with a hatchet,⁷ or set it on fire.⁸

The gateway had commonly a chamber, either on one side or on both, which served as the residence of the porter or guard. It was called πυλῶν.⁹ Its situation is shown in the following plan. (See woodcut.) But the gateway was also, in many cases, surmounted by a tower, adapted either for defence (portis turres imposuit¹⁰), or for conducting the general business of government. In the gates of Como and Verona this edifice is three stories high. At Treves it was four stories high in the flanks, although the four stories remain standing in one of them only, as may be observed in the annexed woodcut. The length of this building is 115 feet; its

depth, 47 in the middle, 67 in the flanks; its greatest height, 92. All the four stories are ornamented in every direction with rows of Tuscan columns. The gateways are each 14 feet wide. The entrance of

G., vii., 9.—Virg., Æn., vi., 552-554.)

each appears to have been guarded, as at Pompeii (see p. 224), first by a porticulus, and then by gates of wood and iron. The barbican, between the double porticulus and the pair of gates, was no doubt open to the sky, as in the gates of Pompeii. This edifice was probably erected by Constantine.¹ Its rows of ornamental windows, and the general style of its architecture, afford sufficient indications, that, although very strong, it was not intended solely nor principally for the purposes of defence, but to be applied in time of peace to the various objects of civil government. To these latter purposes the gatehouse (πυλών) was commonly devoted, more especially in Eastern countries. Hence Polybius² calls a building at Alexandria τὸν χρηματιστικὸν πυλῶνα τῶν βασιλείων, i. e., "the gatehouse of the palace, used for the transaction of public business." In the Old Testament the references to this custom are very frequent. By metonymy, "the gates" meant those who administered justice at the gates, and wielded the powers of government.³

Statues of the gods were often placed near the gate, or even within it in the barbican, so as to be ready to receive the adoration of those who entered the city.⁴ The probable position of the statue was the point S in the above plan. The gate was sometimes much ornamented. Sculptured elephants, for example, were placed upon the Porta Aurea at Constantinople.

PORTICUS (στοῶ), a walk covered with a roof, which is supported by columns at least on one side. A porticus was either attached to temples and other public buildings, or it was built independent of any other edifice. Such shaded walks and places of resort are almost indispensable in the southern countries of Europe, where people live much in the open air, as a protection from the heat of the sun and from rain. This was the case in ancient times to a much greater extent than at present. The porticoes attached to the temples were either constructed only in front of them, or went round the whole building, as is the case in the so-called Temple of Theseus at Athens. They were originally intended as places for those persons to assemble and converse in who visited the temple for various purposes. As such temple-porticoes, however, were found too small or not suited for the various purposes of private and public life, most Grecian towns had independent porticoes, some of which were very extensive; and as the Greeks, in all their public works, soon went beyond the limits of mere utility, these public walks were not only built in the most magnificent style, but were adorned with pictures and statues by the best masters. Of this kind were the ποεῖλε and στοῶ βασιλείος at Athens,⁵ and the στοῶ Περσική at Sparta.⁶ The Skias at Sparta, where the popular assemblies were held, seems to have been a building of the same kind.⁷ In most of these stoæ, seats (exedra) were placed, that those who were tired might sit down. They were frequented not only by idle loungers, but also by philosophers, rhetoricians, and other persons fond of intellectual conversation. The Stoic school of philosophy derived its name from the circumstance that the founder of it used to converse with his disciples in a stoæ. The Romans derived their great fondness for such covered walks from the Greeks; and as luxuries among them were carried in everything to a greater extent than in Greece, wealthy Romans had their private porticoes, sometimes in the city itself, and sometimes in their country-seats. In the public

porticoes of Rome, which were exceedingly numerous and very extensive (as that around the Forum and the Campus Martius), a variety of business was occasionally transacted: we find that lawsuits were conducted here, meetings of the senate held, goods exhibited for sale, &c. (See Pitiscus,¹ who has given a complete list of all the porticoes of Rome.)

PORTISCVLVS (κελευστής), an officer in a ship, who gave the signal to the rowers, that they might keep time in rowing. The same name was also given to the pole or hammer, by the striking of which he regulated the motion of the oars.² The duties of this officer are thus described by Silius Italicus:³

"*Mediæ stat margine puppis,
Quid voce alternos nautarum temperet ictus,
Et remis dicet sonitum, pariterque relatis
Ad sonitum plaudat resonantia cœrula tonsis.*"

This officer is sometimes called *Hortator*,⁴ or PAUSARIUS.⁵

PORTITORES. (Vid. PUBLICANI.)

PORTORIUM was one branch of the regular revenues of the Roman state, consisting of the duties paid on imported and exported goods: sometimes, however, the name portorium is also applied to the duties raised upon goods for being carried through a country or over bridges.⁶ A portorium, or duty upon imported goods, appears to have been paid at a very early period, for it is said that Valerius Publicola exempted the plebes from the portoria at the time when the Republic was threatened with an invasion by Porsenna.⁷ The time of its introduction is uncertain; but the abolition of it, ascribed to Publicola, can only have been a temporary measure; and as the expenditure of the Republic increased, new portoria must have been introduced. Thus the censors M. Æmilius Lepidus and M. Fulvius Nobilior instituted portoria et vectigalia multa,⁸ and C. Gracchus again increased the number of articles which had to pay portoria.⁹ In conquered places and in the provinces, the import and export duties, which had been paid there before, were generally not only retained, but increased, and appropriated to the ærarium. Thus we read of portoria being paid at Capua and Puteoli on goods which were imported by merchants.¹⁰ Sicily, and, above all, Asia, furnished to the Roman treasury large sums which were raised as portoria.¹¹ In some cases, however, the Romans allowed a subject nation, as a particular favour, to raise for themselves whatever portoria they pleased in their ports, and only stipulated that Roman citizens and socii Latini should be exempted from them.¹² In the year 60 B.C., all the portoria in the ports of Italy were done away with by a lex Cæcilia, carried by the prætor Q. Metellus Nepos.¹³ It appears, however, that the cause of this abolition was not any complaint by the people of the tax itself, but of the portitores, i. e., the persons who collected it, and who greatly annoyed the merchants by their unfair conduct and various vexations. (Vid. PUBLICANI.) Thus the Republic for a time only leaved import and export duties in the provinces, until J. Cæsar restored the duties on commodities imported from foreign countries.¹⁴ During the last triumvirate new portoria were introduced,¹⁵ and Augustus partly increased the old import duties and partly instituted

(Plin., H. N., xii., 31.—Sueton., Vitell., 14.)—7. (Liv., ii., 9.—Compare Dionys., v., 22.)—8. (Liv., xl., 51.)—9. (Vellei. Pat., ii., 6.)—10. (Liv., xxxii., 7.)—11. (Cic., c. Verr., ii., 75.—Pro leg. Manil., 6.)—12. (Liv., xxxviii., 44.—Gruter, Inscr., p. 500.)—13. (Dion Cass., xxxvii., 51.—Cic. ad Att., ii., 16.)—14. (Suet., Jul., 43.)—15. (Dion Cass., xlviii., 34.)

new ones. The subsequent emperors increased or diminished this branch of the revenue as necessity required, or as their own discretion dictated.

As regards the articles subject to an import duty, it may be stated in general terms, that all commodities, including slaves, which were imported by merchants for the purpose of selling them again, were subject to the portorium, whereas things which a person brought with him for his own use were exempted from it. A long list of such taxable articles is given in the Digest.¹ Many things, however, which belonged more to the luxuries than to the necessities of life, such as eunuchs and handsome youths, had to pay an import duty, even though they were imported by persons for their own use.² Things which were imported for the use of the state were also exempt from the portorium. But the governors of provinces (*praesides*), when they sent persons to purchase things for the use of the public, had to write a list of such things for the publicani (*portitores*), to enable the latter to see whether more things were imported than what were ordered;³ for the practice of smuggling appears to have been as common among the Romans as in modern times. Respecting the right of the portitores to search travellers and merchants, see PUBLICANI. Such goods as were duly stated to the portitores were called *scripta*, and those which were not, *inscripta*. If goods subject to a duty were concealed, they were, on their discovery, confiscated.⁴

Respecting the amount of the import or export duties, we have but very few statements in the ancient writers. In the time of Cicero, the portorium in the ports of Sicily was one twentieth (*vicesima*) of the value of taxable articles;⁵ and as this was the customary rate in Greece,⁶ it is probable that this was the average sum raised in all the other provinces. In the times of the emperors, the ordinary rate of the portorium appears to have been the fortieth part (*quadragesima*) of the value of imported goods.⁷ At a late period, the exorbitant sum of one eighth (*octava*)⁸ is mentioned as the ordinary import duty; but it is uncertain whether this is the duty for all articles of commerce, or merely for certain things.

The portorium was, like all other vectigalia, farmed out by the censors to the publicani, who collected it through the portitores. (*Vid. VECTIGALIA, PUBLICANI*.)⁹

PORTUNNA'LIA or PORTUNA'LIA, a festival celebrated in honour of Portunus or Portunus, the god of harbours.¹⁰ It was celebrated on the 17th day before the calends of September.¹¹

POSCA, vinegar mixed with water, was the common drink of the lower orders among the Romans, as of soldiers when on service,¹² slaves,¹³ &c.

POSEIDON'IA (Ποσειδώνια), a festival held every year in Ægina in honour of Poseidon.¹⁴ It seems to have been celebrated by all the inhabitants of the island, as Athenæus¹⁵ calls it a panegyris, and mentions that, during one celebration, Phryne, the celebrated hetæra, walked naked into the sea in the presence of the assembled Greeks. The festival is also mentioned by Theodoretus,¹⁶ but no particulars are known.

POSSESSIO. Paulus¹ observes. "*Possessio appellata est, ut et Labeo ait, a pedibus*" (ed. Flor., "*Sedibus*"), "*quasi positio: quia naturaliter tenetur ab eo qui insistit*." The absurdity of the etymology and of the reason is equal. The elements of possession are either *pot* (pot-is) and *sedere*, or the first part of the word is related to *apud* and the cognate Greek form of *πορί* (πόρος).

Possessio, in its primary sense, is the condition or power by virtue of which a man has such a mastery over a corporeal thing as to deal with it at his pleasure and to exclude other persons from meddling with it. This condition or power is detention, and it lies at the bottom of all legal senses of the word possession. This possession is no legal state or condition, but it may be the source of rights, and it then becomes possessio in a juristical or legal sense. Still, even in this sense, it is not in any way to be confounded with property (*proprietas*). A man may have the juristical possession of a thing without being the proprietor, and a man may be the proprietor of a thing without having the juristical possession of it, and, consequently, without having the detention of it.² Ownership is the legal capacity to operate on a thing according to a man's pleasure, and to exclude everybody else from doing so. Possession, in the sense of detention, is the actual exercise of such a power as the owner has a right to exercise.

Detention becomes juristical possession and the foundation of certain rights when the detainer has the intention (*animus*) to deal with the thing as his own. If he deal with it as the property of another, as exercising over it the rights of another, he is not said "*possidere*" in a juristical sense, but he is said "*alieno nomine possidere*." This is the case with the commodatarius and with him who holds a deposit.³

When the detention is made a juristical possessio by virtue of the animus, it lays the foundation of a right to the interdict, and by virtue of usucapion it becomes ownership. The right to the interdict is simply founded on a juristical possession, in whatever way it may have originated, except that it must not have originated illegally with respect to the person against whom the interdict is claimed. (*Vid. INTERDICTUM*.) Simply by virtue of being possessor, the possessor has a better right than any person who is not possessor.⁴ Usucapion requires not only a juristical possession, but in its origin it must have been bona fide and founded on a *iusta causa*, that is, there must be nothing illegal in the origin of the possessio. (*Vid. USUCAPIO*.)

The right which is founded on a juristical possessio is a *jus possessionis*, or right of possession, that is, a right arising from a juristical possession. The expression *jus possessionis* is used by the Roman jurists. The right to possess, called by modern jurists *jus possidendi*, belongs to the theory of ownership.

All juristical possession, then, that is, possessio in the Roman law as a source of rights, has reference only to usucapion and interdicts; and all the rules of law which treat possession as a thing of a juristical nature, have no other object than to determine the possibility of usucapion and of the interdicts.⁵

In answer to the question to which class of rights possession belongs, Savigny observes,⁶ "So far as concerns usucapion, one cannot suppose the thing to be the subject of a question. No one thinks of asking to what class of rights a *iusta causa* belongs, without which tradition cannot give owner-

ship. It is no right, but it is a part of the whole transaction by which ownership is acquired. So is it with possession in respect to usucapion."

The right to possessorial interdicts belongs to the law of obligationes ex maleficiis. "The right to possessorial interdicts, then, belongs to the law of obligationes, and therein possession is only so far considered as containing the condition without which the interdicts cannot be supposed possible. The *jus possessionis*, consequently—that is, the right which mere possession gives—consists simply in the claim which the possessor has to the interdicts as soon as his possession is disturbed in a definite form. Independent of this disturbance, bare possession gives no rights, neither a *jus obligationis*, as is self-evident, nor yet a right to the thing, for no dealing with a thing is to be considered as a legal act simply because the person so dealing has the possession of the thing."¹

The term *possessio* occurs in the Roman jurists in various senses. There is *possessio* generally, and *possessio civilis*, and *possessio naturalis*.

Possessio denoted originally bare detention. But this detention under certain conditions becomes a legal state, inasmuch as it leads to ownership through usucapion. Accordingly, the word *possessio*, which required no qualification so long as there was no other notion attached to *possessio*, requires such qualification when detention becomes a legal state. This detention, then, when it has the conditions necessary to usucapion, is called *possessio civilis*; and all other *possessio*, as opposed to *civilis*, is *naturalis*. But detention may also be the foundation of interdicts, which notion of possession is always expressed by *possessio* simply, and this is the meaning of *possessio* when used alone and in a technical sense. As opposed to this sense of *possessio*, all other kinds of detention are also called *naturalis possessio*, the opposition between the natural and the juristical possession (*possessio*) being here expressed just in the same way as this opposition is denoted in the case of the *civilis possessio*. There is, therefore, a twofold juristical *possessio*: *possessio civilis*, or possession for the purpose of usucapion, and *possessio*, or possession for the purpose of the interdict. It follows that *possessio* is included in *possessio civilis*, which only requires more conditions than *possessio*. If, then, a man has *possessio civilis*, he has also *possessio*, that is, the right to the interdict; but the converse is not true. *Possessio naturalis*, as above observed, has two significations, but they are both negative, and merely express in each case a logical opposition, that is, they are respectively not *possessio civilis* or *possessio*. The various expressions used to denote bare detention are "*tenere*," "*corporaliter possidere*," "*esse in possessione*."

In the case of a thing being pignorated, the person who pledges it has still the *possessio ad usucapionem*, but the pledgee alone has the *possessio ad interdicta*. It is not a *possessio civilis* which is the foundation of the pledger's title by usucapion; but by a special fiction he is considered to have such possession, and so the case is a special exception to the general rule, "*sine possessione usucapio contingere non potest*."

Possessio justa is every *possessio* that is not illegal in its origin, whether such *possessio* be mere detention or juristical *possessio*. The word *justa* is here used, not in that acceptation in which it has reference to *jus civile*, and is equivalent to *civilis* or *legitima*, but in another sense, which is more indefinite, and means "rightful" generally, that is, not wrongful. The creditor who is in possession of a pledge has a *justa possessio*, but not a *civilis*

possessio: he has, however, a juristical *possessio*, that is, *possessio*, and, consequently, a right to the interdicts. The *missio in possessionem* is the foundation of a *justa possessio*, but, as a general rule, not of a juristical *possessio*. *Possessio injusta* is the logical opposite of *justa*, and in the case of *possessio injusta* there are three special *vita possessionis*, that is, in the possession has originated *vi*, *clam*, or *precario*¹ (*Hanc tu mihi vel vi, vel clam, vel precario fac tradas*).

With respect to the *causa possessionis*, there was a legal maxim: "*Nemo sibi ipse causam possessionis mutare potest*." This rule is explained by Savigny by means of Gaius,² as having reference to the old usucapio pro herede, and the meaning of it was, that if a person had once begun to possess for any particular cause, he could not at his pleasure change such *possessio* into a *possessio pro herede*.³

A possessor *bonæ fidei* is he who believes that no person has a better right to possess than himself. A possessor *malæ fidei* is he who knows that he has no right to possess the thing.⁴

Besides these various meanings of *possessio*, possessor, *possidere*, at the bottom of all which lies the notion of possession, there are some other meanings. "To have ownership" is sometimes expressed by *possidere*; the thing which is the object of ownership is sometimes *possessio*; and the owner is possessor. This use of the word occurs frequently in the Code and Pandect, and also in Cicero, Quintilian, Horace, and other writers. But it is remarked by Savigny that these meanings of *possidere*, *possessio*, &c., always refer to land as their object.

Possessio also denotes the relation of a defendant with respect to a plaintiff. For instance, when ownership is claimed, the demand must be against a person in possession; but this does not mean that such person must have a juristical possession. In a *vindicatio*, accordingly, the plaintiff is called *petitor*, and the defendant is named *possessor*, because, in fact, he has the possession of that which the plaintiff claims. The procedure by the *vindicatio* was also adapted to the case of an *hereditas*, and here also the term *possessor* was applied to the defendant. In many cases the possessor was really such, and one object of the *hereditatis petitio* was to recover single things which the defendant possessed pro herede or pro *possessore*. But the term *possessor* was not limited to such cases, for the defendant is called *possessor* when the *petitio* is not about a matter of possession. He is called *juris possessor*, because he refuses to do something which the heres claims of him, or because he asserts his right to a portion of the *hereditas*.

The juristical notion of possession implies a thing which can be the object of ownership: it also implies that the possessor can be no other than a person who has a capacity for ownership.

The notion of possession is such that only one person at a time can possess the whole of a thing (*plures eandem rem in solidum possidere non possunt*). When several persons possess a thing in common, so that their possession is mutually limited, each, in fact, possesses only a definite part of the thing, but does not possess the other parts; and, though the division into parts is only ideal, this does not affect the legal consideration of the matter. Persons may also possess the same thing in different senses, as in the case of the debtor and his creditor or who has received from him a *pignus*.

Though things incorporeal are not strictly ob

1. (Terent., *Eunuch*, ii., 3.—Dig. 43, tit. 17, s. 1, 2.)—2. (ii. 52, &c.)—3. (Savigny, p. 56.)—4. (Savigny, p. 84.)

jects of possession, yet there is a *juris quasi possessio* of them, as, for instance, in the case of servitudes (*easements*). The exercise of a right of this kind is analogous to the possession of a corporeal thing: in other words, as real possession consists in the exercise of ownership, so this kind of possession, which is fashioned from analogy to the other, consists in the exercise of a *jus in re*, or of one of the component parts of ownership. In the case of possession, it is the thing (*corpus*) which is possessed, and not the property: by analogy, then, we should not say that the servitus or the *jus in re* is possessed. But as in the case of a *jus in re* there is nothing to which the notion of possession can be attached, while in the case of ownership there is the thing to which we apply the notion of possession, we are compelled to resort to the expression, *juris quasi possessio*, by which nothing more is meant than the exercise of a *jus in re*, which exercise has the same relation to the *jus in re* that proper possession has to ownership.¹

In order to the acquisition of juristical possession, apprehension and *animus* are necessary. The apprehension of a corporeal thing is such a dealing with it as empowers the person who intends to acquire the possession to operate on the thing to the exclusion of all other persons. But actual corporeal contact with the thing is not necessary to apprehension: it is enough if there is some act on the part of the person who intends to acquire possession, which gives him the physical capacity to operate on the thing at his pleasure. Thus, in the case of a piece of ground, he who enters upon part is considered to have entered upon the whole. A man may acquire possession of what is contained in a thing by delivery of the key which gives him access to the contents, in the presence of (*apud*) the thing. The case mentioned in the Digest² is that of the key of a granary being delivered in sight of the granary (*apud horrea*). The delivery of the key is not a symbolical delivery, as some have supposed, but it is the delivery of the means of getting at the thing.³

The *animus* consists in the will to treat as one's own the thing that is the object of our apprehension. All persons, therefore, who are legally incompetent to will, are incompetent to acquire a juristical possession. Children and lunatics are examples of such persons. If a man has the detention of a thing, he can acquire the possession by the *animus* alone, for the other condition has been already complied with.

In order that juristical possession may be acquired, there must always be the *animus* on the part of him who intends to acquire the possession; but the act of apprehension (*corpus*) may be effected by another as his representative, if that other does the necessary acts, and with the intention of acquiring the possession for the other, and not for himself.⁴ There must be a certain relation between the person for whom possession is thus acquired and the person who acquires it for him, either of legal power (*potestas*) or of agency: the former is the case of a slave or *filiusfamilias* who obeys a command, and the latter is the case of an agent who follows instructions (*mandatum*). A person who is the representative of another, and has the possession of a thing, may by the *animus* alone cease to have the possession, and transfer it to that other, retaining only the bare detention.

Possessio, that is, the right of possession, is, however, a thing that can be transferred without the transfer of ownership. In this case of deriva-

tive possessio, the apprehension is the same as in the case of acquiring a juristical possessio; but the *animus* with which the thing is apprehended cannot be the "*animus domini*," but merely the "*animus possidendi*," that is, the will to acquire the *jus possessionis*, which the possessor transfers, and nothing more. The detention of a thing may be transferred without the ownership, but the transfer of the detention is not always accompanied by a transfer of the *jus possessionis*. There are three classes into which all acts may be distributed which are accompanied with a transfer of detention: 1. those which are never the foundation of a derivative possessio; 2. those which always are; and, 3. those which are sometimes. The first class comprehends such cases as those when the detention of a thing is transferred to an agent (*procurator*), and the case of a commodatum. (*Vid. Commodatum*.) The second class comprehends the case of the *emphyteuta*, which is a possessio, but only a derivative one, as the *emphyteuta* has not the *animus domini*; it also comprehends the case of the creditor who receives the detention of a *pignus* by a *contractus pignoris*, but it does not comprehend the case of a *pignus prætorium*, *pignus in causa judicati captum*, nor a *pactum hypothecæ*. In the case of a *contractus pignoris*, when the thing was delivered to the creditor he had *possessio*, that is, a right to the interdicts, but not *possessio civilis*, that is, the right of usucapion. The debtor had no *possessio* at all, but, by virtue of an exception to a general rule, he continued the usucapion that had been commenced. (*Vid. Pignus*.) The third class comprehends *depositum* and *precarium*.

The right of possession consists in the right to the protection of the interdict (*vid. Interdictum*), and this protection is also extended to *jura in re*. The relation of the *juris quasi possessio* to *possessio* has been already explained. The objects of this *juris quasi possessio* are personal servitudes, real servitudes, and *jura in re* which do not belong to the class of servitudes, of which *superficies* is the only proper instance. In all the cases of *juris quasi possessio*, the acquisition and the continuance of the right of possession depend on the *corpus* and *animus*; and the *animus* is to be viewed exactly in the same way as in the case of possession of a corporeal thing. The exercise of personal servitudes (particularly *usus* and *usufructus*) is inseparable from the natural possession of the thing, and the possession of them is consequently acquired in the same way as the possession of a corporeal thing. As to the *juris quasi possessio* of real servitudes, there are two cases: either he who has a right to the servitus must do some act, which, if he had not the right, he might be forbidden to do (*servitus quæ in faciendo consistit*), or the owner of property has no right to do some particular thing, which, if the right did not exist, he might do (*servitus quæ in non faciendo consistit*). As to the first class, which may be called positive servitudes, the acquisition of the *juris quasi possessio* consists merely in doing some act which is the object of the right, and the doing of this act must be done for the purpose of exercising the right.¹ This rule applies to the *jus itineris*, *actus*, *viæ*, and others, which are independent of the possession of any other property. Such an act as the *jus tigni immittendi*, or the driving a beam into the wall of one's neighbour's house, is a right connected with the possession of another piece of property, and the possession of this right consists in the exercise of it. As to the second class, which may be called negative servitudes, the *juris quasi possessio* is acquired in consequence of

1. (Savigny, p. 166.)—2. (Dig. 18, tit. 1, s. 74.)—3. (Compare Lord Hardwicke's remarks on this matter, *Ward v. Turner*, 2 Ves.)—4. (Paulus, S. R., v. tit. 2, s. 1.)

the person whose right is thereby limited attempting to do some act contrary to the right of the person who claims the servitus, and meeting with opposition to such act, and acquiescing in the opposition.¹ This *juris quasi possessio* may also be founded on a legal title, that is, on any juridical act which can give such right.

Every possession continues so long as the corpus and the animus continue. If both cease, or either of them ceases, the possession is gone.² As to the corpus, the possession is lost when, in consequence of any event, the possessor cannot operate on the thing at his pleasure, as before. In the case of movable things, the possession is lost when another person has got hold of them, either by force or secretly: in the case of immovable things, it is lost when a man has turned another out of the possession; but if, in the absence of the possessor, another occupies his land without his knowledge, he does not lose the possession till he attempts to exercise ownership over the land, and is prevented by the person then in possession of it, or, through fear, does not attempt to recover his possession. The possession thus acquired by the new possessor is a violent possession. If the former possessor knows the fact, and acquiesces by doing nothing, he loses the possession by the animus alone. In the case of possession being lost by the animus alone, it may be effected either expressly or tacitly; the only thing necessary is, that there must be an intention to give up the possession. The possession is lost *corpore et animo* when the possessor gives up a thing to another to possess as his own. In the case of a *juris quasi possessio*, as well as in that of *possessio* proper, the continuance of the possession depends on the corpus and animus together. There can be no *juris quasi possessio* without the animus possidendi; and if there be merely the animus possidendi, the *juris quasi possessio* must cease.

Possessio can be lost by a person who represents the possessor. Such person may himself acquire the possession by exercising the animus possidendi when it is accompanied with a sufficient corporeal act: in the case of movable things, this is *furtum*; in the case of immovable things, it is violent dispossession. The possession can be lost through the representative in all cases in which it would have been lost by the possessor if there had been no representation.

In many of the systematic expositions of Roman law, the theory of *possessio* is treated as introductory to the theory of ownership (*dominium*). The view which has been here given of it is also not universally acquiesced in. For instance, Gans, in his chapter on Possession,³ begins with the two following sections:

§ 103. *Darstellung der verschiedenen herrschenden Meinungen über den Besitz.*—Der Besitz ist kein blosses factum, und entsteht nicht als recht, durch den umweg des unrechts.

§ 104. *Der Besitz als das eigenthum nach der seite des bloss besondern willens.*—Anfangendes, präsumtives eigenthum.

Savigny's view, on the contrary, is briefly this: "Possession is a fact (*factum*), so far as a mere factish (*unjuridical*) relation (*detention*) is the foundation of it. But possession is also a right, so far as rights are connected with the bare existence of the relation of fact. Consequently, possession is both fact and right."

Also: "The only right arising from bare possession is a right to the interdicts"—and "the right to the interdicts is founded on the fact of the exercise of

ownership being obstructed wrongfully, as, for instance, by force."

It is shown in the article *AGRICOLÆ LEGES* that the origin of the Roman doctrine of possession may probably be traced to the possession of the *ager publicus*. Possessio, possessor, and possidere are the proper technical terms used by the Roman writers to express the possession and the enjoyment of the public lands. These terms did not express ownership (*ex jure Quiritium*): they had, in fact, no more relation to ownership than the possession of which this article treats. Still, the notion of this kind of use and enjoyment was such, that one may easily conceive how the term *possessio* became applicable to various cases in which there was no Quiritarian ownership, but something that had an analogy to it. Thus, in the case of *dammum infectum*, with reference to the second *missio* in possessionem (*ex secundo decreto*), the prætor says "*possidere jubebo*," which is equivalent to giving bonitarian ownership with the power of usucapion. A usufructus which could only be maintained by the *jus prætorium*, was a *possessio usufructus* as opposed to *dominium usufructus*. The expressions *hereditatis* or *bonorum possessio* do not mean the actual possession of the things, but the peculiar character of the prætorian hereditas: for this *bonorum possessio* has the same relation to the hereditas that bonitarian has to Quiritarian ownership. (*Vid. DOMINIUM, HERES.*) Now there is a clear analogy in all these instances to the possession of the *ager publicus*, which consists in this, that in both cases an actual exclusive enjoyment of a particular person to a particular thing is recognised. This will also explain how property in provincial ground came to be called *possessio*: such property was not Quiritarian ownership, but it was a right to the exclusive enjoyment of the land; a right which the word *possessio* sufficiently expressed. Thus the name *possessio* was transferred from the right to its object, and *ager* and *possessio* were thus opposed: *ager* was a piece of land which was the object of Quiritarian ownership, and *possessio* a piece of land which was either accidentally an object only of bonitarian ownership, as a *fundus Italicus* of which there had been merely tradition; or it was land that could not be the object of Quiritarian ownership, such as provincial land¹ and the old *ager publicus*.

Other matters relating to possession appear to be explained by this view of its historical origin. The *interdictum recuperandæ possessionis* relates only to land, a circumstance which is consistent with the hypothesis of the origin of possession. The nature of the *precarium*, also, is explained, when we know that it expressed originally the relation between the patronus and the clients who occupied the possession of the patronus as a tenant at will, and could be ejected by the *interdictum de precario* if he did not quit on notice. Farther, we may thus explain the apparent inconsistency in the case of a lessee of *ager vectigalis*, who, though he had only a *jus in re*, had yet juridical possession: the *ager vectigalis* was in fact fashioned according to the analogy of the old *ager publicus*, and it was a simple process to transfer to it that notion of possession which had existed in the case of the *ager publicus*. (*Vid. EMPHYTEUSIS.*)

This article, read in connexion with the article on the *Agrariæ Leges* and the *Licinian Rogationes* (*vid. ROGATIONES LICINIÆ*), will give the reader an outline of the law of possession both in relation to the *ager publicus* and *privatus*.

The preceding view of possession is from Savigny, *Das Recht des Besitzes*, fifth ed., 1827. There is

1. (Dig. 8, tit. 5, s. 6.)—2. (Dig. 41, tit. 2, s. 3, 46.)—3. (System des Röm. Civilrechts im Grundrisse, &c.)

1. (Javolenus, Dig. 50, tit. 16, s. 12.)

an analysis of this excellent work by Warakönig, "Analyse du traité de la possession par M. de Savigny, Liège, 1824;" and a summary view of Savigny's Theory is given by Mackeldey, *Lehrbuch*, &c., ii., p. 7.¹

POSSESSIO BONORUM. (*Vid.* BONORUM POSSESSIO.)

POSSESSIO CLANDESTINA. (*Vid.* INTERDICTUM, p. 544.)

POSTICUM. (*Vid.* JANUA, p. 524.)

POSTLIMINIUM, JUS POSTLIMINII. "There are," says Pomponius,² "two kinds of postliminium, for a man may either return himself or recover something." Postliminium is farther defined by Paulus³ to be the "right of recovering a lost thing from an extraneous and of its being restored to its former status, which right has been established between us (the Romans) and free people and kings by usage and enactments (*moribus ac legibus*); for what we have lost in war or even out of war, if we recover it, we are said to recover postliminio; and this usage has been introduced by natural equity, in order that he who was wrongfully detained by strangers should recover his former rights on returning into his own territories (*in fines suos*)." Again, Paulus says, "a man seems to have returned postliminio when he has entered our territory (*in fines nostros intraverit*), as a foundation is laid for a postliminium (*sicuti admittitur*) (!) when he has gone beyond our territories (*ubi fines nostros excessit*). But if a man has come into a state in alliance (*socii*) or friendship with Rome, or has come to a king in alliance or friendship with Rome, he appears to have forthwith returned by postliminium, because he then first begins to be safe under the name of the Roman state." These extracts are made for the purpose of clearing up the etymology of this word, as to which there was a difference of opinion.⁴ The explanation of Scævola, as given by Cicero, has reference to the etymology of the word, *post* and *limen*: "what has been lost by us and has come to an enemy, and, as it were, has gone from its own limen, and then has afterward (*post*) returned to the same limen, seems to have returned by postliminium." According to this explanation, the limen was the boundary or limit within which the thing was under the authority of Rome and an object of the Roman law. A recent writer⁵ suggests that postliminium must be viewed in a sense analogous to pmoerium. There is a fanciful explanation of the matter by Plutarch⁷ in his answer to the question, Why are those who have been falsely reported to have died in a foreign land, not received into the house through the door in case of their return, but let down through an opening in the roof?

If a Roman citizen, during war, came into the possession of an enemy, he sustained a diminutio capitis maxima, and all his civil rights were in abeyance. Being captured by the enemy, he became a slave; but his rights over his children, if he had any, were not destroyed, but were said to be in abeyance (*pendere*) by virtue of the jus postliminii: when he returned, his children were again in his power; and if he died in captivity, they became sui juris. Whether their condition as sui juris dated from the time of the captivity or of the death, was a disputed matter;⁸ but Ulpian, who wrote after Gaius, declares that in such case he must be considered to have died when he was made captive; and this is certainly the true deduction from the

premises. In the case of a filius or nepos being made captive, the parental power was suspended (*in suspensio*). If the son returned, he obtained his civic rights, and the father resumed his parental powers, which is the case mentioned in the Digest.¹ As to a wife, the matter was different: the husband did not recover his wife jure postliminii, but the marriage was renewed by consent. This rule of law involves the doctrine, that if a husband was captured by the enemy, his marriage, if any then existed, was dissolved. If a Roman was ransomed by another person, he became free, but he was in the nature of a pledge to the ransomer, and the jus postliminii had no effect till he had paid the ransom money.

Sometimes, by an act of the state, a man was given up bound to an enemy, and if the enemy would not receive him, it was a question whether he had the jus postliminii. This was the case with Sp. Postumius, who was given up to the Samnites, and with C. Hostilius Mancinus, who was given up to the Numantines; but the better opinion was that they had no jus postliminii:² and Mancinus was restored to his civic rights by a lex.³

Cicero⁴ uses the word postliminium in a different sense; for he applies it to a man who had, by his own voluntary act, ceased to be a citizen of a state, and subsequently resumed his original civic rights by postliminium.

It appears that the jus postliminii was founded on the fiction of the captive having never been absent from home—a fiction which was of easy application; for as the captive, during his absence, could not do any legal act, the interval of captivity was a period of legal non-activity, which was terminated by his showing himself again.

The Romans acknowledged capture in war as the source of ownership in other nations, as they claimed it in their own case. Accordingly, things taken by the enemy lost their Roman owners; but when they were recovered, they reverted to their original owners. This was the case with land that had been occupied by the enemy, and with the following movables, which are enumerated by Cicero as res postliminii:⁵ "*homo* (that is, slaves), *navis*, *mulus*, *clitellarius*, *equus*, *equa quæ fræna recipere solet*." Arms were not res postliminii, for it was a maxim that they could not be honourably lost.

The recovery above referred to seems to mean the recovery by the Roman state or by the original owner. If an individual recaptured from an enemy what had belonged to a Roman citizen, it would be consistent that we should suppose that the thing recaptured was made his own by the act of capture; but if it was a res postliminii, this might not be the case. If a thing, as a slave, was ransomed by a person not the owner, the owner could not have it till he had paid the ransom: but it does not appear to be stated how the matter was settled if a Roman citizen recaptured property (of the class res postliminii) that had belonged to another Roman citizen. But this apparent difficulty may perhaps be solved thus: in time of war, no Roman citizen could individually be considered as acting on his own behalf under any circumstances, and, therefore, whatever he did was the act of the state. It is a remark of Labeo,⁷ "*Si quid bello captum est, in præda est, non postliminio redit*;" and Pomponius⁸ states, that if the enemy is expelled from Roman lands, the lands return to their former owners, being neither considered public land nor præda; in making which remark he evidently assumes the general doctrine

1. (*Vid.* also Gaius, iv., 138-170.—Inst., iv., tit. 15.—Dig. 41, tit. 2, § 3; 43, tit. 16-23, 26, 31.—Cod., vii., tit. 32; viii., tit. 4, § 6, 9.—Cod. Theod., iv., tit. 22, 23.)—2. (Dig. 49, tit. 15, § 14.)—3. (Dig. 49, tit. 15, § 19.)—4. (The reading in Flor., Geb., and Spang: is "sicuti amittitur.")—5. (Cic., Top., 8.)—6. (Göthling, Geschichte der Röm. Staatsverfassung, p. 117.)—7. (Quest. Rom., 5.)—8. (Gaius, i., 129.)

1. (49, tit. 15, § 14.)—2. (Cic., De Or., i., 40.—Id., De Off., iii., 30.—Id., Top., 8.—Id., Pro Cæcina, c. 34.—Dig. 49, tit. 15, § 4; 50, tit. 7, § 17.)—3. (Dig. 50, tit. 7, § 17.)—4. (Pro Balbo, c. 12.)—5. (Top., 8.)—6. (Compare Festus, s. v. Postliminium.)—7. (Dig. 49, tit. 15, § 28.)—8. (Dig. 49, tit. 15, § 20.)

laid down by Labeo. Paulus also, in his remark on Labeo's rule of law, merely mentions an exception to the rule, which was of a peculiar kind. If, then, anything taken in war was booty (*præda*), to what did the *jus postliminii* apply? It applied, at least, to all that was restored by treaty or was included in the terms of surrender, and slaves, no doubt, were a very important part of all such things as were captured or lost in time of war; and they were things that could be easily identified and restored to their owners. It also applied to a slave who escaped from the enemy and returned to his master. The maxim "*quæ res hostiles apud nos sunt, occupantium fiunt*,"¹ has no reference to capture from the enemy, as it sometimes seems to be supposed.²

It may be objected, that the explanation of one difficulty that has been already suggested raises another. According to this explanation, if a man in time of war recaptured his own slave, it would be *præda*, and he would not at once recover the ownership, as above supposed. The answer is, that it may be so, and that this matter of *postliminium*, particularly as regards things, waits for a careful investigation. As a general rule, all movables belonging to an enemy which were captured by a Roman army were *præda*, apparently not the property of the individual soldier who happened to lay his hands on them, but the property of the state, or, at least, of the army. Now the difficulty is to ascertain whether all movables so taken were *præda*, except *res postliminii*, or whether all things so taken were *præda*, res *postliminii* included. In the former case, the *res postliminii* would be the property of the owner when he could prove them to have been his: in the latter, when a thing had become *præda*, it had lost its capacity (if we may so speak) of being a *res postliminii*. The distinction here made is a fundamental one. The difficulty partly arises from the expression of Labeo above quoted, *Si quid*, &c., where the Florentine reading has been followed. But Bynkershoek³ amends the reading into *Si quod*, &c., the propriety of which may be doubted.

If a man made a will before he was taken captive, and afterward returned, the will was good *jure postliminii*. If he died in captivity, the will was good by the *lex Cornelia*. The law of *postliminium* applied to time of peace as well as war, when the circumstances were such that the person or the thing could become the property of another nation,⁴ as, for instance, of a nation that had neither an *amicitia*, *hospitium*, nor a *fœdus* with Rome; for such might be the relation of a nation to Rome, and yet it might not be *hostis*. A nation was not *hostis*, in the later acceptance of that term, till the Romans had declared war against it, or the nation had declared war against Rome. Robbers and pirates were not *hostes*, and a person who was captured by them did not become a *slave*, and therefore had no need of the *jus postliminii*.

POSTUMUS. (*Vid. HERES, ROMAN.*)

*POTAMOGEITON (*ποταμογείτων*), the *Potamogeton natans*, or Floating Pondweed.⁵

*POTERION (*ποτήριον*), a species of plant Pena and Lobelius held it to be the *Poterium spinosum*, L., but Sprengel is inclined to think, with Matthioli and Clusius, that it is the *Astragalus Poterium*, Pall., being a species of *Tragacanth*, according to Linnaeus.⁶

POTESTAS. (*Vid. PATRIA POTESTAS.*)

*POTHUS (*πόθος*), "a species of plant, which Sprengel, in the first edition of his R. H. H., sets

down for the *Lychnis Chalcedonica*, and in the second for the *Amaryllis lutea*, but upon a doubtful reading according to Schneider. Bauhin, however, is pretty decided in favour of the *Lychnis Chalcedonica*.⁷

PRAC'TORES (*πράκτορες*), subordinate officers (*δύναμις ὑπηρεσίας*, says Pollux²) who collected the fines and penalties (*ἐπιβολὴς* and *τιμῆματα*) imposed by magistrates and courts of justice, and payable to the state. The magistrate who imposed the fine, or the *ἡγεμὼν δικαστηρίου*, gave notice thereof in writing to the *πράκτορες*. He was then said *ἐπιγράψαι τὸ τίμημα τοῖς πράκτορσιν*, and the debtor's name *παράδοθῆναι τοῖς πράκτορσιν*. If the fine or any part thereof was to go to a temple, the like notice was sent to the *ταμίαι* of the god or goddess to whom the temple belonged.³ The name of the debtor, with the sum which he was condemned to pay, was entered by the *πράκτορες* in a tablet in the Acropolis. Hence the debtor was said to be *ἐγγεγραμμένος τῷ δημοσίῳ*, or *ἐν τῇ ἀκροπόλει*. It was the business of the *πράκτορες* to demand payment of this sum, and, if they received it, to pay it over to the *ἀποδέκται*, and also to erase the name of the debtor in the register (*ἐξαλείφειν* or *ἀπαλείφειν*). Such erasure usually took place in the presence of some members of the senate. An *ἐνδείξις* lay against any man who made or caused to be made a fraudulent entry or erasure of a debt.⁴ The collectors took no steps to enforce payment; but, after the expiration of the ninth *πρωτανεία* from the registering of the debt (or, in case of a penalty imposed on a *γραφὴ ὕβρεως*, after the expiration of eleven days), if it still remained unpaid, it was doubled, and an entry made accordingly.⁵ Thereupon immediate measures might be taken for seizure and confiscation of the debtor's goods; but here the *πράκτορες* had no farther duty to perform, except, perhaps, to give information of the default to the senate.⁶

PRÆCINCTIO. (*Vid. AMPHITHEATRUM*, p. 53.)

*PRÆCŌCĪA (*πραϊκόκκία*), called *Βερικόκκα* in the *Geoponica*, the same as the *μήλα Ἀρμενιᾶκά*, being a variety of the Apricot, or *Prunus Armeniaca*.⁷

PRÆCONES, Criers, were employed for various purposes: 1. In sales by auction, they frequently advertised the time, place, and conditions of sale: they seem also to have acted the part of the modern auctioneer, so far as calling out the biddings and amusing the company, though the property was knocked down by the *magister auctionis*.⁸ (*Vid. AUCTION.*) 2. In all public assemblies they ordered silence.⁹ 3. In the comitia they called the centuries one by one to give their votes, pronounced the vote of each century, and called out the names of those who were elected.¹⁰ They also recited the laws that were to be passed. 4. In trials, they summoned the accuser and the accused, the plaintiff and defendant.¹¹ 5. In the public games, they invited the people to attend, and proclaimed the victors.¹² 6. In solemn funerals they also invited people to attend by a certain form; hence these funerals were called *funera indictiva*.¹³ 7. When things were lost, they cried them and searched for

them.¹ 8. In the infliction of capital punishment, they sometimes conveyed the commands of the magistrates to the lictors.²

Their office, called *præconium*, appears to have been regarded as rather disreputable: in the time of Cicero, a law was passed preventing all persons who had been *præcones* from becoming decuriones in the municipia.³ Under the early emperors, however, it became very profitable,⁴ which was, no doubt, partly owing to fees to which they were entitled in the courts of justice and on other occasions, and partly to the bribes which they received from the suitors, &c.

PRÆCONIUM (Vid. PRÆCONES.)

PRÆDA. (Vid. POSTLIMINIUM.)

PRÆDIATOR. (Vid. PRÆS.)

PRÆDIATORIUM JUS. (Vid. PRÆS.)

PRÆDIUM. This word originally signified, according to Varro,⁵ any property which was made a security to the state by a *præs*: "*Prædia dicta, item ut prædes, a præstando, quod ea pignori data publice mancipis fidem præstent.*" Subsequently the word was limited to signify land generally. In this sense *prædia* were divided into *rustica* and *urbana*, of which the following definition has been given: *Rustica* are those on which there are no *ædes* or which are in the country (*in agro*), and *urbana* are those which are in the city, and comprise buildings. Those incorporeal things which consisted not in the ownership of *prædia*, but in certain rights with respect to them, were called *jura prædiorum*. As to a difference in the mode of transferring such *jura* in the case of *prædia rustica* and *urbana*, see *Gaius*.⁶ A *prædium* which was liable to a *servitus* was said "*servire*," and was "*a prædium serviens.*"

Provincialia *prædia* were either *stipendiaria* or *tributaria*: the former were in those provinces which were considered to belong to the *populus Romanus*, and the latter in those provinces which were considered to belong to the *Cæsar*.⁷

Under the word *Colonus* a reference was made to *prædium* for an explanation of the term *coloni* of the later imperial period.

These *coloni* were designated by the various names of *coloni*, *rustici*, *originarii*, *adscriptionii*, *inquilini*, *tributarii*, *censiti*. A person might become a *colonus* by *birth*, with reference to which the term *originarius* was used. When both the parents were *coloni* and belonged to the same master, the children were *coloni*. If the father was a *colonus* and the mother a slave, or conversely, the children followed the condition of the mother. If the father was free and the mother a *colona*, the children were *coloni*, and belonged to the master of the mother. If the father was a *colonus* and the mother free, the children before the time of Justinian followed the condition of the father; afterward Justinian declared such children to be free, but finally he reduced them to the condition of *coloni*. If both parents were *coloni* and belonged to different masters, it was finally settled that the masters should divide the children between them, and if there was an odd one, it should go to the owner of the mother. If a man lived for thirty years as a *colonus*, he became the *colonus* of the owner of the land on which he lived; and, though he was still free, he could not leave the land: and a man who had possessed for thirty years a *colonus* belonging to another, could defend himself against the claim of the former owner by the *præscriptio triginta annorum*. A constitution of Valentinian III. declared how free persons might become *coloni* by *agreement*, and, though

there is neither this nor any similar regulation in the Code of Justinian, there is a passage which apparently recognises that persons might become *coloni* by such agreement.¹

The *coloni* were not slaves, though their condition in certain respects was assimilated to that of slaves, a circumstance which will explain their being called *servi terre*, and sometimes being contrasted with *liberi*. They had, however, *connubium*, which alone is a characteristic that distinguishes them clearly from slaves.² But, like slaves, they were liable to corporeal punishment, and they had no right of action against their master, whose relation to them was expressed by the term *patronus*.³ The *colonus* was attached to the soil, and he could not be permanently separated from it by his own act, or by that of his *patronus*, or by the consent of the two. The *patronus* could sell the estate with the *coloni*, but neither of them without the other.⁴ He could, however, transfer superabundant *coloni* from one to another of his own estates. When an estate held in common was divided, married persons and relatives were not to be separated. The ground of there being no legal power of separating the *coloni* and the estate was the opinion that such an arrangement was favourable to agriculture, and there were also financial reasons for this rule of law, as will presently appear. The only case in which the *colonus* could be separated from the land was that of his becoming a soldier, which must be considered to be done with the *patronus*'s consent, as the burden of recruiting the army was imposed on him, and in this instance the state dispensed with a general rule for reasons of public convenience.

The *colonus* paid a certain yearly rent for the land on which he lived: the amount was fixed by custom, and could not be raised; but, as the land-owner might attempt to raise it, the *colonus* had in such case for his protection a right of action against him, which was an exception to the general rule above stated.⁵ There were, however, cases in which the rent was a money payment, either by agreement or by custom.

A farther analogy between the condition of *servi* and *coloni* appears from the fact of the property of *coloni* being called their *peculium*. It is, however, distinctly stated that they could hold property,⁶ and the expressions which declare that they could have nothing "*propria*,"⁷ seem merely to declare that it was not *propria* in the sense of their having power to alienate it, at least without the consent of their *patroni*. It appears that a *colonus* could make a will, and that, if he made none, his property went to his next of kin: for if a bishop, presbyter, deacon, &c., died intestate and without kin, his property went to the church or convent to which he belonged, except such as he had as a *colonus*, which went to his *patronus*, who, with respect to the ownership of the land, is called *dominus possessionis*.⁸ Some classes of *coloni* had a power of alienating their property.⁹

The land-tax due in respect of the land occupied by the *colonus* was paid by the *dominus*; but the *coloni* were liable to the payment of the poll-tax, though it was paid in the first instance by the *dominus*, who recovered it from the *colonus*. The liability of the *colonus* to a poll-tax explains why this class of persons was so important to the state, and why their condition could not be changed without the consent of the state. It was only when the *colonus* had lived as a free man for thirty years that

1 (Plaut., *Merc.*, iii., 4, 78.—Petron., 67.)—2 (Liv., xxvi., 15.)—3 (Cic. ad Fam., vi., 18.)—4 (Juv., iii., 157.—Id., vii., 6.)—Mart., v., 56, 11.—Id., vi., 8, 5.)—5 (L. L., v., 40, ed. Müller.)—6 (ii., 29.)—7 (Gaius, ii., 21.)

1 (Cod., xi., tit. 47, s. 22.)—2. (Cod., xi., tit. 47, s. 24.)—3 (Cod. Theod., v., tit. 11.)—4. (Cod., xi., tit. 47, s. 2, 7.)—5 (Cod., xi., tit. 47, s. 5.)—6. (Cod. Theod., v., tit. 11.)—7. (Cod., xi., tit. 49, s. 2.)—8. (Cod. Theod., v., tit. 3.)—9. (Cod., xi., tit. 47, s. 23.)

he could maintain his freedom by a *præscriptio*, but Justinian abolished this *præscriptio*, and thus empowered the dominus to assert his right after any lapse of time.¹ With respect to their liability to the poll-tax, the coloni were called *tributarii*, *censiti* or *censibus obnoxii*, *adscriptitii*, *adscriptitiae conditionis*, and *censibus adscripti*. This term *adscriptio* appears to have no reference to their being attached to the land, but it refers to their liability to the poll-tax as being rated in the tax-books; and, accordingly, we find that the Greek term for *adscriptitius* is *ἑναπόγραφος*.

As the coloni were *pot servi*, and as the class of Latini and peregrini hardly existed in the later ages of the Empire, we must consider the coloni to have had the *civitas*, such as it then was; and it is a consequence of this that they had *conubium* generally. A constitution of Justinian, however,² declared the marriage of a colonus who belonged to another person and a free woman to be void. The constitution does not seem to mean anything else than that in this case the emperor took away the *conubium*, whether for the reasons stated by Savigny, or for other reasons, is immaterial. This special exception, however, proves the general rule as to *conubium*.

The origin of these coloni seems absolutely uncertain. They appear to be referred to in one passage of the Pandect³ under the name of *inquilinus*, a term which certainly was sometimes applied to the whole class of coloni. The passage just referred to states that, if a man bequeaths as a legacy the *inquilini* without the *prædia* to which they adhere (*sine prædiis quibus adherent*), it is a void legacy. Savigny conceives that this passage may be explained without considering it to refer to the coloni of whom we are speaking; but the explanation that he suggests seems a very forced one, and the same remark applies to his explanation of another passage in the Digest.⁴ The condition of the old clients seems to bear some relation to that of the coloni, but all historical traces of one class growing out of the other are entirely wanting; and, indeed, all evidence of the real origin of the coloni seems to fail altogether.

Savigny observes that he does not perceive any historical connexion between the villeins (*villani*) of modern Europe and the coloni, though there is a strong resemblance between their respective conditions. There were, however, many important distinctions; for instance, the villein services due to the lord had nothing corresponding to them in the case of the coloni, so far as we know. Littleton's Tenures, section 172, &c., and Bracton,⁵ may be consulted as to the incidents of villeinage.

This view of the condition of the coloni is from Savigny's Essay on the subject, which is translated in the Philological Museum, vol. ii.

PRÆFECTUS. (*Vid. ARMV. ROMAN.* p. 102.)

PRÆFECTUS ÆRARII. (*Vid. ÆRARIUM.*)

PRÆFECTUS ANNONÆ, the præfect of the provisions, especially of the corn-market, was not a regular magistrate under the Republic, but was only appointed in cases of extraordinary scarcity, when he seems to have regulated the prices at which corn was to be sold.⁶ The superintendence of the corn-market throughout the whole Republic was at a later period intrusted to Pompey for a period of five years;⁷ and, in accordance with this example, Augustus took the same superintendence upon himself, and commanded that two persons, who had been prætors five years before, should be appointed every

year for the distribution of the corn (*curam frumentum populo dividendi*).⁸ Subsequently Augustus assigned this duty to two persons of consular rank; but he also created an officer, under the title of *Præfectus Annonæ*, who must be distinguished from the above-mentioned officers. This office was a permanent one, and appears to have been only held by one person at a time: he had jurisdiction over all matters appertaining to the corn-market, and, like the *Præfectus Vigiliæ*, was chosen from the equites, and was not reckoned among the ordinary magistrates.⁹ The *præfectus annonæ* continued to exist till the latest times of the Empire: respecting his duties in later times, see Walter, *Gesch. des Röm. Rechts*, p. 373, 374.

PRÆFECTUS AQUARUM. (*Vid. AQUÆ DUCTUS*, p. 75.)

PRÆFECTUS CASTRORUM, præfect of the camp, is first mentioned in the reign of Augustus. There was one to each legion.⁵ We learn from Vegetius⁶ that it was his duty to attend to all matters connected with the making of a camp, such as the vallum, fossa, &c., and also to the internal economy of it.

PRÆFECTUS CLASSIS, the commander of a fleet. This title was frequently given in the times of the Republic to the commander of a fleet;⁷ but Augustus appointed two permanent officers with this title, one of whom was stationed at Ravenna on the Adriatic, and the other at Misenum on the Tuscan Sea, each having the command of a fleet.⁸

PRÆFECTUS FABRUM. (*Vid. FABRI.*)

PRÆFECTUS JURI DICUNDO. (*Vid. COLONIA*, p. 282.)

PRÆFECTUS PRÆTORIO was the commander of the troops who guarded the emperor's person. (*Vid. PRÆTORIANI.*) This office was instituted by Augustus, and was at first only military, and had comparatively small power attached to it;⁹ but under Tiberius, who made Sejanus commander of the prætorian troops, it became of much greater importance, till at length the power of these præfects became only second to that of the emperors.¹⁰ The relation of the *præfectus prætorio* to the emperor is compared to that of the *magister equitum* to the dictator under the Republic.¹¹ From the reign of Severus to that of Diocletian, the præfects, like the viziers of the East, had the superintendence of all departments of the state, the palace, the army, the finances, and the law; they also had a court in which they decided cases.¹² The office of præfect of the prætorium was not confined to military officers; it was filled by Ulpian and Papinian, and other distinguished jurists.

Originally there were two præfects; afterward sometimes one and sometimes two; from the time of Commodus, sometimes three,¹³ and even four. They were, as a regular rule, chosen only from the equites,¹⁴ but, from the time of Alexander Severus, the dignity of senator was always joined with their office.¹⁵

Under Constantine the præfects were deprived of all military command, and changed into governors of provinces. He appointed four such præfects: the one who commonly attended on the imperial court had the command of Thrace, the whole of the East, and Egypt; the second had the command of Illyricum, Macedonia, and Greece, and usually resided

ded first at Sirmium, afterward at Thessalonica; the third, of Italy and Africa; the fourth, who resided at Trèves, of Gaul, Spain, and Britain.¹ These præfects were the proper representatives of the emperor, and their power extended over all departments of the state: the army alone was not subject in their jurisdiction.²

PRÆFECTUS VIGILUM, the commander of the city guards. To protect the state against fires at night, robbery, housebreaking, &c., Augustus formed seven cohorts of watch-soldiers (*vigiles*), originally consisting of freedmen, but afterward of others, one for each of the two regiones into which the city was divided; each cohort was commanded by a tribune, and the whole were under a præfectus vigilum, who had jurisdiction in all ordinary cases of incendiaries, thieves, &c.; but, if anything extraordinary occurred, it was his duty to report it to the præfectus urbi. This præfect was chosen from the equites, and was not reckoned among the ordinary magistrates.³ We read of the præfectus vigilum under the reigns of Theodosius and Arcadius, at which time he had to refer all capital crimes to the præfect of the city.⁴

PRÆFECTUS URBI, præfect or warden of the city, was originally called *custos urbis*.⁵ The name *præfectus urbi* does not seem to have been used till after the time of the decemvirs. The dignity of *custos urbis*, being combined with that of *princeps senatus*, was conferred by the king, as he had to appoint one of the decem primi as *princeps senatus*.⁶ The functions of the *custos urbis*, however, were not exercised except in the absence of the king from Rome, and then he acted as the representative of the king: he convoked the senate, held the comitia, if necessary, and on any emergency might take such measures as he thought proper; in short, he had the imperium in the city.⁷ Romulus is said to have conferred this dignity upon Denter Romulus, Tullus Hostilius upon Numa Martius, and Tarquinius Superbus upon Sp. Lucretius. During the kingly period, the office of warden of the city was probably for life. Under the Republic, the office and its name of *custos urbis* remained unaltered; but in 487 B.C. it was elevated into a magistracy, to be bestowed by election.⁸ The *custos urbis* was in all probability elected by the *curiæ*, instead of whom Dionysius⁹ mentions the senate. Persons of consular rank were alone eligible; and, down to the time of the decemvirate, every præfect that is mentioned occurs previously as consul. The only exception is P. Lucretius in Livy,¹⁰ whose name, however, is probably wrong.¹¹ In the early period of the Republic, the warden exercised within the city all the powers of the consuls if they were absent: he convoked the senate,¹² held the comitia,¹³ and in times of war even levied civic legions, which were commanded by him.

When the office of prætor urbanus was instituted, the wardenship of the city was swallowed up in it;¹⁴ but, as the Romans were at all times averse to dropping altogether any of their old institutions, a præfectus urbi, though a mere shadow of the former office, was henceforth appointed every year, only for the time that the consuls were absent from Rome for the purpose of celebrating the *feriæ Latiniæ*. This præfectus had neither the power of convoking the senate nor the right of speaking in it, as in most cases he was a person below the senatorial

age, and was not appointed by the people, but by the consuls.¹ When Varro, in the passage of Gellius here referred to, claims for the præfectus urbi the right of convoking the senate, he is probably speaking of the power of the præfect such as it was previously to the institution of the office of prætor urbanus. Of how little importance the office of præfect of the city had gradually become, may be inferred from the facts that it was always given to young men of illustrious families,² and that J. Cæsar even appointed to it several youths of equestrian rank under age.³ During the Empire such præfects of the city continued to be appointed so long as the *feriæ Latiniæ* were celebrated, and were even invested with some kind of jurisdiction.⁴ On some occasions, however, no præfectus urbi was appointed at all, and then his duties were performed by the prætor urbanus.⁵

An office very different from this, though bearing the same name, was instituted by Augustus on the suggestion of Mæcenæ.⁶ This new præfectus urbi was a regular and permanent magistrate, whom Augustus invested with all the powers necessary to maintain peace and order in the city. He had the superintendence of butchers, bankers, guardians, theatres, &c.; and, to enable him to exercise his power, he had distributed throughout the city a number of *milites stationarii*, whom we may compare to a modern police. He also had jurisdiction in cases between slaves and their masters, between patrons and their freedmen, and over sons who had violated the *pietas* towards their parents.⁷ His jurisdiction, however, became gradually extended; and, as the powers of the ancient republican præfectus urbi had been swallowed up by the office of the prætor urbanus, so now the power of the prætor urbanus was gradually absorbed by that of the præfectus urbi; and at last there was no appeal from his sentence except to the person of the princeps himself, while anybody might appeal from a sentence of any other city magistrate, and, at a later period, even from that of a governor of a province, to the tribunal of the præfectus urbi.⁸ His jurisdiction in criminal matters was at first connected with the questiones;⁹ but from the third century he exercised it alone, and not only in the city of Rome, but at a distance of one hundred miles from it, and he might sentence a person to deportatio in insulam.¹⁰ During the first period of the Empire and under good emperors, the office was generally held for a number of years, and in many cases for life;¹¹ but from the time of Valerian a new præfect of the city occurs almost every year.

At the time when Constantinople was made the second capital of the Empire, this city also received its præfectus urbi. The præfects at this time were the direct representatives of the emperors, and all the other officers of the administration of the city, all corporations, and all public institutions, were under their control.¹² They also exercised a superintendence over the importation and the prices of provisions, though these subjects were under the more immediate regulation of other officers.¹³ The præfects of the city had every month to make a report to the emperor of the transactions of the senate,¹⁴ where they gave their vote before the consulars.

They were the medium through which the emperors received the petitions and presents from their capital.¹ At the election of a pope, the præfect of Rome had the care of all the external regulations.²

PRÆFECTURA. (Vid. COLONIA, p. 282, 283.)

PRÆFICÆ. (Vid. FUNUS, p. 459.)

PRÆFURNIUM. (Vid. BATHS, p. 151.)

PRÆJUDICIUM. This word, as appears from its etymology, has a certain relation to *judicium*, to which it is opposed by Cicero,³ "*de quo non præjudicium, sed plane jam judicium factum.*" The commentator, who goes under the name of Asconius, observes on this passage, that a *præjudicium* is something which, when established, becomes an *exemplum* for the *judices* (*judicaturi*) to follow; but this leaves us in doubt whether he means something established in the same cause by way of preliminary inquiry, or something established in a different, but a like cause, which would be what we call a precedent. Quintilian⁴ states that it is used both in the sense of a precedent, in which case it is rather *exemplum* than *præjudicium* (*res ex paribus causis judicata*), and also in the sense of a preliminary inquiry and determination about something which belongs to the matter in dispute (*judiciis ad ipsam causam pertinentibus*), whence also comes the name *præjudicium*. This latter sense is in conformity with the meaning of *præjudiciales actiones* or *præjudicia*, in which there is an intentio only, and nothing else.⁵ (Vid. ACTIO.) These, accordingly, were called *præjudiciales actiones*, which had for their object the determination of some matter which was not accompanied by a condemnation. For instance, the question might be whether a man is a father or not, or whether he has a potestas over his child: these were the subject of *præjudiciales actiones*. If a father denied that the child who was born of his wife, or with which she was then pregnant, was his child, this was the subject of a "*præjudicium cum patre de partu agnoscendo.*" If a *judex* should have declared that the child must be maintained by the reputed father, there must still be the *præjudicium* to ascertain whether the reputed father is the true father. If it was doubtful whether the mother was his wife, there must be a *præjudicium* on this matter before the *præjudicium de partu agnoscendo*. These *præjudicial* actions, then, were, as it appears, actions respecting status, and they were either *civiles* or *prætoriae*. It was a *civilis actio* when the question was as to *libertas*; the rest seem to have been *prætoriae actiones*. Quintilian makes a third class of *præjudicia*, "*cum de eadem causa pronuntiatum est,*" &c.

Sometimes *præjudicium* means inconvenience, damage, injury, which sense appears to arise from the notion of a thing being prejudged, or decided without being fairly heard; and this sense of the word seems to be very nearly the same in which it occurs in our law in the phrase "without prejudice to other matters in the cause."⁶

PRÆLUSIO. (Vid. GLADIATORES, p. 476.)

PRÆNOMEN. (Vid. NOMEN, ROMAN.)

PRÆPOSITUS, which means a person placed over, was given as a title in the later times of the Roman Empire to many officers: of these, the most important was the *præpositus sacri cubiculi*, or chief chamberlain in the emperor's palace.⁷ Under him was the *primicerius*, together with the *cubicularii* and the corps of *silentarii*, commanded by three decuriones, who preserved silence in the interior of the palace.⁸

(Dig., tit. 3.—Dig., 22, tit. 3, s. 8.—Inst., iv., tit. 6, s. 13.—Theophilus, Paraphr. ad Inst., iv., tit. 6, s. 13.)—8. (Cod., xii., tit. 5.—Cod. Theod., vi., tit. 8.)—9. (Cod., xii., tit. 16.—Walter, Gesch. des Röm. Rechts, p. 360.)

PRÆROGATIVA CENTURIA. (Vid. COMITIA, p. 297.)

PRÆS. If we might trust a definition by Ausonius,¹ he was called *vas* who gave security for another in a *causa capitalis*; and he who gave security for another in a civil action was *præs*. But this authority cannot be trusted, and the usage of the words *vas* and *præs* was certainly not always conformable to this definition. According to Varro,² any person was *vas* who promised *vadimonium* for another, that is, gave security for another in any legal proceeding. Festus³ says that *vas* is a sponsor in a *res capitalis*. If *vas* is *genus*, of which *vas* is in its special sense, and *præs* are species, these definitions will be consistent. Under *Maniceps* Festus remarks, that *maniceps* signifies him who buys or hires any public property (*qui a populo emit conductitæ*), and that he is also called *præs* because he is bound to make good his contract (*præstare quod promisit*) as well as he who is his *præs*.⁴ According to this, *præs* is a surety for one who buys of the state, and so called because of his liability (*præstare*). But the etymology at least is doubtful, and, we are inclined to think, false. The passage of Festus explains a passage in the Life of Atticus,⁵ in which it is said that he never bought anything at public auction (*ad hastam publicam*), and never was either *maniceps* or *præs*. A case is mentioned by Gellius⁶ in which a person was committed to prison who could not obtain *prædes*. The goods of a *præs* were called *prædia*,⁷ and in Cicero⁸ and Livy⁹ "*prædibus et prædiis*" come together. The phrase "*prædibus cavere*," to give security, occurs in the Digest,¹⁰ where some editions have "*pro adibus cavere*." (See the various readings, ed. Gebauer and Spangenberg.) The phrase "*prædes vendere*" means to sell, not the *prædes* properly so called, but the things which are given as a security.

Prædiatores are supposed by Brissonius to be the same as *prædes*,¹¹ at least so far as they were sureties to the state. But *prædiator* is defined by Gaius:¹² to be one "who buys from the people," and from the context it is clear that it is one who buys a *prædium*, which is farther defined to be a thing pledged to the *populus* "*res obligata populo.*" The *prædiator*, then, is he who buys a *prædium*, that is, a thing given to the *populus* as a security by a *præs*; and the whole law relating to such matters was called *jus prædiatorium*.

PRÆSCRIPTIO, or, rather, TEMPORIS PRÆSCRIPTIO, signifies the exceptio or answer which a defendant has to the demand of a plaintiff, founded on the circumstance of the lapse of time. The word, then, has properly no reference to the plaintiff's loss of right, but to the defendant's acquisition of a right by which he excludes the plaintiff from prosecuting his suit. This right of a defendant did not exist in the old Roman law. When the prætors gave new actions by their edict, they attached to them the condition that those actions must be brought within a year (*intra annum judicium dabo*), that is, a year from the time when the right of action accrued. These actions, then, were exceptions from the old rule, that all actions were *perpetuæ*. This rule became extended by the *longi temporis præscriptio*, which established that in actions about ownership, or *jura in re*, ten, or in some cases twenty years, would give a *præscriptio*, when the possessor could show that he had complied with the main conditions of *usucapion*, without having acquired ownership by *usucapion*, for if he had, he had

1. (Idyll., xii., 9.)—2. (Ling. Lat., vi., 74, ed. Müller.)—3. (S. v. Vadem.)—4. (Vid. also Varro, l. c.)—5. (C. Nep., 6.)—6. (vii., 19.)—7. (Pseudo-Ascon. in Verr., II., i., 54.)—8. (l. c.)—9. (xiii., 60.)—10. (10, tit. 3, s. 6.)—11. (Cic., Pro Balb., c. 20.—ad Attic., xii., 14, 17.—Sueton., Claud., c. 9.—Val. Max., viii., 12.)—12. (i., 61.)

no need of any exceptio. This rule was farther extended by Constantine, and a period of 30 or 40 years, for it seems that the time was not quite settled, was to be considered sufficient for a præscriptio, though the defendant had not complied with the conditions of usucapion. A general constitution was made by Theodosius, A.D. 424, which, with some variations, appears in both the Codes;¹ and it enacted that, as in the case of the actiones already mentioned, there should be no hereditatis petitio after 30 years, and that, after the same time, no personal action should be brought. The actio finium regundorum was excepted, and also the action of a creditor for his pignus or hypotheca against the debtor, but not against others. Præjudiciales actiones as to status are not enumerated among those against which there was a præscriptio, but they seem to be included in the general words of the law. Justinian, by a constitution of the year 530,² established the general rule of 30 years for all actions, with the exception of the actio hypothecaria, for which he required 40 years. His constitution enumerates the following actions to which the præscriptio of 30 years would apply: *Familie heriscunda, Communi dividundo, Finium regundorum, Pro Socio, Furti et Vi Bonorum Raptorum*; and it adds, "*neque alterius cujuscunque personalis actionem longiorem esse triginta annis, &c., sed ex quo ab initio competit, et semel nata est, &c., post memoratum tempus finire.*" It thus appears that all actions were originally perpetuæ, then some were made subject to præscriptio, and, finally, all were made so. In consequence of this change, the term perpetuæ, originally applied to actions that were not subject to præscriptio, was used to signify an actio in which 30 years were necessary to give a præscriptio, as opposed to actiones in which the right to a præscriptio accrued in a shorter time.³

The conditions necessary to establish a præscriptio were, 1. Actio nata, for there must be a right of action in order that a præscriptio may have an origin, and the date of its origin must be fixed by the date of the right of action. 2. There must be a continuous neglect on the part of the person entitled to bring the action, in order that the time of the præscriptio may be reckoned uninterruptedly. 3. Bona fides was not a necessary ingredient in a præscriptio as such, because it was the neglect of the plaintiff which laid the foundation of the præscriptio. But the longi temporis præscriptio was made like to usucapion as to its conditions, of which bona fides was one. Justinian⁴ required a bona fides in the case of a thirty-year præscriptio; but this was no new rule, except so far as the possessor claimed the benefit of usucapio; and as the longi temporis præscriptio, as an independent rule of law, disappeared from the legislation of Justinian, the bona fides, as a condition of præscriptio, went with it. 4. The lapse of time, which was 30 years; but to this there were many exceptions.

The sources on the subject of præscriptio are referred to in Brinkmann's *Institutiones Juris Romani*, and Mühlenbruch's *Doctrina Pandectarum*, § 261 and § 481, on the distinction being ultimately abolished between præscriptio and usucapio. — Savigny, *System des heutigen Röm. Rechts*, vol. v., from whom this outline is taken. *Vid.* also *USUCAPIO*.

Præscriptio had a special sense in Roman pleadings, which Gaius has explained as existing in his time.⁵ These præscriptions were pro actore, and not pro reo; and an example will explain the term. It often happens that an obligatio is such that a man is bound to another to do certain acts at cer-

tain times, as, for instance, yearly, half yearly, or monthly. The payment of interest on money would be an example. At the close of any of these certain periods, the party to whom the obligatio was due might sue for what was due, but not for what was not due, though an obligatio was contracted as to future time. When a debt had become due in consequence of an obligatio, there was said to be a præstatio, or it was said "*aliquid jam præstari oportet.*" when the obligatio existed, but the præstatio was not due, it was "*futura præstatio,*" or it was said "*præstatio adhuc nulla est.*" If then the plaintiff wished to limit his demand to what was due, it was necessary to use the following præscriptio: "*Ea res agatur cujus rei dies fuit.*"¹ The name of præscriptiones, observes Gaius, is manifestly derived from the circumstance of their being prefixed (præscribuntur) to the formulæ, that is, they came before the intentio. In the time of Gaius the præscriptiones were only used by the actor; but formerly they were also used in favour of a defendant (reus), as in the following instance: "*Ea res agatur quod præjudicium hereditati non fiat,*" which in the time of Gaius was turned into a kind of exceptio or answer, when the petitor hereditatis, by using a different kind of actio, was prejudging the question of the hereditas (*cum petitor, &c. . . præjudicium hereditati faciat*). (*Vid.* *PRÆJUDICIUM*.)

Savigny shows that, in the legislation of Justinian, præscriptio and exceptio are identical, and that either term can be used indifferently. He observes, that the præscriptiones which in the old form of procedure were introduced into the formula for the benefit of the defendant, were properly exceptions, and it was merely an accidental matter that certain exceptions were placed before the intentio instead of being placed at the end of the formula, as was the usual practice. Subsequently, as appears from Gaius, only the præscriptiones pro actore were prefixed to the formulæ; and those pro reo were placed at the end, and still retained, though improperly, the name of præscriptiones. Thus exceptio and præscriptio came to be used as equivalent terms, a circumstance to which the disuse of the ordo judiciorum contributed. Yet, in the case of particular exceptions, one or other of the names was most in use, and the indiscriminate employment of them was an exception to the general rule. The prevalence of one or the other name, in particular cases, is easily explained: thus, the doli and rei judicate exceptiones were always at the end of the formulæ, and the temporis and fori præscriptiones in earlier times were placed at the beginning. Savigny adds, that in modern times præscriptio has acquired the sense of usucapion, but this is never the sense of the word præscriptio in the Roman law. Though exceptio and præscriptio came to be used as equivalent, yet neither exceptio nor præscriptio is used in the sense of temporis præscriptio without the addition of the words temporis, temporalis, triginta annorum, &c.²

PRÆTOR. According to Cicero,⁴ prætor was a title which designated the consuls as the leaders of the armies of the state; and he considers the word to contain the same elemental parts as the verb *præire*. The period and office of the command

1. (Cod. Theod., iv., tit. 14.—Cod., vii., tit. 39, s. 3.)—2. (Cod., vii., tit. 40, s. 1.)—3. (Inst., iv., tit. 12.)—4. (Cod., vii., tit. 39, s. 8.)—5. (iv., 130.)

1. (Compare Cic., *De Or.*, i., 37.)—2. (Compare Gaius.—Dig. 10, tit. 2, s. 1.)—3. (Savigny, *System*, &c. iv., 309; v., 163.)—4. (Leg., iii., 3.)

of the consuls might appropriately be called prætorium.¹ Prætor was also a title of office among the Latins.

The first prætor specially so called was appointed in the year B.C. 366, and he was chosen only from the patricians, who had this new office created as a kind of indemnification to themselves for being compelled to share the consulship with the plebeians.² No plebeian prætor was appointed till the year B.C. 337. The prætor was called *collega consulis*, and was elected with the same auspices at the *comitia centuriata*.

The prætorship was originally a kind of third consulship, and the chief functions of the prætor (*jus in urbe dicere*,³ *jura reddere*⁴) were a portion of the functions of the consuls, who, according to the passage of Cicero above referred to, were also called *judices a judicando*. The prætor sometimes commanded the armies of the state; and while the consuls were absent with the armies, he exercised their functions within the city. He was a *magistratus curulis*, and he had the *imperium*, and, consequently, was one of the *magistratus majores*: but he owed respect and obedience to the consuls.⁵ His insignia of office were six lictors, whence he is called by Polybius *ἡγεμῶν* or *στρατηγὸς ἐξαπέλεκτος*, and sometimes simply *ἐξαπέλεκτος*. At a later period, the prætor had only two lictors in Rome.⁶ The prætorship was at first given to a consul of the preceding year, as appears from Livy.

In the year B.C. 246 another prætor was appointed, whose business was to administer justice in matters in dispute between peregrini, or peregrini and Roman citizens; and, accordingly, he was called prætor peregrinus.⁷ The other prætor was then called prætor urbanus "*qui jus inter cives dicit*," and sometimes simply prætor urbanus and prætor urbis. The two prætors determined by lot which functions they should respectively exercise. If either of them was at the head of the army, the other performed all the duties of both within the city. Sometimes the military *imperium* of a prætor was prolonged for a second year. When the territories of the state were extended beyond the limits of Italy, new prætors were made. Thus, two prætors were created B.C. 227, for the administration of Sicily and Sardinia, and two more were added when the two Spanish provinces were formed, B.C. 197. When there were six prætors, two stayed in the city, and the other four went abroad. The senate determined their provinces, which were distributed among them by lot.⁸ After the discharge of his judicial functions in the city, a prætor often had the administration of a province, with the title of pro-prætor. Sulla increased the number of prætors to eight, which Julius Cæsar raised successively to ten, twelve, fourteen, and sixteen. Augustus, after several changes, fixed the number at twelve. Under Tiberius there were sixteen. Two prætors were appointed by Claudius for matters relating to *fideicommissa* when the business in this department of the law had become considerable; but Titus reduced the number to one, and Nerva added a prætor for the decision of matters between the *fiscus* and individuals. "Thus," says Pomponius, speaking of his own time, "eighteen prætors administer justice (*jus dicunt*) in the state."⁹ M. Aurelius, according to Capitolinus,¹⁰ appointed a prætor for matters relating to *tutela*, which must have taken place after Pomponius wrote. (*Vid. PANDECTÆ*.) The main duties of the prætors were judicial, and it appears that it was found necessary from time

to time to increase their number, and to assign to them special departments of the administration of justice.

The prætor urbanus was specially named prætor, and he was the first in rank. His duties confined him to Rome, as is implied by the name, and he could only leave the city for ten days at a time. It was part of his duty to superintend the *ludi Apollinares*. He was also the chief magistrate for the administration of justice, and to the edicts of the successive prætors the Roman law owes in a great degree its development and improvement. Both the prætor urbanus and the prætor peregrinus had the *jus edicendi*,¹ and their functions in this respect do not appear to have been limited on the establishment of the imperial power, though it must have been gradually restricted as the practice of imperial constitutions and rescripts became common. (*Vid. EDICTUM*.)

The chief judicial functions of the prætor in civil matters consisted in giving a *judex*. (*Vid. JUDEX*.) It was only in the case of interdicts that he decided in a summary way. (*Vid. INTERDICTUM*.) Proceedings before the prætor were technically said to be *in jure*.

The prætors also presided at trials of criminal matters. These were the *questiones perpetuæ*,² or the trials for *repetundæ*, *ambitus*, *majestas*, and *peculatus*, which, when there were six prætors, were assigned to four out of the number. Sulla added to these *questiones* those of *falsum*, *de sicariis* et *veneficis*, and *de parricidis*, and for this purpose he added two, or, according to some accounts, four prætors, for the accounts of Pomponius and of other writers do not agree on this point.³ On these occasions the prætor presided, but a body of *judices* determined by a majority of votes the condemnation or acquittal of the accused. (*Vid. JUDICIUM*.)

The prætor, when he administered justice, sat on a *sella curulis* in a tribunal, which was that part of the court which was appropriated to the prætor and his assessors and friends, and is opposed to the *subsellia*, or part occupied by the *judices*, and others who were present.⁴ But the prætor could do many ministerial acts out of court, or, as it was expressed, *ex plano* or *ex æquo loco*, which terms are opposed to *ex tribunali* or *ex superiore loco*: for instance, he could, in certain cases, give validity to the act of manumission when he was out of doors, as on his road to the bath or to the theatre.⁵

The prætors existed with varying numbers to a late period in the Empire, and they had still jurisdiction.⁶

The functions of the prætors, as before observed, were chiefly judicial, and this article should be completed by a reference to *EDICTUM*, *IMPERIUM*, *JUDEX*, *JURISDICTIO*, *MAGISTRATUS*, *PROVINCIA*. To the authorities referred to under *EDICTUM* may be added, "*Die Prætorischen Edicte der Römer, &c., von D. Eduard Schrader*, Weimar, 1815."

PRÆTORIA ACTIO. (*Vid. ACTIO*, p. 17.)

PRÆTORIA COHORS. (*Vid. PRÆTORIANI*.)

PRÆTORIANI, *sc. milites*, or *Prætorie Cohortes*, a body of troops instituted by Augustus to protect his person and his power, and called by that name in imitation of the *prætorie cohors*, or select troop, which attended the person of the prætor or general of the Roman army.⁷ This cohort is said to have been first formed by Scipio Africanus out of the bravest troops, whom he exempted from all other duties except guarding his person, and to whom he gave sixfold pay;⁸ but even in the early

1. (Liv., viii., 11.)—2. (Liv., vi., 42; vii., 1.)—3. (Liv., vi., 42.)—4. (Liv., vii., 1.)—5. (Polyb., xxxiii., 1.)—6. (Censorinus, c. 24.)—7. (Dig. 1, tit. 2, s. 28.)—8. (Liv., xxxii., 27, 28.)—9. (Dig. 1, tit. 2, s. 34.)—10. (M. Ant., c. 10.)

1. (Gaius, i., 2.)—2. (Cic., Brut., c. 27.)—3. (Suet., Jul., 41.—Dion Cass., xlii., 61.)—4. (Cic., Brut., 84.)—5. (Gaius, i., 20.)—6. (Cod., vii., tit. 62, s. 17; v., tit. 71, s. 18.)—7. (Sallust, Cat., 60.—Cic., Cat., ii., 11.—Cæsar, B. Gall., i., 40.)—8. (Festus, s. v.)

times of the Republic the Roman general seems to have been attended by a select troop.¹ In the time of the civil wars the number of the prætorian cohorts was greatly increased,² but the establishment of them as a separate force was owing to the policy of Augustus. They originally consisted of nine³ or ten cohorts,⁴ each consisting of a thousand men, horse and foot. They were chosen only from Italy, chiefly from Etruria and Umbria, or ancient Latium, and the old colonies,⁵ but afterward from Macedonia, Noricum, and Spain also.⁶ Augustus, in accordance with his general policy of avoiding the appearance of despotism, stationed only three of these cohorts in the capital, and dispersed the remainder in the adjacent towns of Italy.⁷ Tiberius, however, under pretence of introducing a stricter discipline among them, assembled them all at Rome in a permanent camp, which was strongly fortified.⁸ Their number was increased by Vitellius to sixteen cohorts, or 16,000 men.⁹

The prætorians were distinguished by double pay and especial privileges. Their term of service was originally fixed by Augustus at twelve years,¹⁰ but was afterward increased to sixteen years; and when they had served their time, each soldier received 20,000 sesterces.¹¹ All the prætorians seem to have had the same rank as the centurions in the regular legions, since we are told by Dio¹² that they had the privilege of carrying a *vitis* (ράβδος) like the centurions. The prætorians, however, soon became the most powerful body in the state, and, like the janizaries at Constantinople, frequently deposed and elevated emperors according to their pleasure. Even the most powerful of the emperors were obliged to court their favour; and they always obtained a liberal donation upon the accession of each emperor. After the death of Pertinax (A.D. 193) they even offered the empire for sale, which was purchased by Didius Julianus;¹³ but upon the accession of Severus in the same year they were disbanded, on account of the part they had taken in the death of Pertinax, and banished from the city.¹⁴ The emperors, however, could not dispense with guards, and accordingly the prætorians were restored on a new model by Severus, and increased to four times their ancient number. Instead of being levied in Italy, Macedonia, Noricum, or Spain, as formerly, the best soldiers were now draughted from all the legions on the frontiers, so that the prætorian cohorts now formed the bravest troops of the Empire.¹⁵ Dioclesian reduced their numbers and abolished their privileges;¹⁶ they were still allowed to remain at Rome, but had no longer the guard of the emperor's person, as he never resided in the capital. Their numbers were again increased by Maxentius, but after his defeat by Constantine, A.D. 312, they were entirely suppressed by the latter, their fortified camp destroyed, and those who had not perished in the battle between Constantine and Maxentius were dispersed among the legions.¹⁷ The new form of government established by Constantine did not require such a body of troops, and, accordingly, they were never revived. The emperor's body-guards now only consisted of the domestici, horse and foot under two comites, and of the protectores.¹⁸

The commanders of the prætorians were called PRÆFECTI PRÆTORIO, whose duties, powers, &c., are mentioned in a separate article.

PRÆTORIUM was the name of the general's tent in the camp, and was so called because the name of the chief Roman magistrate was originally prætor, and not consul. (*Vid. CASTRA*, p. 220.) The officers who attended on the general in the prætorium, and formed his council of war, were called by the same name.¹ The word was also used in several other significations, which were derived from the original one. Thus the residence of a governor of a province was called the prætorium;² and the same name was also given to any large house or palace.³ The camp of the prætorian troops at Rome, and frequently the prætorian troops themselves, were called by this name. (*Vid. PRÆTORI ANI*.)

PRÆNDIUM. (*Vid. CÆNA*, p. 274.)

*PRASITES LAPIS (πρασίτης λίθος), "the *Prase* of Jameson and *Prasium* of Kirwan. It is a subspecies of quartz, and, as Cleaveland remarks, usually of a leek or dark olive colour. It is a gem, as Sir J. Hill says, of the lower class, and is known by our jewellers by the name of root of emerald. De Laet states that the χρυσόπρασος is a gem of greater value."¹

*PRASIUM (πράσιον), a name applied to more than one species of the *Marrubium*, L., or Horehound.²

*PRASOCURIS (πρασόκουρίς), a species of larva or caterpillar noticed by Aristotle, Theophrastus, and Athenæus. Stackhouse refers it to the *Cimex prasinus*, or Lady-cow.³

*PRASON (πράσον), the Leek, or *Allium porrum*, L. (*Vid. ALLIUM*.)

PRÆCARIUM. (*Vid. INTERDICTUM*, p. 544.)

PRELUM or PRÆLUM is a part of a press used by the ancients in making wine, olive oil, and paper. The press itself was called *torcular*, and the prelum was that part which was either screwed or knocked down upon the things to be pressed, in order to squeeze out the last juices.¹ Sometimes, however, prelum and torcular are used as convertible terms, a part being named instead of the whole. As regards the pressing of the grapes, it should be remembered that they were first trodden with the feet; but as this process did not press out all the juice of the grapes, they were afterward, with their stalks and peels (*scopi et folliculi*), put under the prelum.² Cato³ advised his countrymen always to make the prelum of the wood of black maple (*carpinus atra*). After all the juice was pressed out of the grapes, they were collected in casks, water was poured upon them, and after standing a night they were pressed again. The liquor thus obtained was called *lora*; it was preserved in casks, and was used as a drink for workmen during the winter.⁴ Respecting the use of the prelum in making olive-oil and in the manufacture of paper, see Plin., *H. N.*, xv., 1; xiii., 25.—*Column.*, xii., 50.

*PRESTER (πρηστήρ). (*Vid. DIPSA*.)

PRIMICERIIUS, a name given to various officers and dignitaries under the later Roman Empire, is explained by Suidas¹ to be the person who holds the first rank in anything. The etymology of the word is doubtful: it is supposed that a person was

called *primicerius* because his name stood first in the wax (*cera*), that is, the tablet made of wax, which contained a list of persons of any rank.

The word *primicerius* does not seem to have been always applied to the person who was at the head of any department of the state or army, but also to the one second in command or authority, as, for instance, the *primicerius sacri cubiculi*, who was under the *praepositus sacri cubiculi*. (*Vid. Praepositus*.) Various *primicerii* are mentioned, as the *primicerius domesticorum* and *protectorum*,¹ *fabrica*,² *mensorum*,³ *notariorum*,⁴ &c.

PRIVILEGIUM. (*Vid. Lex*, p. 581)

ΠΡΟΑΓΩΓΕΑΣ ΓΡΑΦΗ (*προαγωγείας γραφή*), a prosecution against those persons who performed the degrading office of pimps or procurers (*προαγωγού*). By the law of Solon, the heaviest punishment (*τὸ μέγιστον ἐπιτίμια*) was inflicted on such a person (*εἰάν τις ἐλευθεροῦν παῖδα ἢ γυναῖκα προαγωγέσθῃ*). According to Plutarch,⁹ a penalty of twenty drachms was imposed for the same offence. To reconcile this statement with that of Æschines, we may suppose with Platner⁹ that the law mentioned by Plutarch applied only to prostitutes. An example of a man put to death for taking an Olynthian girl to a brothel (*σῆσας ἐπ' οἰκήματος*) occurs in Dinarchus.¹⁰ A prosecution of a man by Hyperides *ἐπὶ προαγωγῇ* is mentioned by Pollux.¹¹ A charge (probably false) was brought against Aspasia of getting free-born women into her house for the use of Pericles.¹² In connexion with this subject, see the *γραφαὶ ἑταίρησεως*, and *φθορὰς τὸν ἐλεγεῖ-θῶρον*.¹³

PROB'OLE (*προβολή*), an accusation of a criminal nature, preferred before the people of Athens in assembly, with a view to obtain their sanction for bringing the charge before a judicial tribunal. It may be compared in this one respect (*viz.*, that it was a preliminary step to a more formal trial) with our application for a criminal information, though in regard to the object and mode of proceeding there is not much resemblance. The *προβολή* was reserved for those cases where the public had sustained an injury, or where, from the station, power, or influence of the delinquent, the prosecutor might deem it hazardous to proceed in the ordinary way without being authorized by a vote of the sovereign assembly. In this point it differed from the *εἰσαγγελία*, that in the latter the people were called upon either to pronounce final judgment, or to direct some peculiar method of trial; whereas in the *προβολή*, after the judgment of the assembly, the parties proceeded to trial in the usual manner. The court before whom they

appeared, however influenced they might be by the *præjudicium* of the people, were under no legal compulsion to abide by their decision; and, on the other hand, it is not improbable that, if the people refused to give judgment in favour of the complainant, he might still proceed against his adversary by a *γραφή* or a private action, according to the nature of the case.¹

The cases to which the *προβολή* was applied were complaints against magistrates for official misconduct or oppression; against those public informers and mischief-makers who were called *συκοφάνται*; against those who outraged public decency at the religious festivals; and against all such as, by evil practices, exhibited disaffection to the state.²

With respect to magistrates,³ Schömann thinks that the *προβολαί* could only be brought against them at those *ἐπιχειροτονίαι* which were held at the first *κυρία ἐκκλησία* in every Prytanea, when the people inquired into the conduct of magistrates, with a view to continue them in office or depose them, according to their deserts. An example of magistrates being so deposed occurs in Demosth., c. *Theocr.*, 1330. The people (says Schömann) could not proceed to the *ἐπιχειροτονία* except on the complaint (*προβολή*) of some individual; the deposed magistrate was afterward brought to trial, if the accuser thought proper to prosecute the matter farther. There appears, however, to be no authority for limiting the *προβολαί* against magistrates to these particular occasions; and other writers have not agreed with Schömann on this point.⁴

An example of a *προβολή* against sycophants is that which the people, discovering too late their error in putting to death the generals who gained the battle of Arginusæ, directed to be brought against their accusers.⁵ Another occurs in Lysias,⁶ where the words *συνλήδον ἅπαντες καὶ ἐν τῷ δήμῳ καὶ ἐν τῷ δικαστηρίῳ συκοφαντίας κατέγνωτε*, describe the course of proceeding in this method of prosecution.⁷

Those who worked the public mines clandestinely, and those who were guilty of peculation or embezzlement of the public money, were liable to a *προβολή*. A case of embezzlement is referred to by Demosthenes, c. *Mid.*, 584.⁸

But the *προβολή* which has become most celebrated, owing to the speech of Demosthenes against Midias, is that which was brought for misbehaviour at public festivals. We learn from the laws cited in that speech,⁹ that *προβολαί* were enjoined against any persons who, at the Dionysian, Thargelian, or Eleusinian festival (and the same enactment was probably extended to other festivals), had been guilty of such an offence as would fall within the description of *ἀσέβεια περὶ ἑορτῇν*. A riot or disturbance during the ceremony, an assault, or other gross insult or outrage, committed upon any of the performers or spectators of the games, whether citizen or foreigner, and even upon a slave, much more upon a magistrate or officer engaged in superintending the performance; an attempt to imprison by legal process, and even a levying of execution upon the goods of a debtor during the continuance of the festival, was held to be a profanation of its sanctity, and to subject the offender to the penalties of these statutes. For any such offence complaint was to be made to the *prytanes* (*i. e.*, the *proedri*), who were to bring forward the charge at an assembly to be held soon after the festival in the theatre

of Bacchus. The defendant was to be produced before the assembly. Both parties were heard, and then the people proceeded to vote by show of hands. Those who voted in favour of the prosecution were said *καταχειροτονεῖν*, those who were against it *ἀποχειροτονεῖν*. The complainant was said *προβάλλεσθαι τὸν ἀδικοῦντα*, and the people, if they condemned him, *προκαταγοῦναι*.¹

Some difficulty has arisen in explaining the following words in the law above referred to: *τὰς προβούλους παραδιδότωσαν ὅσαι ἂν μὴ ἐκτετισκέναι ὦσιν*. Platner² and Schömann³ suppose that by these words the prytanes are commanded to bring before the people those complaints for which satisfaction has not been made by the offender to the prosecutor; and, to show that a compromise would be legal, Platner refers to Demosthenes, *c. Mid.*, 563, 583; to which we may add the circumstance that Demosthenes is said to have compromised his charge against Midias for a sum of money. Meier⁴ explains it thus: that the prytanes (or, rather, the *proedri*) were to bring before the people all the *προβούλοι*, except those of a trifling character, for which they were themselves empowered to impose a fine. (As to the power of fining, see *Att. Proc.*, 34.) If we suppose the complaint to take the name of *προβολή* upon its being presented to the *proedri*, the expression *ἐκτετισμένη προβολή* will cause no difficulty; for as *δίκην τίνειν* signifies to pay the damages awarded in an action, so *προβολὴν τίνειν* may signify to pay the fine imposed by the magistrates before whom the charge was brought; and *προβολὴν* is not used improperly for *ἐπιβολήν*, any more than *δίκην* is for *τίμιμα* in the other case. Perhaps there is more force in another objection urged by Platner, viz., that (according to this interpretation) the not bringing the case before the assembly is made to depend on the non-payment, and not (as might have been expected) on the imposition of the fine.

The people having given their sentence for the prosecution, the case was to be brought into the court of *heliaea*. In certain cases of a serious nature, the defendant might be required to give bail for his appearance or (in default thereof) go to prison.⁵ The persons on whom devolved the *ἡγεμονία δικαστηρίου* were, according to Pollux,⁶ the *thesmothetæ*. Meier⁷ thinks this would depend on the nature of the case, and that, upon a charge for the profanation of a festival, the cognizance would belong to such of the three superior archons as had the superintendence thereof. This would no doubt follow from the ordinary principles of Athenian jurisprudence; but it may be conceived that the extraordinary nature of the complaint by *προβολή* might take it out of the common course of practice.⁸ The dicasts had to pronounce their verdict on the guilt of the party, and to assess the penalty, which might be death, or only a pecuniary fine, according to their discretion. The trial (it seems) was attended with no risk to the prosecutor, who was considered to proceed under the authority of the popular decree.⁹

PROBOULEUMA. (*Vid. BOULE*, p. 168, 169.)

PROBOULOI (*πρόβουλοι*), a name applicable to any persons who are appointed to consult or take measures for the benefit of the people. Thus the delegates who were sent by the twelve Ionian cities to attend the Panionian council, and deliberate on the affairs of the confederacy, were called *πρόβουλοι*.¹⁰ So were the deputies sent by the several Greek states to attend the congress at the Isthmus,

on the occasion of the second Persian invasion;¹¹ and also the envoys whom the Greeks agreed to send annually to Platæa.¹² The word is also used, like *νομοφύλακες*, to denote an oligarchical body, in whom the government of a state was vested, or who at least exercised a controlling power over the senate and popular assemblies. Such were the sixty senators of Cnidus; and a similar body appears to have existed at Megara, where, although democracy prevailed at an earlier period, the government became oligarchical before the beginning of the Peloponnesian war.¹³ A body of men called *πρόβουλοι* were appointed at Athens, after the end of the Sicilian war, to act as a committee of public safety. Thucydides¹⁴ calls them *ἀρχήν τινα πρεσβυτέρων ἀνδρῶν, οἵτινες περὶ τῶν παρόντων ὡς ἂν καιρὸς ἢ προβουλεύουσιν*. They were ten in number.¹⁵ Whether their appointment arose out of any concerted plan for overturning the constitution, is doubtful. The ostensible object, at least, was different; and the measures which they took for defending their country and prosecuting the war appear to have been prudent and vigorous. Their authority did not last much longer than a year; for a year and a half afterward Pisander and his colleagues established the council of Four Hundred, by which the democracy was overthrown.¹⁶ The first step which had been taken by Pisander and his party was to procure the election of a body of men called *ἐγγυραφεῖς αὐτοκράτορες*, who were to draw up a plan, to be submitted to the people, for remodelling the constitution. Thucydides says they were ten in number. Harpocration¹⁷ cites Androtion and Philochorus as having stated that thirty were chosen, and adds, *Ὁ δὲ Θουκυδίδης τῶν δέκα ἐμνημόνευσε μόνον τῶν προβούλων*. This and the language of Suidas¹⁸ have led Schömann to conjecture that the *πρόβουλοι* were elected as *συγγραφεῖς*, and twenty more persons associated with them, making in all the thirty mentioned by Androtion and Philochorus.¹⁹ Others have thought that the *συγγραφεῖς* of Thucydides have been confounded by grammarians with the thirty tyrants, who were first chosen *οἱ τοὺς πατέρας νόμους συγγράψουσι καὶ οὐδὲ πολιτεύουσιν*.²⁰ These Athenian *πρόβουλοι* are alluded to by Aristophanes in the *Syssistrata*,²¹ which was acted the year after the Sicilian defeat, and by Lysias, *c. Eratosth.*, 126, ed. Steph.

PROCHEIROTONIA (*προχειροτονία*). (*Vid. BOULE*, p. 169)

PROCLYSIS (*πρόκλησις*). (*Vid. ΔΙΑΙΤΗΤΑΙ*, p. 353, 354.)

PROCONSUL is an officer who acts in the place of a consul without holding the office of consul itself; though the proconsul was generally one who had held the office of consul, so that the proconsulship was a continuation, though a modified one, of the consulship. The first time that we meet with a consul whose imperium was prolonged after the year of his consulship, is at the commencement of the second Samnite war, at the end of the consular year 327 B.C., when it was thought advisable to prolong the imperium (*imperium prorogare*) of Q. Publilius Philo, whose return to Rome would have been followed by the loss of most of the advantages that had been gained in his campaign.²² The power of proconsul was conferred by a senatus consultum and plebiscitum, and was nearly equal to that of a regular consul, for he had the imperium and ju-

1. (Demosth., *c. Mid.*, 578, 583, 586.)—2. (*Proc. and Kl.*, i., 304.)—3. (*De Com.*, 238.)—4. (*Att. Proc.*, 275.)—5. (Meier, *Att. Proc.*, 276.)—6. (*viii.*, 87.)—7. (*l. c.*)—8. (Platner, 385.)—9. (Meier *Att. Proc.*, 277.)—10. (Herod., vi., 7.)

1. (Herod., vii., 172.)—2. (Plutarch, *Arist.*, 21.)—3. (Aristot., *Pol.*, iv., 12, 8.—Id., vi., 5, 13.—Müller, *Dor.*, iii., 9, § 10.—Wachsmuth, *Alterth.*, i., ii., 91.—Schömann, *Antiq. Jur. Publ.*, 82.)—4. (*viii.*, 1.)—5. (Suidas, *s. v. Πρόβουλοι*.)—6. (Thucyd., viii., 67.—Wachsmuth, i., ii., 197.)—7. (*s. v. Συγγραφεῖς*.)—8. (*s. v. Πρόβουλοι*.)—9. (*Ant. Jur. Publ.*, 181.)—10. (Xen., *Hell.* 3, § 2.—Göller ad Thucyd., viii., 67.)—11. (*v.*, 467.)—12. (*l. v.*, viii., 23, 26.)

risdictio, but it differed inasmuch as it did not extend over the city and its immediate vicinity (see Niebuhr, *Röm. Gesch.*, iii., p. 214, who infers it from Gaius, iv., 104, 105), and was conferred without the auspices by a mere decree of the senate and people, and not in the comitia for elections.¹ Hence, whenever a proconsul led his army back to Rome for the purpose of holding a triumph, the imperium (*in urbe*) was especially granted to him by the people, which was, of course, not necessary when a consul triumphed during the year of his office. Livy,² it is true, mentions men appointed with proconsular power at a much earlier period than the time of Publius Philo; but there is this difference, that in this earlier instance the proconsular power is not an *imperium prorogatum*, but a fresh appointment as commander of the reserve, and Niebuhr³ justly remarks that Livy here probably applies the phraseology of a much later time to the commander of the reserve; and this is the more probable, as Dionysius⁴ speaks of this ἀντιστρατηγός as having been appointed by the consuls. Nineteen years after the proconsulship of Publius Philo, 308 B.C., Livy⁵ relates that the senate alone, and without a plebiscitum, prolonged the imperium of the consul Q. Fabius Maximus Rullianus; but it is manifest that here again Livy transfers a later institution to a time when it did not yet exist; for it was only by the *lex Mænia* (236 B.C.) that the senate obtained the right to prolong the imperium.

When the number of Roman provinces had become great, it was customary for the consuls, who during the latter period of the Republic spent the year of their consulship at Rome, to undertake at its close the conduct of a war in a province, or its peaceful administration.⁶ There are some extraordinary cases on record in which a man obtained a province with the title of proconsul without having held the consulship before. The first case of this kind occurred in B.C. 211, when young P. Cornelius Scipio was created proconsul of Spain in the comitia centuriata.⁷ During the last period of the Republic such cases occurred more frequently.⁸ Respecting the powers and jurisdiction of the proconsuls in the provinces, see *PROVINCIA*.

After the administration of the Empire was newly regulated by Constantine, parts of certain dioceses were under the administration of proconsuls. Thus a part of the diocese of Asia, called Asia in a narrower sense, Achaia in the diocese of Macedonia, and the consular province in the diocese of Africa, were governed by proconsuls.⁹

PROCURATOR is the person who has the management of any business committed to him by another. Thus it is applied to a person who maintains or defends an action on behalf of another, or, as we should say, an attorney (*vid. Actio*, p. 19): to a steward in a family (*vid. Calculator*): to an officer in the provinces belonging to the Cæsar, who attended to the duties discharged by the quæstor in the other provinces (*vid. Provincia*): to an officer engaged in the administration of the fiscus (*vid. Fiscus*, p. 444): and to various other officers under the Empire.

PRODIGIUM, in its widest acceptance, denotes any sign by which the gods indicated to men a future event, whether good or evil, and thus includes omens and auguries of every description.¹⁰ It is, however, generally employed in a more restricted sense to signify some strange incident or wonderful appearance, which was supposed to herald the approach of

misfortune, and happened under such circumstances as to announce that the calamity was impending over a whole community or nation rather than private individuals. The word may be considered synonymous with *ostentum*, *monstrum*, *portentum*—"Quia enim ostendunt, portentum, monstrant, prædicunt; ostenta, portentia, monstra, prodigia dicuntur."¹¹ It should be observed, however, that *prodigium* must be derived from *ago*, and not from *dico*, as Cicero would have it.

Since prodigies were viewed as direct manifestations of the wrath of heaven, and warnings of coming vengeance, it was believed that this wrath might be appeased, and, consequently, this vengeance averted, by prayers and sacrifices duly offered to the offended powers. This being a matter which deeply concerned the public welfare, the necessary rites were in ancient times regularly performed, under the direction of the pontifices, by the consuls before they left the city, the solemnities being called *procuratio prodigiorum*. Although, from the very nature of the occurrences, it was impossible to anticipate and provide for every contingency, we have reason to know that rules for expiation, applicable to a great variety of cases, were laid down in the *Ostentaria*, the *Libri Rituals*, and other sacred books of the Etrurians,² with the contents of which the Roman priests were well acquainted; and when the prodigy was of a very terrible or unprecedented nature, it was usual to seek counsel from some renowned Tuscan seer, from the Sibylline books, or even from the Delphic oracle. Prodigies were frequently suffered to pass unheeded when they were considered to have no direct reference to public affairs, as, for example, when the marvel reported had been observed in a private mansion or in some town not closely connected with Rome, and in this case it was said *non suscipi*, but a regular record of the more important was carefully preserved in the Annals, as may be seen from the numerous details dispersed throughout the extant books of Livy.³ For an interesting essay on the illustrations of Natural History to be derived from the records of ancient prodigies, see Heyne, *Opusc. Acad.*, iii., p. 198, 255.

PRODOSIA (προδοσία). Under this term was included not only every species of treason, but also every such crime as (in the opinion of the Greeks) would amount to a betraying or desertion of the interests of a man's country. The highest sort of treason was the attempt to establish a despotism (τυραννίς) or to subvert the constitution (καταλύειν τὴν πολιτείαν), and in democracies καταλύειν τὸν δῆμον or τὸ πλῆθος. Other kinds of treason were a secret correspondence with a foreign enemy; a betraying of an important trust, such as a fleet, army, or fortress; a desertion of post; a disobedience of orders, or any other act of treachery or breach of duty in the public service.⁴ It would be a betrayal of the state to delude the people by false intelligence or promises, or to disobey any special decree, such as that (for instance) which prohibited the exportation of arms or naval stores to Philip, and that which (after Philip had taken possession of Phocis) forbade Athenian citizens to pass the night out of the city.⁵ But not only would overt acts of disobedience or treachery amount to the crime of *prodosia*, but also the neglect to perform those active duties which the Greeks in general ex-

1. (Cic., *De Div.*, i., 42.)—2. (Cic., *De Div.*, i., 33.—Müller, *Etrusker*, i., p. 33, 36, 343; ii., 30, 99, 122, 131, 146, 337.)—3. pected of every good citizen. Cowardice in battle (*δειλία*) would be an instance of this kind; so would any breach of the oath taken by the *ἐθνοὶ* at Athens, or any line of conduct for which a charge of disaffection to the people (*μισοδημία*) might be successfully maintained.¹ Thus we find persons, whose offence was the propounding unconstitutional laws, or advising bad measures, or the like, charged by their political opponents with an attempt to overthrow the constitution.² Of the facility with which such charges might be made at Athens, especially in times of political excitement, when the most eminent citizens were liable to be suspected of plots against the state, history affords abundant proof; and Greek history, no less than modern, shows the danger of leaving the crime of treason undefined by the law, and to be interpreted by judges.³ One of the most remarkable trials for constructive treason at Athens was that of Leocrates, who left the city after the defeat at Chæroneia, and was prosecuted by Lycurgus for desertion of his country. The speech of Lycurgus is preserved to us, and is a good specimen of his eloquence. The facts of the case are stated in p. 150, ed. Steph. The nature of the charge may be seen from various expressions of the orator, such as *προδοὺς τοὺς νεὺς καὶ τὰ ἔδη καὶ τὰς ἐν τοῖς νόμοις θύνας* (147), *μὴ βοηθῆσας τοῖς πατρίοις ἱεροῖς, ἐγκαταλίπων τὴν πόλιν* (148), *οὐ συμβεβλημένους οὐδὲν εἰς τὴν τῆς πόλεως σωτηρίαν* (153), *φεύγων τὸν ὑπὲρ τῆς πατρίδος κίνδυνον* (154), and the like. The defence of the accused was, that he did not leave Athens with a traitorous intention (*ἐπὶ προδοσίᾳ*), but for the purposes of trade (*ἐπὶ ἐμπορίᾳ*).⁴

The ordinary method of proceeding against those who were accused of treason or treasonable practices was by *εἰσαγγελία*, as in the case of Leocrates.⁵ In some cases a *γραφὴ* might be laid before the *thesmothetae*.⁶ We read of an old law, by which the jurisdiction in trials for high treason was given to the archon *βασιλεὺς*.⁷ But it could hardly be expected that in a Greek city state offences would always be prosecuted according to the forms of law; and we find various instances in which magistrates, generals, and others, took a summary method for bringing traitors and conspirators to justice. Thus a certain person, named Antiphon, who had promised Philip to burn the Athenian arsenal, was seized by the council of Areopagus, and afterward put to the torture and condemned to death by the people.⁸ As to the power of the Areopagus, see farther Lycurgus, c. *Leoc.*, 154. The people in assembly might, of course, direct any extraordinary measures to be taken against suspected persons, as they did in the affair of the *Hermes busts*,⁹ and by their *ψήφισμα* might supersede even the form of a trial. So fearful were the Athenians of any attempt to establish a tyranny or an oligarchy, that any person who conspired for such purpose, or any person who held an office under a government which had overthrown the constitution, might be slain with impunity. Every citizen, indeed, was under an obligation to kill such a person, and for so doing was entitled by law to honours and rewards.¹⁰

The regular punishment appointed by the law for most kinds of treason appears to have been death,¹¹

which, no doubt might be mitigated by decree of the people, as in the case of Miltiades¹ and many others. The less heinous kinds of *προδοσία* were probably punished at the discretion of the court which tried them.² The goods of traitors who suffered death were confiscated, and their houses razed to the ground; nor were they permitted to be buried in the country, but had their bodies cast out in some place on the confines of Attica and Megara. Therefore it was that the bones of Themistocles, who had been condemned for treason, were brought over and buried secretly by his friends.³ The posterity of a traitor became *ἄτιμοι*, and those of a tyrant were liable to share the fate of their ancestor.⁴ Traitors might be proceeded against even after their death, as we have seen done in modern times. Thus the Athenians resolved to prosecute Phrynichus, who had been most active in setting up the oligarchy of the Four Hundred (*τὸν νεκρὸν κρίνειν προδοσῆς*), and also to subject his defenders to the punishment of traitors in case of a conviction. This was done. Judgment of treason was passed against Phrynichus. His bones were dug up, and cast out of Attica; his defenders put to death; and his murderers honoured with the freedom of the city.⁵

ΠΡΟΔΟΣΙΑΣ ΓΡΑΦΗ (*προδοσίας γραφή*). (*Vid.* PRODOSIA.)

PRODRI. (*Vid.* BOULE, p. 168, 170.)

PROEDROSIA or PROEDROSIAI (*προηδρόσια* and *προηδροσία*) were sacrifices (or, according to other writers, a festival) offered to Demeter at the time when the seeds were sown, for the purpose of obtaining a plentiful harvest.⁶ According to Suidas, the Athenians performed this sacrifice in Ol. 5, on behalf of all the Greeks; but from all the other accounts it would appear that the Athenians did so at all times, and that the instance mentioned by Suidas is only the first time that proedrosia were offered by the Athenians for all the Greeks. They are said to have been instituted on the command of some oracle, at a time when all the world was suffering from scarcity or from the plague.⁷

PROEISPHORA (*προεισφορά*). (*Vid.* ΕΙΣΦΟΡΑ, p. 392.)

ΠΡΟΕΙΣΦΟΡΑΣ ΔΙΚΗ (*προεισφοράς δίκη*), an action brought by a member of a symmoría, to recover a rate paid on account of another. The symmoría being so arranged that three hundred of the richest men were selected to form a superior board, responsible to the state in the first instance for the collection of a property tax, the people passed a decree, in case of need, commanding them to pay the whole tax in advance. These then were entitled to be reimbursed by the remaining nine hundred of the symmoría, and each of them probably had a certain number assigned to him by the strategí for that purpose, against whom he might bring actions for contribution according to their respective assessments. To recover money so advanced was called *προεισφορὰν κομίσσασθαι*.⁸ This cause, like others relating to the property tax and the trierarchy, belonged to the jurisdiction of the strategí.⁹

PROIX (προίξ). (*Vid.* DOS, GREEK.)

PROLETA'RII. (*Vid.* CAPUT.)

PROMETHE'IA (Προμήθεια), a festival celebrated at Athens in honour of Prometheus.¹ The time at which it was solemnized is not known, but it was one of the five Attic festivals which were held with a torch-race in the Ceramicus² (compare ΛΑΜΠΑΔΕΦΟΡΙΑ), for which the gymnasiarch had to supply the youths from the gymnasium. Prometheus himself was believed to have instituted this torch-race, whence he was called the torch-bearer.³ The torch-race of the Prometheia commenced at the so-called altar of Prometheus in the Academia,⁴ or in the Ceramicus, and thence the youths with their torches raced to the city.⁵

PROSCRIPTIO. The verb *proscribere* properly signifies to exhibit a thing for sale by means of a bill or advertisement: in this sense it occurs in a great many passages. But in the time of Sulla it assumed a very different meaning, for he applied it to a measure of his own invention,⁶ namely, to the sale of the property of those who were put to death at his command, and who were themselves called *proscripti*. Towards the end of the year 82 B.C., Sulla, after his return from Præneste, declared before the assembly of the people that he would improve their condition, and punish severely all those who had supported the party of Marius.⁷ The people appear tacitly to have conceded to him all the power which he wanted for the execution of his design, for the lex Cornelia de Proscriptione et Proscriptis was sanctioned afterward, when he was made dictator.⁸ This law, which was proposed by the interrex L. Valerius Flaccus at the command of Sulla, is sometimes called lex Cornelia⁹ and sometimes lex Valeria. Cicero¹⁰ pretends not to know whether he should call it a lex Cornelia or Valeria.¹¹

Sulla drew up a list of the persons whom he wished to be killed, and this list was exhibited in the Forum to public inspection. Every person contained in it was an outlaw, who might be killed by any one who met him with impunity, even by his slaves and his nearest relatives. All his property was taken and publicly sold. It may naturally be supposed that such property was sold at a very low price, and was in most cases purchased by the friends and favourites of Sulla; in some instances, only part of the price was paid at which it had been purchased.¹² The property of those who had fallen in the ranks of his enemies was sold in the same manner.¹³ Those who killed a proscribed person, or gave notice of his place of concealment, received two talents as a reward; and whoever concealed or gave shelter to a proscribed, was punished with death.¹⁴ But this was not all; the proscription was regarded as a corruption of blood, and, consequent-

ly, the sons and grandsons of proscribed persons were forever excluded from all public offices.¹

After this example of a proscription had once been set, it was readily adopted by those in power during the civil commotions of subsequent years. This was the case during the triumvirate of Antonius, Cæsar, and Lepidus (43 B.C.). Their proscription was not less formidable than that of Sulla, for 2000 equites and 300 senators are said to have been murdered.²

PROSECUTORIA ACTIO. (*Vid.* ACTIO, p. 17.)

PROSTIME'MA (προστήμιμα). (*Vid.* TIME'MA.)

PROST'ATES (προστάτης). (*Vid.* LIBERTUS, GREEK; ΜΕΤΟΙΚΟΙ.)

ΠΡΟΣΤ'ΑΤΗΣ ΤΟΥ ΔΗΜΟΥ (προστάτης τοῦ δήμου), a leader of the people, denoted at Athens and in other democratical states a person who by his character and eloquence placed himself at the head of the people, and whose opinion had the greatest sway among them:³ such was Pericles. It appears, however, that *προστάτης τοῦ δήμου* was also the title of a public officer in some Doric states.⁴

PROTHESIS (πρόθεσις). (*Vid.* FUNUS, p. 456.)

PROTHES'MIA (προθεσμία), the term limited for bringing actions and prosecutions at Athens. In all systems of jurisprudence some limitation of this sort has been prescribed, for the sake of quieting possession, and affording security against vexatious litigation. The Athenian expression *προθεσμίας νόμος* corresponds to our *statute of limitations*. The time for commencing actions to recover debts or compensation for injuries appears to have been limited to five years at Athens. Τοῖς ὑδινομένοις ὁ Σόλων τὴν πέντε ἐτη ἱκανὸν ἤγγασ' εἶναι εἰσπράττειν.⁵ Inheritance-causes stood on a peculiar footing. When an estate had been adjudged to a party, he was still liable to an action at the suit of a new claimant for the whole period of his life, and his heir for five years afterward. This arose from the anxiety of the Athenians to transmit inheritances in the regular line of succession. (*Vid.* HERES, GREEK.) The liability of bail continued only for a year (ἐγγυία ἐπέτειοι ἦσαν), and, of course, no proceeding could be taken against them after the expiration of the year.⁶ It is doubtful whether any period was prescribed for bringing criminal prosecutions, at least for offences of the more serious kind, though, of course, there would be an indisposition in the jury to convict if a long time had elapsed since the offence was committed.⁷ Certain cases, however, must be excepted. The γραφή παρανόμων could only be brought within a year after the propounding of the law:⁸ and the εἰσθύναι against magistrates were limited to a certain period, according to Pollux.⁹ Amnesties or pardons, granted by special decrees of the people, scarcely belong to this subject.¹⁰ The term *προθεσμία* is applied also to the time which was allowed to a defendant for paying damages, after the expiration of which, if he had not paid them, he was called *ὑπερήμερος*, *ὑπερπρόθεσπος*, or *ἐκπρόθεσπος*.¹¹

PROTHYRA (πρόθυρα). (*Vid.* HOUSE, GREEK, p. 514.)

PROTRYG'IA (Προτρυγία), a festival celebrated in honour of Dionysus, surnamed Protryges, and of Poseidon.¹² The origin and mode of celebration

this festival at Tyre are described by Achilles Tatius.¹

PROVINCIA. The original meaning of this word seems to be "a duty" or "matter intrusted to a person," as we see in various passages; though some writers, apparently not correctly, consider this sense of "provincia" to be derived from that ordinary acceptance of it which will presently be mentioned. The etymology appears to be uncertain; but, if the usual orthography be correct, it is difficult to assign any other meaning to the verb than to "push forward," to "drive before one," and in this sense provincia is the commission which a Roman general received to drive the enemy from the Roman state.² But this sense of the word, if it was the original one, became changed in the course of time, or perhaps it received additions to its meaning. Thus, for instance, in the age of Cicero, provincia denoted a part of the Roman dominion beyond Italy which had a regular organization and was under Roman administration. This is the ordinary sense of the word, that of a foreign territory in a certain relation of subordination to Rome. It is clear, however, from Livy,³ that the word was also used, before the establishment of any provincial governments, to denote a district or enemy's country which was assigned to a general as the field of his operations; a circumstance which confirms the correctness of the primary meaning of the word, as above explained.

The Roman state, in its complete development, consisted of two parts with a distinct organization, Italia and the provinciæ. There were no provinciæ in this sense of the word till the Romans had extended their conquests beyond Italy; and Sicily⁴ was the first country that was made a Roman province: Sardinia was made a province B.C. 235. The Roman province of Gallia Ulterior in the time of Cæsar was sometimes designated simply by the term provincia,⁵ a name which has been perpetuated in the modern Provence.

A conquered country received its provincial organization either from the Roman commander, whose acts required the approval of the senate, or the government was organized by the commander and a body of commissioners appointed by the senate out of their own number. The mode of dealing with a conquered country was not uniform. When constituted a provincia, it did not become to all purposes an integral part of the Roman state; it retained its national existence, though it lost its sovereignty. The organization of Sicily was completed by P. Rupilius, with the aid of ten legates, and his constitution is sometimes referred to under the name of leges Rupiliæ. (Vid. Lex, p. 585.) The island was formed into two districts, with Syracuse for the chief town of the eastern, and Lilybæum of the western district: the whole island was administered by a governor annually sent from Rome. He was assisted by two quæstors, and was accompanied by a train of præcones, scribæ, haruspices, and other persons, who formed his cohorts. The quæstors received from the Roman ærarium the necessary sums for the administration of the island, and they also collected the taxes, except those which were farmed by the censors at Rome. One quæstor resided at Lilybæum, and the other with the governor or prætor at Syracuse. The governor could dismiss the quæstors from the province if they did not conform to his orders, and could appoint legati to do their duties. The whole island was not treated exactly in the same way. Seventeen conquered towns forfeited their land, which was re-

stored on condition of the payment of the decimæ and the scriptura. But this restoration must not be understood as meaning that the ownership of the land was restored, for the Roman state became the owner of the land, and the occupiers had at most a possessio. These taxes or dues were let to farm by the censors at Rome. Three cities, Messana, Tauromenium, and Netum, were made federatæ civitates, and retained their land. The duties of federatæ civitates towards the Roman state are explained in another place. (Vid. FÆDERATÆ CIVITATES.) Five other cities, among which were Panormus and Segesta, were liberæ et immunes, that is, they paid no decimæ; but it does not appear whether they were free from the burdens to which the federatæ civitates, as such, were subject by virtue of their fœdus with Rome. Before the Roman conquest of Sicily, the island had been subject to a payment of the tenth of wine, oil, and other products, the collecting of which had been determined with great precision by a law or regulation of King Hiero (*lex Hieronica*). The regulations of Hiero were preserved, and these tenths were let to farm by the quæstors in Sicily to Sicilians and Romans settled in Sicily: the tenths of the first-mentioned towns were let to farm to Romans in Rome. The towns which paid the tenths were called by the general name of stipendiariæ.

For the administration of justice, the island was divided into fora or conventus, which were territorial divisions. Sicilians who belonged to the same town had their disputes settled according to its laws; citizens of different towns had their disputes decided by judges appointed by lot by the governor; in case of disputes between an individual and a community, the senate of any Sicilian town might act as judges, if the parties did not choose to have as judges the senate of their own towns; if a Roman citizen sued a Sicilian, a Sicilian was judex; if a Sicilian sued a Roman citizen, a Roman was judex; but no person belonging to the cohorts of a prætor could be judex. These were the provisions of the Rupiliæ leges. Disputes between the lessees of the tenths and the aratores were decided according to the rules of Hiero.¹ The settlement of the municipal constitution of the towns was generally left to the citizens; but in some instances, as in the case of C. Claudius Marcellus and the town of Alesa, a constitution was given by some Roman, at the request, as it appears, of the town. The senate and the people still continued as the component parts of the old Greek cities. Cicero mentions a body of 130 men, called censors, who were appointed to take the census of Sicily every five years, after the fashion of the Roman census.² The island was also bound to furnish and maintain soldiers and sailors for the service of Rome, and to pay tributum for the carrying on of wars. The governor could take provisions for the use of himself and his cohorts on condition of paying for them. The Roman state had also the portoria, which were let to farm to Romans at Rome.

The governor had complete jurisdictio in the island, with the imperium and potestas. He could delegate these powers to his quæstors, but there was always an appeal to him, and for this and other purposes he made circuits through the different conventus.

Such was the organization of Sicilia as a province, which may be taken as a sample of the general character of Roman provincial government. Sicily obtained the Latinitas from Julius Cæsar, and the civitas was given after his death;³ Lat. notwith-

1. (ii., init.)—2. (Göttling, *Gesch. der Röm. Staatsv.*, p. 413.)—3. (ii., 40; iii., 2.)—4. (Cic. in *Verr.*, II., ii.)—5. (Cæs., *Bell. Gall.*, i., 1, 7, &c.)

1. (Cic. in *Verr.*, II., ii., 13.)—2. (in *Verr.*, II., ii., 55, &c.)—3. (Cic. *ad Att.*, xiv., 12.)

standing this, there remained some important distinctions between Sicily and Italy, as hereafter explained. The chief authority for this account of the provincial organization of Sicily is the Verrine orations of Cicero.

Hispania was formed into two provinces, Citerior or Tarraconensis, and Ulterior or Bætica. Hispania Citerior was divided into seven conventus: Carthaginiensis, Tarraconensis, Cæsaraugustanus, Cluniensis, Asturum, Lucensis, and Bracarum. The diversity of the condition of the several parts of the province appears from the enumeration of coloniae, oppida civium Romanorum, Latini veteres, Fœderati, oppida stipendiaria. Hispania Bætica was divided into four juridici conventus: Gaditanus, Cordubensis, Astigitanus, Hispalensis. The oppida consisted of coloniae, municipia, Latii antiquitus donata, which appear to be equivalent to Latini veteres, libera, fœderata, stipendiaria.¹ The provincia of Lusitania was divided into three conventus: Emeritensis, Pacensis, and Scalobitanus. The classes of oppida enumerated are coloniae, municipia civium Romanorum, oppida Latii antiqui or veteris, stipendiaria.² This example will give some idea of the Roman mode of administering a province for judicial purposes. All Hispania received the Latinitas from Vespasian.³ The province paid a fixed vectigal or land-tax in addition to the tributum which was collected by præfecti, and in addition to being required to deliver a certain quantity of corn. And the prætor had originally the right to purchase a twentieth part at what price he pleased.⁴

This organization was not confined to the Western provinces. In Asia, for instance, there was a Smyrnæus conventus which was frequented by a great part of Æolia; the term conventus was applied both to the territorial division made for the administration of justice, and also to the chief city or place "*in quem conveniebant*." Ephesus gave name to another conventus. As the conventus was mainly formed for judicial purposes, the term jurisdictio is sometimes used as an equivalent. Thus Pliny⁵ speaks of the Sardiana jurisdictio, which is the same as Sardiæ conventus. The object of this division is farther shown by such phrases as "*eodem disceptant foro*," "*Tarracone disceptant populi xliii*."

Strabo remarks⁶ that the boundaries of Phrygia, Lydia, Caria, and Mysia were confused, and that the Romans had added to the confusion by not attending to the subsisting national divisions, but making the administrative divisions different (*τὰς διοικήσεις*), in which are the fora (*ἄγορæ*, MS.). The word *ἄγορæ* probably represents conventus (as to the reading, see Casaubon's note). The conventus, it appears, were sometimes held (*conventus acti*) in the winter;⁷ but in Cæsar's case this might be a matter of convenience. Cicero proposed to do the same in his province.⁸ The expression "*forum agere*" is equivalent to "*conventum agere*."

The conventus were attended by the Romans who were resident in the province, among whom were the publicani, and generally by all persons who had any business to settle there. The judges for the decision of suits were chosen from the persons who attended the conventus. Other acts were also done there which were not matters of litigation, but which required certain forms in order to be legal. In the case of manumission by persons under thirty years of age, certain forms were required by the lex Ælia Sentia, and in the provinces it was effect-

ed on the last day of the conventus;¹ from which it appears that conventus means also the time during which business was transacted at the place "*in quem conveniebant*."

The governor, upon entering on his duties, published an edict, which was often framed upon the Edictum Urbanum. Cicero, when proconsul of Cilicia, says that on some matters he framed an edict of his own, and that as to others he referred to the Edicta Urbana.² Though the Romans did not formally introduce their law into the provinces, and so much of it as applied to land and the status of persons was inapplicable to provincial land and provincial persons, great changes were gradually introduced by the edictal power, both as to the forms of procedure and all other matters to which the Roman law was applicable, and also by special enactments.³

There was one great distinction between Italy and the provinces as to the nature of property in land. Provincial land could not be an object of Quiritarian ownership, and it was accordingly appropriately called possessio. The ownership of provincial land was either in the populus or the Cæsar: at least this was the doctrine in the time of Gaius.⁴ Provincial land could be transferred without the forms required in the case of Italian land, but it was subject to the payment of a land-tax (vectigal). Sometimes the jus Italicum was given to certain provincial towns, by which their lands were assimilated to Italian land for all legal purposes. With the jus Italicum such towns received a free constitution, like that of the towns of Italy, with magistrates, as decemviri, quinquennales (censores), and ædiles, and also a jurisdictio. It was a ground of complaint against Piso that he exercised jurisdictio in a libera civitas.⁵ Towns possessing the jus Italicum in Hispania, Gallia, and other countries, are enumerated. The Latinitas or jus Latii also, which was conferred on many provincial towns, appears to have carried with it a certain jurisdictio; and those who filled certain magistratus in these towns thereby obtained the Roman civitas.⁶ It is not easy to state what was the precise condition of the coloniae Romanæ and Latinæ which were established in the provinces: if the name is a certain indication of their political condition, that is pretty well ascertained.

It has been stated that the terms Italia and provinciæ are opposed to one another as the component parts of the Roman state, after it had received its complete development. Under the emperors we find Gallia Cisalpina or Citerior an integral part of Italy, and without a governor, the provincial organization having entirely disappeared. In the year B.C. 49, when Cæsar crossed the Rubicon on his march towards Rome, it was a province of which he was proconsul, a circumstance which gives a distinct meaning to this event. Cicero still calls it Provincia Gallia at the epoch of the battle of Mutina. In the autumn of B.C. 43, D. Brutus, the proconsul of the Provincia Gallia, was murdered, and from that time we hear of no more proconsuls of this province, and it is a reasonable conjecture that those who then had all the political power were unwilling to allow any person to have the command of an army in a district so near to Rome. The name Italia was, however, applied to this part of Italia before it became an integral portion of the peninsula by ceasing to be a provincia.⁷ On the determination of the provincial form of government in Gallia Cisalpina, it was necessary to give to this part

of Italy a new organization suited to the change of circumstances, particularly as regarded the administration of justice, which was effected by the *lex Rubria de Gallia Cisalpina*. The proconsul of Gallia Cisalpina had the imperium, but, on his functions ceasing, the *iurisdictio* was placed in the hands of the local magistrates who had not the imperium. These magistrates could give a *iudex*: in some cases their jurisdiction was unlimited; in others it did not extend to cases above a certain amount of money; they could remit a *novi operis nuntiatio*, require a *cautio* in case of *damnum infectum*, and, if it was not given, they could grant an action for damages.

The Roman provinces up to the battle of Actium, as enumerated by Sigonius, are, Sicilia, Sardinia et Corsica, Hispania Citerior et Ulterior, Gallia Citerior, Gallia Narbonensis et Comata, Illyricum, Macedonia, Achaia, Asia, Cilicia, Syria, Bithynia et Pontus, Cyprus, Africa, Cyrenaica et Creta, Numidia, Mauritania. Those of a subsequent date, which were either new or arose from a subsequent division, are, according to Sigonius, Rhætia, Noricum, Pannonia, Mœsia, Dacia, Britannia, Mauritania Cæsariensis et Tingitana, Ægyptus, Cappadocia, Galatia, Rhodus, Lycia, Commagene, Judæa, Arabia, Mesopotamia, Armenia, Assyria. The accuracy of this enumeration is not warranted. It will appear that it does not contain Lusitania, which is one of the two divisions of Hispania Ulterior, the other being Bætica: Lusitania may, however, not have had a separate governor. Originally the whole of Spain, so far as it was organized, was divided into the two provinces Citerior and Ulterior; the division of Ulterior into Bætica and Lusitania belongs to a later period. Under Augustus, Gallia was divided into four provinces: Narbonensis, Celtica or Lugdunensis, Belgica, and Aquitania. The Provincia of Cæsar's Commentaries, from which term the modern name Province is derived, appears to have corresponded to the subsequent province Narbonensis. He had also the province of Gallia Cisalpina or Citerior,¹ which, as already explained, was subsequently incorporated with Italia as an integral part of it. Cicero speaks of the two Galliæ as then united in one imperium under C. Julius Cæsar, and he farther distinguishes them by the names of Citerior and Ulterior.² The same expressions are used by Cæsar in his Commentaries.³

Strabo⁴ gives the division into provinces (*ἐπαρχιαι*) as constituted by Augustus. The provinces of the populus (*δῆμος*) were two consular provinces (*ὑπαρκται*) and ten prætorian provinces (*σπαρτηγίαι*). The rest of the eparchies, he says, belong to the Cæsar. Lusitania is not enumerated among the eparchies of the populus, and if it was a distinct eparchy, it must have belonged to the Cæsar according to the principle of the division of the provinces, as stated by Strabo. The list of provinces in the "Demonstratio Provinciarum"⁵ mentions the province of Asturia et Gallæcia Lusitania. Dion Cassius⁶ states the distribution of the provinces by Augustus as follows: the provinces of Africa, Numidia, Asia, Hellas (Achaia) with Epirus, Dalmatia, Macedonia, Sicilia, Creta with the Cyrenaica, Bithynia with the adjacent Pontus, Sardinia, and Bætica, belonged to the senate and the people (*δῆμος* and *γενομένη*); Tarraconensis, Lusitania, all Gallia, Cœle-Syria, Phœnice, Cilicia, Cyprus, and Ægyptus, belonged to Augustus. He afterward took Dalmatia from the senate, and gave to them Cyprus and Gallia Narbonensis, and other changes were made subsequently.

At first prætors were appointed as governors of provinces, but afterward they were appointed to the government of provinces upon the expiration of their year of office at Rome, and with the title of prætores. In the later times of the Republic, the consuls also, after the expiration of their year of office, received the government of a province, with the title of proconsules: such provinces were called consulares. Cicero was proconsul of Cilicia B.C. 55, and his colleague in the consulship, C. Antonius, obtained the proconsulship of Macedonia immediately on the expiration of his consular office. The provinces were generally distributed by lot, but the distribution was sometimes arranged by agreement among the persons entitled to them. By a *Sempronia lex* the proconsular provinces were annually determined before the election of the consuls, the object of which was to prevent all disputes. A *senatus consultum* of the year 55 B.C. provided that no consul or prætor should have a province till after the expiration of five years from the time of his consulship or prætorship. A province was generally held for a year, but the time was often prolonged. When a new governor arrived in his province, his predecessor was required to leave it within thirty days.

The governor of a province had originally to account at Rome (*ad urbem*) for his administration from his own books and those of his quæstors; but after the passing of a *lex Julia*, B.C. 61, he was bound to deposit two copies of his accounts (*rationes*) in the two chief cities of his province, and to forward one (*totidem verbis*) to the *Ærarium*.¹ If the governor misconducted himself in the administration of the province, the provincials applied to the Roman senate, and to the powerful Romans who were their patroni. The offences of *repetundæ* and *peculatus* were the usual grounds of complaint by the provincials; and if a governor had betrayed the interests of the state, he was also liable to the penalties attached to *majestas*. *Quæstiones* were established for inquiries into these offences; yet it was not always an easy matter to bring a guilty governor to the punishment that he deserved.

With the establishment of the imperial power under Augustus, a considerable change was made in the administration of the provinces. Augustus took the charge of those provinces where a large military force was required; the rest were left to the care of the senate and the Roman people.² Accordingly, we find in the older jurists³ the division of provinciae into those which were "*propria populi Romani*," and those which were "*propria Cæsaris*;" and this division, with some modifications, continued to the third century. The senatorian provinces were distributed among consulares and those who had filled the office of prætor, two provinces being given to the consulares and the rest to the prætori: these governors were called proconsules or præsides, which latter is the usual term employed by the old jurists for a provincial governor. The præsides had the *iurisdictio* of the prætor urbanus and the prætor peregrinus, and their quæstors had the same jurisdiction that the curule ædiles had at Rome.⁴ The imperial provinces were governed by *legati Cæsaris* with prætorian power, the proconsular power being in the Cæsar himself, and the *legati* being his deputies and representatives. The *legati* were selected from those who had been consuls or prætors, or from the senators. They held their office and their power at the pleasure of the emperor, and he delegated to them both military command and *iurisdictio*, just as a proconsul in the republican period delegated these powers to his *legati*. These *legati* had also *legati* under them. No quæstors were sent to the

¹ (Cæs., B. Gall., i., 54.)—² (De Prov. Cons., ii., 15, 16.)—³ (Bell. Gall., i., 7; v., 1, 2.)—⁴ (xvii., p. 840, ed. Casaub.)—⁵ (Mythog. Vat., Bode.)—⁶ (liii., 12.)

¹ (Cic. ad Fam., ii., 17; v., 20.)—² (Strabo, xvii., p. 840.)—³ (Gaius, ii., 21.)—⁴ (Gaius, i., 6.)

provinces of the Cæsar, and for this reason, observes Gaius, *this edict (hoc edictum)* is not published in those provinces, by which he appears, from the context, to mean the edict of the curule ædiles. In place of the quæstors, there were procuratores Cæsaris, who were either equites or freedmen of the Cæsar. Egypt was governed by an eques, with the title of præfectus. The procuratores looked after the taxes, paid the troops, and generally were intrusted with the interests of the fiscus. Judæa, which was a part of the province of Syria, was governed by a procurator who had the powers of a legatus. It appears that there were also procuratores Cæsaris in the senatorial provinces, who collected certain dues of the fiscus, which were independent of what was due to the ærarium. The regular taxes, as in the Republican period, were the poll-tax and land-tax. The taxation was founded on a census of persons and property, which was established by Augustus. The portoria and other dues were farmed by the publicani, as in the republican period.

The governors of the senatorial provinces and the legati of the Cæsar received their instructions from him, and, in all cases not thus provided for, they had to apply to the Cæsar for special directions. The rescripta of the emperors to the provincial governors are numerous. Justice was administered in the provinces according to the laws of the provinces, and such Roman laws as were specially enacted for them, and according to imperial constitutiones, senatus consulta, and the edict of the governors. In some instances the provisions of Roman laws were extended to the provinces.¹

The organization of the Italian towns under the Empire has been already explained in the article Colonia; and the same observations apply, in general, to the senates of provincial towns which have been made with respect to the functions of the senates of Italian towns. Even in the provinces, the names senate and senator occur in the sense, respectively, of curia and decuriones. But there was a great distinction between the magistratus of provincial and those of Italian towns. The functions of these personages in the provincial towns were generally munera (*burdens*), and not honores. (*Vid. Honores*.) Such honores as have reference to religious functions they certainly had, and probably others also; but they had nothing corresponding to the duumviri juri dicundo of the Italian towns, that is, no functionary "qui jus dicebat." The only exception were such towns as had received the jus italicum, the effect of which, as elsewhere explained, appears to have been, in brief, to give to a certain city and district the same character that it would have had if it had been a part of the Italian soil, but only so far as affected the whole district: it did not affect the status of individuals. Freedom from the land-tax, and a free constitution in Italian form, with duumviri J. D., quinquennales, ædiles, and jurisdiction, were essential ingredients of this jus italicum. Sicily received the civitas after the death of Julius Cæsar, and from the occurrence of the mention of duumviri in the inscriptions of a Sicilian town, Savigny draws the probable inference that the Sicilian towns received the jus italicum also: at least, if in any case we can show that any provincial city had duumviri, we may conclude that such city had the jus italicum, and, consequently, magistratus with jurisdiction. The regular jurisdiction in all the provinces was vested in the governor, who exercised it personally and by his legati: with reference to his circuits in the provincia, the governor, in the later ages of the Empire, was called judex ordinarius, and sometimes simply judex. The towns which had the jus italicum were, as already observ-

ed, not under his immediate jurisdiction, though a right of appeal to the governor from the judgment of the duumviri must be considered as always existing. The provincial towns had the management of their own revenue; and some of the principal towns could coin money. It does not appear that the religion of the provincials was ever interfered with, nor had it been put under any restraint in the republican period.

The constitution of Caracalla, which gave the civitas to all the provinces and towns of the Empire, merely affected the personal status of the people. The land remained provincial land when the jus italicum had not been communicated to it, and the cities which had not received the jus italicum were immediately under the jurisdiction of the governors. This constitution, however, must have made considerable changes in the condition of the provincials; for, when they all became Roman citizens, the Roman incidents of marriage, such as the patria potestas, and the Roman law of succession in case of intestacy, would seem to be inseparable consequences of this change, at least so far as the want of the jus italicum did not render it inapplicable.

The constitution of the provincial towns was materially affected by the establishment of defensores, whose complete title is "*Defensores Civitatis Plebis Loci*." Until about the time of Constantine, so far as the Pandect shows, defensor was the title of persons who were merely employed in certain municipal matters of a temporary kind. In the year A.D. 365, the defensores appear as regularly established functionaries.¹ They were elected by the decuriones and all the city; but, unlike the magistratus, they could not be elected out of the body of decuriones. The office was originally for five years, but after the time of Justinian only for two years. The principal business of the defensor was to protect his town against the oppression of the governor.² He had a limited jurisdiction in civil matters, which Justinian extended from matters to the amount of 60 solidi to matters to the amount of 300 solidi. There was an appeal from him to the governor.³ He could not impose a multa, but he could appoint a tutor. In criminal matters, he had only jurisdiction in some of the less important cases.

The number of senators, both in the Italian and provincial towns, seems to have been generally one hundred; and this was the number in Capua.⁴ But the number was not in all places the same. Besides the actual members, the album decurionum comprised others who were merely honorary members. The album of the town of Canusium, of the year A.D. 223, which has been preserved, consists of 148 members, of whom 30 were patroni, Roman senators, and 2 were patroni, Roman equites; the remainder were 7 quinquennialicii, a term which is easily explained by referring to the meaning of the term quinquennales (*vid. Colonia*, p. 283), 4 allecti inter quinquennales, 22 duumviralicii, 19 edilicii, 21 pedani, 34 prætextati. The distinction between pedani and prætextati Savigny professes himself unable to explain. In many towns, the first persons in the list of actual senators were distinguished from the rest, and generally the first ten, as decemprimi, of which there is an example in Livy;⁵ and in the case of Ameria, and of Centuripe in Sicily.⁶

It has been previously shown, that, at the time when the Roman republica had attained its complete development, Italia and the provinciæ were the two great component parts of the Empire; and one great distinction between them was this, that in

1. (Gaius, i., 47.—Ulp., Frag., xi., 20.)

1. (Cod., i., tit. 55, "De Defensoribus.")—2. (Cod., i., tit. 55, s. 4.)—3. (Nov., 15, c. 5.)—4. (Cic. in Rull., ii., 35.)—5. (xxix. 15: "Magistratus denosque principes.")—6. (Cic., Pro Ros. Amer., c. 9.—Id. in Verr., ii., 67.)

Italia the towns had magistratus with jurisdiction; in the provinces, except in places which had received the jus Italicum, the governor alone had jurisdiction. But with the growth and development of the imperial power a greater uniformity was introduced into the administration of all parts of the Empire, and ultimately Italy itself was under a provincial form of government. (*Vid. COLONIA.*) As above shown, the relation of the governor to the province was not the same when a city had magistratus and when it had not; and, consequently, it was in this respect not the same in Italy as in the provinces.

The constitution of Constantine was based on a complete separation of the civil and military power, which were essentially united in the old system of provincial government: Justinian, however, ultimately reunited the civil and military power in the same person. The governor, who had civil power, was called rector, judex, judex ordinarius; and of these governors there were three classes, consulares, correctores, præsidēs, among whom the only distinction was in the extent and rank of their government. In the writings of the older jurists, which are excerpted in the Pandect, the præses is a general name for a provincial governor.¹ The military power was given to duces, who were under the general superintendence of the magistri militum. Some of these duces were called comites, which was originally a title of rank given to various functionaries, and among them to the duces; and when the title of comes was regularly given to certain duces, who had important commands, the name dux was dropped, and comes became a title. This was more particularly the case with important commands on the frontier.² The comes is mentioned in imperial constitutions before the dux, whence we infer his higher rank.³

It remains to add a few remarks on the exercise of the jurisdiction, so far as they have not been anticipated in speaking of the functionaries themselves. In Italy, and in the towns which had the privileges of Italian towns, all matters, as a general rule, came before the magistratus in the first instance; but in certain excepted matters, and in cases where the amount in question was above a certain sum (the precise amount of which is not known), the matter came before the governor of the province in the first instance, or in Italy before the Roman prætor. Until the middle of the fourth century A.D., all matters in the provincial towns which had not magistratus came before the governor in the first instance; but about this time the defensor acquired a power like that of the magistratus of the privileged towns, though more limited. The old form of proceeding in civil matters has been explained elsewhere (*vid. JUDEX*): the magistratus empowered the judex to make a condemnatio; and this institution was the *ordo judiciorum privatorum*. That which the magistratus did without the aid of a judex was *extra ordinem*. (*Vid. INTERDICTION.*) The same institution prevailed in those towns which had a magistratus, for it was of the essence of a magistratus or of jurisdiction to name a judex.⁴ Under the emperors, it gradually became common for the magistratus to decide various cases without the aid of a judex, and these are the *extraordinariæ cognitiones* spoken of in the Digest.⁵ In the reign of Dioclesian, the *ordo judiciorum*, as a general rule, was abolished in the provinces, and the *pedanei iudices* (*hoc est qui negotia humiliora disceptant*) were only appointed by the præses when he was very much occupied with business, or for some trifling matters (*vid. Ju-*

DEX PEDANEUS); and in the time of Justinian the institution had entirely disappeared,⁶ and, as it is conjectured, both in Rome and the municipia.

By the aid of the iudices, two prætors were able to conduct the whole judicial business between citizens and peregrini at Rome; and by the aid of the same institution, the judicial business was conducted in the jurisdictiones out of Rome. In no other way is it conceivable how the work could have been got through. But when the *ordo judiciorum* was abolished, the difficulty of transacting the business must have been apparent. How this was managed is explained by Savigny, by referring to the growth of another institution. Even in the time of the Republic, the prætors had their legal advisers, especially if they were not jurists themselves; and when all the power became concentrated in the Cæsars, they were soon obliged to form a kind of college for the despatch of business of various kinds, and particularly judicial matters which were referred to the Cæsar. This college was the Cæsar's *consistorium* or *auditorium*. The provincial governors had their body of assessors, which were like the Cæsar's *auditorium*,⁷ and it is a conjecture of Savigny, which has the highest probability in its favour, that the new institution was established in the municipal towns and in the provincial towns, so that here also the magistratus and the defensor had their assessors.

Besides the jurisdiction which had reference to litigation, the so-called *contentiosa jurisdictio*, there was the *voluntaria*. Matters belonging to this jurisdiction, as manumission, adoption, emancipation, could only be transacted before the magistratus *populi Romani*, and, unless these powers were specially given to them, the municipal magistrates had no authority to give the legal sanction to such proceedings; though in the old municipia it is probable that the power of the magistratus was as little limited in the *voluntaria* as in the *contentiosa jurisdictio*. In the imperial period it was usual to perform many acts before the public authorities, and in the three cases of large gifts, the making of a will, and the opening of a will, it was necessary for these acts to be done before a public authority. Such acts could be done before a provincial governor, and also before the curia of a city in the presence of a magistratus and other persons. (Compare the Constitution of Honorius, *Cod. Theod.*, xii., tit. 1, s. 151, and a Novel of Valentinian, *Nov. Theod.*, tit. 23, with Savigny's remarks on them.)

Though the general administration of the Roman provinces is adequately understood, there are differences of opinion as to some matters of detail; one cause of which lies in the differences which actually existed in the administration of the provinces, and which had their origin in the different circumstances of their conquest and acquisition, and in the diversity of the native customary law in the different provinces, with a large part of which the Romans originally did not interfere. A general view of the provinces should therefore be completed and corrected by a view of the several provinces.

The authorities for this imperfect view of the provincial government have been generally referred to. They are, more particularly, Sigonius, *De Antiquo Jure Provinciarum*, lib. i.-iii.—Göttling, *Geschichte der Römischen Staatsverfassung*.—Walter, *Geschichte des Römischen Rechts*, where the authorities are very conveniently collected and arranged, and chap. xxxi., notes 76, 79, wherein he differs from Savigny as to the *jus Italicum*; in chapter xxxvii., Walter has described the provincial divisions of the Empire, which existed about the middle of the fifth century

1 (*Dig.* 8, tit. 18).—2 (*Cod. Theod.*, vii., tit. 1, s. 9).—3 (*Cod. Theod.*, viii., tit. 7, s. 11: "Ad magistratū militum, et comites, et duces omnes").—4 (*Lex Gall. Cisalp.*, c. 20).—5 (*50*, tit. 13.)

*PRUNUM, the Plum, called in Greek κοκκὺμῃλον. (Vid. COCCYMELEA.) It is the fruit of the *Prunus domestica*, L.

*PRUNUS (κοκκὺμῃλέα), the Plum-tree, or *Prunus domestica*, L. (Vid. COCCYMELEA.) Theophrastus and Dioscorides designate the Plum-tree by the name of κοκκὺμῃλέα. It is also called by Theophrastus προυνή. Galen styles it προυνή. The compound term κοκκὺμῃλέα, however (meaning the tree that bears for fruit little balls or pillules), is the most classical form of expression. The term προυνή, whence comes the Latin *prunus*, seems to be a barbarian word Græcised. The Plum-tree is originally from the mountains in the vicinity of Damascus.²

PRYTANEION (Πρυτανεῖον). The *Prytaneia* of the ancient Greek states and cities were to the communities living around them, the common houses of which they in some measure represented, what private houses were to the families which occupied them. Just as the house of each family was its home, so was the *Prytaneion* of every state or city the common home of its members or inhabitants, and was consequently called the *ἐστία πόλεως*, the "focus" or "penetræ urbis."³ This correspondence between the *Prytaneion*, or home of the city, and the private home of a man's family, was at Athens very remarkable. A perpetual fire, or *πῦρ ἱερόστον*, was kept continually burning on the public altar of the city in the *Prytaneion*, just as in private houses a fire was kept up on the domestic altar in the inner court of the house.⁴

The same custom was observed at the *Prytaneion* of the Eleans, where a fire was kept burning night and day.⁵ Moreover, the city of Athens exercised in its *Prytaneion* the duties of hospitality, both to its own citizens and strangers. Thus foreign ambassadors were entertained here, as well as Athenian envoys on their return home from a successful or well-conducted mission.⁶ Here, too, were entertained from day to day⁷ the successive prytanes, or presidents of the senate, together with those citizens who, whether from personal or ancestral services to the states, were honoured with what was called the *στράτης ἐν Πρυτανείῳ*, the "victus quotidianus in *Prytaneio*,"⁸ or the privilege of taking their meals there at the public cost. This was granted sometimes for a limited period, sometimes for life, in which latter case the parties enjoying it were called *ἀείσται*. The custom of conferring this honour on those who had been of signal service to the state and their descendants was of so great antiquity, that one instance of it was referred to the times of Codrus; and in the case to which we allude, the individual thus honoured was a foreigner, a native of Delphi.⁹ Another illustration of the uses to which the *Prytaneion* was dedicated is found in the case of the daughters of Aristides, who, on the death of their father, were considered as the adopted children of the state, and married

from (ἐκδοθεῖσαι) that common home of the city, just as they would have been from their father's home had he been alive.¹ Moreover, from the ever-burning fire of the *Prytaneion*, or home of a mother state, was carried the sacred fire which was to be kept burning in the *prytaneia* of her colonies; and if it happened that this was ever extinguished, the flame was rekindled from the *prytaneion* of the parent city.² Lastly, a *Prytaneion* was also a distinguishing mark of an independent state, and is mentioned as such by Thucydides,³ who informs us that before the time of Theseus every city or state (πόλις) of Attica possessed a *Prytaneion*. The Achæans, we are told,⁴ called their *Prytaneion* *λήτρον* (from *λέω*, *populus*), or the "town-hall," and exclusion from it seems to have been a sort of civil excommunication.

The *Prytaneion* of Athens lay under the Acropolis, on its northern side (near the *ἀγορά*), and was, as its name denotes, originally the place of assembly of the *πρυτανεῖς*: in the earliest times it probably stood on the Acropolis. Officers called *πρυτανεῖς* were intrusted with the chief magistracy in several states of Greece, as Corcyra, Corinth, Miletus,⁵ and the title is sometimes synonymous with *βασίλεις*, or princes, having apparently the same root as *πρώτος* or *πρότατος*. At Athens they were in early times probably a magistracy of the second rank in the state (next to the archon), acting as judges in various cases (perhaps in conjunction with him), and sitting in the *Prytaneion*. That this was the case is rendered probable by the fact, that even in after times the fees paid into court by plaintiff and defendant, before they could proceed to trial, and received by the dicasts, were called *πρυτανεῖα*.⁶ This court of the *Prytaneion*, or the *τὰ ἐν Πρυτανείῳ*, is said⁷ to have been presided over by the *φυλοβασίλεις*, who, perhaps, were the same as the *πρυταιεῖς*.

In later ages, however, and after the establishment of the courts of the *heliæa*, the court of the *Prytaneion* had lost what is supposed to have been its original importance, and was made one of the courts of the *ephæte*, who held there a species of mock trial over the instruments by which any individual had lost his life, as well as over persons who had committed murder, and were not forthcoming or detected.

The tablets or *ἄξονες*, otherwise *κύρβεις*, on which Solon's laws were written,⁸ were also deposited in the *Prytaneion*;⁹ they were at first kept on the Acropolis, probably in the old *Prytaneion*, but afterward removed to the *Prytaneion* in the *ἀγορά*, that they might be open to public inspection.¹⁰ Ephialtes is said to have been the author of this measure,¹¹ but their removal may have been merely the consequence of the erection of a new *Prytaneion* on the lower site in the time of Pericles.¹²

PRYTANEIS. (Vid. PRYTANEION, BOULE, page 168, 170.)

*PSAR (ψάρ), the Starling, or *Sturnus vulgaris*. Starlings are gregarious, and hence mention is made by Homer of "a cloud of starlings."¹³

*PSEN (ψήν), the insect on the fig-tree which performs the work of caprification. It is the *Cynips Psenes* of modern naturalists.¹⁴

(Hom., Il., xvii, 755.—Didymi, schol. ad loc.—Adams, Append., s. v.)—14. (Theophr., H. P., ii, 9.—Adams, Append., s. v.)

pose they used either seashells, *χορίναι*,¹ or beans (hence the *δῆμος* is called *κυμαστῶς* by Aristophanes²), or balls of metal (*σπάνδυλος*), or stone (*ψήφοι*). These last were the most common: hence *ψηφίζεσθαι* and its various derivatives are used so often to signify *voting, determining, &c.* The balls were either pierced (*τετραπηγμέναι*) and whole (*πληρεῖς*), the former for condemnation, the latter for acquittal,³ or they were black and white, for the same purposes respectively, as the following lines show:⁴

"*Mos erat antiquus niveis atrisque lapillis,
His damnare reos, illis absolvere culpa.*"

There might be three methods of voting. First, the secret method, called *κρύβδην ψηφίζεσθαι*, when each dicast had two balls given him (say a black and a white); two boxes (*κάδοι, καδίσκοι, or ἀμφορείς*) were prepared, one of brass, called the judgment-box (*κύριος*), into which the dicast put the ball by which he gave his vote, and the other of wood, called *ἄκυρος*, into which he put the other ball, and the only object of which was to enable him to conceal his vote. Each box had a neck or funnel (*κημός, i. e., ἐπίθημα μιάς ψήφον χώραν ἔχον*), into which a man could put his hand, but only one ball could pass through the lower part into the box.⁵ Secondly, there might be only one box, in which the dicast put which of the two balls he pleased, and returned the other to the officer of the court. Thirdly, there might be two boxes, one for condemnation, the other for acquittal, and only one ball.⁶ The first method was most commonly practised at Athens. Where, however, there were several parties before the court, as in inheritance causes, to one of whom an estate or other thing was to be adjudged, it was customary to have as many ballot-boxes as there were parties, or, at least, parties in distinct interests; and the dicast put the white or whole ball into the box of that person in whose favour he decided. (*Vid. HÆRES, GREEK.*) The same system of balloting was employed when the dicasts voted on the question of damages. Hence the verdict on the question, *guilty or not guilty, or for the plaintiff or defendant* (to distinguish it from the other), is called *πρώτη ψήφος*.⁷ A curious custom was in vogue in the time of Aristophanes. Each dicast had a waxen tablet, on which, if the heavier penalty was awarded, he drew a long line (lengthway on the tablet); if the lighter penalty, he drew a short line (breadthway on the tablet). We must suppose, not that the voting took place in this way, but that, on the votes being counted, the jurors took a note of the result for their own satisfaction; unless we resort to this hypothesis, viz., that the drawing lines on the tablets was an act preliminary to the division, whereby the jury intimated to the parties how the matter was likely to go unless they came to a compromise. Such intimation might be necessary in those cases where, the estimates of the parties being widely different, the one proposing too high a penalty, the other too low a one, the jury wished to inform the more unreasonable party that, unless he offered them some better alternative, they should adopt the estimate of his adversary. (As to this point, see Meier, *Att. Proc.*, 181.) The tablet is called by Aristophanes *πινάκιον τιμωτικόν*. In the expression *τιμὰν τινι μακράν*, we understand *γραμμὴν* or *τίμησιν*.⁸

In the popular assemblies, the common method of voting was by show of hands. (*Vid. CHEIROTONIA.*) There were some occasions, however, when the ballot was employed, as when it was deemed important that the voting should be secret, or that the numbers should be accurately counted. Thus, to pass a law for the naturalization of a foreigner, or for the release of a state debtor, or for the restoration of a disfranchised citizen, and, indeed, in every case of a *privilegium*, it was necessary that six thousand persons should vote in the majority, and in secret.¹ On the condemnation of the ten generals who gained the battle of Arginuse, the people voted by ballot, but openly, according to the second of the plans above mentioned. The voting was then by tribes, *κατὰ φύλας*.² Secret voting by the senate of Five Hundred is mentioned in Æschines,³ and in ostracism the voting was conducted in secret.⁴

The people or jury were said *ψηφίζεσθαι, ψήφον φέρειν* or *θεσθαί, to vote, or give their vote or judgment*. *Ψήφον τίθεσθαι, to cast accounts*, is used with a different allusion.⁵ The presiding magistrate or officer, who called on the people to give their votes, was said *ἐπιψηφίζεν, ψήφον ἐπάγειν* or *διδάναί*, though the last expression is also used in the sense of *voting in favour of a person*. *Ψηφίζεσθαι, to vote, to resolve, ἀποψηφίζεσθαι, to acquit*, and other derivations from *ψῆφος*, are often used metaphorically, where the method of voting was *χειροτονία*, and conversely. *Χειροτονεῖν*, however, is not used, like *ψηφίζεσθαι*, with the accusative of the thing voted. As to this, see Schömann, *De Com.*, 123.

**PSETTA* (*ψῆττα*), a species of fish, mentioned by Aristotle, Ælian, Oppian, and others. According to Adams, it would seem to have been the *Pleuronectes Passer*, or Sea Flounder, called in French *Turbot buclé*. The *ψῆττα* of Athenæus, on the other hand, is referred by Artedi and the writer on Ichthyology in the Encyclopédie Methodique, to the *Pleuronectes Platessa*, or Plaise. The name is often written *ψῆττα*.⁶

ΨΕΥΔΕΓΓΡΑΦΗΣ ΓΡΑΦΗ (*ψευδεγγραφήs γραφή*) It is shown under *PRÆTORES* that the name of every state debtor at Athens was entered in a register by the prætores, whose duty it was to collect the debts, and erase the name of the party when he had paid it. The entry was usually made upon a return by some magistrate, to whom the incurring of the debt became officially known; as, for instance, on a return by the *πωλῆται* that such a person had become a lessee of public lands or farmer of taxes, at such a rate or on such terms. In case the authorities neglected to make the proper return, any individual might, on his own responsibility, give information to the registering officers of the existence of the debt; and thereupon the officers, if they thought proper, might make an entry accordingly, though it would probably be their duty to make some inquiry before so doing. If they made a false entry, either wilfully, or upon the suggestion of another person, the aggrieved party might institute a prosecution against them, or against the person upon whose suggestion it was made. Such prosecution was called *γραφὴ ψευδεγγραφῆs*. It would lie, also, where a man was registered as debtor for more than was really due from him. And the reader must understand the like remedy to be open to one who was falsely recorded as a debtor by the *τομίαι τῶν θεῶν*. Whether this form of proceeding could be adopted against magistrates for making a false return, or whether the rem-

edy against them could only be at the *ἐπιχειροποιή* or *εὐθύναι*, we cannot say. The *γραφὴ ψευδεγγράφης* was brought before the *thesmothetæ*. If the defendant was convicted, the name of the complainant was struck out of the register, and that of the defendant was entered in his stead, as debtor for the same amount. The *γραφὴ βουλεύσεως* was similar to this, only it lay in those cases where a man who had been a state debtor had paid all that was due, but his name was not erased, or, having been erased, was re-entered. We may presume that fraudulent or malicious motives were necessary to be proved on such a charge; but it is reasonable, also, to suppose, that in any case of gross negligence, fraud or malice might (as matter of course) be presumed by the *dicastræ*.¹

**ΨΕΥΔΗΣ ΣΜΑΡΑΓΔΟΣ* (*ψευδὴς Σμάραγδος*), the Bastard Emerald. "By bastard gems," says Adams, "the ancients meant crystals, tinged of the colours of the precious stones by the admixture of metallic particles."²

**PSEUDOBON'UM* (*ψευδοβούνιον*), a plant, which Dodonæus, Matthiolus, and Bauhin held to be the *Barbarea*, or Winter Cress; but Sprengel follows Lobelius in referring it to the *Pimpinella tenuis*.³

**PSEUDODICTAMNUM* (*ψευδοδίκταμνον*), a plant, which Stackhouse sets down for the *Origanum Ægyptiacum*; but Sprengel adopts the opinion of Dodonæus, who makes it the *Marrubium Pseudodictamnium*, or Bastard Dittany.*

**ΨΕΥΔΟΚΛΗΤΕΙΑΣ ΓΡΑΦΗ* (*ψευδοκλητείας γραφή*), a prosecution against one who had appeared as a witness (*κλητήρ* or *κλητήρ*) to prove that a defendant had been duly summoned, and thereby enabled the plaintiff to get a judgment by default. To prevent fraud, the Athenian law directed that the names of the witnesses who attended the summons should be subscribed to the bill of plaint or indictment (*ἐγκλημα*), so that the defendant, if he never had been summoned, and judgment had nevertheless been given against him by default, might know against whom to proceed. The false witness (*κλητήρ*) was liable to be criminally prosecuted, and punished at the discretion of the court. Even death might be inflicted in a case of gross conspiracy.⁴ A person thrice convicted of this offence was, as in the case of other false testimony, *ipso jure* disfranchised; and even for the first offence the jury might, if they pleased, by a *προστίμῃ*, inflict the penalty of disfranchisement upon him.⁵ Here we may observe this distinction, that the proceeding against the false witness to a summons was of a criminal nature, while the witness in the cause (*μάρτυρ*) was liable only to a civil action. The cause might be that the former offence was more likely to do mischief. The magistrate before whom the defendant neglected to appear, when, by the evidence of the witness, it was shown that he had been duly summoned, had no discretion but to pronounce judgment against him; whereas the *dicastræ*, to whom the witness gave false evidence at the trial, might disbelieve him, and find their verdict according to the truth. If the fraud was owing to a conspiracy between the plaintiff and the witness, it is probable that an action at the suit of the defendant would lie against the former, to recover compensation; for, though the conviction of the witness would lead to a reversal of the judgment, still he (the defendant) might have suffered

damage in the mean time, which the setting aside of the judgment would not repair. Such action (it has been conjectured) might be a *δίκη συκοφαντίας*, or, perhaps, *κακοτεχνιών*. If the name of the witness had been fraudulently used by the plaintiff, and the witness had thereby been brought into trouble, we may conclude, by analogy to the case of other witnesses, that he had a *δίκη βλάβης* against the plaintiff.¹ The *γραφὴ ψευδοκλητείας* came before the *thesmothetæ*, and the question at the trial simply was, whether the defendant in the former cause had been summoned or not.²

**ΨΕΥΔΟΜΑΡΤΥΡΙΩΝ ΔΙΚΗ* (*ψευδομαρτυριῶν δίκη*). (*Vid.* *MARTYRIA*, p. 627.)

**PSILOI* (*ψιλοί*). (*Vid.* *ARMA*, p. 94; *ARMY*, *GREEK*, p. 99.)

**PSIMMYTH'ION* (*ψιμμύθιον*), the "*Cerussa*" of the Romans, and our "White Lead." The ancient ceruse, like the modern, was prepared by exposing lead to the vapours of vinegar. The ancient process is minutely described by Theophrastus.³

**PSITTACUS* or *PSITTACE* (*ψιττακός, -ή*), the Parrot. "If it be true," remarks Adams, "as stated by Dodonæus, that the Parrot is a native of the extremities of Syria, the Greeks may have been acquainted with it before the invasion of India by Alexander. It is first mentioned by Aristotle, unless Ctesias have a prior claim, who speaks of the *βίττακος*. The species of parrot with which the ancients may be supposed to have been best acquainted is the green parrot with a red collar, namely, the *Psittacus Alexandri* of modern naturalists." "The ancients," says Pidgeon, "were acquainted with several kinds of Parrot, among which the most celebrated was that sent from India by Alexander in the course of his expedition into that country. Mr. Vigors, who has written on a group of *Psittacidae* known to the ancients, and has treated this subject with his accustomed elegance of style, methodical discrimination, and classical research, tells us that the ancient writers are unanimous in informing us, that the parrots known to their times came exclusively from India. In that country these birds were ever held in the highest estimation. We are informed by Ælian that they were the favourite inmates of the palaces of princes, and were looked up to as objects of sacred reverence by the religious feelings of the people. From this quarter they were introduced into Europe at the time of the Macedonian conquest, and the specific name of *Alexandri*, applied by modern science to the type of the group, in honour of the first European discoverer, serves to perpetuate the name of a warrior, who, it is said by some, valued the conquests that extended the boundaries of his empire chiefly as they served to extend the boundaries of science. It was not until the time of Nero that the parrots of Africa became known to the Romans. Some of these birds were among the discoveries made in the course of an expedition sent out by that prince. They came apparently from the neighbourhood of the Red Sea; and it is probable that, as the country became more known, numbers of the same race were imported from it into Rome, and formed the chief part of those victims of the parrot tribe which in after times are said to have supplied the inordinate luxury and wantonness of Heliogabalus."⁴

**PSYKTER* (*ψυκτήρ*), *dim.* *ψυκτηρίδιον*, a Wine-cooler.⁵ Respecting the general use of ice and

Meineke.—Athen., xi., 469, 502, 503.)

snow among the ancients for cooling wine, see *Nix*. The vessel specially adapted for this operation was sometimes made of bronze¹ or silver.² One of earthenware is preserved in the Museum of Antiquities at Copenhagen. It consists of one deep vessel for holding ice, which is fixed within another for holding wine. The wine was poured in at the top. It thus surrounded the vessel of ice, and was cooled by the contact. It was drawn off so as to fill the drinking-cups by means of a cock at the bottom. Thus the *ψυκτήρ* was a kind of *CRATER*; and, accordingly, where Phylarchus,³ in describing the mode of life of Cleomenes, king of Sparta, uses the former term, Plutarch⁴ adopts the latter.

The size of the *ψυκτήρ* was very various. It contained from two quarts⁵ to a great number of gallons.⁶ It was sometimes given as a prize to the winners in the game of the *ΚΟΤΤΑΒΟΣ*.

**PSYLLA* (ψύλλα), the Flea, or *Pulex irritans*, L. The name is applied, also, to another insect engendered in turnips or radishes, which Stackhouse makes to be the *Tenthredo rapæ*.⁷

**PSYLLION* (ψύλλον), the *Plantago Psyllium*, or Fleawort.⁸

**PSYLO* (ψύλον), probably the *Cyprinus Tincta*, L., or Tench. "Willoughby does not hesitate to affirm that Ausonius is the only ancient author who notices the Tench. He may be presumed, then, to have overlooked the description of the *ψύλον* and *γαφείν* by Aristotle and Athenæus, which certainly appear to apply to the Tench. Schneider, in his edition of Aristotle's Natural History, reads *τίλων* instead of the common lecture *ψύλον*."⁹

**PTARMICE* (παρμική), a plant. "Although," remarks Adams, "Dalechamp referred it to the *Arnica montana*, I can see no good reason for not referring it to the *Achillea Ptarmica*, or Sneezewort, which answers very well to the description of Dioscorides."¹⁰

**PTELEA* (πετλέα), the Common Elm, or *Ulmus campestris*, L.¹¹

**PTERIS* (πτερίς), the Fern. "When we consider the general resemblance which several of the ferns have to one another, we have cause to apprehend that botanists in ancient times did not distinguish them very nicely from one another. The *πτερίς*, then, although Sprengel sets it down for the *Aspidium filix mas*, was probably not restricted to it."¹²

**PTERNIX* (πτερνίξ), a plant, according to Sprengel, the *Acarina cancellata*.¹³

PYANEPSIA (Πυανέψια), a festival celebrated at Athens every year on the seventh of Pyanepsion, in honour of Apollo.¹⁴ It was said to have been instituted by Theseus after his return from Crete.¹⁵ The festival, as well as the month in which it took place, are said to have derived their names from *πῡνός*, another form for *κῡνός*, i. e., pulse or beans, which were cooked at this season and carried about.¹⁶ A procession appears to have taken place at the Pyanepsia, in which the *ελευσιώνη* was carried about. This *ελευσιώνη* was an olive-branch surrounded with wool and laden with the fruits of the year, for the festival was in reality a harvest-feast. It was carried by a boy whose parents were still living, and those who followed him sang certain verses, which

are preserved in Plutarch.¹ The procession went to a temple of Apollo, and the olive-branch was planted at its entrance. According to others, every Athenian planted, on the day of the Pyanepsia, such an olive-branch before his own house, where it was left standing till the next celebration of the festival, when it was exchanged for a fresh one.²

PUBES, PUBERTAS. (*Vid.* CURATOR, IMPUBES, INFANS.)

PUBLICANI, farmers of the public revenues of the Roman state (*vectigalia*.) Their name is formed from *publicum*, which signifies all that belongs to the state, and is sometimes used by Roman writers as synonymous with *vectigal*.³ The revenues which Rome derived from conquered countries, consisting chiefly of tolls, tithes, harbour-duties, the scriptura or the tax which was paid for the use of the public pasture-lands, and the duties paid for the use of mines and saltworks (*salinae*), were let out, or, as the Romans expressed it, were sold by the censors in Rome itself to the highest bidder.⁴ This sale generally took place in the month of Quinctilis, and was made for a *lustrum*.⁵ The terms on which the revenues were let were fixed by the censors in the so-called *leges censoria*.⁶ The people or the senate, however, sometimes modified the terms fixed by the censors in order to raise the credit of the publicani,⁷ and in some cases even the tribunes of the people interfered in this branch of the administration.⁸ The tithes raised in the province of Sicily alone, with the exception of those of wine, oil, and garden produce, were not sold at Rome, but in the districts of Sicily itself, according to a practice established by Hiero.⁹ The persons who undertook the farming of the public revenue of course belonged to the wealthiest Romans. Their wealth and consequent influence may be seen from the fact that, as early as the second Punic war, after the battle of Cannæ, when the *ærium* was entirely exhausted, the publicani advanced large sums of money to the state on condition of repayment after the end of the war.¹⁰ But what class of Romans the publicani were at this time is not stated; scarcely half a century later, however, we find that they were principally men of the equestrian order,¹¹ and down to the end of the Republic, as well as during the early part of the Empire, the farming of the public revenues was almost exclusively in the hands of the equites, whence the words *equites* and *publicani* are sometimes used as synonymous.¹²

The publicani had to give security to the state for the sum at which they bought one or more branches of the revenue in a province; but as for this reason the property of even the wealthiest individual must have been inadequate, a number of equites generally united together and formed a company (*socii*, *societas*, or *corpus*), which was recognised by the state,¹³ and by which they were enabled to carry on their undertakings upon a large scale. Such companies appear as early as the second Punic war.¹⁴ The shares which each partner of such a company took in the business were called *partes*, and if they were small, *particulæ*.¹⁵ The responsible person in each company, and the one who contracted with the state, was called *manceps*¹⁶ (*vid.* MANCEPS); but

there was also a magister to manage the business of each society, who resided at Rome, and kept an extensive correspondence with the agents in the provinces.¹ He seems to have held his office only for one year; his representative in the provinces was called sub magistro, who had to travel about and superintend the actual business of collecting the revenues. The ἀρχιτελώνης in St. Luke² is probably such a sub magistro. The magister at Rome had also to keep the accounts which were sent in to him (*tabulæ accepti et expensi*). The credit of these companies of publicani and the flourishing state of their finances were of the utmost importance to the state, and, in fact, its very foundation; and of this the Romans were well aware, and Cicero³ therefore calls them the "*ornamentum civitatis et firmamentum reipublicæ*."⁴ It has been already mentioned that the publicani, in case of need, acted as a kind of public bank, and advanced large sums of money to the state,⁵ which therefore thought them worthy of its especial protection. But they abused their power at an early period, in the provinces as well as at Rome itself; and Livy⁶ says "*ubi publicanus est, ibi aut jus publicum vanum, aut libertas sociis nulla*."⁷

Nobody but a Roman citizen was allowed to become a member of a company of publicani; freedmen and slaves were excluded.⁸ No Roman magistrate, however, or governor of a province, was allowed to take any share whatever in a company of publicani,⁹ a regulation which was chiefly intended as a protection against the oppression of the provincials. During the later period of the Empire various changes were introduced in the farming of the public revenues. Although it was, on the whole, a rule that no person should be compelled to take any share in a company of publicani, yet such cases sometimes occurred.¹⁰ From the time of Constantine, the leases of the publicani were generally not longer than for three years.¹¹ Several parts of the revenue which had before been let to publicani, were now raised by especial officers appointed by the emperors.¹²

All the persons hitherto mentioned as members of these companies, whether they held any office in such a company or not, and merely contributed their shares and received their portions of the profit,¹³ did not themselves take any part in the actual levying or collecting of the taxes in the provinces. This part of the business was performed by an inferior class of men, who were said *operas publicanis dare*, or *esse in operis societatis*.¹⁴ They were engaged by the publicani, and consisted of freemen as well as slaves, Romans as well as provincials.¹⁵ This body of men is called *familia publicanorum*, and comprehended, according to the prætor's edict,¹⁶ all persons who assisted the publicani in collecting the vectigal. Various laws were enacted in the course of time, which were partly intended to support the servants of the publicani in the performance of their duty, and partly to prevent them from acts of oppression.¹⁷

The separate branches of the public revenue in the provinces (*decumæ, portoria, scriptura*, and the revenues from the mines and saltworks) were mostly leased to separate companies of publicani, whence they were distinguished by names derived

from that particular branch which they had taken in farm; e. g., *decumani, pecuarii* or *scripturarii, salinarii* or *manicipes salinarum*, &c.¹ (Compare *DECUMÆ, PORTORUM, SALINÆ, SCRIPTURÆ*.) On some occasions, however, one company of publicani farmed two or more branches at once; thus we have an instance of a *societas* farming the portorium and the scriptura at the same time.² The commentator, who goes by the name of Asconius, asserts that the portitores were publicani who farmed the portorium; but from all the passages where they are mentioned in ancient writers, it is beyond all doubt that the portitores were not publicani properly so called, but only their servants engaged in examining the goods imported or exported, and levying the custom-duties upon them. They belonged to the same class as the publicans of the New Testament.³ Respecting the impudent way in which these inferior officers sometimes behaved towards travellers and merchants, see Flauius, *Menach.*, i., 2, 5, &c.—Cic. *ad Quint. Fr.*, i., 1.—Plut., *De Curiosit.*, p. 518, c.⁴

PUBLICIANA IN REM ACTIO was given to him who obtained possession of a thing *ex iusta causa*, and had lost the possession before he had acquired the ownership by usucapion. This was a prætorian action, so called from a prætor Publicius, and the fiction by which the possessor was enabled to sue was that he had obtained the ownership by usucapion.⁵ This actio was an incident to every kind of possessio which was susceptible of usucapion (the thirty years' excepted). In the old Roman law this actio resembled the vindictio, and in the newer Roman law it was still more closely assimilated to it, and consequently, in this actio, mere possession was not the only thing considered, but the matter was likened to the case where ownership and possession were acquired at the same time by occupatio or traditio. Accordingly, possessio for the purposes of usucapion may be viewed in two ways: viewed with respect to the ownership of which it is the foundation, it is a subject of jurisprudence as bare possession; viewed with reference to the Publiciana actio, which is incident to it, it is viewed as ownership. The owner of a thing might also avail himself of this action if he had any difficulty in proving his ownership.

This action was introduced for the protection of those who had a civilis possessio, but that only, and, consequently, could not recover a thing by the rei vindictio, an action which a man could only have when he had the Quiritarian ownership of a thing. According to the definition, a man could have this actio both for a thing which he had in bonis, and for a thing of which he had a civilis possessio without having it in bonis; and his action was good even against the Quiritarian owner; for if such owner pleaded his ownership, the plaintiff might reply that the thing had been sold and delivered, and therefore was his in bonis. The Publiciana actio of the plaintiff, who had a civilis possessio without having the thing in bonis, was not good against the owner, who had the right of ownership in fact, while the plaintiff had it only in fiction; nor was it good against another who had a civilis possessio, for that possessio was as good as his own. His action was good against a possessor who had not a civilis possessio. In this action the plaintiff had to prove that he possessed civiliter before the time when he lost the possession. (*Vid. Possessio*.)

The object of the action was the recovery of the thing and all that belonged to it. In the legislation of Justinian, the distinction between *res mancipi*

and nec mancipi was abolished, and ownership could in all cases be transferred by tradition. The Publiciana actio, therefore, became useless for any other purpose than a case of bonæ fidei possessio, and this seems to explain why the words "non a domino" appear in the edict as cited in the Digest,¹ while they do not appear in Gaius.²

The Publiciana actio applied also to servitudes, the right to which had not been transferred by mancipatio or in iure cessio, but which had been enjoyed with the consent of the owner of the land. As the legislation of Justinian rendered the old forms of transfer of servitudes unnecessary, the Publiciana actio could then only apply to a case of possessio.³

PUBLICUM. (Vid. PUBLICANI.)

PUBLICUM, PRIVATUM JUS. (Vid. Jus, p. 561.)

PUBLICUS AGER. (Vid. AGRARIÆ LEGES.)

PUBLILIA LEX. In the consulship of L. Pinarus and P. Furius, B.C. 472, the tribune Publius Volero proposed in the assembly of the tribes that the tribunes should in future be appointed in the comitia of the tribes (*ut plebei magistratus tributis comitiis fierent*) instead of by the centuries, as had formerly been the case, since the clients of the patricians were so numerous in the centuries that the plebeians could not elect whom they wished.⁴ This measure was violently opposed by the patricians, who prevented the tribes from coming to any resolution respecting it throughout this year; but in the following year, B.C. 471, Publius was re-elected tribune, and together with him C. Lætorius, a man of still greater resolution than Publius. Fresh measures were added to the former proposition: the ædiles were to be chosen by the tribes as well as the tribunes, and the tribes were to be competent to deliberate and determine on all matters affecting the whole nation, and not such only as might concern the plebes.⁵ This proposition was still more violently resisted by the patricians than the one of the previous year; and, although the consul Appius used force, the tribes could not be prevented from passing the proposition. It was then laid before the senate to receive the assent of that body; and, through the advice of the other consul, T. Quinctius, it received the sanction of the senate, and afterward of the curiæ, and thus obtained the force of a law. Some said that the number of tribunes was now for the first time raised to five, having been only two previously.⁶

PUBLILÆ LEGES, proposed by the dictator Q. Publius Philo, B.C. 339. Niebuhr⁷ thinks that the main object of these laws was to abolish the power of the patrician assembly of the curies, and that they were carried with the approbation of the senate, which was opposed to the narrow-mindedness of the great body of the patricians. Great opposition, however, seems to have been expected; and, accordingly, the consul Ti. Æmilius named his own colleague, Q. Publius Philo, dictator, in order that the reforms might be carried with the authority of the highest magistracy in the state.

According to Livy,⁸ there were three Publilæ leges. The first is said to have enacted that plebiscita should bind all Quirites (*ut plebiscita omnes Quirites tenerent*), which is to the same purport as lex Hortensia of B.C. 286. (Vid. PLEBISCITUM.) Niebuhr, however, thinks that the object of this law was to render the approval of the senate a sufficient confirmation of a plebiscitum, and to make the confirmation of the curiæ unnecessary. The second

law enacted: "*ut legum quæ comitiis centuriarum ferrentur ante initium suffragium patres auctores fierent.*" By patres Livy here means the curiæ; and, accordingly, this law made the confirmation of the curiæ a mere formality in reference to all laws submitted to the comitia centuriata, since every law proposed by the senate to the centuries was to be considered to have the sanction of the curiæ also. The third law enacted that one of the two censors should necessarily be a plebeian. Niebuhr supposes that there was also a fourth, which applied the Licinian law to the prætorship as well as to the censorship, and which provided that in each alternate year the prætor should be a plebeian.¹

PUGILATUS (πύξ, πυγμή, πυμαχία, πυγμοσίνη), Boxing. The fist (pugnus, πύξ) being the simplest and most natural weapon, it may be taken for granted that boxing was one of the earliest athletic games among the Greeks. Hence gods and several of the earliest heroes are described either as victors in the πυγμή, or as distinguished boxers, such as Apollo, Heracles, Tydens, Polydeuces, &c.² The scholiast on Pindar³ says that Theseus was believed to have invented the art of boxing. The Homeric heroes are well acquainted with it.⁴ The contest in boxing was one of the hardest and most dangerous, whence Homer gives it the attribute ἀλγερυνή.⁵ Boxing for men was introduced at the Olympic games in Ol. 32, and for boys in Ol. 37.⁶ Contests in boxing for boys are also mentioned in the Nemea and Isthmia.⁷

In the earliest times boxers (pugiles, πύκται) fought naked, with the exception of a ζώνη round their loins;⁸ but this was not used when boxing was introduced at Olympia, as the contests in wrestling and racing had been carried on here by persons entirely naked ever since Ol. 15. Respecting the leathern thongs with which pugilists surrounded their fists, see Cæstus, where its various forms are illustrated by woodcuts.

The boxing of the ancients appears to have resembled the practice of modern times. Some particulars, however, deserve to be mentioned. A peculiar method, which required great skill, was not to attack the antagonist, but to remain on the defensive, and thus to wear out the opponent, until he was obliged to acknowledge himself to be conquered.⁹ It was considered a sign of the greatest skill in a boxer to conquer without receiving any wounds, so that the two great points in this game were to inflict blows, and at the same time not to expose one's self to any danger (πληγήν καὶ φελακίαν). A pugilist used his right arm chiefly for fighting, and the left as a protection for his head, for all regular blows were directed against the upper parts of the body, and the wounds inflicted upon the head were often very severe and fatal. In some ancient representations of boxers, the blood is seen streaming from their noses, and their teeth were frequently knocked out.¹¹ The ears especially were exposed to great danger, and with regular pugilists they were generally much mutilated and broken.¹² Hence, in works of art, the ears of the pancratiasts always appear beaten flat, and, although swollen in some parts, are yet smaller than ears usually are. In order to protect the ears from severe blows, little covers, called

1. (Compare Arnold, Hist. of Rome, ii., p. 154, &c.)—2 (Paus., vi., 7, § 4.—Theocrit., xxiv., 113.—Apollod., iii., 6, § 4.—Paus., vi., 8, § 2.)—3. (Nem., v., 69.)—4. ἀμφωτίδες, were invented.¹ But these ear covers, which, according to the etymologist, were made of brass, were undoubtedly never used in the great public games, but only in the gymnasia and palaestrae, or, at most, in the public contests of boxing for boys; they are never seen in any ancient work of art.

The game of boxing was, like all the other gymnastic and athletic games, regulated by certain rules. Thus pugilists were not allowed to take hold of one another, or to use their feet for the purpose of making one another fall, as was the case in the pancratium.² Cases of death, either during the fight itself or soon after, appear to have occurred rather frequently;³ but if a fighter wilfully killed his antagonist, he was severely punished.⁴ If both the combatants were tired without wishing to give up the fight, they might pause a while to recover their strength; and in some cases they are described as resting on their knees.⁵ If the fight lasted too long, recourse was had to a plan called κλίμαξ; that is, both parties agreed not to move, but to stand still and receive the blows without using any means of defence except a certain position of the hands.⁶ The contest did not end until one of the combatants was compelled by fatigue, wounds, or despair, to declare himself conquered (ἀπαγορεύειν),⁷ which was generally done by lifting up one hand.⁸

The Ionians, especially those of Samos, were at all times more distinguished pugilists than the Dorians, and at Sparta boxing is said to have been forbidden by the laws of Lycurgus.⁹ But the ancients generally considered boxing as a useful training for military purposes, and a part of education no less important than any other gymnastic exercise.¹⁰ Even in a medical point of view, boxing was recommended as a remedy against giddiness and chronic headaches.¹¹

In Italy boxing appears likewise to have been practised from early times, especially among the Etruscans.¹² It continued as a popular game during the whole period of the Republic as well as of the Empire.¹³

PUGILLARES. (Vid. TABULÆ.)

PUGIO (μάχαιρα, dim. μαχάριον; ἔγχειριδιον), a dagger; a two-edged knife, commonly of bronze, with the handle in many cases variously ornamented or enriched, sometimes made of the hard black wood of the Syrian terebinth.¹⁴ The accompanying woodcut shows three ancient daggers. The

two upper figures are copied from Beger;¹⁵ the third represents a dagger about a foot long, which

was found in an Egyptian tomb, and is preserved in the museum at Leyden. The middle figure is entirely of metal. The handles of the two others were fitted to receive a plate of wood on each side. The lowermost has also two bosses of ivory or horn, and shows the remains of a thin plate of gilt metal with which the wood was covered.

In the heroic ages the Greeks sometimes wore a dagger suspended by the sword on the left side of the body (vid. GLADIUS), and used it on all occasions instead of a knife.¹ Thus Theseus draws his dagger to cut his meat at table.² The custom is continued to the present day among the Arnauts, who are descended from the ancient Greeks.³ The Romans (see woodcuts, p. 11, 454) wore the dagger as the Persians did (vid. ACINACES), on the right side, and consequently drew it with the thumb at the upper part of the hilt, the position most effective for stabbing. The terms *pugio* and ἔγχειριδιον denote both its smallness and the manner of grasping it in the hand (πῆξ, *pugnus*). In the same way we must understand "the two swords" (*duos gladios*) worn by the Gallic chieftain slain by Manlius Torquatus; and the monuments of the Middle Ages prove that the custom long continued in our own and in adjoining countries.⁴ Among some of the northern nations of Europe, a dirk was constantly worn on the side, and was in readiness to be drawn on every occasion.⁵ The Chalybes employed the same weapon, stabbing their enemies in the neck.⁶ For the Greek horsemen, the dagger was considered preferable to the long sword as a weapon of offence.⁷ For secret purposes it was placed under the armpit.⁸

PULGORAI (πυλγόραι). (Vid. AMPHICTY (NE, p. 49).)

PULLARIUS. (Vid. AUSPICUM, p. 130.)

PULPITUM. (Vid. THEATRUM.)

PULVINAR. A representation of the mode of using cushions or pillows (*pulvini*), to recline upon at entertainments, is given in the woodcut at p. 326. The most luxurious of such cushions were stuffed with swan's-down.¹ An ancient Egyptian cushion, filled with feathers, is preserved in the British Museum. In reference to this practice, the Romans were in the habit of placing the statues of the gods upon pillows at the lectisternia. (Vid. EPLONES, LECTISTERNIUM.) The couches provided for this purpose in the temples were called *pulvinaria*.¹¹ There was also a pulvinar, on which the images of the gods were laid, in the Circus.¹²

PUPILLARIS SUBSTITUTIO. (Vid. HERES, ROMAN, p. 498.)

PUPPIS. (Vid. SHIPS.)

PUTEAL properly means the enclosure surrounding the opening of a well, to protect persons from falling into it. It was either round or square, and seems usually to have been of the height of three or four feet from the ground. There is a round one in the British Museum, made of marble, which was found among the ruins of one of Tiberius's villas in Capreae; it exhibits five groups of fauns and bacchanalian nymphs, and around the edge at the top may be seen the marks of the

(Thes. Brand., V., iii., p. 398, 419.)

ropes used in drawing up water from the well. Such putealia seem to have been common in the Roman villas: the *putealia signata*, which Cicero¹ wanted for his Tusculan villa, must have been of the same kind as the one in the British Museum; the *signata* refers to its being adorned with figures. It was the practice in some cases to surround a sacred place with an enclosure open at the top, and such enclosures, from the great similarity they bore to *putealia*, were called by this name. There were two such places in the Roman Forum: one of these was called *Puteal Libonis* or *Scribonianum*, because a chapel (*sacellum*) in that place had been struck by lightning, and Scribonius Libo expiated it by proper ceremonies, and erected a puteal around it, open at the top, to preserve the memory of the place.² The form of this puteal is preserved on several coins of the Scribonian gens. (See woodcut, and compare Spanheim, *De Præst. et Usu Numism.*, ii., p. 190.)

This puteal seems to have been near the Atrium of Vesta,³ and was a common place of meeting for usurers.⁴ The other puteal was in the comitium, on the left side of the senate-house, and in it were deposited the whetstone and razor of Attus Navius.⁵

PUTHIOI (πύθιοι), called *πίθιοι* in the Lacedæmonian dialect,⁶ were four persons appointed by the Spartan kings, two by each, as messengers to the Temple of Delphi (Θεοπρόποι ἐς Δελφοῦς). Their office was highly honourable and important: they were always the messmates of the Spartan kings.⁷

PUTICULÆ, PUTICULI. (*Vid. FUNUS*, p. 461.)

*PYCNOCOMON (πικνόκομον), a plant, about which Matthioli and Sprengel are undecided; but which, as Bauhin states, Columna took for the *Scabiosa succisa*, or Devil's bit.⁸

PYELOI (πέλοι). (*Vid. FUNUS*, p. 456.)

*PYGARGUS (πύγαργος), an animal noticed by Herodotus, and also mentioned in the Septuagint. Dr. Shaw supposes it a species of Antelope, which he calls *Lidnee*.⁹

*II. A species of Eagle. (*Vid. AQUILA*, 76.)

*PYGMÆUS (πυγμαῖος), a name given to a fabulous race of very diminutive size, who were said to be engaged at full periods in warfare with the cranes. For a stated account of the legend, and the various explanations that have been given of it, consult *Anthon's Classical Dictionary*, s. v.

*PYGOLAMP'IS (πυγολαμπίς), the common Glow-worm, or *Lampyrus noctiluca*.¹⁰

PYRA. (*Vid. FUNUS*, p. 456, 460.)

*PYRETHRUM (πύρεθρον), a plant described by Dioscorides and others. "Although," says Adams, "the description of Dioscorides be somewhat loose, I see no reason to doubt that his plant was the *Anthemis Pyrethrum*, or Pellitory of Spain. At all events, its effects, as described by Dioscorides,

correspond very well with those of the Pellitory, that is to say, it is represented as a powerful masticatory, and is recommended for toothache."¹¹

*PYRILAMPIS (πυριλαμπίς), a name applied by Suidas to the PYGOLAMPIS, which see.

*PYROMACHUS LAPIS (πυρόμαχος λίθος), the Common Pyrites of modern mineralogists, consisting principally of sulphurate of iron, with some admixture of copper and arsenic. "Stones of this class," says Adams, "are often called *Marchasites*, from the barbarous term *Marchasita*, which is given to the Pyrites in the Latin translation of Serapion." Dioscorides calls the Pyromachus the *πυρίτης λίθος*.¹²

PYRRHICA (*Vid. SALTATIO*.)

*PYRRHULAS (πυρρόλας), a bird mentioned by Aristotle, and corresponding, as Gesner thinks, to the Bullfinch, or *Pyrrhula vulgaris*. It would appear, according to Adams, not to have been the same bird as the *πυραλίς* of Aristotle, the *πύρρα* of Ælian, and the *πύρρα* of Philo.¹³

*PYRUS (ἄπιος), the Pear-tree, or *Pyrus communis*, L., the fruit of which was called *Pyrum* by the Latins, and *ἄπιον* by the Greeks. Virgil mentions several kinds of pears. The one termed "*Crustumian*," called also, according to Celsus, *Nævianum*, was the best. Columella ranks it the first, and Pliny says of these pears, "*cunctis autem Crustumina gratissima*." Dalechamp makes the Crustumian the same as the French "*Poire perle*," while Stapel says that it is known in Flanders under the name "*Poire de Saint Jacques*." Some make it the same as the English "*Warden pear*." The appellation of Crustumian (*Crustumium* or *Crustuminum*) was derived from the Italian town of Crustumium, in the territory adjacent to which they particularly abounded. Virgil speaks also of the "*Syrian*" pear; but in Columella the *Syrium pyrum* is a generic name, embracing both the *Crustumium* and the *Turentinum*. Pliny, on the other hand, distinguishes between the Syrian and Tarentine kinds. Servius says that the epithet "*Syrian*" has no relation whatever to the country of Syria, but comes from the Greek *σῆρος*, "dark-coloured" or "black," and Pliny, in fact, assures us that the Syrian was a dark-coloured pear. Some modern writers, however, take it to be the Bergamot. The pear called *Voleumum* took its name, as is said, from its large size, "*quia volam manus impleant*," "because they fill the palm of the hand." Ruæus thinks they are the *Bon Chretien*; but it would seem more correct, with Dryden, Martyn, and others, to make them the "*Pounder-pears*," or, as they are more commonly termed, "*Pound-pears*." The *Bon Chretien* answers rather to the *ταλανταῖον ἄπιον*, which Pliny calls *Librale pyrum*, and which must not be confounded with the *Voleumum*.¹⁴

*II. (πυρός), Wheat. (*Vid. TRITICUM*.)

PYTHIAN GAMES (Πύθια), one of the four great national festivals of the Greeks. It was celebrated in the neighbourhood of Delphi, anciently called Pytho, in honour of Apollo, Artemis, and Leto. The place of this solemnity was the Crissæan plain, which for this purpose contained a hippodromus or racecourse,¹⁵ a stadium of 1000 feet in length,¹⁶ and a theatre, in which the musical contests took place.¹⁷ A gymnasium, prytæneum, and other buildings of this kind probably existed here, as at Olympia, although they are not mentioned.

(Paus., x., 27, § 4.)—6. (Censor., De Die Nat., 13.)—7. (Lucian, adv. doct., 9.)

Once the Pythian games were held at Athens, on the advice of Demetrius Poliorcetes (Ol. 122, 3¹), because the Ætolians were in possession of the passes around Delphi.

The Pythian games were, according to most legends, instituted by Apollo himself;² other traditions referred them to ancient heroes, such as Amphictyon, Adrastus, Diomedes, and others. They were originally, perhaps, nothing more than a religious panegyris, occasioned by the oracle of Delphi, and the sacred games are said to have been at first only a musical contest, which consisted in singing a hymn to the honour of the Pythian god with the accompaniment of the cithara.³ Some of the poets, however, and mythographers represent even the gods and the early heroes as engaged in gymnastic and equestrian contests at the Pythian games. But such statements, numerous as they are, can prove nothing; they are anachronisms in which late writers were fond of indulging. The description of the Pythian games in which Sophocles, in the *Electra*, makes Orestes take part, belongs to this class. The Pythian games must, on account of the celebrity of the Delphic oracle, have become a national festival for all the Greeks at a very early period; and when Solon fixed pecuniary rewards for those Athenians who were victors in the great national festivals, the Pythian agon was undoubtedly included in the number, though it is not expressly mentioned.⁴

Whether gymnastic contests had been performed at the Pythian games previous to Ol. 47 is uncertain. Böckh supposes that these two kinds of games had been connected at the Pythia from early times, but that afterward the gymnastic games were neglected; but, however this may be, it is certain that about Ol. 47 they did not exist at Delphi. Down to Ol. 48 the Delphians themselves had been the *agonothetæ* at the Pythian games, but in the third year of this olympiad, when, after the Crissæan war, the Amphictyons took the management under their care, they naturally became the *agonothetæ*.⁵ Some of the ancients date the institution of the Pythian games from this time,⁶ and others say that henceforth they were called *Pythian games*. Owing to their being under the management of the Amphictyons, they are sometimes called *Ἀμφικτυονικά ἄθλα*.⁷ From Ol. 48, 3, the Pythiads were occasionally used as an æra, and the first celebration under the Amphictyons was the first Pythiad. Pausanias⁸ expressly states that in this year the original musical contest in *Κίθαριδιᾷ* was extended by the addition of *αὐλῳδίᾳ*, i. e., singing with the accompaniment of the flute, and by that of flute-playing alone. Strabo,⁹ in speaking of these innovations, does not mention the *αὐλῳδία*, but states that the contest of cithara-players (*κιθαρισταί*) was added, while Pausanias assigns the introduction of this contest to the eighth Pythiad. One of the musical contests at the Pythian games, in which only flute and cithara-players took part, was the so-called *νόμος Πύθικος*, which, at least in subsequent times, consisted of five parts, viz., *ἀνὰκρουσις*, *ἀμπεύρα*, *κατακλεισμός*, *ἰαμβοὶ καὶ δάκτυλοι*, and *σύριγγες*. The whole of this *νόμος* was a musical description of the fight of Apollo with the dragon, and of his victory over the monster.¹⁰ A somewhat different account of the parts of this *νόμος* is given by the scholiast on Pindar,¹¹ and by Pollux.¹²

Besides these innovations in the musical contests which were made in the first Pythiad, such gymnastic and equestrian games as were then customary at Olympia were either revived at Delphi, or introduced for the first time. The chariot-race with four horses was not introduced till the second Pythiad.¹ Some games, on the other hand, were adopted, which had not yet been practised at Olympia, viz., the *δολιχός* and the *διὰυλος* for boys. In the first Pythiad the victors received *χρήματα* as their prize, but in the second a chaplet was established as the reward for the victors.² The scholiasts on Pindar reckon the first Pythiad from this introduction of the chaplet, and their system has been followed by most modern chronologers, though Pausanias expressly assigns this institution to the second Pythiad.³ The *αὐλῳδία*, which was introduced in the first Pythiad, was omitted at the second and ever after, as only elegies and *ῥήνοι* had been sung to the flute, which were thought too melancholy for this solemnity. The *τεθρίππος*, or chariot-race with four horses, however, was added in the same Pythiad. In the eighth Pythiad (Ol. 55, 3), the contest in playing the cithara without singing was introduced; in Pythiad 23, the foot-race in arms was added; in Pythiad 48, the chariot-race with two full-grown horses (*συνωρίδος ὄρος*) was performed for the first time; in Pythiad 53, the chariot-race with four foals was introduced. In Pythiad 61, the pancratium for boys; in Pythiad 63, the horserace with foals; and in Pythiad 69, the chariot-race with two foals, were introduced.⁴ Various musical contests were also added in the course of time, and contests in tragedy, as well as in other kinds of poetry and in recitations of historical compositions, are expressly mentioned.⁵ Works of art, as paintings and sculptures, were exhibited to the assembled Greeks, and prizes were awarded to those who had produced the finest works.⁶ The musical and artistic contests were at all times the most prominent features of the Pythian games, and in this respect they even excelled the Olympic games.

Previous to Ol. 48, the Pythian games had been an *ἐναετηρίς*, that is, they had been celebrated at the end of every eighth year; but in Ol. 48, 3, they became, like the Olympia, a *πενταετηρίς*, i. e., they were held at the end of every fourth year; and a Pythiad, therefore, ever since the time that it was used as an æra, comprehended a space of four years, commencing with the third year of every olympiad.⁷ Others have, in opposition to direct statements, inferred from Thucydides⁸ that the Pythian games were held towards the end of the second year of every olympiad. Respecting this controversy, see Krause, *l. c.*, p. 29, &c. As for the season of the Pythian games, they were, in all probability, held in the spring; and most writers believe that it was in the month of Bysius, which is supposed to be the same as the Attic Munychion. Böckh,⁹ however, has shown that the games took place in the month of Bucatius, which followed after the month of Bysius, and that this month must be considered as the same as the Attic Munychion. The games lasted for several days, as is expressly mentioned by Sophocles,¹⁰ but we do not know how many. When ancient writers speak of the *day* of the Pythian agon, they are probably thinking of the musical agon alone, which was the most important part of the games, and probably took place on the 7th of

(Elect., 690 &c.)

Bucatus. It is quite impossible to conceive that all the numerous games should have taken place on one day.

The concourse of strangers at the season of this pygryis must have been very great, as undoubtedly all the Greeks were allowed to attend. The states belonging to the amphictyony of Delphi had to send their theori in the month of Bysius, some time before the commencement of the festival itself.¹ All theori sent by the Greeks to Delphi on this occasion were called *ἱθαῖσται*,² and the theories sent by the Athenians were always particularly brilliant.³ As regards sacrifices, processions, and other solemnities, it may be presumed that they resembled, in a great measure, those of Olympia. A splendid, though probably, in some degree, fictitious description of a theoria of Thessalians, may be read in Heliodorus.⁴

As to the order in which the various games were performed, scarcely anything is known, with the exception of some allusions in Pindar and a few remarks of Plutarch. The latter⁵ says that the musical contests preceded the gymnastic contests, and from Sophocles it is clear that the gymnastic contests preceded the horse and chariot races. Every game, moreover, which was performed by men and by boys, was always first performed by the latter.⁶

We have stated above that, down to Ol. 48, the Delphians had the management of the Pythian games; but of the manner in which they were conducted previous to that time, nothing is known. When they came under the care of the Amphictyons, especial persons were appointed for the purpose of conducting the games and of acting as judges. They were called *ἐπιμεληταί*,⁷ and answered to the Olympian *hellenodicae*. Their number is unknown.⁸ In later times it was decreed by the Amphictyons that King Philip, with the Thessalians and Boeotians, should undertake the management of the games;⁹ but afterward, and even under the Roman emperors, the Amphictyons again appear in the possession of this privilege.¹⁰ The *ἐπιμεληταί* had to maintain peace and order, and were assisted by *μαστιγοφόροι*, who executed any punishment at their command, and thus answered to the Olympian *ἀλῦται*.¹¹

The prize given to the victors in the Pythian games was from the time of the second Pythiad a laurel chaplet, so that they then became an *ἀγών στεφανίτης*, while before they had been an *ἀγών χρυσιαίτης*.¹² In addition to this chaplet, the victor here, as at Olympia, received the symbolic palm-branch, and was allowed to have his own statue erected in the Crissæan plain.¹³

The time when the Pythian games ceased to be solemnized is not certain, but they probably lasted as long as the Olympic games, i. e., down to the year A.D. 394. In A.D. 191, a celebration of the Pythia is mentioned by Philostratus;¹⁴ and in the time of the Emperor Julian they still continued to be held, as is manifest from his own words.¹⁵

Pythian games of less importance were celebrated in a great many other places where the worship of Apollo was introduced; and the games of Delphi are sometimes distinguished from these lesser Pythia by the addition of the words *ἐν Δελφοῖς*. But as by far the greater number of the lesser Pythia are not mentioned in the extant ancient

writers, and are only known from coins or inscriptions, we shall only give a list of the places where they were held: Ancyra in Galatia, Aphrodisias in Caria, Antiochia, Carthæa in the island of Ceos,¹ Carthage,² Cihyra in Phrygia, Delos,³ Emisa in Syria, Hierapolis in Phrygia, Magnesia, Megara,⁴ Miletus, Neapolis in Italy, Nicæa in Bithynia, Nicomedia, Pergamus in Mysia, Perge in Pamphylia, Perinthus on the Propontis, Philippopolis in Thrace, Side in Pamphylia, Sicyon,⁵ Taba in Caria, Thessalonice in Macedonia, in Thrace, Thyatira, and Tralles in Lydia, Tripolis on the Mæander, in Caria.⁶

PYXIS, *dim.* PYXIDULA (*πίξις, dim. πύξιδιον*), a Casket, a Jewel-box.⁷ Quintilian⁸ produces this term as an example of catachresis, because it properly denoted that which was made of box (*πύξος*), but was applied to things of similar form and use made of any other material. In fact, the caskets in which the ladies of ancient times kept their jewels and other ornaments, were made of gold, silver, ivory, mother-of-pearl, tortoise-shell, &c. They were also much enriched with sculpture. A silver coffer, 2 feet long, 1½ wide, and 1 deep, most elaborately adorned with figures in bas-relief, is described by Böttiger.⁹ The annexed woodcut (from

Ant. d'Ercolano, vol. ii., tab. 7) represents a plain jewel-box, out of which a dove is extracting a rib or orfillet. Nero deposited his beard in a valuable pyxis when he shaved for the first time. (*Vid. BARBA*, p. 138.)

The same term is applied to boxes used to contain drugs or poison,¹⁰ and to metallic rings employed in machinery.¹¹

*PYXUS (*πύξος*), the Boxwood-tree. (*Vid. BUXUS*.)

Q.

QUADRAGESIMA, the fortieth part of the imported goods, was the ordinary rate of the portorium.¹² Tacitus¹³ says that the quadragesima was abolished by Nero, and had not been imposed again (*manet abolitio quadragesimæ*); but it appears most probable that this quadragesima abolished by Nero was not the portorium, but the tax imposed by Caligula¹⁴ of the fortieth part of the value of all property respecting which there was any lawsuit. That the latter is the more probable opinion appears from the fact that we never read of this tax upon lawsuits after the time of Nero, while the former one is mentioned to the latest times of the Empire. Considerable difficulty, however, has arisen in consequence of some of the coins of Galba having *Quadragesima Remissa* upon them, which is supposed by some writers to contradict the passage of Tacitus, and by others to prove that Galba abolished the quadragesima of the portorium. The words, however, do not necessarily imply this: it was common, in seasons of scarcity and want, or as an act of special favour, for the emperors to remit certain taxes for a certain period, and it is

QUADRANS. (*Vid.* AS, p. 111.)

QUADRANTAL. (*Vid.* CUBUS.)

QUADRIGA. (*Vid.* BIGA, CURRUS.)

QUADRIGATUS. (*Vid.* BIGATUS.)

QUADRUPES. (*Vid.* PAUPERIES.)

QUADRUPLETORÆS, public informers or accusers, were so called, either because they received a fourth part of the criminal's property, or because those who were convicted were condemned to pay fourfold (*quadrupli damnavi*), as in cases of violation of the laws respecting gambling, usury, &c.¹ We know that on some occasions the accuser received a fourth part of the property of the accused;² but the other explanation of the word may also be correct, because usurers who violated the law were subjected to a penalty of four times the amount of the loan.³ When the general right of accusation was given, the abuse of which led to the springing up of the quadrupletores, is uncertain; but originally all fines went into the common treasury, and while that was the case, the accusations, no doubt, were brought on behalf of the state.⁴ Even under the Republic, an accusation of a public officer, who had merited it by his crimes, was considered a service rendered to the state: the name of quadrupletores seems to have been given by way of contempt to mercenary or false accusers.⁵ Seneca⁶ calls those who sought great returns for small favours *Quadrupletores beneficiorum suorum*.

QUADRUPPLICATION. (*Vid.* ACTIO, p. 19.)

QUESTIONES, QUÆSTIONES PERPETUÆ. (*Vid.* JUDEX, p. 552; PRÆTOR, p. 806.)

QUÆSTOR is a name which was given to two distinct classes of Roman officers. It is derived from *quæro*, and Varro¹ gives a definition which embraces the principal functions of both classes of officers: "*Quæstores a quærendo, qui conquærent publicas pecunias et maleficia.*" The one class, therefore, had to do with the collecting and keeping of the public revenues, and the others were a kind of public accusers. The former bore the name of *quæstores classici*, the latter of *quæstores parricidii*.²

The *quæstores parricidii* were, as we have said, public accusers, two in number, who conducted the accusation of persons guilty of murder or any other capital offence, and carried the sentence into execution.³ Respecting their confusion with the *dumviri perduellionis*, see *PERDUELLIONIS DUMVIRI*. All testimonies agree that these public accusers existed at Rome during the period of the kings, though it is impossible to ascertain by which king they were instituted,⁴ as some mention them in the reign of Romulus, and others in that of Numa. When Ulpian takes it for certain that they occurred in the time of Tullus Hostilius, he appears to confound them, like other writers, with the *dumviri perduellionis*, who in this reign acted as judges in the case of Horatius, who had slain his sister. During the kingly period there occurs no instance in which it could be said with any certainty that the *quæstores parricidii* took a part. As thus everything is so uncertain, and as the late writers are guilty of such manifest confusions, we can say no more than

that such public accusers existed, and infer, from the analogy of later times, that they were appointed by the populus on the presentation of the king. In the early period of the Republic the *quæstores parricidii* appear to have become a standing office, which, like others, was held only for one year.⁵ They were appointed by the populus or the curies on the presentation of the consuls.⁶ When these *quæstores* discovered that a capital offence had been committed, they had to bring the charge before the comitia for trial.⁷ They convoked the comitia through the person of a trumpeter, who proclaimed the day of meeting from the Capitol, at the gates of the city, and at the house of the accused.⁸ When the sentence had been pronounced by the people, the *quæstores parricidii* executed it; thus they threw Spurius Cassius from the Tarpeian rock.⁹ They were mentioned in the laws of the Twelve Tables, and after the time of the decemvirate they still continued to be appointed, though probably no longer by the curies, but either in the comitia centuriata or tributa, which they therefore must also have had the right to assemble in cases of emergency.¹⁰ This appears to be implied in the statement of Tacitus, that in the year 447 B.C. they were created by the people without any presentation of the consuls. From the year 366 B.C. they are no longer mentioned in Roman history, as their functions were gradually transferred to the *triumviri capitales*⁷ (*vid.* *TRIUMVIRI CAPITALES*), and partly to the aediles and tribunes. (*Vid.* *ÆDILES*, *TRIBUNI*.) The *quæstores parricidii* have not only been confounded with the *dumviri perduellionis*, but also with the *quæstores classici*,⁹ and this probably owing to the fact that they ceased to be appointed at such an early period, and that the two kinds of *quæstores* are seldom distinguished in ancient writers by their characteristic epithets.

The *quæstores classici* were officers intrusted with the care of the public money. Their distinguishing epithet *classici* is not mentioned by any ancient writer except Lydus,¹⁰ who, however, gives an absurd interpretation of it. Niebuhr¹¹ refers it to their having been elected by the centuries ever since the time of Valerius Publicola, who is said to have first instituted the office.¹² They were at first only two in number, and, of course, taken only from the patricians. As the senate had the supreme administration of the finances, the *quæstores* were in some measure only its agents or paymasters, for they could not dispose of any part of the public money without being directed by the senate. Their duties consequently consisted in making the necessary payments from the *ærium*, and receiving the public revenues. Of both they had to keep correct accounts in their *tabula publica*.¹³ Demands which any one might have on the *ærium*, and outstanding debts, were likewise registered by them.¹⁴ Fines to be paid to the public treasury were registered and exacted by them.¹⁵ Another branch of their duties, which, however, was likewise connected with the treasury, was to provide the proper accommodations for foreign ambassadors and such persons as were connected with the Republic by ties of public hospitality. Lastly, they were charged with the care of the burials and monuments of distinguished men, the expenses for which had been

decreed by the senate to be defrayed by the treasury. In the ærarium, and, consequently, under the superintendence of the quæstors, were kept the books in which the senatus consulta were registered,¹ while the original documents were in the keeping of the ædiles, until Augustus transferred the care of them also to the quæstors.²

In the year B.C. 421 the number of quæstors was doubled, and the tribunes tried to effect, by an amendment of the law, that a part (probably two) of the quæstors should be plebeians.³ This attempt was indeed frustrated, but the interrex L. Papirius effected a compromise, that the election should not be restricted to either order. After this law was carried, eleven years passed without any plebeian being elected to the office of quæstor, until, in B.C. 409, three of the four quæstors were plebeians.⁴ A person who had held the office of quæstor had undoubtedly, as in later times, the right to take his seat in the senate, unless he was excluded as unworthy by the next censors. And this was probably the reason why the patricians so determinately opposed the admission of plebeians to this office. (*Vid. SENATUS.*) Henceforth the consuls, whenever they took the field against an enemy, were accompanied by one quæstor each, who at first had only to superintend the sale of the booty, the produce of which was either divided among the legion, or was transferred to the ærarium.⁵ Subsequently, however, we find that these quæstors also kept the funds of the army, which they had received from the treasury at Rome, and gave the soldiers their pay; they were, in fact, the paymasters in the army.⁶ The two other quæstors, who remained at Rome, continued to discharge the same duties as before, and were distinguished from those who accompanied the consuls by the epithet *urbani*. In the year B.C. 265, after the Romans had made themselves masters of Italy, and when, in consequence, the administration of the treasury and the raising of the revenues became more laborious and important, the number of quæstors was again doubled to eight;⁷ and it is probable that henceforth their number continued to be increased in proportion as the Empire became extended. One of the eight quæstors was appointed by lot to the *quæstura Ostiensis*, a most laborious and important post, as he had to provide Rome with corn.⁸ Besides the quæstor Ostiensis, who resided at Ostia, three other quæstors were distributed in Italy, to raise those parts of the revenue which were not farmed by the publicani, and to control the latter. One of them resided at Cales, and the two others probably in towns on the Upper Sea.⁹ The two remaining quæstors, who were sent to Sicily, are spoken of below.

Sulla, in his dictatorship, raised the number of quæstors to twenty, that he might have a large number of candidates for the senate (*senatui expleudo*), and J. Cæsar even to forty.¹¹ In the year B.C. 49 no quæstors were elected, and Cæsar transferred the keeping of the ærarium to the ædiles. From this time forward the treasury was sometimes intrusted to the prætors, sometimes to the prætorii, and sometimes, again, to quæstors. (*Vid. ÆRARIUM.*) Quæstors, however, both in the city and in the provinces, occur down to the latest period of the Empire. Some of them bore the title of *candidati principis*, and their only duty was to read in the senate the communications which the princeps had to make to

this assembly (*libri principales, epistola principis*⁴). From the time of the Emperor Claudius, all quæstors, on entering upon their office, were obliged to give gladiatorial games to the people at their own expense, whereby the office became inaccessible to any one except the wealthiest individuals.² When Constantinople had become the second capital of the Empire, it received, like Rome, its quæstors, who had to give games to the people on entering upon their office; but they were probably, like the prætors, elected by the senate, and only announced to the emperor.²

The proconsul or prætor, who had the administration of a province, was attended by a quæstor. This quæstor had undoubtedly to perform the same functions as those who accompanied the armies into the field; they were, in fact, the same officers, with the exception that the former were stationary in their province during the time of their office, and had, consequently, rights and duties which those who accompanied the army could not have. In Sicily, the earliest Roman province, there were two quæstors, answering to the two former divisions of the island into the Carthaginian and Greek territory. The one resided at Lilybæum, the other at Syracuse. Besides the duties which they had in common with the paymasters of the armies, they had to levy those parts of the public revenue in the province which were not farmed by the publicani, to control the publicani, and to forward the sums raised, together with the accounts of them, to the ærarium.⁴ In the provinces, the quæstors had the same jurisdiction as the curule ædiles at Rome.⁵ The relation existing between a prætor or proconsul of a province and his quæstor was, according to ancient custom, regarded as resembling that between a father and his son.⁶ When a quæstor died in his province, the prætors had the right to appoint a pro-quæstor in his stead;⁷ and when the prætor was absent, the quæstor supplied his place, and was then attended by lictors.⁸ In what manner the provinces were assigned to the quæstors after their election at Rome is not mentioned, though it was probably by lot, as in the case of the quæstor Ostiensis. But in the consulship of Decimus Drusus and Porcina it was decreed that the provinces should be distributed among the quæstors by lot, *ex senatus consulto*.⁹ During the time of the Empire this practice continued, and if the number of quæstors elected was not sufficient for the number of provinces, those quæstors of the preceding year who had had no province might be sent out. This was, however, the case only in the provinces of the Roman people, for in those of the emperors there were no quæstors at all. In the time of Constantine the title of *quæstor sacri palatii* was given to a minister of great importance, whose office probably originated in that of the *candidati principis*. Respecting his power and influence, see Walter, *Gesch. d. Röm. R.*, p. 365.

QUASILLARIE. (*VID. CALATHUS.*)

QUASILLUM. (*VID. CALATHUS.*)

QUATUORVIRI JURI DICUNDO. (*VID. COLONIA*, p. 282.)

QUATUORVIRI VIARUM CURANDARUM, four officers who had the superintendence of the roads (*viæ*), were first appointed after the war with Pyrrhus, so many public roads were made by the Romans.² They appear to be the same as the *Viocuri* of Varro.³

*QUERCUS (*δρῦς*), the Oak, or "*Quercus* (Linn., gen. 1447) *species omnes*." "On reading attentively," says Fée, "the different passages of Virgil where mention is made of the oak, it is easy to perceive that the poet refers to several species, the determination of which would not be an easy task. The kind of oak, however, which figures most commonly in his verses as the symbol of strength, and which, moreover, from its majestic beauty, was consecrated to the father of the gods, is the species to which botanists have given the name of *Quercus robur*, and which abounds in Europe." According to ancient legends, the fruit of the oak served as nourishment for the early race of mankind. If this account be true, it must have been on the acorns of the *Quercus ilex* that the primitive race of mankind supported themselves. They are still used as an article of food by the inhabitants of certain countries in the south of Europe, and taste, when roasted, like chestnuts. In the year 1812, during the Peninsular War, the French troops canonized in the environs of Salamanca, where immense forests of the *Quercus ballota* exist, lived for several days on the fruit of these trees. "The species of oak described by Theophrastus may be thus arranged: 1. the *δρῦς ἡμερῆς*, *Quercus robur*.—2. *δ. αἰγίλων*, *Q. agrilops*.—3. *δ. πλατύφυλλος* (uncertain).—4. *δ. φηγός*, *Q. asculus*.—5. *δ. ἀλφειοῖς* (uncertain).—6. *δ. φέλλος*, *Q. suber*.—7. *δ. ἐνυμόδρος* (uncertain).—8. *δ. ὄσπρις*, *Q. cerris*.—The *δρῦς* of Homer is referable to both the *Q. ilex* and *Q. asculus*." (*VID. ASCULUS*.)⁴

QUERE'LA INOFFICIO'SI TESTAMENTI. (*VID. TESTAMENTUM.*)

QUINARIUS. (*VID. DENARIUS.*)

QUINCUNX. (*VID. AS*, p. 110.)

QUINDECIMVIRI. (*VID. DECEMVIRI*, p. 340.)

QUINQUAGESIMA, the fiftieth, or a tax of two per cent. upon the value of all slaves that were sold, was instituted by Augustus, according to Dion Cassius.⁶ Tacitus,⁶ however, mentions the twenty-fifth, or a tax of four per cent. upon the sale of slaves in the time of Nero: if both passages are correct, this tax must have been increased after the time of Augustus, probably by Caligula, who, we are told by Suetonius,⁷ introduced many new taxes.⁸

We are also told by Tacitus⁹ that Nero abolished the quinquagesima; this must have been a different tax from the above-mentioned one, and may have been similar to the quinquagesima mentioned by Cicero¹⁰ in connexion with the aratores of Sicily.

A duty of two per cent. was levied at Athens upon exports and imports. (*VID. PENTECOSTE.*)

QUINQUATRUS or QUINQUA'TRIA, a festival sacred to Minerva, which was celebrated on the 19th of March (*a. d. XIV., Kal. Apr.*), and was so

called, according to Varro,¹ because it was the fifth day after the ides, in the same way as the Tusculans called a festival on the sixth day after the ides *Sextatrus*, and one on the seventh *Septimatrus*. Gellius² and Festus³ also give the same etymology, and the latter states that the Faliscans too called a festival on the tenth day after the ides *Decimatrus*.⁴ Both Varro and Festus state that the quinquatrus was celebrated for only one day, but Ovid⁵ says that it was celebrated for five days, and was for this reason called by this name: that on the first day no blood was shed, but that on the last four there were contests of gladiators. It would appear, however, from the above-mentioned authorities, that the first day was only the festival properly so called, and that the last four were merely an addition, made, perhaps in the time of Cæsar, to gratify the people, who became so passionately fond of gladiatorial combats. The ancient calendars, too, assign only one day to the festival.

Ovid⁶ says that this festival was celebrated in commemoration of the birthday of Minerva; but, according to Festus, it was sacred to Minerva because her temple on the Aventine was consecrated on that day. On the fifth day of the festival, according to Ovid,⁷ the trumpets used in sacred rites were purified; but this seems to have been originally a separate festival, called *Tublustrium*,⁸ which was celebrated, as we know from the ancient calendars, on the 23d of March (*a. d. X., Cal. Apr.*), and would, of course, when the quinquatrus was extended to five days, fall on the last day of that festival.

As this festival was sacred to Minerva, it seems that women were accustomed to consult fortune-tellers and diviners upon this day.⁹ Domitian caused it to be celebrated every year in his Alban Villa, situated at the foot of the hills of Alba, and instituted a collegium to superintend the celebration, which consisted of the hunting of wild beasts, of the exhibition of plays, and of contests of orators and poets.¹⁰

There was also another festival of this name, called *Quinquatrus Minusculæ* or *Quinquatrus Minores*, celebrated on the ides of June, on which the tibicines went through the city in procession to the Temple of Minerva.¹¹

QUINQUENNALIA were games instituted by Nero, A.D. 60, in imitation of the Greek festivals, and celebrated, like the Greek *πενταετηρίδες*, at the end of every four years: they consisted of musical, gymnastic, and equestrian contests, and were called *Neroniana*.¹² Suetonius and Tacitus¹³ say that such games were first introduced at Rome by Nero, by which they can only mean that games consisting of the three contests were new, since *quinquennialia* had been previously instituted both in honour of Julius Cæsar¹⁴ and of Augustus.¹⁵ The quinquennialia of Nero appear not to have been celebrated after his time till they were revived again by Domitian in honour of the Capitoline Jupiter.¹⁶

QUINQUENNALIS. (*VID. COLONIA*, p. 283.)

QUINQUEREMIS. (*VID. SHIPS.*)

QUINQUERTIUM. (*VID. PENTATHLON.*)

QUINQUEVIRI, or five commissioners, were frequently appointed, under the Republic, as extraordinary magistrates to carry any measure into effect. Thus *quinqueviri mensarii*, or public bankers, were sometimes appointed in times of great distress (*vid.*

MENSARIUM); the same number of commissioners was sometimes appointed to superintend the formation of a colony, though three (*triumviri*) was a more common number. (*Vid. COLONIA*, p. 280.) We find, too, that quinqueviri were created to superintend the repairs of the walls and of the towers of the city,¹ as well as for various other purposes.

Besides the extraordinary commissioners of this name, there were also permanent officers, called quinqueviri, who were responsible for the safety of the city after sunset, as it was inconvenient for the regular magistrates to attend to this duty at that time: they were first appointed soon after the war with Pyrrhus.²

QUINTANA. (*Vid. CASTRA*.)

QUINTILIS. (*Vid. CALENDAR, ROMAN*.)

QUIRINALIA, a festival sacred to Quirinus, which was celebrated on the 17th of February (*a. d. XIII., Cal. Mart.*), on which day Romulus (Quirinus) was said to have been carried up to heaven.³ This festival was also called *Stultorum feria*, respecting the meaning of which, see FORNACALIA.

QUIRINALIS FLAMEN. (*Vid. FLAMEN*.)

QUIRITIMUM JUS. (*Vid. CIVITAS, ROMAN*; JUS, p. 561.)

QUOD JUSSU, ACTIO. (*Vid. JUSSU, QUOD, ACTIO*.)

QUORUM BONORUM, INTERDICTUM. The object of this interdict is to give to the prætorian heres the possession of anything belonging to the hereditas which another possesses pro herede or pro possessore. The name of this interdict is derived from the introductory words, and it runs as follows: "*Ait prætor: Quorum bonorum ex edicto meo illa possessio data est: quod de his bonis pro herede aut pro possessore possides, possideresve si nihil usucapum esset: quod quidem dolo malo fecisti, uti desineres possidere: id illi restituas.*" The plaintiff is entitled to this interdict when he has obtained the herorum possessio, and when any one of the four following conditions apply to the defendant.

1. *Quod de his bonis pro herede.*

2. *Aut pro possessore possides.*

3. *Possideresve si nihil usucapum esset.*

4. *Quod quidem dolo malo fecisti, uti desineres possidere.*

The first two conditions are well understood; and apply, also, to the case of the hereditatis petitio. The fourth condition also applies to the case of the hereditatis petitio and the rei vindicatio; but, instead of "*quod quidem*," the reading "*quodque*" has been proposed, which seems to be required; for No. 4 has no reference to No. 3, but is itself a new condition. The words of No. 3 have caused some difficulty, which may be explained as follows.

In establishing the bonorum possessio, the prætor intended to give to many persons, such as emancipated children and cognati, the same rights that the heres had; and his object was to accomplish this effectually. The Roman heres was the representative of the person who had died and left an hereditas, and by virtue of this representative or juridical fiction of the person of the dead having a continued existence in the person of the heres, the heres succeeded to his property, and to all his rights and obligations. In the matter of rights and obligations, the prætor put the bonorum possessio in the same situation as the heres, by allowing him to sue in respect of the claims that the deceased had, and allowing any person to sue him in respect of claims against the deceased, in an actio utilis or fictitia.⁴ In respect to the property, according to the old law any person might take possession of a thing belonging to the

hereditas, and acquire the ownership of it in a certain time by usucapion.¹ The persons in whose favour the prætor's edict was made could do this as well as any other person; but if they found any other person in possession of anything belonging to the hereditas, they could neither claim it by the vindicatio, for they were not owners, nor by the hereditatis petitio, for they were not heredes. To meet this difficulty, the interdictum quorum bonorum was introduced, the object of which was to aid the bonorum possessor in getting the possession (whence the title of the interdictum adipiscendæ possessionis), and so commencing the usucapion. If he lost the possession before the usucapion was complete, he could, in most cases, recover it by the possessorial interdicts properly so called, or by other legal means. This, according to Savigny, is the origin of the bonorum possessio.

In course of time, when bonitarian ownership (in bonis) was fully established, and coexisted with Quiritarian ownership, this new kind of ownership was attributed to the bonorum possessor after he had acquired the bonorum possessio, and thus all that belonged to the deceased ex jure Quiritium became his in bonis, and finally, by usucapion, ex jure Quiritium, though in the mean time he had most of the practical advantages of Quiritarian ownership. Ultimately the bonorum possessio came to be considered as a species of hereditas, and the like forms of procedure to those in the case of the real hereditas were applied to the case of the bonorum possessio: thus arose the possessoria hereditatis petitio, which is mentioned by Gaius, and cannot, therefore, be of later origin than the time of Marcus Aurelius. Thus the new form of procedure, which would have rendered the interdict quorum bonorum unnecessary if it had been introduced sooner, coexisted with the interdict, and a person might avail himself of either mode of proceeding, as he found best.² In the legislation of Justinian we find both forms of procedure mentioned, though that of the interdict had altogether fallen into disuse.³

According to the old law, any possessor, without respect to his title, could, by usucapion pro herede, obtain the ownership of a thing belonging to the hereditas; and, of course, the bonorum possessor was exposed to this danger as much as the heres. If the time of usucapion of the possessor was not interrupted by the first claim, the heres had no title to the interdict, as appears from its terms, for such a possessor was not included in No. 1 or 2. Hadrian,⁴ by a senatus consultum, changed the law so far as to protect the heres against the complete usucapion of an improbus possessor, and to restore the thing to him. Though the words of Gaius are general, there can be no doubt that the senatus consultum of Hadrian did not apply to the usucapion of the bonorum possessor nor to that of the bonæ fidei possessor. Now if we assume that the senatus consultum of Hadrian applied to the bonorum possessor also, its provisions must have been introduced into the formula of the interdict, and thus the obscure passage No. 3 receives a clear meaning, which is this: You shall restore that also which you no longer possess pro possessore, but once so possessed, and the possession of which has only lost that quality in consequence of a lucrativa usucapio. According to this explanation, the passage No. 3 applies only to the new rule of law established by the senatus consultum of Hadrian, which allowed the old usucapion of the improbus possessor to have its legal effect, but rendered it useless to him by compelling restitution. In the legislation of Justinian, consequently, these words have no meaning,

1. (*Liv.*, xxv., 7.)—2. (*Dig.*, i., tit. 2, s. 2, § 31.)—3. (*Ovid. Fast.*, ii., 475.—*Fest.*, s. v.—*Varro*, *De Ling. Lat.* vi., 13, ed. Müller.)—4. (*Ulp.*, *Frag.*, tit. 28, s. 12.—*Gaius*, iv. 34.)

1. (*Gaius*, ii., 52–58.)—2. (*Gaius*, iii., 34.)—3. (*Inst.*, iv., tit. 15.)—4. (*Gaius*, ii., 57.)

since that old usucapion forms no part of it; yet the words have been retained in the compilation of Justinian, like many others belonging to an earlier age, though in their new place they are entirely devoid of meaning.¹

R.

*RAIA, a species of fish, the Skate. (*Vid.* BATIS.)
 *RAMNES, RAMNENSES. (*Vid.* PATRICII.)
 *RANA, the Frog. (*Vid.* BATRACHUS.)
 *RANUNCULUS, a plant. (*Vid.* BATRACHION.)
 *RAPHANUS. (*Vid.* RHAPHANIS.)
 *RAPINA. (*Vid.* BONA RAPTA, FURTUM.)
 *RASTER or RASTRUM, *dim.* RASTELLUS, RALLUS, RALLUM (*ῥαστήρ*), a spud (*vid.* KATRINOS) a rake, a hoe.

Agreeably to its derivation from *rado*, to scrape, "raster" denoted a hoe which in its operation and in its simplest form resembled the scrapers used by our scavengers in cleansing the streets. By the division of its blades into tines or prongs, it assumed more of the form of our garden-rakes, and it was distinguished by the epithets *bidens* and *quadridens*,² according to the number of the divisions.

The *raster bidens* was by far the most common species, and hence we frequently find it mentioned under the simple name *bidens*.³ This term corresponds to the Greek *δικέλλαι*, for which *σινύνη* was substituted in the Attic dialect.⁴ The *bidens* was used to turn up the soil, and thus to perform, on a small scale, the part of a plough.⁵ But it was much more commonly used in the work called *occatio* and *βωλοκοπία*, i. e., the breaking down of the clods after ploughing.⁶ (*Vid.* MALLEUS.) Hence it was heavy.⁷ The prongs of the *bidens* held by the rustic in the woodcut at p. 715 are curved, which agrees with the description of the same implement in Catullus.⁸ Vine-dressers continually used the *bidens* in hacking and breaking the lumps of earth, stirring it, and collecting it about the roots of the vines.⁹ In stony land it was adapted for digging trenches, while the spade was better suited to the purpose when the soil was full of the roots of rushes and other plants.¹⁰ (*Vid.* PALA.) Wooden rakes were sometimes used.¹¹

RATIONIBUS DISTRAHENDIS ACTIO. (*Vid.* TUTELA.)

RECEPTA; DE RECEPTO, ACTIO. The prætor declared that he would allow an action against *nauta*, *caupones*, and *stabularii*, in respect of any property for the security of which they had undertaken (*recepterint*, whence the name of the action), if they did not restore it. The meaning of the term *nauta* has been explained (*vid.* EXERCITORIA ACTIO): the meaning of *caupo* follows from the description of the business of a *caupo*.¹² "A *nauta*, *caupo*, and *stabularius* are paid, not for the care which they take of a thing, but the *nauta* is paid for carrying passengers, the *caupo* for permitting travellers to stay in his *caupona*, the *stabularius* for allowing beasts of burden to stay in his stables, and yet they are bound for the security of the thing also (*custodiæ nomine tenentur*). The two latter actions are similar to such actions as arise among us against innkeepers and livery-stable-keepers, on whose premises loss or injury has been sustained with respect to the property of persons which they have by

legal implication undertaken the care of. At first sight there seems no reason for these *prætoriae* actions, as the person who has sustained loss would either have an *actio locati* and *conducti* in cases where payment had been agreed on, or an *actio depositi* where no payment had been agreed on; but Pomponius suggests that the reason was this: in a matter of *locatum* and *conductum*, the receiver was only answerable for loss in case he was guilty of culpa; and in a matter of *depositum*, only in case he was guilty of *dolus malus*; but the receiver was liable to these *prætoriae* actions if the thing was lost or injured even without any culpa on his part, and he was only excused in case of *dammum fatale*, such as shipwreck, piracy, and so forth.

These *prætorian* actions in factum were either "*rei persecutoriae*" for the recovery of the thing, or "*pænales*" for damages. The former action might be maintained against the heres of the *nauta*, *caupo*, or *stabularius*. The exheritor of a ship was answerable for any loss or damage caused to property, which he had received in the legal sense of this term, by any person in his employment. The *actio* against him was in *duplum*. The liability on the part of *caupones* and *stabularii* was the same: a *caupo*, for instance, was answerable for loss or damage to the goods of any traveller who lodged in his house, if caused by those who were dwelling in the *caupona*, but not if caused by other travellers. The *actio* for damages could not be maintained against the heres.¹

When parties who had a matter to litigate had agreed to refer it to an arbitrator, which reference was called *compromissum*, and a person had accepted the office of arbitrator (*arbitrium receperit*), the prætor would compel him to pronounce a sentence, unless he had some legal excuse. The prætor could compel a person of any rank, as a *consularis*, for instance, to pronounce a sentence after taking upon him the office of arbitrator; but he could not compel a person who held a *magistratus* or *potestas*, as a *consul* or *prætor*, for he had no *imperium* over them. The parties were bound to submit to the award of the arbitrator; and if either party refused to abide by it, the other had against him a *pænæ petitio*, if a *pæna* was agreed on in the *compromissum*; and if there was no *pæna* in the *compromissum*, he had an *incerti actio*.²

RECISSORIA ACTIO. (*Vid.* INTERCESSIO, p. 542.)

RECUPERATORÆS. (*Vid.* Actio, p. 18; JUREX, p. 550.)

REDEMPTOR, the general name for a contractor who undertook the building and repairing of public works, private houses, &c., and, in fact, of any kind of work.³ The farmers of the public taxes were also called *Redemptores*.⁴

REDHIBITORIA ACTIO was an *actio* which a buyer had against a seller for rescinding the bargain of sale on account of any defect in the thing purchased, which the buyer was not acquainted with, and which, according to the edict of the *cursu ædiles*, he ought to have been acquainted with. "Redhibere," says Ulpian, "is so to act that the seller shall have back what he had; and because this is done by restoration, for that reason it is called '*redhibitio*,' which is as much as to say '*redditio*.'" The effect of the *redhibitio* was to rescind the bargain, and to put both parties in the same condition as if the sale had never taken place. The time allowed for prosecuting the *actio redhibitoria* was "*sex menses utiles*," which were reckon-

ed from the day of sale, or from the time when any statement or promise had been made relating to the matter (*dictum promissumve*, the words of the edict').

REDIMICULUM (*καθετήρ*), a fillet attached to the CALANTICA, DIADEMA, mitra, or other headdress at the occiput, and passed over the shoulders so as to hang on each side over the breast.² Redimicula were properly female ornaments;³ and in the statues of Venus they were imitated in gold.⁴

REGIA LEX. A lex regia during the kingly period of Roman history might have a twofold meaning. In the first place, it was a law which had been passed by the comitia under the presidency of the king, and was thus distinguished from a lex tribunicia, which was passed by the comitia under the presidency of the tribunus celerum. In later times, all laws, the origin of which was attributed to the time of the kings, were called leges regię, though it by no means follows that they were all passed under the presidency of the kings, and much less, as some modern scholars have supposed, that they were enacted by the kings without the sanction of the curies. Some of these laws were preserved and followed at a very late period of Roman history. Livy⁵ tells us, that after the city was burned by the Gauls, the leges regię still extant were collected. That they were followed at a much later period is clear from Livy.⁶ Fragments of such laws are preserved in Festus,⁷ Pliny,⁸ and others.⁹ The minute detail into which some of them appear to have entered, allows us to infer that their number was not small. The existence of such leges belonging to the period of the kings cannot be doubted, though it may be uncertain whether they were written at so early a period.¹⁰ (*VID. JUS CIVILE, PAPIRIANUM.*)

The second meaning of lex regia during the kingly period was undoubtedly the same as that of the lex curiata de imperio. (*VID. IMPERIUM.*) This is, indeed, not mentioned by any ancient writer, but must be inferred from the lex regia which we meet with under the Empire, for the name could scarcely have been invented then; it must have come down from early times, when its meaning was similar, though not by far as extensive. During the Empire the curies continued to hold their meetings, though they were only a shadow of former times; and after the election of a new emperor, they conferred upon him the imperium in the ancient form by a lex curiata de imperio, which was now usually called lex regia. The imperium, however, which this regia lex conferred upon an emperor, was of a very different nature from that which in former times it had conferred upon the kings. It now embraced all the rights and powers which formerly the populus Romanus had possessed, so that the emperor became what formerly the populus had been, that is, sovereign. Hence he could do all those things on his own authority which had formerly been done by the populus Romanus, or, at least, only with its sanction.¹¹ A fragment of such a lex regia, conferring the imperium upon Vespasian, engraved upon a brazen table, is still extant in the Lateran at Rome. It is generally called, though wrongly, Senatus consultum de Vespasiani Imperio. It is copied in Ernesti, Excurs. ii. on Tacitus, vol. ii., p. 604, &c., ed. Bekker.¹²

REGIFUGIUM or FUGALIA, the king's flight, a festival which was held by the Romans every year on the 24th of February, and, according to Verrinus¹ and Ovid,² in commemoration of the flight of King Tarquinius Superbus from Rome. The day is marked in the fasti as nefastus. In some ancient calendaria the 24th of May is likewise called Regifugium, and in others it is described as Q. Rex C. F., that is, "quando rex comitavit fas," or "quando rex comito fugit." Several ancient as well as modern writers have denied that either of these days had anything to do with the flight of King Tarquinius,³ and are of opinion that these two days derived their name from the symbolical flight of the rex sacrorum from the comitium; for this king-priest was generally not allowed to appear in the comitium, which was destined for the transaction of political matters, in which he could not take part. But on certain days in the year, and certainly on the two days mentioned above, he had to go to the comitium for the purpose of offering certain sacrifices, and immediately after he had performed his functions there he hastily fled from it; and this symbolical flight was called Regifugium.⁴

REGULA (*κανών*), the ruler used by scribes for drawing right lines with pen and ink;⁵ also the rule used by carpenters, masons, and other artificers, either for drawing straight lines or making plane surfaces.⁶ That it was marked with equal divisions, like our carpenter's rules, is manifest from the representations of it among the "*instrumenta fabrorum tignariorum*," in the woodcuts at pages 252, 664. The substance with which the lines were made was raddle or red ochre (*μύλος*). (*VID. LINEA.*)

The scalebeam is sometimes called *κανών* instead of *γώνυς*. (*VID. JUGUM.*) Two rulers were sometimes fixed crossways, in the form of the letter X, as a support for a piece of machinery.⁸

REPETUNDÆ or PECUNIÆ REPETUNDÆ. Repetundæ pecuniæ was the term used to designate such sums of money as the socii of the Roman state or individuals claimed to recover from magistratus, judices, or publici curatores, which they had improperly taken or received in the provinciæ or in the urbs Roma, either in the discharge of their jurisdiction, or in their capacity of judices, or in respect of any other public function. Sometimes the word repetundæ was used to express the illegal act for which compensation was sought, as in the phrase "*repetundarum insimulari, damnari*;" and pecuniæ meant not only money, but anything that had value. Originally inquiry was made into this offence extra ordinem ex senatus consulto, as appears from the case of P. Furius Philus and M. Matienus, who were accused of this offence by the Hispani.⁹ The first lex on the subject was the Calpurnia, which was proposed and carried by the tribunus plebis L. Calpurnius Piso (B.C. 149), who also distinguished himself as an historical writer. By this lex a prætor was appointed for trying persons charged with this crime.¹⁰ This lex only applied to provincial

magistratus, because in the year B.C. 141, according to Cicero,¹ the like offence in a magistratus urbanus was the subject of a *questio extra ordinem*. It seems that the penalties of the *lex Calpurnia* were merely pecuniary, and, at least, did not comprise *exsilium*, for L. Lentulus, who was censor B.C. 147, had been convicted on a charge of *repetundæ* in the previous year. The pecuniary penalty was ascertained by the *litis æstimatio*, or taking an account of all the sums of money which the convicted party had illegally received.

Various *leges De Repetundis* were passed after the *lex Calpurnia*, and the penalties were continually made heavier. The *lex Junia* was passed probably about B.C. 126, on the proposal of M. Junius Pennus, *tribunus plebis*. It is probable that this was the *lex* under which C. Cato, *proconsul* of Macedonia, was living in exile at Tarraco;² for at least *exsilium* was not a penalty imposed by the *Calpurnia lex*, but was added by some later *lex*. This *lex Junia* and the *lex Calpurnia* are mentioned in the *lex Servilia*.

The *lex Servilia Glaucia* was proposed and carried by C. Servilius Glaucia, *prætor*, in the sixth consulship of Marius, B.C. 100. This *lex* applied to any magistratus who had improperly taken or received money from any private person; but a magistratus could not be accused during the term of office. The *lex* enacted that the *prætor peregrinus* should annually appoint 450 judges for the trial of this offence: the judges were not to be senators. The penalties of the *lex* were pecuniary and *exsilium*; the law allowed a *comperendinatio*.³ Before the *lex Servilia*, the pecuniary penalty was simply restitution of what had been wrongfully taken; this *lex* seems to have raised the penalty to double the amount of what had been wrongfully taken; and subsequently it was made quadruple. *Exsilium* was only the punishment in case a man did not abide his trial, but withdrew from Rome.⁴ Under this *lex* were tried M. Aquilius, P. Rutilius, M. Scaurus, and Q. Metellus Numidicus. The *lex* gave the civitas to any person on whose complaint a person was convicted of *repetundæ*.⁵ When Sigonius was professor at Padua, he found in the library of Cardinal Bembo two fragments of a Roman law on bronze, which, for reasons apparently sufficient, he considers to be fragments of this *lex Servilia*. The inscription, which is greatly mutilated, is given in the work of Sigonius *De Judiciis*, and has also been published by Klenze, *Berol.* 1825, but the writer has not seen the work of Klenze.

The *lex Acilia*, which seems to be of uncertain date, was proposed and carried by M. Acilius Glabrio, a *tribunus plebis*, which enacted that there should be neither *ampliatio* nor *comperendinatio*. It is conjectured that this is the *lex Cæcilia* mentioned by Valerius Maximus,⁶ in which passage, if the conjecture is correct, we should read *Acilia* for *Cæcilia*.⁷ It has been doubted whether the *Acilia* or *Servilia* was first enacted, but it appears that the *Acilia* took away the *comperendinatio* which the *Servilia* allowed.

The *lex Cornelia* was passed in the dictatorship of Sulla, and continued in force to the time of C. Julius Cæsar. It extended the penalties of *repetundæ* to other illegal acts committed in the provinces, and to judges who received bribes, to those to whose hands the money came, and to those who did not give into the *ærarium* their *proconsular accounts* (*proconsulares rationes*). The *prætor* who presided over this *questio* chose the judges by lot

from the senators, whence it appears that the *Servilia lex* was repealed by this *lex*, at least so far as related to the constitution of the court. This *lex* also allowed *ampliatio* and *comperendinatio*. The penalties were pecuniary (*litis æstimatio*) and the *aquæ et ignis interdictio*. Under this *lex* were tried L. Dolabella, Cn. Piso, C. Verres, C. Macer, M. Fonteius, and Lucius Flaccus, the last two of whom were defended by Cicero. In the Verrine orations, Cicero complains of the *comperendinatio*, or double hearing of the cause which the *lex Cornelia* allowed, and refers to the practice under the *lex Acilia*, according to which the case for the prosecution, the defence, and the evidence were only heard once, and so the matter was decided.¹

The last *lex De Repetundis* was the *lex Julia*, passed in the first consulship of C. Julius Cæsar, B.C. 59.² This *lex* consisted of numerous heads (*capita*), which have been collected by Sigonius. This *lex* repealed the penalty of *exsilium*, but, in addition to the *litis æstimatio*, it enacted that persons convicted under this *lex* should lose their rank, and be disqualified from being witnesses, judges, or senators. This is the *lex* which was commented on by the jurists, whose expositions are preserved in the *Digest*³ and in the *Code*.⁴ This *lex* adopted some provisions that existed in previous *leges*, as, for instance, that by which the money that had been improperly retained could be recovered from those into whose hands it could be traced.⁵ The *lex* had been passed when Cicero made his oration against Piso, B.C. 55.⁶ A. Gabinius was convicted under this *lex*. Many of its provisions may be collected from the oration of Cicero against Piso. Cicero boasts that in his *proconsulship* of Cilicia there was no cost caused to the people by himself, his *legati*, *quæstor*, nor any one else; he did not even demand from the people what the *lex* (Julia) allowed him.⁷

Under the Empire, the offence was punishable with exile.⁸

In Clinton's *Fasti Hellenici*, the *lex Calpurnia* is incorrectly stated to be the first law at Rome against bribery at elections. Bribery is *AMBITUS*.

(Sigonius, *De Judiciis*, ii, c. 27, to which subsequent writers have added very little.)

RESPONSA. (*Vid. JURISCONSULTI*.)

RESTITUTIO IN INTEGRUM, in the sense in which the term will here be used, signifies the rescinding of a contract or transaction, so as to place the parties to it in the same position with respect to one another which they occupied before the contract was made or the transaction took place. The *restitutio* here spoken of is founded on the *Edict*. If the contract or transaction is such as not to be valid according to the *jus civile*, this *restitutio* is not needed, and it only applies to cases of contracts and transactions which are not in their nature or form invalid. In order to entitle a person to the *restitutio*, he must have sustained some injury capable of being estimated, in consequence of the contract or transaction, and not through any fault of his own, except in the case of one who is *minor xxv. annorum*, who was protected by the *restitutio* against the consequences of his own carelessness. The injury, also, must be one for which the injured person has no other remedy.

1. (*De Fin.*, ii, 16.)—2. (*Cic.*, *Pro Balbo*, 11.—*Vell. Patere.*, ii, 8.)—3. (*Cic.*, *in Verr.*, II, i, 9.)—4. (*Savigny*, *Von dem Schutz der Mind.*, *Zeitschrift*, x.)—5. (*Cic.*, *Pro Balbo*, 23, 24.)—6. (*vi.*, 9, 10.)—7. (*Cic.*, *in Verr.*, Act. Pr., 17; in *Verr.*, II, i, 9.)

1. (*in Verr.*, II, i, 9.)—2. (*Cic.*, *in Vat.*, 12.)—3. (*48*, tit. 11.)—4. (*9*, tit. 27.)—5. (*Cic.*, *Pro C. Rabir. Post.*, 4.)—6. (*in Pis.*, 21.)—7. (*ad Att.*, v, 16.)—8. (*Tacit.*, *Ann.*, xiv, 28, and the note of Lipsius.)

The restitutio may either be effected on the complaint of the injured party, which would generally be made after the completion of the transaction, or when he is sued by the other party in respect of the transaction, and defends himself by an exceptio. The complaint, as a general rule, must be made within four years of the time of the injury being discovered, and of the party being capable of bringing his action; in the case of minores, the four years were reckoned from the time of their attaining their majority. In the case of an exceptio there was no limitation of time.¹ According to the old law, the complaint must be made within one year.

The application for a restitutio could only be made to one who had jurisdictio, either original or delegated, which flowed from the possession of the imperium; and it might, according to the circumstances, be decreed by the magistratus extra ordinem, or the matter might be referred to a iudex. When a restitutio was decreed, each party restored to the other what he had received from him, with all its accessions and fruits, except so far as the fruits on one side might be set off against the interest of money to be returned on the other side. All proper costs and expenses incurred in respect of the thing to be restored were allowed. If the object of the restitutio was a right, the injured party was restored to his right; or if he had incurred a duty, he was released from the duty.

The action for restitutio might be maintained by the person injured, by his heredes, cessionarii, and sureties; but, as a general rule, it could only be maintained against the person with whom the contract had been made, and not against a third person who was in possession of the thing which was sought to be recovered, except when the actio for restitutio was an actio in rem scripta, or the injured party had an actio in rem, or when the right which he had lost was a right in rem.

The grounds of restitutio were either those expressed in the Edict, or any good and sufficient cause: "*item si qua alia mihi iusta causa esse videbitur: r: integrum restitutum, quod ejus per leges plebiscita, senatus consulta, edicta, decreta principum licebit.*"²

The ground of the restitutio was, that the party who had just cause of complaint had not bona fide consented to the contract or transaction by which he was injured. The following are the chief cases in which a restitutio might be decreed:

The case of vis et metus. When a man had acted under the influence of force, or reasonable fear caused by the acts of the other party, he had an actio quod metus causa for restitution against the party who was the wrong-doer, and also against an innocent person who was in possession of that which had thus illegally been got from him, and also against the heredes of the wrong-doer if they were enriched by being his heredes. If he was sued in respect of the transaction, he could defend himself by an exceptio quod metus causa. The actio quod metus was given by the prætor L. Octavius, a contemporary of Cicero.³

The case of dolus. When a man was fraudulently induced to become a party to a transaction which was legal in all respects saving the fraud, he had his actio de dolo malo against the guilty person and his heredes, so far as they were made richer by the fraud, for the restoration of the thing of which he had been defrauded, and, if that was not possible, for compensation. Against a third party who was in bona fide possession of the thing, he had no action. If he was sued in respect of the transaction,

he could defend himself by the exceptio doli mali. (*Vid. CULPA.*)⁴

The case of minores xxv. annorum. A minor could by himself do no legal act for which the assent of a tutor or curator was required, and, therefore, if he did such act by himself, no restitutio was necessary. If the tutor had given his auctoritas, or the curator his assent, the transaction was legally binding, but yet the minor could claim restitutio if he had sustained injury by the transaction. Gains⁵ gives an example when he says that, if too large an amount was inserted in the condemnation of the formula, the matter is set right by the prætor, or, in other words, "*reus in integrum restituitur;*" but if too little was inserted in the formula, the prætor would not make any alteration; "for," he adds, "the prætor more readily relieves a defendant than a plaintiff; but we except the case of minores xxv. annorum, for the prætor relieves persons of this class in all cases wherein they have committed error (*in omnibus rebus lapsis*)."

There were, however, cases in which minores could obtain no restitutio; for instance, when a minor, with fraudulent design, gave himself out to be major; when he confirmed the transaction after becoming of age; and in other cases. The benefit of this restitutio belonged to the heredes of the minor, and generally, also, to sureties. The demand could only be made, as a general rule, against the person with whom the minor had the transaction and his heredes. The minor had four years after attaining his majority in which he could sue. The older law allowed only one year. If the time had not elapsed when he died, his heres had the benefit of the remaining time, which was reckoned from the time adeundi hereditatem; and if the heres was a minor, from the time of his attaining his majority (*Vid. CURATOR.*)

The case of absentia: which comprehends not merely absence in the ordinary sense of the word, but absence owing to madness or imprisonment, and the like causes.⁶ If a man had sustained injury by his own absentia, he was generally entitled to restitutio if the absentia was unavoidable: if it was not unavoidable, he was entitled to restitutio, either if he could have no redress from his procurator, or was not blameable for not having appointed one. If a man found that he might sustain damage on account of the absence of his adversary, he might avoid that by entering a protestation in due form.

The case of error, mistake, comprehends such error as cannot be imputed as blame; and in such case, a man could always have restitutio when another was enriched by his loss. The erroris causæ probatio somewhat resembles this case.⁴

The case of capitis diminutio through adrogatio or in manum conventio, which was legally followed by the extinction of all the obligations of the person adrogated or in manum. The prætor restored to the creditors of such persons their former rights.⁵

The case of alienatio iudicii mutandi causa facta is hardly a case of restitutio, though sometimes considered such. It occurs when a man alienates a thing for the purpose of injuring a claimant by substituting for himself another against whom the claimant cannot so easily prosecute his right. In the case of a thing which the possessor had thus alienated, the prætor gave an actio in factum against the alienor to the full value of the thing. If a man assigned a claim or right with the view of injuring his adversary by giving him a harder claimant to deal with, the adversary could meet the assignee, when he sued, with an exceptio iudicii mutandi causa.
